No. 475.

BRITISH EAST AFRICA PROTECTORATE.

(For Report for 1903-4, *see* [Cd. 2331].)

THE COMMISSIONER to MR. LYTTELTON.

Commissioner's Office,
Mombasa,
September 25th, 1905.

SIR,

I HAVE the honour to transmit to you herewith two copies of the Blue Book for 1904-5, together with the Annual Report which, in accordance with the instructions contained in Foreign Office despatches, has been compiled from the statistics furnished for and on the model of the Blue Book.

I have, &c.,
F. J. JACKSON,
(In the absence of H. M. Commissioner.)

REPORT ON THE BRITISH EAST AFRICA PROTECTORATE BLUE BOOK OF 1904-5.

I.—FINANCIAL.

(A.) General. Revenue and Expenditure.

Revenue.

The estimated revenue for the year ending March 31st, 1905, was £121,692; the actual revenue collected, exclusive of a Parliamentary grant of £251,133, was £154,756 1*s.* 1*d.*, showing an increase of £33,064 1*s.* 1*d.* over the estimate, and of £45,899 1*s.* 10*d.* over the revenue for the year 1903-4, which, exclusive of a Parliamentary grant of £256,000, was £108,856 19*s.* 3*d.*

2. The following is a comparative statement showing the actual revenue collected in 1903-4 and 1904-5:—

—	1903-4.			1904-5.			Increase.			Decrease.		
	£	*s.*	*d.*	£	*s.*	*d*	£	*s.*	*d.*	£	*s.*	*d.*
1. Customs Duties ...	34,124	6	0	61,520	17	2	27,396	11	2	—		
2. Harbour Dues and S.S. "Juba."	4,128	2	5	5,083	9	4	955	6	11	—		
3. Judicial Fees and Fines, &c.	4,858	6	11	5,429	13	11	571	7	0	—		
4. Licences and Taxes...	40,338	15	7	54,493	15	6	14,154	19	11	—		
5. Miscellaneous Revenue.	10,315	10	1	9,373	0	1	—			942	10	0
6. Post and Telegraphs	10,756	2	11	12,529	17	1	1,773	14	2	—		
7. Receipts from Government Property.	2,600	3	2	4,566	19	4	1,966	16	2	—		
8. Sale of Lands and Houses.	1,735	12	2	1,758	8	8	22	16	6	—		
	108,856	19	3	154,756	1	1	46,841	11	10	942	10	0
Parliamentary Grant ..	256,000	0	0	251,133	0	0	—			4,867	0	0
Total	364,856	19	3	405,889	1	1	46,841	11	10	5,809	10	0

3. Every head of revenue shows an increase except "Miscellaneous Revenue," where there is a decrease of £942 10*s.* 0*d.*, due in a large measure to the falling off of receipts from the sales of confiscated cattle. The large increase of £27,396 11*s.* 2*d.* under the head of "Customs Duties" is accounted for partly by the raising of the import duty from 5 per cent. to 10 per cent. *ad valorem*, and partly by the increase of trade consequent on the arrival in the country of a considerable number of white colonists, who are also responsible for almost doubling the receipts from Government property, owing to the increased number of leases of Crown lands. The import of arms and ammunition, wines and spirits, beads and wire, manufactured cotton goods, and rice also contribute to the

increase under this head. “Licences and Taxes” show an increase of £14,154 19*s.* 11*d.*, due chiefly to the more thorough collection of the hut tax, and also, in a less degree, to the issue of a larger number of game licenses.

Expenditure.

4. The following is the comparative statement of expenditure for 1903-4 and 1904-5:—

—	1903–4.			1904-5.			Increase.			Decrease.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*

Total	418,877	0	8	302,559	12	9	19,360	12	1	135,677	19	7

5. The expenditure for 1904-5 was thus less than the expenditure for 1903-4 by £116,317 7*s.* 6*d.* The principal causes for this were large decreases in the expenditure of the Uganda Railway (£62,543 14*s.* 1*d.*), of the “Customs and Shipping” (£28,153 14*s.* 5*d.*), and of the “Military” (£10,313 18*s.* 3*d.*), in addition to which sums of £12,872 14*s.* 4*d.* and £19,109 3*s.* 4*d.* paid in 1903-4 for the Ogaden Punitive Force, 1900, and “Indian Military Arrears” respectively, no longer appear in the expenditure of the year 1904-5.

6. The Administration expenditure shows an increase of £2,762 4*s.* 5*d.* (£29,633 6*s.* 9*d.* to £32,395 11*s.* 2*d.*), caused

by additions made to the staff, and also by the fact that the Commissioner's salary, which was partly paid from consular funds while he was also Agent and Consul-General for Zanzibar, is now paid entirely from the East Africa Protectorate funds. The decrease from £45,475 12*s.* 4*d.* to £17,321 17*s.* 11*d.* in "Customs and Shipping" is due to the extraordinary expenditure incurred in 1903-4 on account of the steamers on Lake Victoria. The decrease shown in "Military" expenditure from £61,960 8*s.* 5*d.* to £51,646 10*s.* 2*d.* is somewhat misleading. Had the full military programme been carried out, and all debts incurred been paid during the year, the expenditure for 1904-5 would have been £25,936 more than it actually was, and would have brought the total to £77,582, or an increase of £15,622 on the previous year. This was due to the reorganisation of the King's African Rifles. The decrease in "Postal and Telegraph Service" of £2,576 12*s.* 1*d.* is accounted for by the fact that arrears of freight, due to the Uganda Railway, involved extraordinary expenditure in 1903-4.

7. The transport expenditure has increased from £26,782 16*s.* 3*d.* to £29,211 14*s.* 10*d.* in consequence of the increase in travelling, necessitated for the more thorough collection of the hut tax, and to the additions made to the staff generally.

8. The large decrease of £62,543 14*s.* 1*d.* in the expenditure of the Uganda Railway is accounted for by the growth of traffic consequent on the general development of the country. Under extraordinary and unestimated expenditure two small increases are shown, viz., £2,174 7*s.* 7*d.* spent on the formation of the Masai Reserve at Laikipia, and £445 7*s.* 5*d.* on precautionary measures taken to stamp out the outbreaks of cattle diseases.

9. The other increases are due to the additions made to the staff of various departments, notably—Agricultural and Veterinary, increase from £7,610 16*s.* 6*d.* to £11,625 9*s.* 0*d.*; Medical, from £7,588 15*s.* 0*d.* to £10,781 6*s.* 6*d.*; Police, from £34,106 9*s.* 8*d.* to £35,794 14*s.* 3*d.*; Public Works and Survey, from £35,447 2*s.* 11*d.* to £36,548 15*s.* 0*d.*; and Scientific and Forestry, from £2,316 11*s.* 0*d.* to £3,355 9*s.* 10*d.*

10. The following table shows the total revenue and expenditure for the last five years:—

—	1900-1.			1901-2.			1902-3.			1903-4.			1904-5.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Revenue	64,275	2	11	68,453	8	9	95,283	12	11	108,856	19	3	154,756	1	1
Expenditure	185,488	3	7	278,151	12	7	311,469	0	5	418,877	0	3	302,559	12	9

These figures are exclusive of the Parliamentary grant.

(B.) TAXATION.

The only direct tax levied is the hut tax at the rate of Rs. 3, or Rs. 2 per hut, according to district. This may also be paid in labour or kind. The taxes collected in 1904-5 amounted to £37,655, as against £24,176 in 1903-4, or an increase of £13,479.

(C.) ASSETS AND LIABILITIES.

		£	s.	d.
The surplus of assets over liabilities on March 31st, 1905, was		148,966	9	10
From this should be deducted sundry sums which should have been spent during 1904-5, but which will not be actually disbursed till 1905-6, amounting to ...		33,607	0	0
Showing a real excess of assets over liabilities of		115,359	9	10
From this surplus has to be met the difference between the grant-in-aid and the deficit on the estimated revenue and expenditure in 1905-6, viz.	£26,360			
And the cost of a new steamer for Lake Victoria Nyanza estimated at	£36,699			
		63,059	0	0
Leaving a net surplus of		£52,300	9	10

which is available for the reduction of the grant-in-aid for 1906-7, or to meet any extraordinary expenditure that may arise. There is also a reserve fund of copper amounting in face value to Rs. 25,600, or the equivalent of £1,706 13*s.* 4*d.*, which has never been put into circulation.

(D.) PUBLIC DEBT.

There is no public debt.

(E.) CURRENCY.

Under the East Africa Currency Order-in-Council of May 19th, 1898, the rupee, whether of British India or of the late Imperial British East Africa Company, is legal tender to any amount. There are also in use the ½, ¼, and ⅛ of a rupee (silver) of British India and of the Imperial British East Africa Company which are legal tender up to Rs. 5, and the ½ and ¼ anna-pieces (copper) of British India, the ¼ anna-piece of the

East Africa Protectorate and of the Imperial British East Africa Company, and the $\frac{1}{12}$ anna-piece of British India. These are legal tender up to $\frac{1}{2}$ rupee. The British sovereign, though not strictly speaking legal tender, is in practice accepted at the rate of Rs. 15. Under the East Africa and Uganda Currency Order-in-Council of February 10th, 1905, provision has been made for the substitution of cents in place of the existing copper coinage, for the introduction of currency notes, and for making the sovereign legal tender for Rs. 15.

(F.) BANK.

The only bank doing business in the Protectorate is the National Bank of India, which has branches at Mombasa and Nairobi. It has a paid-up capital of £500,000.

(G.)

Comparative statement of the total revenue and expenditure of Municipalities:—

Name of Municipality.	Revenue and Expenditure.	1901.	1902.	1903.	1904.		
		Rs.	Rs.	Rs.	Rs.	a.	p.
Nairobi	Revenue ...	17,233	12,770	17,233	40,866	0	0
	Expenditure	17,233	12,770	17,233	40,886	0	0
Kisumu... ...	Revenue ...	—	—	—	8,779	12	3
	Expenditure	—	—	—	8,418	4	3

No other figures are available as the Kisumu Municipality was only established in 1904.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) IMPORTS AND EXPORTS.

1. The annual value of the trade of the Protectorate for the last four years was:—

Year.	Imports.	Exports.	Total.
	£	£	£
1901–2	426,267	113,206	539,473
1902–3	443,032	148,060	591,092
1903–4	436,947	159,815	596,762
1904–5	518,143	234,664	752,807

Imports.

2. These figures do not include importations on behalf of the East Africa Administration, for the construction and maintenance of the Uganda Railway, on behalf of the Uganda Protectorate, of specie, or of goods in transit. Including these figures, which are as follows:—

—	1901-2.	1902-3.	1903-4.	1904-5.
	£	£	£	£
Importation on behalf East Africa Administration.	16,500	63,000	14,940	28,677
Importation for construction and maintenance of Uganda Railway.	320,000	102,128	42,000	18,578
Importation on behalf of Uganda Protectorate.	30,000	12,500	13,000	19,320
Importation of specie (Indian rupees)	155,000	80,000	79,000	100,000
Importation of goods in transit ...	—*	—*	18,480	57,067

* Not known.

the total imports for the years in question amount to:—

Year.	Amount.
	£
1901-2	947,[illegible]67
1902-3	700,660
1903-4	604,367
1904-5	741,785

The increase of £81,196 as compared with the year 1903-4 is due to the rapid opening up of the country, to the arrival of numbers of white settlers, and to the consequent stimulus given to trade all over the Protectorate. This figure represents the increase only in traders' goods imported.

3. The imports for 1904-5 are made up as follows:—

	£
Imports from the United Kingdom...	165,484
Imports from British Possessions ...	151,383
Imports from Foreign Countries ...	201,276
	£518,143

The corresponding figures in 1903-4 were £123,006, £123,765 and £190,176.

4. Comparing the imports of the two years 1904-5 and 1903-4.

As has been already stated, the increase in the imports is to a large extent attributable to the influx of white settlers; *e.g.*, agricultural implements show an increase from £638 to £4,035; arms and ammunition from £7,813 to £11,510; building materials from £19,936 to £24,233; furniture from £6,807 to £7,837; wines and spirits from £15,782 to £26,132; kerosine oil from £6,247 to £9,116; drugs, chemicals, and medicines from £3,576 to £4,552; live stock from £7,925 to £10,032; and grains from £57,804 to £60,875. Beads and wire (for personal wear) show a slight increase from £9,023 to £10,970, and this in spite of the advance of civilisation, the reason probably being that cheapened transport has enabled the trader to get into touch with the more outlying tribes, who formerly could only afford to buy on a small scale through middlemen. Manufactured cotton goods show an increase from £118,539 to £145,588, whilst woollen goods show a decrease from £14,764 to £5,190. This is accounted for by a re-allocation of the cheap blankets used by natives from woollen to cotton goods. The latter importation consists largely of Kangas (printed cloths worn by the native women). If the design printed on these cloths is one which appeals to the native taste, very large quantities are sold at a considerable profit. Tobacco shows a slight decrease from £11,404 to £10,633; and coal a decrease from £11,843 to £339. The decrease in the importation of coal is due to the fact that the Navy no longer uses Mombasa as a coaling station, owing to the inadequate supply of fresh water obtainable.

Exports.

1. The value of exports in 1904-5 amounted to £234,664, which sum includes the export of produce from East Africa and Uganda, and also from German East Africa and the Congo Free State shipped through East Africa.

2. Compared with 1903-4 the figures show an increase of £74,849. This is due chiefly to increases of £24,987, £10,807, £4,298, and £3,741 in the export of hides, rubber, ivory (from the Congo Free State), and wax respectively. The large increase in the export of hides is attributable to the increased railway and Lake steamer facilities which enable the German towns in the interior to export through Mombasa. The export of rubber, which has almost doubled in quantity, may be ascribed to the heavy rainfall during the year under review. The export of mangrove bark has increased by 75 per cent., though a recent fall in price may temporarily check this trade until a better knowledge of the country and organisation of the labour shall enable the trader to effect economies in the export.

3. Whilst the value of exports to British possessions fell from £88,779 in 1903-4 to £61,112 in the year under review,

the exports to the United Kingdom rose from £17,274 to £36,834, and those sent to foreign countries from £53,762 to £136,718. The decline in the export to British possessions is mainly accounted for by the decreased export of hides to Aden, where they were formerly sorted and shipped to Great Britain, France, Germany, and the United States of America. In 1903-4 hides to the value of £21,630 were exported to Aden as against £642 in 1904-5. There was also a slight decrease in exports to Zanzibar owing to greater facilities being offered to shippers to send ivory from Mombasa to New York. The value of the goods exported to foreign countries was nearly trebled. This was largely due to an increase of £59,123 in the export of hides, ivory, &c., to the United States of America, of £13,049 to Germany, and of £8,985 to France.

(B.) MINES, MANUFACTURES AND FISHERIES.

1. The mineral resources of the Protectorate are not yet well ascertained, but iron is known to occur abundantly in most districts; mica and graphite are found in Ukamba; limestone is worked near Kitui, Makindu, and Lake Victoria; opals are common in the Rift Valley; a large deposit of carbonate of soda has been discovered in the southern part of Ukamba; and gold mining began, but was discontinued.

2. The principal manufactures are vegetable oils, copra, coir, cotton cloth woven on hand looms, mats, baskets, thatch, and furniture. There are also two soda water factories, the products of which are consumed in the Protectorate.

3. The fisheries at the Coast and in Lake Victoria afford the means of livelihood to a small portion of the population. Recent concessions include the working of pearl fisheries in the Lamu, Malindi, and Wasin districts. The finding of Medusae in Lake Victoria was a matter of considerable scientific interest.

(C.) AGRICULTURAL INDUSTRIES AND FARMS.

Highlands.

1. During the last two years there has been a large increase in the number of European settlers in the Protectorate, and it is estimated that in the highlands some 3,000 acres of land have been brought under cultivation by them, and are cropped as follows:—

Maize	800	acres
Beans	700	,,
Potatoes	700	,,
Millet	300	,,
Coffee	80	,,
Wheat	150	,,
China grass	90	,,
Oats, castor oil, lucerne, barley, linseed	180	,,

2. Maize, beans, potatoes, and oats are most successfully grown, but any large export of these products is seriously hampered by the high transport charges both by land and sea. In 1903, 938 tons of potatoes alone were despatched from the vicinity of Nairobi, a large portion of which went to South Africa, the export of this commodity increasing in that year from £300 to £3,000. Unfortunately, however, some of the growers lost heavily in their attempts to exploit the South African market, and abandoned the cultivation of potatoes for more profitable crops. The result of this was that towards the end of 1904 a potato famine occurred, and the prices reached four times their normal figure.

3. The area under coffee is rapidly increasing, and this product bids fair to be one of the most important in the Protectorate. So far the plants have suffered from no disease of a serious nature, and the yield has been heavy. One tree produces from two to three pounds of dried berries, valued at 6*d.* or 7*d.* per pound, f.o.b. London. The great danger is that the trees will over-produce themselves and become exhausted at an early age.

4. The cultivation of wheat is still under trial, and no very satisfactory results have as yet been obtained, the average yield being only two quarters per acre. This failure is probably due to the crop having been sown in unfavourable lands or at a wrong time of year. Barley and linseed show good results, and China grass yields large profitable crops in the moister districts or where it is artificially watered. Of forage plants lucerne and green oats are the most satisfactory. The ordinary root crops and vegetables are all successful.

5. The following are the average prices obtained for the principal products:—

	s.	d.
Wheat per bushel	6	8
Potatoes per cwt.	5	0
Millet ,, ...	2	0
Maize ,, ...	4	0
Beans ,, ...	2	6

Experimental Farms.

There are three experimental farms belonging to Government, at Nairobi, Naivasha, and Makindu, and many experiments both in agriculture and stock trading have been tried. A report by the Director of Agriculture on the results was published as a Parliamentary Paper, Africa, No. 4 (1905). A zebra ranch was also opened by the Government at Naivasha, but the mortality amongst the animals was so great that it has since been closed. The actual cause of death was for the most part intestinal worms, and it is supposed that this was due to the confinement to which the zebras were of necessity subjected.

Stock Farms.

1. Large herds of stock, sheep, and goats are kept on the enormous pasture grounds on the uplands, and a few shorthorn, polled Angus, Hereford, and Guernsey bulls, English sheep, and Angora goats have been imported to improve the breeds.

2. There are now nearly a dozen dairies in the neighbourhood of Nairobi; milk is sold at 2*d.* per bottle, and butter at from 1*s.* 8*d.* to 2*s.* per pound. Cows get no food but grass, and the cost of keeping a herd is consequently very small. The Government also maintains a dairy at Naivasha which likewise serves as a stock farm, from which cattle of imported breed are distributed.

3. Besides cattle, sheep, and goats, pigs are found on every farm, and are fed at practically no cost on the small potatoes and other by-products.

4. Native fowls, which are small but hardy, can generally be obtained in any part of the country. European fowls are becoming widely distributed.

5. Ducks of the Manilla type can be obtained at the coast and thrive well up-country. Turkeys and geese are imported with successful results.

6. Horses and ponies generally do well, and during the last year or two many have been imported from England, South Africa, Somaliland, India, and Australia.

7. Mules are the most serviceable animals both for light agricultural work and also for travelling purposes. Of late considerable numbers have been introduced from Somaliland.

8. The native donkey is of a fair size, but is slow. Crossed with the Muscat donkey, however, a useful animal is obtained.

9. The prices of some of the principal farm commodities are given in the following list:—

Oxen (untrained), £1 to £3.
Oxen (trained), £3 to £5.
Cows, £5 to £10.
Horses, £30 to £50.
Donkeys (male), £3 to £4.
Donkeys (female), £5 to £6.
Donkeys (Muscat), £25.
Sheep, 4*s.* to 8*s.*
Goats, 4*s.* to 8*s.*
Pigs, £1.
Mules, £20,

Lowlands.

1. The chief agricultural products of the lowlands are cocoa-nuts, rice, millet, maize, ground-nuts, sesame, and various native grains. Tobacco is also grown in small quantities. It is estimated that there are 550,000 cocoa-nut palms in the Protectorate. The price of ground-nuts and sesame, from which oil is obtained, is 2*s.* 6*d.* per 60 lbs.

2. Cotton promises well on the coast and at low elevations, and in spite of the abnormal rainfall and the fact that planting was started too late in the year, a fair crop was obtained. Experiments with a view to a large extension of cotton growing are now being made. A good yield of Egyption brown cotton was obtained from the Government Cotton Farm at Malindi. The crop, consisting of thirty-six hundredweight of fibre, was sold at home for prices ranging from 5¼*d.* to 7½*d.* per lb., and was reported as "clean, good colour, staple a little irregular but strong, and a good result."

A very heavy crop of cotton was also obtained at Kibos, near Lake Victoria, but the quality was not of the best.

Forests.

The forest products of the coast are rubber, gum-copal, and timber. Mangroves grow on the sea-shore; acacia and ebony in the scrub forests further inland; and the highland forests yield rubber, fibre, and castor-oil beans, and contain croton, olive, fig, cedar, and bamboo. The greater part of the forest area is quite unexplored, though a syndicate, which has obtained a concession for cutting timber, is now surveying the country north of the Uganda Railway. Three or four extensive areas have also been leased for the working of fibre and rubber. The former (Sanseviera) produces fibre of from three to seven feet in length, valued at about £25 per ton.

Diseases of Plants and Animals.

1. Diseases of plants are always prevalent. In 1904-5 a species of surface caterpillar did much damage, though it fortunately confined itself for the most part to grass lands.

2. Heavy losses are also at times caused by diseases of cattle. The chief reasons of these diseases, which have wrought considerable havoc in the herds in various parts of the Protectorate during the year under review, are the mixing of different breeds, and the fact that fencing is not general, the movement of stock being in consequence unrestricted.

3. An outbreak of rinderpest occurred in the early part of April, 1904, among three herds of Masai cattle at Naivasha

and Elmenteita. A system of strict segregation was adopted, and the outbreak was checked without serious loss. There have been several small epidemics of pleuro-pneumonia in the Ukamba and Naivasha Provinces, but these have been kept under control by the slaughter of infected animals and the segregation of those free from the disease. In June rinderpest broke out at Rabai, within 16 miles of Mombasa, and was only checked after the loss of nearly 50 per cent. of the cattle in the district. There have also been cases of Rhodesian or coast fever among the cattle in Ukamba and Naivasha, and of sheep scab at Naivasha.

4. There have been occasional outbreaks of horse sickness, when the mortality was very high. In 1901 75 per cent. of the horses at Nairobi died in two months, and at the commencement of 1905 the sickness reappeared in epidemic form all over the Protectorate.

(D.) LAND GRANTS, VALUE OF LAND, AND SQUATTING.

1. In 1904 197,256 acres of land were alienated by the Crown by sale or lease, as against 109,764 in 1903. Of this amount 111,957 acres (65,053 leasehold and 46,904 freehold) were situated in the Ukamba Province, 19,649 acres (16,639 leasehold and 3,010 freehold) in the Naivasha Province, and 65,650 acres (64,650 leasehold and 1,000 freehold) in the Kisumu Province.

2. Very little land is occupied by squatters, but persons who have applied for land have been granted temporary occupation thereof pending the completion of survey and title deeds.

(E.) SURVEY.

1. The Survey Department and Land Office are worked together under one Chief Surveyor. The amount expended under these two heads in 1904 was £4,183 12*s.* 9*d.*

2. The frequent delay in executing surveys and in drawing up the title deeds of land applied for is receiving the serious attention of His Majesty's Government.

(F.) SURVEY OF LAKE VICTORIA.

The survey of the southern or German half of Lake Victoria, which was undertaken by the Uganda Railway in 1903, has neared its completion. £1,636 12*s.* 11*d.* was spent on this work last year.

(G.) SHIPPING.

1. The shipping returns for the Protectorate show a decrease in the number of sailing vessels, but a slight increase of

steamers. There is a total increase of 164,361 tons over last year, as shown in the following table:—

—	1903–4.		1904–5.	
	No.	Tons.	No.	Tons.
Entered:—				
Sailing vessels	2,414	59,203	2,222	52,670
Steamers	419	816,457	421	899,367
Cleared:—				
Sailing vessels	2,492	58,750	2,254	53,702
Steamers	418	811,396	422	904,428
Total	5,743	1,745,806	5,319	1,910,167

2. Compared with the years 1902 and 1903 the result inwards and outwards is as follows:—

Inwards.

1902. An increase of 291 vessels and an increase of 227,638 tons.

1903. An increase of 368 vessels and an increase of 234,165 tons.

1904. A decrease of 190 vessels, but an increase of 76,377 tons.

Outwards.

1902. An increase of 279 vessels and an increase of 232,040 tons.

1903. An increase of 557 vessels and an increase of 230,049 tons.

1904. A decrease of 234 vessels, but an increase of 87,984 tons.

3. The total revenue collected in the Port Office of the Protectorate amounted to Rs. 33,908.13.¾ as compared with Rs. 29,909 of the preceding year. In the following table the revenue, as collected under the different headings, is shown for the last three years:—

Head of Revenue.	1904–5.			1903–4.			1902–3.		
	Mombasa	Coast Ports.	Total.	Mombasa	Coast Ports.	Total.	Mombasa	Coast Ports.	Total.

III.—LEGISLATION.

Among the Ordinances enacted during the year 1904 and the first quarter of the year 1904-5* were the following:—

An Ordinance restricting the importation of plants and seeds with the object of preventing coffee disease.

An Ordinance increasing the duty leviable on imports to 10 per cent. *ad valorem.*

An Ordinance repealing the Kisumu and Naivasha Trading Ordinance, 1902, and providing for the prohibition of trade save under licence.

An Ordinance prohibiting the withdrawal of firearms and ammunition intended for export if there is any suspicion that such arms and ammunition will be brought back into the prohibited zone.

---

* With the exception of the legislation returns which in former years were given for the Calendar year all other returns of the Protectorate were given for the financial year (*i.e.* from the 1st of April to the 31st March). It has, therefore, been considered better in future to give the legislation returns for the financial year also.

An Ordinance providing for the registration of births and deaths.

An Ordinance reducing the formalities necessary for native Christian marriages, and providing for the registration by Ministers of such marriages.

An Ordinance giving power to apprehend deserters from a foreign ship.

An Ordinance repealing (1) The Game Ordinance, 1903, (2) East Africa Game Regulations, 1900, part of section 12 and the 3rd and 4th schedules thereto; and providing for landholders' licenses, and sale of trophies under certain conditions.

An Ordinance providing for the dissolution of marriage.

An Ordinance giving the High Court the same power of revision over sentences passed by a special Court as in other cases.

1905.

An Ordinance rendering Maxim gun porters and also followers or other persons employed on active service liable to Military law.

An Ordinance repealing the Cattle Disease Ordinance, 1902, and providing measures for the suppression and prevention of infectious and contagious diseases of animals.

In addition to the above, two Orders-in-Council were promulgated in 1904 and one in the first quarter of 1905, as follows:—

The British Protectorates Neutrality Order-in-Council, 1904.

The British Protectorates Neutrality (Amendment) Order-in-Council, 1904.

The East Africa and Uganda (Currency) Order-in-Council, 1904.

The last-mentioned provides for the introduction of currency notes and decimal coinage, and makes the sovereign legal tender.

IV.—ECCLESIASTICAL STATISTICS AND EDUCATION.

The prevailing religious beliefs are pagan; but on the coast, where the Arabs have been settled for centuries, Mahommedanism has made considerable progress. There are in the Protectorate many Christian Mission stations representing eleven different societies, as shown in the following table:—

Name of Mission.	Denomination.	Number of Stations.	Nationality.
Church Missionary Society.	Church of England.	10	British.
United Methodists Free Church Mission.	United Methodists Free Church Mission.	15	„
Church of Scotland Mission.	Church of Scotland	1	Scotch.
Mission de Saint Esprit	Roman Catholic ...	12	French and Italian.
Algerian Mission ...	„ ...	2	French.
Evangelical Lutheran Mission.	Protestant ...	7	German.
Neukirchen Mission ...	„ ...	7	„
Africa Inland Mission	Undenominational	5	American.
Friends Industrial Mission.	Quaker	1	„
American Evangelical Mission.	Protestant ...	1	„
Swedish Mission ...	„ ...	1	Swedish.

2. At nearly all the mission stations schools have been started for elementary instruction and handicrafts. The Church Missionary Society and the Africa Inland Mission have also opened industrial schools at Freretown and Kijabe respectively. The number of children receiving primary education in the mission schools numbered about 3,000 in 1904.

3. At most of the coast towns there are Mahommedan schools for Arab and Swahili children. Two schools, belonging to the Uganda Railway and the Mission du Saint Esprit respectively, have lately been opened for European children at Nairobi. At the former there is a daily attendance of thirty-five pupils. The Government contribution towards this school amounted in the year under review to Rs. 4,114. Rs. 1,048 was collected in fees.

4. There is also a school for Indian children belonging to the Uganda Railway at Nairobi, at which 44 pupils are being educated. Government contributed last year Rs. 1,542 towards the upkeep.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

In the European Hospital at Mombasa, the principal hospital in the Protectorate, 28 patients were admitted, of whom two died. In the European Hospital at Nairobi ten patients were admitted, nine of whom were discharged as cured, whilst one died.

2. Of the other hospitals in the Protectorate, where treatment is administered free of charge, one is for the police and gaol at Mombasa, and three—at Kilindini, Nairobi, and Kisumu—for natives. In the first-mentioned 452 persons were admitted, of whom nine died; in the other there were 1,121 patients, and 113 deaths.

3. The sleeping sickness hospital at Kisumu was closed.

(B.) Asylums.

1. There are no lunatic asylums in the Protectorate.

2. There is one small leper asylum at Mzizima, near Mombasa, belonging to the Church Missionary Society. Lepers are, however, generally sent to the asylum at Zanzibar, whenever the Zanzibar Government consents to accept them.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The authorised strength of the police on March 31st, 1905, was one Inspector-General, one Deputy Inspector-General, four Assistant District Superintendents, six Inspectors, six Sergeant Inspectors, seven Clerks, and 1,800 rank and file. They are distributed among the various out-stations, most of which have no troops, and they are under the orders of the Civil Officer in charge. The total cost of the police for 1904-5 was £30,156 8*s*. 6*d*. as against £28,278 14*s*. 8*d*. in 1903-4.

(B.) Criminal Statistics.

1. The number of offences reported to the police and the magistrates during 1904-5 was 3,472, made up as follows:—Offences against the person, 598; prædial larceny, 41; offences against property (other than prædial larceny), 975; other offences (*e.g.*, offences against by-laws), 1,858.

2. The following table shows the number of offences, apprehensions, convictions, and acquittals for the last five years:—

—	1904.	1903.	1902.	1901.	1900.
The number of persons apprehended by the police or summoned before the magistrates.	3,472	3,315	2,892	3,195	3,588
The number of summary convictions—					
1. For offences against the person ...	431	567	250	372	483
2. For prædial larceny	34	48	1	—	19
3. For offences against property, other than prædial larceny.	761	262	559	818	895
4. For other offences	1,585	1,821	860	797	765
The number of convictions in the Superior Courts—					
1. For offences against the person...	1	13	7	14	55
2. For prædial larceny	—	—	—	—	—
3. For offences against property other than prædial larceny.	—	—	1	1	—
4. For other offences	6	10	1	1	—
The number of persons acquitted—					
1. In the Inferior Courts	647	594	1,208	1,181	1,258
2. In the Superior Courts	6	5	5	35	121

3. In 1904-5 13 cases were tried by the Court of Sessions. Of these seven resulted in convictions, six in acquittals.

4. The following table shows the comparative number of summary convictions and the kind of punishment inflicted for the years 1903-4 and 1904-5:—

Punishments.	Total Number of Offences.	Assaults and other Offences against the Person.	Malicious Injuries to Property.	Prædial Larceny.	Offences against Property other than Malicious Injuries to Property or Prædial Larceny.	Offences against Revenue Acts, Highway Acts, Health Acts, and other Acts relating to the Social Economy of the Colony.	Offences against Masters and Servants Acts, including Acts relating to Indentured Coolies.	Other Offences.
Fine—								
1903-4	1,296	235	3	8	58	990	1	1
1904-5	1,413	169	7	11	98	609	5	514
Imprisonment in lieu of Fine or Surety—								
1903-4	152	44	—	4	24	80	—	—
1904-5	96	31	—	4	34	7	4	16
Peremptory Imprisonment—								
1903-4	762	161	8	18	111	456	4	4
1904-5	748	139	—	13	382	111	12	91
Whipping—								
1903-4	433	114	1	18	56	240	1	3
1904-5	432	81	3	5	230	43	—	70
Bound over with or without Sureties, or other trivial punishment—								
1903-4	55	13	—	—	1	41	—	—
1904-5	136	19	—	1	11	41	—	64

5. It will be seen that offences against the person show a decrease of 128 cases, and offences against local legislation a decrease of 996 cases, while offences against property other than malicious injuries and prædial larceny show an increase of 505.

(C.) PRISONS.

1. There are eight prisons in the Protectorate—at Mombasa, Nairobi, Naivasha, Eldama Ravine, Kisumu, Fort Hall, Nyeri, and Lamu. The total number of convicted prisoners committed to the prisons during the year 1904-5 was 1,493. Eight prisoners escaped, but of these three were recaptured. The daily average of prisoners was 361. The average daily sick-rate was 28, and the number of deaths amongst persons undergoing sentence eleven.

4. Vagrants are also lodged in the gaols until they earn sufficient to pay for a passage elsewhere. In the year under review they amounted to 20 in number. Deserving cases are also assisted from a fund collected locally and called "The Distressed British Subjects Fund."

3. The expenditure on the prisons in the Protectorate during 1904-5 was £5,648 5*s.* 9*d.* as compared with £5,827 15*s.* 0*d.* in 1903-4.

VII.—VITAL STATISTICS.

(A.) POPULATION.

No census of the population has been taken in the Protectorate, and it is extremely difficult to estimate it even approximately, as a large part of the country is still unexplored. It is generally considered to amount to about 2,000,000. The white population on March 31st, 1904, was 1,464. This number included 233 Government and railway officials.

(B.) BIRTH AND DEATH RATES.

No records of births and deaths are kept except in the case of European and native Christians, so that it is impossible to give the birth and death-rates with any degree of accuracy. Since the promulgation of the Registration of Births and Deaths Ordinances 46 persons have been registered (births 29, deaths 17).

(C.) SLAVERY.

On the ten-mile coast strip domestic slavery is legal, but is practically extinct; no one born after August, 1890, can be a slave, and the purchase of slaves is prohibited. During the year under review 82 slaves were freed. There was no prosecution for cruelty.

(D.) CLIMATE AND PUBLIC HEALTH.

In the large extent of territory included in the two Protectorates, ranging in altitude from sea-level to 18,000 feet above sea-level, there are necessarily great variations in the climatic conditions and, dependent on these, in the health of different localities.

Climatically, British East Africa, which extends approximately from 5 S. to 4 N. latitude, may be divided into three zones:—

1. *The Coast.*

The coast strip, including the valleys of the three principal rivers—the Sabaki, the Tana, and the Juba. This is essentially tropical. The atmosphere is always charged with a considerable amount of moisture, but the temperature is equable and never very high. From June to December, during the prevalence of the south-west monsoon, residence on the coast is far from unpleasant, and although it is hotter during the other six months of the year, the nights are always fairly cool. On the whole, the health of the coast belt is good; there is very little malaria, and yellow fever—the scourge of the tropical coasts of the Western Hemisphere—is unknown.

Further inland, in the scrub country and in the river valleys, the effect of the sea breeze is lost, and the climate is hotter and less agreeable. Malaria is also more common, but cannot be said to be very prevalent or of a severe type.

2. *The Highlands.*

Leaving the coast belt, a gradual rise is experienced till an altitude of 9,000 feet above sea-level is reached on the Mau, or 18,000 feet on snow-clad Mount Kenya. On the whole of these uplands the climate is excellent, healthy, and invigorating. Although the sun is fairly strong in the middle of the day, European clothing can be worn all the year round, and the nights are cold enough to render the use of two or more blankets indispensable.

The fact that children born and bred on these high plateaux grow up rosy and robust is sufficient evidence of the excellence of the climate.

3. *The District round Lake Victoria Nyanza.*

From the highlands a somewhat rapid descent is made to the depression in which lies Lake Victoria. This is 3,680 feet above sea-level, and a tropical climate is again met with. It is hot, and owing to the vicinity of high hills, thunder storms are of frequent occurrence. The climatic conditions are less favourable, and at certain seasons of the year cases of malarial and hæmoglobinuric fever are not infrequent.

4. *Public Health.*

The public health has on the whole been good during the past year, and there have been no serious epidemics. Bubonic plague broke out at Kisumu in January, 1905, but, owing to the precautions taken, it did not assume very grave dimensions. The number of cases was 26, resulting in 25 deaths. Sleeping sickness is still prevalent in Kavirondo. The health of the Government officials has during the past year or two shown a marked and steady improvement, due principally to better housing, greater facilities for obtaining suitable food, and a more intelligent appreciation of the precautions necessary to guard against disease in tropical climates. Two officials died during the year, and one was invalided from the country. The commonest diseases are malaria and dyspepsia.

5. *Climate.*

The climate, as has been stated above, varies considerably in different parts of the Protectorate both as regards temperature and rainfall.

Temperature.

The temperature at the four stations, at which observations were taken for the whole year, is shown in the following table:—

Station.	Barometer				Thermometer.			
	Inches.	Temp.	Extremes.		9 a.m.	Means.		Mean.

Rainfall.

At the coast the rainfall was considerably in excess of the year 1903-4; up country the total recorded was somewhat less than in the preceding year.

In the following tables the returns of the stations, at which observations have been taken for a period of two years or more, are given:—

Station.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.

(E.) SANITATION.

General Sanitary Condition of the Protectorate and of the Chief Towns.

1. The general sanitary condition of the Protectorate, although far from good, compares on the whole favourably with other tropical countries.

2. Owing to the Treaty rights with foreign Powers, neither Mombasa nor Lamu—the two principal ports—possess municipalities but the sanitation of the former is fairly effective, thanks [illegible] conservancy department. Some of the narrower thoroughfares of the native town have been widened, while the scavenging is improving. Sunlight and free circulation of air are, however, interfered with by the houses being much huddled together. The water supply is poor, Europeans being dependent on tanks in which rain is collected, while the natives drink the well water, which is brackish. During a drought the supply of good water would be a matter of some anxiety.

3. At Lamu the cess-pit system is in vogue, and water is obtained from tanks and wells.

4. Nairobi possesses a municipality and employs a town clerk. The drainage of the town is still somewhat defective, but is being improved. The burial of night soil has been adopted and has been found to work satisfactorily. The town itself is well scavenged. The water supply is of good quality, being brought a distance of nine miles in pipes from the Kikuyu hills.

5. Kisumu likewise possesses a municipality, and considerable progress has been made during the past year in draining the swamps round the town. Steps have also been taken to fill up pools and hollows, the breeding place of mosquitoes. The water supply is bad owing to the lake being much polluted, and the residents are dependent on rain-water which is collected in tanks. The burial of night soil is the method adopted for the conservancy of the town.

VIII.—POST AND TELEGRAPHS.

Comparison of Revenue and Expenditure.

—	1903–4.	1904–5
	£ s. d.	£ s. d.
Revenue	10,756 2 11	12,529 17 1½
Expenditure	16,749 14 4	18,517 6 3
Excess Expenditure ...	5,993 11 5	5,987 9 1½

The revenue figures represent receipts from commission on money orders, sale of stamps, surcharge collections, telegraph revenue, and rent from the Uganda Railway for the use of the telegraph line. The total number of letters dealt with during the year under review was 787,260.

Money Order Business.—The total number of money orders issued in the Protectorate was 12,909, amounting in value to £61,276 18*s.* 9½*d.*, while the number paid was 1,603, valued at £6,742 6*s.* 2½*d.* Of those issued 10,392 were sent to India.

Telegraphs.

The total mileage open for telegraph traffic in the East Africa Protectorate is as follows:—

	mileage.
Mombasa to Lamu, 200 miles, single wire ...	200
Mombasa to Kisumu, 584 miles, three wires ...	1,752
Londiani to Eldama Ravine, 18 miles, single wire	18
	1,970

Preparations were made for laying three additional wires as follows:—

	mileage.
Nairobi to Kiambu, single wire	9
Muhoroni to Kericho, single wire	22
Kibigori to Nandi, single wire	12

The total number of telegrams dealt with was 42,031, of which 32,278 were internal. This figure includes 7,680 telegrams despatched from the Uganda Railway Telegraph Offices.

IX.—MILITARY FORCE AND EXPENDITURE.

The military force consists of 24 officers and 1,000 men forming the 3rd Battalion of the King's African Rifles; the 2nd (Yao) Battalion was also in the Protectorate for the latte- half of the year 1904.

The expenditure incurred by the Protectorate on account of its military defence was as follows:—

	£	s.	d.
Regimental Staff Officers, Europeans ...	13,376	4	9
„ „ „ Natives ...	1,092	13	6
Office establishment	1,190	13	8
Troops, artisans, porters, &c.	22,755	9	11
Camel Corps	2,044	16	8
Arms, equipment, uniforms and outfit	6,013	14	3
Rations and camp equipment for field service	649	1	1
Purchase of mules	130	8	4
Gratuities and contingencies	1,068	14	0
Yao contingent	3,324	14	0
Total ...	£51,646	10	2

X.—GENERAL OBSERVATIONS.

(A.) IMPORTANT EVENTS.

1. Sir Donald Stewart, K.C.M.G., was appointed Commissioner and Commander-in-Chief on July 8th, 1904, in succession to Sir Charles N. E. Eliot, K.C.M.G., C.B., who resigned. At the same time the dual appointment of Agent and Consul-General of Zanzibar and Commissioner and Commander-in-Chief of the East Africa Protectorate was abolished.

2. The Masai, who had formerly occupied the land on both sides of the railway near Naivasha, were placed in two reserves —one on the Laikipia escarpment, some 60 miles north of the line, and the other to the south of Nairobi towards German East Africa.

3. A Land Committee, consisting of the two Judges of the High Court, the Crown Advocate, and two prominent non-official residents, was appointed on October 31st, 1904, to enquire into and report on matters relating to land in the East Africa Protectorate. The Committee's report had not been published by the end of the financial year (March 31st, 1905).

(B.) PUBLIC WORKS.

The total amount charged to the Public Works Vote for the year under review was £30,728 9*s*. 4*d*. During this period the following buildings were erected:—

Station.	Description of buildings.	Remarks.
Mombasa.	Public works yard and offices.	Completed.
"	Treasury.	Not completed.
Taveta.	House for assistant collector.	"
Nairobi.	House for principal medical officer.	Completed.
"	House for chief surveyor.	"
"	Police orderly room and barracks.	"
"	Quarters for office orderlies.	"
"	Quarters for hospital assistants.	"
"	Quarters for nurses.	"
"	Quarters for medical storekeeper.	"
"	Quarters for court clerk.	"
"	Quarters for three European surveyors.	"
"	Quarters for Indian surveyors.	"
"	Additional offices for surveyors.	"
"	Landy for chainmen.	"
Kitui.	House for assistant collector.	"
Fort Hall.	Additional prison.	"
"	Store and magazine.	"
"	Medical officer's house.	"
Nyeri.	Store and magazine.	"
Kisumu.	House for sub-commissioner.	"
"	House for medical officer and collector.	"
"	Court.	"
"	Subordinates' quarters.	"
"	Police station.	"
"	Dispensary.	"
"	Gaol.	"
"	Market sheds.	"
"	Native hospital.	"
"	Subordinates' quarters.	"
"	Landy for Indian artisans.	"
Baringo.	New station buildings.	"
Nakuru.	Police buildings.	"

Mombasa Fort.

Various repairs were carried out in Mombasa Fort, which is now the central gaol of the Protectorate.

Mombasa Harbour Works.

The sum of £700 was spent on a retaining wall in Mombasa Harbour, the sea having encroached and undermined some of the Customs buildings.

Rest houses in the Kenya Province.

Six rest houses for Europeans with out-houses for porters have been built by the native chiefs in Kenya Province.

Roads.

At Mombasa the Kilindini road has been widened at a cost of £500. There are now sixteen miles of roads and streets on the Island of Mombasa.

The Nairobi-Fort Hall road has been continued, and at the end of the year was some 36 miles in length.

Small sums were spent on the upkeep and repairs of the following roads during the year:—

Name of Road.	Length.
	Miles.
Voi-Taveta	75
Mkonumbi-Witu	22
Malindi-Mambrui	10
Machakes Road Station-Machakes ...	22
Nairobi-Dageretti	8
Nairobi-Ngong	10
Vanga-Mombasa	50
Mombasa-Malindi	60
Kisumu-Mumias	28

The roads in the Kenya Province continued to receive the attention of the local officials and native chiefs.

Canal.

There is one canal in the Protectorate which is known by the name of Belazoni. It joins the Tana and Ozi rivers.

Under the Belazoni Canal dues Rs. 768 7*a*. 0*p*. was collected last year.

(C.) RAILWAY.

1. The Uganda Railway from Mombasa to Kisumu on Lake Victoria is worked as a State railway of the East Africa Protectorate. Its length is 584 miles with a gauge of one metre. The construction cost to March 31st, 1905, was (approximately) £5,404,920. Two steamers on the Lake—"the Winifred" and "Sybil"—are worked in connection with the railway. The telegraph along the line is worked by the Protectorate Postal Department at the principal stations, and by the railway staff at the smaller stations.

2. In 1904-5 23,717 tons of goods (exclusive of railway material) and 71,680 passengers were carried, as against 16,368 tons of goods and 58,199 passengers in 1903-4. 6,195 head of live stock were also carried last year. The earnings in 1904-5

were £153,793 (railway £138,641, steamers, £14,466, and telegraphs £686), or an increase of £22,226 on the preceding year, whilst the total expenditure was £151,153, or a decrease of £40,514.

3. The railway zone extends one mile on either side. The revenue derived from rents in 1904-5 was £1,988, or £1,316 more than in 1903-4.

(D.) EMIGRATION AND IMMIGRATION.

The figures available are unreliable and must only be considered as approximately correct.

The number of immigrants and emigrants during the year 1904-5 was, as far as could be ascertained, as follows:—

—	Immigrants.	Emigrants.
European...	599	317
Indians	97	365

In addition to these a number of natives left the Protectorate for periods of six months to work on the clove plantations of Pemba. An Indian settlement scheme has been started at Kibos, near Victoria Nyanza, and Indians have taken up land and engaged in the cultivation of cotton and rice. The scheme promises to be successful as the soil is well adapted to the growth of these crops, and the climate, though unfavourable to Europeans, appears to suit the Indians.

(E.) RATES AND WAGES.

1. Native boys can be engaged for domestic service at a salary of 10 to 20 rupees a month, but when travelling a food allowance must be paid to them, amounting to about 4 annas a day. Native cooks can be obtained from Rs. 20 per mensem, but Goanese cooks, who are of a better class, command a wage of Rs. 35 to Rs. 50. No hard and fast rule can be laid down to fix the cost of living, but at the coast Rs. 2 per person per day suffices to provide an ordinary household with bread, meat, and vegetables, &c.; fuel, oil, milk, and groceries are generally provided separately, and the average inclusive cost should not exceed Rs. 3 per head, or £6 per mensem.

2. The cost of living up-country is on the whole cheaper, though groceries are more expensive owing to the cost of freight on the Uganda Railway. Farmers and others, who keep their own stock and plant their own vegetables, can

generally live well on £3 to £4 a month. This amount includes the pay of one servant.

The prices of some of the ordinary articles of consumption are:—

	Rs.	a.
Fowl	0	6
Egg	0	1
Tea	1	0 per lb.
Sugar	0	2¼ ,,
Salt	0	7 ,,
Beef and mutton	0	3 ,,
Fresh butter	1	8 ,,
Bread	0	2½ per loaf.
Coffee	1	8 per lb.

3. Washing is done by Hindus, Goanese, and Swahilis, the general price being Rs. 8 per 100 articles (large or small).

4. As regards the important question of labour, prices vary somewhat, according to districts. Labourers on the coast receive a wage of Rs. 10 a month, whereas in the interior only half this amount is paid. Native carpenters are paid eight annas to R. 1 a day, and Indians Rs. 2-4. Painters and masons can be obtained for Rs. 2 a day. Skilled ploughmen receive from Rs. 12 to Rs. 15 a month. The average working day lasts from 7 a.m. to 5 p.m. with an interval of an hour at noon. The master provides food for men who work by the month; daily labourers feed themselves.

It is estimated that to break in an acre of rough grass land with manual labour from £2 to £3 an acre is required; to regularly re-cultivate and sow crops the cost per acre is from 10*s.* to 15*s.* Manual labour is gradually being superseded by oxen and tillage implements, and as the cost decreases the area of cultivated land will doubtless rapidly extend.

5. The cost of buildings varies according to the style of house required. A comfortable three-roomed thatched house is all a settler is likely to want when he first enters into possession of his land. This will cost him about £15. Later on, if he elects to build an iron house lined with wood, he would have to pay about £200. Corrugated galvanized iron sheets, 7 feet by 2 feet, cost 2*s.* 6*d.* each, and timber 3*s.* 6*d.* per cubic foot. A comfortable stone house would cost from £400 to £500; a general store from £20 to £30. A five barbed-wire fence costs from £20 to £30 per mile.

(F.) SOCIAL CONDITION OF THE PEOPLE.

The material condition of the people generally is good. They are lightly taxed, the necessaries of life are cheap, and with the extension of cultivation and public works, and the upkeep of the Uganda Railway, work is plentiful. Unfortunately, the wants of the native being so easily satisfied, there is often a dearth of labour, and many employers would welcome a famine in order to induce the inhabitants of more remote parts of the Protectorate to leave their villages, even temporarily, to search for work.

As regards the moral conditions of the people, no decided progress can be recorded. Violent crime is still unduly prevalent in certain districts and amongst certain classes, and the knowledge of probable punishments seems to have little effect in restraining it. It is, however, to be hoped that the spread of civilisation will in time operate as a restraining influence.

(G.) OPENINGS FOR INVESTMENT OF CAPITAL.

1. The coast strip may be described as a moderately rich tropical country, and money might be successfully invested in the products usually grown in hot climates. Cocoa-nuts pay well, and many minor products, notably rubber and fibre, are coming to the fore. Cotton too, as has been mentioned in another part of this report, is likely to repay any capital expended on it.

2. A project has been set on foot for establishing a cold storage at Kismayu, where the hinterland is rich in cattle, for exportation to South Africa and other parts. A cold storage might also be opened in Mombasa with success.

3. In the cool regions of the interior horse and cattle ranches, ostrich and zebra farms, dairies, plantations of coffee, and other products will probably show profitable returns to the capitalist.

4. The enormous belts of timber are likely to prove one of the most valuable assets of the Protectorate.

(H.) FUTURE PROSPECTS OF TRADE.

There has been a visible improvement in trade, and during the last twelve months the best returns are shown since the slump experienced on the completion of the Uganda Railway four years ago. Goods on arrival pass quickly into consumption, and capital for developing purposes is thus introduced into the country. The increase in the downward traffic of the Uganda Railway is most encouraging, and although this is to a large extent due to exports from German East Africa, Uganda, and the Congo Free State the East Africa Protectorate, as the owner of the shipping port, benefits materially thereby.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title-page :—

EAST AFRICA PROTECTORATE.

(For Report for 1904–5, *see* No. 475.)

THE COMMISSIONER TO THE SECRETARY OF STATE.

Commissioner's Office, Mombasa,
5th December, 1906.

MY LORD,

I HAVE the honour to transmit to Your Lordship herewith the annual report on the East Africa Protectorate for 1905-6.

I have, &c.,

J. HAYES SADLER.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1905-6.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

Revenue.

1. The estimated revenue for the year ending March 31st, 1906, was £163,000: the actual revenue collected, exclusive of a Parliamentary Grant of £214,000, was £270,362 3*s.* 5*d.*, showing an increase of £115,606 2*s* 4*d.* over the revenue for the year 1904-5, which, exclusive of a Parliamentary Grant of £251,133, was £154,756 1*s.* 1*d.*

2. The following is the comparative statement showing the actual revenue collected in 1904-5 and 1905-6:—

—	Amount collected in the year 1904-5.			Amount collected in the year 1905-6.			Increase.			Decrease.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
1. Customs Duties ...	61,520	17	2	75,800	7	8	14,279	10	6	—		
2. Harbour Dues and s.s. "Juba."	5,083	9	4	4,674	13	1	—			408	16	3
3. Judicial Fees and Fines, &c.	5,429	13	11	7,009	15	0	1,580	1	1	—		
4. Licences and Taxes...	54,493	15	6	72,883	2	6	18,389	7	0	—		
5. Miscellaneous Revenue.	9,373	0	1	17,298	8	3	7,925	8	2	—		
6. Post and Telegraphs	12,529	17	1	15,267	7	4	2,737	10	3	—		
7. Receipts from Government Property.	4,566	19	4	6,437	7	5	1,870	8	1	—		
8. Uganda Railway Profit.	—			68,835	9	6	68,835	9	6	—		
9. Sale of Lands and Houses.	1,758	8	8	2,155	12	8	397	4	0	—		
Total exclusive of Grant-in-Aid.	154,756	1	1	270,362	3	5	116,014	18	7	408	16	3
Parliamentary Grant ..	251,133	0	0	214,000	0	0	—			37,133	0	0
Total	405,889	1	1	484,362	3	5	116,014	18	7	37,541	16	3

3. All the various heads of revenue show increases with the exception of Harbour Dues and s.s. "Juba." The small decrease of £408 16*s.* 3*d.* under that item is due to the increased trade of the coast, which has attracted the attention of the private shipping companies, and induced them to run their own vessels in competition with the Government steamer.

The most striking advance is that made by the Railway, which now shows a surplus of earnings over working expenses of £68,835 9*s.* 6*d.* The general increase of trade and the continued immigration of European settlers are responsible for this, and the same causes have swelled the revenue from Judicial Fees, Post and Telegraphs, and Sale of Lands, though the last item did not realize the sum estimated, owing to unavoidable delays in the Land and Survey Office, which prevented the completion of a number of transactions in which areas had been applied for.

The amount derived from Hut Tax continues to increase, and Game Licences (£7,000) also contribute even more than during 1904-5, large numbers of sportsmen having visited the country, particularly during the last half of the year. The total revenue from these and other sources included under the head of Licences and Taxes exceeds that collected in the previous year by no less a sum than £18,389 7*s.*

A particularly gratifying circumstance is the advance in the proceeds of Government property, due, as it largely is, to the development of the important mangrove bark industry.

Expenditure.

4. The following is the comparative statement of expenditure for 1904-5 and 1905-6:—

—	Expenditure.		Increase.	Decrease.
	1904-5.	1905-6.		
	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*

5. The expenditure for 1905-6 shows an increase of £116,279 11*s.* 1*d.* over that incurred in the year 1904-5. This is mainly due to large amounts being spent on the Military and Public Works Departments (increase of £53,334 5*s.* 5*d.* and £63,478 14*s.* respectively).

Under the former head must be included arrears from the previous year in connection with the 2nd Battalion, King's African Rifles, and the erection of lines and provision of passages from British Central Africa for the 1st Battalion, as well as heavy expenses due to rearmament ; while the increase under Public Works is due to the extensive building programme laid down, and to additions to the staff. This latter item, rendered necessary by the rapid development of the Protectorate and its greatly improved revenue-earning capacity, is mainly responsible also for increases under Administration (£2,489 18*s.* 9*d.*), Audit (£210 10*s.* 1*d.*), Medical (£2,453 18*s.* 6*d.*), Police and Prisons (£2,041 3*s.* 4*d.*), Port Office (£289 14*s.* 8*d.*, mainly for Water Police), Posts and Telegraphs (£678 18*s.* 7*d.*), and Treasury (£631 14*s.* 1*d.*).

The Printing and Stationery Vote is greater by £645 11*s.* 9*d.* than in 1904-5. A new machine to replace the small obsolete presses previously used was purchased, and the staff was increased. The Department is now able to meet the requirements of almost all Government Departments, with the exception of the Railway, which has its own press. A saving is thereby effected of a considerable sum previously expended in having forms printed in India or locally.

The Transport Department cost £8,193 17*s.* 3*d.* more than in 1904-5. This schedule is always found to grow in proportion to the general advance of the country, entailing as it does an increased staff in almost every department, more efficient control of hut tax collection, and heavy expenditure in connection with public works.

The most notable decreases are to be found under Agriculture (£2,470 17*s.* 7*d.*), due to capital expenditure in 1904-5, which did not recur; under Miscellaneous Expenditure (£1,394 8*s.* 2*d.*); and under Uganda Railway, which, as explained above, has ceased to be a charge against Protectorate funds, bringing in on the contrary a handsome revenue.

There are also small decreases of £378 16*s.* 1*d.* under Customs and Shipping, owing to the transfer of expenditure on lake steamers from this schedule, and of £333 12*s.* 6*d.* under Forestry and Scientific, being savings on the vacant Conservatorship of Forests.

The unestimated extraordinary expenditure only amounted to £710 10*s.* 4*d.*, being a decrease of £2,540 2*s.* 4*d.*

6. The totals of the revenue and expenditure for the last six years, exclusive of Parliamentary Grants, are as follows:—

—	1900–1.			1901–2.			1902–3.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Revenue	64,275	2	11	68,453	8	9	95,283	12	11
Expenditure ...	193,438	3	7	278,151	12	7	311,469	0	5

—	1903–4.			1904–5.			1905–6.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Revenue	108,856	19	3	154,756	1	1	270,362	3	5
Expenditure ...	418,877	0	3	302,559	12	9	418,839	3	10

(B.) TAXATION.

The growth of administrative control in the remoter districts has borne fruit in an enhanced revenue from hut tax, the only direct impost levied in the Protectorate. The total sum collected amounted to £44,541, as against £37,655 in 1904-5, an increase of £6,886. This source of income varies sympathetically with the amount of European supervision which can be allotted to its collection, and even small increases in the administrative staff have a most beneficial effect upon it. These remarks apply in a particular degree to the Provinces of Kisumu and Kenya, in both of which the appointment of additional Collectors and Assistant Collectors would have most important results. In certain circumstances the tax is payable in labour or kind; but it is a satisfactory sign that except in a very few instances the natives now prefer to pay in specie. This indicates not only a growing acquaintance with and liking for civilised methods of barter, but an inclination to work for Europeans and others with a view to the acquisition of rupees.

(C.) Assets and Liabilities.

The surplus of assets over liabilities on March 31st, 1906, was £209,843 19*s.* 8*d.*, a state of affairs due to the unexpectedly large earnings of the Uganda Railway, and to the general increase in the Protectorate revenue.

Surplus of assets over liabilities		£209,843	19	8
From this must be deducted:—				
The anticipated surplus of £62,593 already taken into account in calculating the grant-in-aid for 1906-7	£62,593			
The balance of construction of the "Clement Hill"	16,954			
The new cargo boat for Lake Victoria	23,000			
The erection of harbour works at Kilindini	80,000			
The erection of piers and goods sheds at Jinja and Entebbe ...	5,334			
And additional Public Works ...	10,000			
		197,881	0	0
Leaving available for the reduction of the grant-in-aid, 1907-8, a net surplus of ...		£11,962	19	8

(D.) PUBLIC DEBT.

The Protectorate has no public debt.

(E.) CURRENCY.

In addition to the rupee currency referred to in the 1904-5 Report, currency notes of the value of 5, 10, 20, 50, 100, and 500 rupees have now been introduced, but were not brought into circulation during the financial year 1905-6. The contemplated subsidiary decimal coinage has also not yet come into use.

(F.) BANK.

The only bank doing business in the Protectorate is the National Bank of India, with branches at Mombasa and Nairobi. It has a paid-up capital of £600,000, and a reserve fund of £575,000.

(G.) MUNICIPALITIES.

There are two municipalities in the East Africa Protectorate, Nairobi and Kisumu. The treaty rights possessed by the subjects of foreign powers prevent the creation of municipalities in the Sultan of Zanzibar's dominions, the mainland portion of which consists of a ten-mile strip from the German East Africa frontier to Kipini, the Lamu Archipelago, and the town of Kismayu.

2. The comparative revenue and expenditure are shown in the accompanying table:—

Name of Municipality.	Revenue and Expenditure.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
		Rs.	Rs.	Rs.	Rs.	Rs.
Nairobi ...	Revenue ...	17,233	12,770	17.233	40,866 0 0	44,036 0 0*
	Expenditure	17,233	12,770	17,233	40,866 0 0	51,191 0 0
Kisumu† ...	Revenue ...	—	—	—	8,779 12 3	12,843 14 6
	Expenditure	—	—	—	8,418 4 3	15,727 3 6

* A balance in hand of Rs. 7,155 must be added to this.

† The Kisumu Municipality was only established in 1904.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) IMPORTS AND EXPORTS.

1. The annual value of the trade of the Protectorate for the last five years was:—

Year.	Imports.	Exports.	Total.
	£	£	£
1901–2	426,267	113,206	539,473
1902–3	443,032	148,060	591,092
1903–4	436,947	159,815	596,762
1904–5	518,143	234,664	752,807
1905–6	672,360	332,838	1,005,198

Imports.

2. The above figures do not include importations on behalf of the East Africa or Uganda Administrations, or for the construction and maintenance of the Uganda Railway, of specie, or of goods in transit. Including these figures, which are as follows:—

——	1901–2.	1902–3.	1903–4.	1904–5.	1905–6.
	£	£	£	£	£
Importation on behalf of East Africa Administration.	16,500	63,000	14,940	28,677	32,389
Importation on behalf of the Uganda Administration.	30,000	12,500	13,000	19,320	21,413
Importation for construction and maintenance of the Uganda Railway.	320,000	102,128	42,000	18,578	16,489
Importation of specie (Indian rupees).	155,000	80,000	79,000	100,000	100,000
Importation of goods in transit.	—*	—*	18,480	57,067	131,751

* Not known.

the total imports for the years in question amount to:—

Year.	Amount.
	£
1901–2	947,767
1902–3	700,660
1903–4	604,367
1904–5	741,785
1905–6	974,402

The increase of £154,217, as compared with the year 1904-5, and £235,413, as compared with the year 1903-4, is due to the rapid development and opening up of the country. Great stimulus has been given to the trade of the Protectorate by the numerous shooting parties and tourists who have visited East Africa, and by the white settlers who have taken up land during the last two years.

3. The principal countries from which merchandise has been imported, and the sterling value of the imports (exclusive of Government stores, specie, and goods in transit), are shown in the following table:—

—	1904–5.		1905–6.	
	£	£	£	£
United Kingdom		165,484		227,950
British Possessions :—

Portuguese East Africa ...	—		28	
Italian East Africa	2,568		5,150	
		201,276		244,765
Total	. . £	518,143		672,360

For the quantity and value of the imports during 1904-5 and 1905-6 *see* Appendix 1.

4. In passing in review the principal articles imported into the Protectorate in 1905-6, as compared with 1904-5, the following are those most deserving of notice:—

Agricultural implements have risen from £4,035 to £12,893. This increase is entirely due to the influx of settlers. In 1903-4 agricultural implements to the value of only £638 were imported, and before that date the return was nil.

The increase in the importation of building materials, wood and furniture, of iron, steel, brass, copper, earthen and glass wares, and of machinery all indicate progress and enterprise. The building materials, consisting chiefly of cement and galvanized iron, a large percentage of which come from the United Kingdom, have risen from £15,000 to £30,000. The timber brought into the country for building purposes likewise shows an appreciable increase—from £9,000 to £14,000. Deal and pitch-pine are brought from Norway in sailing vessels, and teak from Burmah. It is probable that in future years the importation of timber will decrease and possibly cease altogether, as there are large areas of forest land in the country, some of which have been leased to syndicates. At present it is cheaper to import than to work up our own supply. Furniture has increased from £8,000 to £11,000; iron and steel wares from £20,000 to £24,000; brass and copper wares from £5,500 to £13,000; and earthen and glass wares from £4,500 to £7,000. Machinery to the value of £4,400 was imported, as against £1,100 in 1904-5.

The increased demand for the export of produce and hides has caused the number of bags and sacks imported to be doubled, whilst 30 per cent. more drugs and chemical goods (chiefly naphthalin and preservatives for curing skins) were brought into the country than in the previous year.

Firearms and ammunition show a small increase of £1,000 (£12,000 as against £11,000). These figures are somewhat misleading, as the number of shooting parties that arrived in the Protectorate was considerably in excess of the preceding year; but an explanation can be found in the fact that several of the sportsmen who visited East Africa in 1905 used the rifles that had been previously imported and left for sale with local agents.

Coal, which is limited to £2,500, is imported principally for the Government steamship and for the launches and cranes. This amount shows an increase of £2,000 on last year, but a decrease of £9,000 on the year before. As pointed out in last year's report, the decrease in the importation of coal as compared with former years is due to the fact that the Navy no longer use Mombasa as a coaling station, owing to the inadequate supply of fresh water available.

The importations of provisions (£47,000), tobacco (£11,000), and wines (£6,000) are practically the same as in 1904; but there is a fall in beer (£3,000 as against £4,000) and spirits (£14,000 as against £16,000). This is probably caused by the supply in past years having been in excess of the requirements; and, with the exception of well-known and popular brands, it is often possible to purchase spirituous liquors at less than the cost price.

In the importation of animals the principal feature of the year was a shipment of 5,000 merino sheep from Australia by the East Africa Syndicate, an experiment which is fraught with great possibilities and the result of which is being watched with great interest.

Of the wares brought into the country for trading purposes cotton goods head the list. They have increased by 50 per cent. with an importation of £210,000 against £145,000 in the previous year. The United Kingdom and India have each contributed 25 per cent. of the total amount imported, America 18 per cent., and Holland 14 per cent.; but, as the printed cloth from Holland has mostly been manufactured in Lancashire and sent to Holland to be hand printed, the total contribution from the United Kingdom stands at about 39 per cent. Although American sheetings are slightly more expensive than Lancashire and Bombay makes, they are more durable, and consequently command a large sale.

Beads are still very popular with the natives as an article of adornment, and their value is maintained at the rate of £1,000 per month. This commodity emanates in equal proportions from Austria, Germany, and Italy. In 1904-5 Germany contributed one-half of the total amount imported.

Rice shows an increase of £5,000 (£47,000 as compared with £42,000 in 1904). This is, however, due to an increase in the price of the grain, and not to the extra amount imported. Rice of excellent quality is now being raised in considerable quantities on the shores of Lake Victoria; and when the rice-growing country on the banks of the Tana River and along the sea coast is properly taken in hand, it is probable that oversea importations will be unnecessary.

Exports.

1. The value of the exports in 1905-6 amounted to £332,838. This sum, which, as in preceding years, includes the export of produce from the East Africa and Uganda Protectorates, as well as goods in transit from German East Africa, Italian East

Africa, and the Congo Free State, shipped through Mombasa, shows an increase of £98,174 on 1904-5 and £173,023 on 1903-4.

The principal products exported were hides, rubber, ivory, mangrove poles and bark, chillies, beeswax, grains, cotton, coffee, fibre, copra, and potatoes.

The value of hides and skins exported has risen from £80,000 to £103,000. The trade in this commodity is almost entirely in the hands of Italian and American houses, who have agents in Uganda and German East Africa, as well as in the East Africa Protectorate.

Rubber has increased from £25,000 to £44,000. This is in a great measure due to the larger output from Uganda and German East Africa, the former having contributed £12,000 and the latter £13,000.

The exports of ivory have increased from £57,500 to £62,500. An analysis of the returns shows a slight decrease in the quantity obtained from the East Africa Protectorate, and a corresponding increase from Uganda. The amount shipped in transit from the Congo Free State has risen from £4,300 to £6,800. The export of the tusks of cow and immature bull elephants is prohibited.

The shipments of mangrove poles and bark have almost doubled in value (£9,400 as compared with £5,300 in 1904). The poles, which are locally known as "borities" or "Zanzibar rafters," are largely used for building purposes, and the bark, prized for its tanning qualities, fetches good prices in the home markets.

Chillies have risen from £3,000 to £15,000. The whole came from Uganda, where this industry has developed in a phenomenal degree.

More than five times the amount of beeswax was exported last year than in 1904-5. Three-quarters of the whole amount (£16,000) came from German East Africa, the remainder (£5,000) from the Ukamba Province.

The export of grains (in which ground-nuts are included) has risen from £23,000 to £37,000. This includes large increases in the production of ground-nuts, maize, millet, beans, and simsim.

The amount of cotton exported has increased from 25 tons to 80 tons, the value being £2,600 as against £600 in 1904. Considerable attention is now being paid to the cultivation of this product, which is likely to develop into one of our staple exports. The coast districts and the country near the lake are exceedingly fertile, and the quality of the cotton produced is particularly good.

The export of coffee has risen from £400 to £2,500. Comparatively little is as yet grown in the East Africa Protectorate, and that is consumed locally. The coffee for export comes from the German towns on Lake Victoria and from Kilima Njaro.

The development of the fibre-bearing land, of which large areas are to be found in various parts of the Protectorate, is now being seriously taken in hand; and it is expected that this product will soon be one of our most important exports. The amount shipped last year was valued at £2,500.

The shipments of copra to Europe (£9,400) and potatoes to South Africa (£3,700) are the same as last year.

2. The principal countries to which products have been exported and the sterling value of the exports are shown in the following tables:—

---

(1) E.A.P. stands for East Africa Protectorate; U.P. for Uganda Protectorate; G.E.A. for German East Africa; C.F.S. for Congo Free State; and I.E.A. Italian East Africa.

(2) These items were not shown separately before 1905-6.

3. For the quantities and value of articles exported during 1904-5 and 1905-6, see Appendix 2.

(B.) Mines, Manufactures, and Fisheries.

1. No important discoveries of minerals took place during the year 1905-6, but many parts of the Protectorate are still so little known that it is impossible to say what its resources in this direction may be. A geologist is at present engaged in examining the districts bordering on the Uganda Railway. His report on the results of his researches will be printed separately.

Limestone quarries exist near Kitui, Makindu, Kiambu, and on Lusinga Island in Lake Victoria; and good building stone is nearly everywhere obtainable. On Mombasa Island

and on the coast generally, coral rock is used for building purposes and also for producing lime. Negotiations are in progress for working the deposits of carbonate of soda at Lake Magadi. In many districts iron occurs abundantly, but it has not been worked except by natives, who use it for weapons and ornaments. Mica is met with, but not so far in pieces of sufficient size to attract serious attention. Graphite, opals, and garnets have been discovered in different parts of the Protectorate, and two concessions have recently been granted to prospect in what are supposed to be diamondiferous deposits in the Elgeyo valley.

2. Manufactures carried on by natives of the coast districts are the extraction of vegetable oils by presses, the production of copra and coir, the weaving of cotton cloth on hand looms, and the making of mats, baskets, and thatch.

Europeans and Indians have ice and soda factories at Mombasa and Nairobi. Soap is also manufactured at the former place.

There is an increasing production of furniture made from native woods, and steam-saw mills have been erected at Mombasa, Nairobi, and near Molo. There is also a small factory at Mombasa fitted with machinery for manipulating tropical products.

The most important enterprise of this nature is, however, the establishment at Voi of a decorticating plant for treating the sanseviera fibre. So far, the results have not been satisfactory owing to lack of proper machinery, but if finally successful, this industry is bound to be an important feature in the development of the country, as the fibre is indigenous and grows freely over a large area of otherwise useless jungle and scrub.

3. There is a good supply of excellent fish to be had in the coast towns and at Kisumu, and a small proportion of the population make their livelihood by fishing. A certain amount is sent from Mombasa to Nairobi by train, but apart from this the fisheries are for local consumption only, and there is no export. Concessions for bêche-de-mer and pearls have been given, but the former was a failure and the latter has not yet produced any appreciable results.

During 1905, a Trout Acclimatisation Society was started, and two attempts to introduce trout were made. The first, an experiment initiated by Captain E. S. Grogan, was singularly successful, and 12,000 fish have been hatched and placed in different rivers in the Highlands. The second, made by Mr. S. L. Hinde, Sub-Commissioner of the Kenya Province was less fortunate, but 200 fish of the Rainbow variety were hatched and are doing well.

The Society have now sent their expert to England to import fresh ova.

(C.) AGRICULTURAL INDUSTRIES AND FARMS.

Highlands.

1. European farmers in the neighbourhood of Nairobi are extending the acreage under cultivation, and are showing a disposition to abandon, to some extent, such crops as potatoes and beans for staples possessing a higher commercial value, such as coffee and fibres of different kinds. Ordinary cereals and foodstuffs, though useful for supplying a farmer's own wants and for feeding his native labourers, are never likely to bring in a very large return, as the expense of exporting to South Africa or elsewhere is so great as to swallow up almost all profit. Possibly, if in the future ocean freights could be reduced, a trade in foodstuffs might spring up.

Such cereals as barley, maize, millet, oats, and eleusine grow very well, and potatoes also give a good crop. Beans were not very successful during 1905-6, having been attacked by fungus disease, and wheat failed, except at Njoro, owing to rust. Possibly the introduction of a rust-resisting variety would produce good results.

2. China grass or ramie is receiving considerable attention, and shows signs of doing well. There should be a considerable future for this fibre if the demand for it at home proves large and consistent, and the difficulty of decorticating and degumming can be overcome.

3. An increased acreage of coffee is being brought under cultivation, and, where the trees are bearing, good crops have been secured.

4. Cotton has been tried but without success, owing to the high altitude.

Lowlands.

1. In the low-lying coast lands most tropical fruits and grains can be successfully grown. There are large cocoanut plantations and the cultivation of rice is being much extended. This cereal, which forms the staple food of the coast Swahilis and Arabs, is at present largely imported from India; but there is no doubt that the Protectorate might supply a much greater proportion of the demand. Maize, sweet potatoes, millet, ground-nuts, and sesame are also produced. This district is a fertile region where very little labour suffices to provide the native cultivator with a livelihood.

The existence of large areas of fibre-producing plants, and the experimental exploitation which is taking place in connection with them have been alluded to under manufactures.

The production of cotton has now been proved to be a success at Malindi, and a very considerable increase in the acreage cultivated may be confidently anticipated during the next few years. The Government farm produced a crop of four tons, selling for prices up to 8*d.* per lb., and a settler in the neighbourhood has realised even better prices. Egyptian seed of the Abbasi variety gives the best results; Sea Island, though giving a longer staple, is too delicate to thrive well.

2. The low-lying country round Lake Victoria is very fertile, and many tropical products flourish there. It has the advantage over the coast lands of being thickly populated by an industrious agricultural tribe, but it is distinctly unhealthy, and concessions for the development of this land would only answer in the case of syndicates or private people whose financial position would be such as to enable them to maintain a periodical change of staff.

3. A cotton, rubber, and fibre plantation was started on the banks of the Tsavo River during the year under review, but on the death of its manager it was closed.

Experimental Farms.[*]

Nairobi Farm.—The past season was generally favourable, but the leguminous crops suffered severely from disease, and the damage done by vermin to general crops made it impossible to ascertain the yield that the land should be capable of maintaining.

Various rubber plants were tried without any great success, and a number of fibre-yielding plants were laid down and are now available for distribution to settlers. Fruit trees did not answer well, and it seems doubtful whether they will repay the large amount of care required in their rearing in this part of the country. The most promising trees are those from India, presented by Sir Edward Buck, which come from an altitude of 4,000 feet.

The soil of the farm is, on the whole, poor, the rock coming frequently to the surface. Both for experimental crop and stock purposes the farm is not well situated, and its conditions are not characteristic of that part of the Nairobi and Kiambu districts occupied by the settlers. The farm has consequently not proved an unqualified success, and it is probable that the site will be changed to a more suitable locality, nearer the European settlements.

---

[*] Exhaustive reports on the farms are contained in the Appendices.

Mazeras Farm.—The most important experiments made were with cotton from Egyptian seed, rubber and fibre plants, and mountain rice, for the cultivation of which the coast districts are peculiarly well suited.

This farm should prove to be of considerable use, as the coast area is now attracting attention, and the development of this part of the Protectorate may soon be looked for.

Makindu Farm.—The Makindu Farm was closed on March 31st, 1906, as the locality is unhealthy in the wet season, and the farm was found not to answer the principal objects for which it was established, namely to attract Europeans and Indians to the plains situated about 200 miles from the coast.

When inspected in February there was a promising crop of cotton, but as there are no settlers in the immediate neighbourhood, and other districts are more promising, it was thought unnecessary to continue the experiment further. The natives of the neighbouring hills had confined their interest in the farm to raiding most of the live stock.

Malindi Farm.—The experiments in cotton have been successful and gratifying—400 lb. of Egyptian seed yielding 7,444 lb. of seed cotton of good fine long-staple quality.

The cotton industry is being taken up with success by white settlers in the neighbourhood of Malindi, the soil and conditions being peculiarly well suited for the cultivation of this product. The agent of the British Cotton Growing Association has spoken most hopefully of the results already obtained and of the prospects in the future.

New ground is being rapidly brought under cultivation, and during the next year there should be in this district alone some 1,200 acres planted with cotton.

Naivasha Farm.—This farm has served a very useful purpose in experimenting with the breeding of various kinds of stock, and in supplying the settlers with young stock.

The results obtained during the year, under the careful management of Mr. John K. Hill, are gratifying and encouraging. The imported Merino flock of sheep showed an increase of 133 per cent. in two years, the young rams being eagerly bought by settlers. The Lincoln and Welsh ewes were again reported to be a failure. Merino rams yielded an average of 8½ lb. of wool, and the ewes 7½ lb.; the Lincolns averaged 11 lb., and the Welsh, 4½ lb. Considerable interest was attached to the breeding by imported rams from native ewes, and the results obtained during the year from Welsh rams were most satisfactory; a batch of first-cross Welsh yearling wethers, sent to the Nairobi butcher, averaged 85 lb. each, and gave excellent meat.

For wool-producing sheep, insistence is made in the report on the necessity of first crossing native ewes with the Welsh rams, and then crossing the produce with the Merino. Some pure-bred Merino rams were sold to settlers at £5 per head, and 27 first-cross rams at prices varying from 10*s.* 6*d.* for Merinos, to £1 for Welsh.

Excepting the loss of one Hereford cow, the English cattle are reported to have done as well as they would have done at home. A further supply of imported bulls has been ordered, the two on the farm being insufficient for requirements. Thirty-one cows were served, and the number for service at the close of the year was 37.

The dairy proved a marked success. The milk, cream, and butter supplied were of the finest quality, and were in great demand, returning a handsome profit. It was regrettable that the dairy operations had to be closed last spring, but this step was necessary in order to avoid competing with private enterprise.

Kibos Farm.—The Indian settlement at Kibos, which may be regarded as a semi-Government institution, has made satisfactory progress. The cultivated acreage has increased from 300 to 500 acres, the most successful crops being sugar cane, from which crude sugar or jagri is largely manufactured; maize, which the cultivators grind in water-mills erected by themselves and sell at a good profit in Kisumu; gram and lentils, mostly sold in the grain; and cotton, which last is an excellent crop as far as labour is concerned, the picking season not clashing with the time when the natives are working on their own plantations. Experimental crops of long-eared Egyptian wheat and oats have also been grown with good results, and the stock has thriven.

Stock Farms.

Many settlers have started ranches in the Rift Valley and on the slopes of the Mau and Aberdare Ranges, now that the removal of the Masai into a reserve has left these excellent grazing grounds open to occupation. Cattle of good quality have been easily obtainable owing to the sale by Government of large herds captured from the Sotik and Nandi tribes, but the prices realised have been high.

2. The East Africa Syndicate imported 5,000 Australian sheep at the end of the year. It is as yet too early to say what the final results will be, as time is necessary for acclimatisation; but, so far, a certain measure of success has been obtained in this most important experiment.

3. As reported elsewhere cross-breeding has been very successful, and the stud animals imported by the Government have been in great demand amongst settlers.

4. The dairying industry continues to prosper, and has been largely extended since the close of the year under report. In addition to the older concerns near Nairobi, two large establishments have been started at Njoro, which supply Mombasa, and, to some extent, Zanzibar also.

5. Pigs are extensively kept, and there is a marked disposition on the part of farmers to go in for this branch of stock raising, which promises to be extremely profitable. The animals themselves do very well, and their keep costs next to nothing. There is a project on foot to start a bacon factory at Njoro.

6. European poultry is being imported in increasing quantities, and the result is satisfactory. The native fowl has a tough constitution, but as a table-bird is somewhat disappointing.

7. An outbreak of horse sickness caused a decrease in the number of horses and ponies, but their importation continues, the race meetings, which take place twice a year at Nairobi, being a great incentive to the introduction of animals of a good class.

8. Mules continue to be in great favour, and there is a constant demand for them.

9. The crossing of the native donkey with imported jacks is under consideration, and should produce a useful animal.

10. The prices of stock have not varied much since 1904-5. The list is, however, reproduced for reference:—

Oxen (untrained), £1 to £4.
„ (trained), £3 to £6.
Cows, £6 to £12.
Horses, £25 to £50.
Donkeys (male), £3 to £5.
„ (female), £6 to £8.
„ (Muscat), £25.
Sheep, 4*s.* to 8*s.*
Goats, 4*s.* to 8*s.*
Pigs, £1 to £1 10*s.*
Mules, £20 to £40.

Forests.

1. The coast forests have been but little worked during the year with the exception of the mangrove areas, which have yielded a considerable amount of bark, the timber being used

for firewood and for building purposes. The concessions at Arabuko and Sekoki have been practically untouched. The collection of rubber is carried on actively, and it is probable that rubber plantations will succeed, but very little has yet been done in this direction.

2. The Government experimental teak plantations have done very well, particularly at Mazeras, where the trees are now 18 feet high and 16 inches in circumference.

3. A good deal of tree-planting has also been done by various settlers in the different districts, gums and wattles being the favourite selection.

4. In the Highlands, the most valuable trees are the Podocarpus and the Croton Elliottianus, the former being largely used for building purposes, and the latter for fencing, posts, &c.

5. The Uganda Railway consumes a very large amount of wood as fuel, which enables it to be worked much more economically than would otherwise be the case.

6. The actual cash revenue of the Forest Department amounted to £706. This is exclusive of rents and royalties on forest concessions. Besides this, forest produce of an estimated value of £2,580 was furnished free to the railway and other Government Departments.

Diseases of Plants and Animals.

1. The most prevalent plant diseases are rust, which attacks wheat, and fungus, which almost destroyed the bean crop and did damage amongst potatoes. The scale insect, causing black blight, appeared in the coffee plantations near Nairobi, but was immediately stamped out by means of resin compounds. A leaf disease made its appearance in the coffee plantation belonging to the Roman Catholic Mission at Bura in the Teita Hills, and the trees had to be destroyed.

2. Of cattle diseases, pleuro-pneumonia and red-water, with its more serious type, coast-fever, caused most anxiety. A more detailed account of these, and the measures taken to combat them, may be found in the extract of the report of the Veterinary Department (Appendix VIII.).

3. Sheep have suffered from the nostril-fly and from intestinal worms; particularly in the neighbourhood of Nairobi.

4. There was a severe outbreak of horse-sickness, causing the death of over 80 animals.

(D.) LAND GRANTS, VALUE OF LAND, AND SQUATTING.

During the year 1905, land grants, amounting to 549,828 acres, were made, as against 197,256 acres in 1904. These grants were distributed as follows:—

District.	Acres.	——
Seyidie	64,000	Leasehold.
Tanaland	32,000	"
Ukamba	30,671	"
	and 7,311	Freehold.
Naivasha	403,932	Leasehold.
	and 3,194	Freehold.
Kenya	8,720	Leasehold.

This total includes the large grant of 320,000 acres to the East Africa Syndicate, and two areas of 64,000 acres, one leased to Messrs. Lingham and Grogan for timber cutting, and the other to the Afro-American Trading Company for the collection of fibre.

The price of freehold averaged 1*s.* 4*d.* an acre for grazing, and 3*s.* 9*d.* per acre for agricultural land, but in certain localities, *e.g.*, the neighbourhood of Nairobi, the value is increasing rapidly.

2. There is practically no "squatting," properly so-called, but many settlers are in temporary occupation of their land pending the completion of survey and deeds.

(E.) SURVEY.

This Department, which during the year 1905-6 was still combined with the Land Office, though shortly to be separated from it, made satisfactory progress, a total area of 745,533 acres being surveyed, as against 618,542 acres in 1904-5. There is still, however, much to be done in order to cope with the applications for land which continue to pour in, not to speak of the trigonometrical survey of the Protectorate. A comprehensive scheme has since been sanctioned by which the Survey Department has been separated from the Land Office and divided into two sections, the trigonometrical and cadastral branches, with a large increase of staff.

The expenditure on land and survey in 1905-6 was £9,935, as against £4,183 12*s.* 9*d.* in the preceding year. The fees taken amounted to £9,947 5*s.* 10*d.* This, however, includes a balance on deposit from the year 1904-5 amounting to £4,330, which was transferred to revenue on April 1st, 1905.

(F.) LAKE SURVEY.

The survey of Lake Victoria is now practically complete. In view of the considerable expansion of lacustrine trade in the course of the year, the charts, which are in course of preparation, will prove most useful, and will render almost impossible such accidents as the grounding of the "Sybil," near Bukoba.

(G.) SHIPPING.

1. Mombasa and Kilindini, two harbours lying respectively on the north and south shores of Mombasa Island, constitute the principal port of the Protectorate, Kilindini being much larger and providing a more convenient anchorage, while Mombasa harbour is close to the business quarters and merchants' offices, but is somewhat narrow, which renders it difficult for vessels to swing. The former is accordingly used by the larger ocean-going steamers, and the latter by those of smaller tonnage and by dhows.

Since the conclusion of the year under report, large additions to the Kilindini harbour works have been sanctioned.

The lines which visit the Protectorate are the Deutsche Ost-Afrika Line, with a fortnightly service (main line steamers calling at Kilindini, intermediate at Mombasa), and the Messageries Maritimes Company with a monthly service calling at Kilindini. These sailings are in both directions, to Europe and to South Africa.

British shipping is represented by the British India Steam Navigation Company and the Laing Steamship Company. The former runs a monthly line of chartered steamers outwards only from England. There is also a fixed monthly service in both directions between Aden and Mombasa, with transhipment at the former place, and somewhat irregular sailings between Bombay and Mombasa. The Deutsche Ost-Afrika Line likewise maintains a service between the two last ports and Zanzibar.

The Deutsche Ost-Afrika Line and British India steamers occasionally call at Lamu and, sometimes, but rarely, at Kismayu. These ports, as well as Wasin, Kilifi, Malindi, and Kipini, are regularly served by the Protectorate steamship "Juba," and occasionally by the steamers of the Zanzibar Government.

The accompanying table shows the gross tonnage, quantity of cargo, and number of passengers carried by three of the lines.

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
				Passengers.			Passengers.	
			Cargo.	Europeans.	Natives.	Cargo.	Europeans.	Natives.
			Tons.			Tons.		
British India, Aden	19	53,627	1,970	27	327	605	37	648
British India, Bombay	21	66,235	4,842	47	1,501	375	13	620
British India (Chartered), Europe	8	28,618	9,835	—	—	53	8	88
Deutsche Ost-Afrika Line, Europe	53	227,864	8,930	726	369	13,736	707	838
Deutsche Ost-Afrika Line, Bombay	56	134,780	7,575	496	3,616	1,518	116	3,853
Messageries Maritimes, Europe ..	24	93,920	399	198	340	266	150	258
Total	205	715,268	35,206	1,861	6,454	18,291	1,427	6,724

2. There has been a considerable increase in the number and tonnage of both steamers and sailing vessels, as the following table will show:—

— —	1904-5.		1905-6.		Increase.	
	No.	Tons.	No.	Tons.	No.	Tons.
Entered:—						
Sailing vessels	2,222	52,670	2,870	75,195	648	22,525
Steamers	421	899,367	426	961,410	5	62,043
Cleared:—						
Sailing vessels	2,254	53,702	2,763	70,142	509	16,440
Steamers	422	904,428	425	957,480	3	53,052
Total	5,319	1,910,167	6,484	2,064,227	1,165	154,060*

3. The total revenue collected in the Port Office of the Protectorate amounted to Rs. 36,294 6¾a., as compared with Rs. 33,908 13¾a. of the preceding year. In the following table the revenue, as collected under the different headings, is shown for the last three years:—

—	1903–4.			1904–5.			1905–6.		
	Mombasa.	Coast Ports.	Total.	Mombasa.	Coast Ports.	Total.	Mombasa.	Coast Ports.	Total.

III.—LEGISLATION.

The Ordinances enacted between April 1st, 1905, and March 31st, 1906, included the following:—

An Ordinance providing for the formation of a Volunteer Reserve.

An Ordinance prohibiting the possession of and dealing in cow ivory and the tusks of immature bull elephants.

An Ordinance providing for the transference of decrees from Uganda Courts to East African Courts.

An Ordinance limiting the liability of the Uganda Railway in respect of carriage on Lake Victoria.

An Ordinance restricting the importation of coffee, with a view to preventing coffee leaf disease.

An Ordinance restricting the immigration of natives from plague-infected ports.

An Ordinance restricting sentences of flogging by Native or Special Courts to 25 lashes.

An Ordinance repealing previous legislation respecting the introduction of animals into and movements of animals within the Protectorate, and giving the Government certain powers with a view to the prevention of disease.

The following Orders in Council were also promulgated:—

"The East Africa and Uganda Currency Order in Council, 1905."

An Order in Council applying the Extradition Convention of 29th June, 1904, as between the United Kingdom and Switzerland.

The Eastern African Protectorates (Court of Appeal) Order in Council, 1906.

IV.—ECCLESIASTICAL STATISTICS AND EDUCATION.

The natives of the interior can scarcely be said to have any religious beliefs properly so called. Amongst many of them a vague and primitive pantheism or nature worship prevails. The inhabitants of the coast towns mostly profess Mohammedanism, but except amongst the upper class Arabs there is but little knowledge of the teaching and tenets of their religion.

Christian missionary enterprise has never found in East Africa so promising a field as that furnished by the receptive and intelligent Baganda of the sister Protectorate, but there are nevertheless eleven different Societies at work, and some idea of the scope of their labours may be gathered from the following table :—

Name.	Denomination.	No. of Churches and Chapels.	Average Attendance.	Seating Accommodation.	No. of Schools.	No. of Scholars.	Nationality.
Church Missionary Society	Anglican	23	2,000	3,700	10	1,300	British.
*United Methodists Free Church Mission.	Methodist	12	800	1,630	11	408	”
*Church of Scotland	Presbyterian	1		No statistics.			”
*Mission du St. Esprit	Roman Catholic.	12	1,500	2,000	No statistics available		French and Italian.
*Algerian Mission	”	Two stations used as Rest Houses for Missionaries *en route* for Uganda, Congo, and German East Africa.					French.
Evangelical Lutheran Mission ...	Lutheran	2	260	260	4	166	German.
Neukirchen Mission	”	3	240	—	3	241	”
African Inland Mission	Undenominational.	4	90	180	4	195	American.
Friends Industrial Mission	Quaker	2	90	400	1	17	
American Evangelical Mission ...	Protestant	—	—	—	2	62	”
*Swedish Mission	”	1	—	—	—	—	Swedish.

* In some cases these figures are for 1904–5, no statistics having been furnished for the year under review.

2. Most of the pupils in the schools mentioned in the foregoing table receive elementary instruction in reading, writing, and scriptural subjects, and some are being trained for the ministry of their respective missions. Others receive instruction in handicrafts, particularly in the schools of the Mission du Saint Esprit.

The Church Missionary Society and the Africa Inland Mission have also made a beginning with industrial schools, and there is no doubt that this form of instruction is a most valuable discipline for the African native, whose intelligence is often insufficiently developed to appreciate fully the spiritual side of Christianity.

3. At Mombasa the Church Missionary Society has established the Buxton High School, which is attended by Indian and Eurasian children, as well as by natives. Here, and in the other coast towns, there are Mohammedan schools where Arab and Swahili children are taught to read and write the Arabic character and recite from the Koran.

4. At Nairobi there are two schools for European children, one, a boarding school, kept by the Mission du Saint Esprit, and the other by the Uganda Railway. The latter has an average daily attendance of 20 boys and 25 girls, who pay Rs. 1,124 annually in fees, while the Government provides the balance, Rs. 5,028.

With the growth of the white population the educational question is becoming acute, and various schemes are under consideration for providing the requisite facilities. The distances which separate the various farms and the absence of means of communication are factors which increase the difficulty of the problem.

5. In connection with the Railway European School is one for the children of Indian employees, which is also taken advantage of by the Indian community generally. Its scholars number 52, and contribute Rs. 736 in fees, the Government finding a further sum of Rs. 1,195.

6. There are no Universities or centres for the dissemination of advanced education, but a certain amount of anthropological and philological investigation is carried on by Government officials and missionaries. During 1905 a comprehensive treatise on the language and customs of the Masai, by Mr. A. C. Hollis, Secretary to the Administration, was published, and a grammar of the Kikuyu language, by Mr. A. W. McGregor, of the Church Missionary Society, appeared.

V.—GOVERNMENT INSTITUTIONS.

(A.) HOSPITALS.

1. There are European Government Hospitals at Mombasa and Nairobi. At the former 30 patients were admitted, 16 were cured, 12 relieved, and two died, or 6·6 per cent; at the latter the admissions numbered 33, 19 patients were discharged as cured, 10 as relieved, and there were four deaths, or 12 per cent.

2. At the Gaol Hospital, Mombasa, there were 133 admissions and 3 deaths, or 2·25 per cent., and at the Native Hospitals—Kilindini, 556 admissions and 45 deaths, or 8 per cent.; Nairobi, 358 admissions and 57 deaths, or 16 per cent.; and Kisumu, 316 admissions and 30 deaths, or 9·5 per cent.

(B.) ASYLUMS.

1. There are at present no lunatic asylums in the Protectorate, but one will be built shortly. Native lunatics, if violent, are confined in the gaol, a most inconvenient arrangement; Europeans are placed under medical supervision and sent to Europe by the first opportunity.

2. During the course of the year a small leper asylum was built on an isolated spot on English Point, near Mombasa.

Hitherto the leper asylum at Mzizima, the property of the Church Missionary Society, had been used, or lepers were sent to Zanzibar whenever the Government of that Sultanate consented to receive them.

VI.—JUDICIAL STATISTICS.

(A.) POLICE.

The constitution of the force on March 31st, 1906, was as follows:—

1	Inspector-General.
1	Deputy Inspector-General.
7	Assistant District Superintendents.
9	Inspectors.
6	Sergeant-Instructors.
5	Native Inspectors.
9	Deputy Native Inspectors.
10	Clerks.
1,907	Rank and file.

The distribution of the force amongst the provinces was as follows:—

Seyidie	369
Ukamba	476
Kenya	192
Naivasha	271
Kisumu	471
Tanaland	67
Jubaland	85

There are 25 stations at which police are posted, most of them unprovided with troops, and their duties are often semi-military.

The cost of the force, which was reorganised during 1905-6 under a new Inspector-General and Deputy Inspector-General, was £37,835 17*s.* 7*d.* as against £30,156 8*s.* 6*d.* in the previous year.

(B.) CRIMINAL STATISTICS.

1. The number of offences reported to the Police and the Magistrates during 1905-6 was 4,015, made up as follows:—

Offences against the person, 668; prædial larceny, 46; offences against property (other than prædial larceny), 1,178; other offences (*e.g.*, offences against by-laws), 2,123.

2. The following table shows the number of offences, apprehensions, convictions, and acquittals for the last five years:—

—	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
The number of persons apprehended by the police or summoned before the magistrates.	3,195	2,892	3,315	3,472	4,015
The number of summary convictions—					
1. For offences against the person.	372	250	567	431	450
2. For prædial larceny	—	1	48	34	40
3. For offences against property, other than prædial larceny.	818	559	262	761	889
4. For other offences...	797	860	1,821	1,585	1,853

—	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
The number of convictions in the Superior Courts—					
1. For offences against the person.	14	7	13	1	6
2. For prædial larceny	—	—	—	—	—
3. For offences against property other than prædial larceny.	1	1	—	—	8
4. For other offences ...	1	1	10	6	3
The number of persons acquitted—					
1. In the Inferior Courts.	1,181	1,208	594	647	763
2. In the Superior Courts.	35	5	5	6	3

3. In 1905-6 20 cases were tried by the Court Sessions. Of these 17 resulted in convictions, 3 in acquittals.

4. The following table shows the comparative number of summary convictions, and the kind of punishment inflicted for the years 1904-5 and 1905-6:—

Punishments.	Total Number of Offences.	Assaults and other Offences against the Person.	Malicious Injuries to Property.	Prædial Larceny.	Offences against Property other than Malicious Injuries to Property or Prædial Larceny.	Offences against Revenue Acts, Highway Acts, Health Acts, and other Acts relating to the Social Economy of the Colony.	Offences against Masters and Servants Acts, including Acts relating to Indentured Coolies.	Other Offences.
Fine—								
1904-5	1,413	169	7	11	98	609	5	514
1905-6	1,626	183	19	4	69	1,254	—	97
Imprisonment in lieu of Fine or Surety—								
1904-5	96	31	—	4	34	7	4	16
1905-6	159	40	4	1	74	8	—	32
Peremptory Imprisonment—								
1904-5	748	139	—	13	382	111	12	91
1905-6	767	128	1	13	408	99	14	99
Whipping—								
1904-5	432	81	3	5	320	43	—	70
1905-6	507	80	3	15	293	64	20	32
Bound over with or without Sureties, or other trivial punishment—								
1904-5	136	19	—	1	11	41	—	64
1905-6	173	19	2	2	17	83	3	47

5. While the amount of criminal work has increased considerably, as the foregoing tables show, the number of civil cases is also greater, 7,951 against 7,089. The increase is

mostly in the Provinces of Tanaland and Ukamba, the latter being responsible for the more important cases.

6. The Special Courts Ordinance has worked successfully, 70 per cent. of the decisions given by the Magistrates remaining unvaried by the High Court. It is, however, thought advisable, with a view to increasing the efficiency of these tribunals, that Assistant Collectors should be called upon to pass an examination in law in order to qualify for promotion.

7. Since the close of the year legislation has been introduced to regulate the procedure in trials of Europeans and Americans.

(C.) PRISONS.

1. There are 28 prisons in the Protectorate, but many of those at the smaller stations may be more properly described as lock-ups, and long-sentence criminals are not confined in them. The principal gaols are at Mombasa, Nairobi, and Kisumu. European prisoners are usually confined in the former.

Throughout the Protectorate the gaols are primitive and lacking in sufficient and proper accommodation. The matter has attracted attention and will be remedied as soon as possible.

The total number of convicted prisoners committed to the gaols in 1905-6 was 2,162, the daily average being 480·9. Of the 14 who escaped 5 were recaptured. The daily average of sick was 29·5, and 22 died in prison.

2. Political prisoners and undesirables are generally interned at Kismayu, from which owing to its isolated position escape is very difficult.

3. Prisoners are employed on wood-cutting and sawing, road-making and other work for the Public Works and Conservancy Departments. In some gaols they also make mats, "chicks," chairs, &c., and at Mombasa there is a tailoring department which makes uniforms for trolly and boat boys, process-servers, and messengers, clothing for prisoners in all the Protectorate prisons, and flags.

4. European and other vagrants are confined in gaol until the value of their labour is sufficient to pay the cost of passage elsewhere. In theory the Protectorate does not lose by this arrangement, but in practice the work done by the vagrant is not worth the price paid. In deserving cases assistance is also rendered to vagrants from a fund subscribed locally and called "The Distressed British Subjects' Fund."

5. The Protectorate prisons cost £5,898 13*s.* 0*d.* in 1905-6 as against £5,648 5*s.* 9*d.* in the preceding year.

VII.—VITAL STATISTICS.

(A.) POPULATION.

It is now generally considered that the estimate of the population of the Protectorate given in the 1904-5 report was somewhat low, and that the real figure is nearer four than two millions. Parts of the Kenya Province have been found to be very thickly populated.

It is, however, practically impossible to compute the native population, as much of the Protectorate is unexplored, and even in the districts which are being administered it is very difficult to form even an approximate idea of the number of inhabitants. The hut tax collections are to some extent a guide, but any estimate founded on them can be but a rough one.

2. The white population was returned at 1,813 on March 31st, 1906, of whom 264 are Government officials, including the officers of the Uganda Railway.

(B.) BIRTH AND DEATH RATES.

Records of births and deaths are only kept in the case of Europeans, and a few Christian natives and Indians in the larger towns. As statistics drawn from the two last-mentioned would be misleading, it will be sufficient to give the European tables:—

Province.	Births.	Deaths.
Kisumu	4	1
Naivasha...	1	2
Ukamba	24	14
Kenya	1	1
Seyidie	8	7
Tanaland	—	1
Jubaland	—	—
Total	38	26

The rate per 1,000 was 20·95 for births and 14·34 for deaths.

Rules making compulsory the registration of all deaths occurring in townships, whether of Europeans, Indians, or natives, and of all deaths throughout the Protectorate of Europeans, Americans, and Indians were published on February 1st, 1906, and the statistics available will be much more comprehensive in future.

(C.) SLAVERY.

That the status of domestic slavery should be recognized in the ten-mile coast strip is repugnant to British ideas, but no evil results are found to occur, and the institution itself is rapidly disappearing. Owing to the operation of Sultan Ali's decree by which the descendants of all slaves born after August, 1890, are free, no additions to the number can be made, and the slightest attempt at cruelty results in the liberation of the slave.

The so-called slaves may be divided into two classes, those who live in their masters' houses and are practically treated as members of the family, and those who work in the fields and receive land for themselves which they can cultivate in their spare time.

The number freed during 1905-6 was 100, 14 in Seyidie and 86 in Tanaland. There have been no prosecutions for cruelty during the year, and no slave has been freed on that account. Any slave wishing to obtain his freedom can do so by crossing the boundary which separates the mainland dominions of the Sultan of Zanzibar from the rest of the Protectorate, but it is a significant fact that very few care to exchange the comfort of their masters' homes for a precarious existence up country.

(D.) CLIMATE AND PUBLIC HEALTH.

The division of the Protectorate into three zones for the purposes of climatic description is a convenient one, though it must be understood that even within these sub-divisions there are considerable ranges in temperature and rainfall, which have a strong influence on the healthiness or unhealthiness of the districts concerned.

1. *The Coast.*

The region described as the coast may be held to include a strip about 100 miles broad extending from the Anglo-German frontier to the Juba River. The rainfall is greatest in the more southern districts and least in Jubaland. As a rule the temperature, as indicated by the thermometer, is not excessive, but owing to the moisture of the atmosphere, the heat is more trying to Europeans than would otherwise be expected. In the coast towns, however, during the monsoons a cool breeze blows constantly, and this is particularly the case between May and November, when the south-west monsoon is prevalent. The hottest season is in January, February, and March, but the nights are generally fairly cool, except during the lull between the two monsoons, when they are apt to be very oppressive. Most rain falls during April, May, June, and November. but the seasons are somewhat variable, and cannot be predicted with accuracy. The climate of the coast stations may be summed up as on the whole not unhealthy for Europeans, but after a long residence it is apt to be enervating, and a change is desirable from time to time. Malaria and other tropical illnesses are not frequent. In Jubaland the climate is hot and dry and the sun very powerful but the nights are cool. It is not an unhealthy region except for nervous diseases, which have been responsible for the invaliding of several officers.

About ten or fifteen miles inland the scrub country begins, and the heat, untempered by the sea-breezes, is less bearable. The stations situated in this belt, such as Rabai and Voi, do not enjoy a good reputation for health, malaria occurring with some frequency. The same may be said of the Valley of the Tana, which is at certain seasons rendered almost intolerable by the presence of swarms of mosquitos.

2. *The Highlands.*

The greater part of the interior of the East Africa Protectorate consists of ridges and plateaux ranging from 4,000 to 9,000 feet in height, one peak (Mount Kenya) reaching an altitude of 18,000 feet. Though naturally the whole of this upland country is not equally salubrious, it may safely be said that it is, generally speaking, exceedingly healthy. The sun, as might reasonably be expected so near to the Equator, is powerful during the mid-day hours, but the air is brisk and invigorating, the nights are cool, and Europeans are able to exert themselves to an extent which would be impossible at the coast. This part of the country is regarded as well suited for colonization, and a large number of settlers have made their homes in it. A striking proof of the excellence of the climate is afforded by the healthy appearance of the children who have been born and brought up in this region. In fact, the only drawbacks appear to be a somewhat unduly great daily range of temperature and a prevalence of strong winds, which, in certain districts, are trying. Some stations, such as Kitui and Baringo, do not come up to the general standard, but they really lie on the outskirts of the Highland region.

3. *The District round Lake Victoria.*

The shores of Lake Victoria are comparatively low-lying, and the heat consequently approaches and even exceeds that of the coast. Violent storms are frequent, and the climate is probably less agreeable than in any other part of the Protectorate. Malaria is common, and is very apt, if not carefully treated, to lead to attacks of black-water fever. Mumias and Kisumu have distinctly bad records in this respect, though an improvement in the accommodation and sanitary conditions of the latter place has rendered it less unhealthy.

4. *Public Health.*

There have been no serious outbreaks of epidemic disease during the year 1905, and normal conditions have prevailed. Plague occurred at Nairobi, at Kisumu, and at Voi. There was also an outbreak in Zanzibar in the latter half of 1905, which lasted several months, but thanks to the preventive measures taken, no case was reported in our seaport towns. Sleeping sickness appears to be abating in Kavirondo, the only district which has been attacked.

With the development of the Protectorate, the erection of better houses, and the gradual amelioration of the conditions of life there is a progressive improvement in the general health of European officials. There have, however, been five deaths and three cases of invaliding during the year. Three of the former and one of the latter were due to black-water fever; one death was from pneumonia and one from drowning.

The total mortality recorded amongst the white population, official and non-official, was twenty-six.

The most prevalent diseases were those of the digestive system and malaria, with a smaller but still considerable number of cases of affections of the respiratory organs. The same proportionate prevalence existed amongst Africans and Asiatic patients, but in their case skin and eye diseases, cellulitis, rheumatism, venereal and parasitic complaints must be added to the list of common ailments. These remarks apply only to such natives as are treated in the various hospitals and dispensaries. This class of patient constitutes, as may be supposed, but a small proportion of the total population. In the out-districts the mortality is often high, especially amongst infants.

5. *Climate.*

It has already been shown that both temperature and rainfall vary very considerably in the different districts of the Protectorate, and the accompanying tables will illustrate this fact more clearly.

Temperature.

(E.) SANITATION.

General Sanitary Condition of the Protectorate and of the Chief Towns.

1. The general sanitary condition of the Protectorate, though necessarily somewhat primitive, is, on the whole, as good as can be expected in a tropical country which is as yet at an early stage of development.

2. The two principal coast towns, Mombasa and Lamu, are situated in the Sultan of Zanzibar's dominions, and it is therefore impossible to create municipalities, owing to the possession of treaty rights by the subjects of foreign Powers.

3. The sanitation of Mombasa is carried on by a Conservancy Department, and is quite satisfactory so far as the European quarter is concerned. Several large cement-lined drains have been put down to carry off the surface-water, which accumulates with extraordinary rapidity in the heavy rains.

The water-supply for Europeans is derived from tanks attached to their bungalows. The quality is good, but in case of an insufficient rainfall there might be a shortage. The natives drink well-water, which is brackish, and, owing to the porous nature of the coral rock, liable to contamination. There is no proper supply for ships visiting the harbour, and there is no doubt that some scheme for bringing water to the town will have to be carried through before it can take its natural place as a port of call.

4. At Lamu, Malindi, Kismayu and the other coast towns the water supply is also derived from tanks and wells, the latter being slightly brackish.

As regards sanitation in the European quarters of these towns, the bucket system is employed; the natives either use cess-pits or no system at all.

5. At Nairobi there is a municipal council and a town clerk with a conservancy staff. The town is well scavenged, and night-soil is buried in trenches at some distance from the town. The purchase of a destructor is contemplated. The surface drainage is not very satisfactory owing to the position of the town in a kind of cup, from which there is very little outfall, and to the nature of the soil. The question of the drainage of Nairobi is receiving the serious attention of the Government. A sanitary engineer has visited the country at the request of the Government, and is about to furnish a report on the subject.

The water supply is sufficient for present needs, and is brought in a 2½-inch main from the Kikuyu Hills, a distance of about 9 miles. The town is, however, increasing rapidly, and a 4-inch pipe will be put in shortly.

6. There is a municipality at Kisumu. The same system of conservancy as at Nairobi has been adopted. A great deal has been done in the last year to improve the general health of the town by cutting down and cleaning away the bush, by filling up borrow-pits, and by the erection of an embankment along the lake shore. These measures have tended to reduce the number of mosquitos. The water supply from the lake is bad, and a system of roof collection and tank storage is coming into vogue.

VIII.—POST AND TELEGRAPHS.

Comparative Statement of Revenue and Expenditure.

—	1903–4.	1904–5.	1905–6.
	£ s. d.	£ s. d.	£ s. d.
Revenue	10,756 2 11	12,529 17 1½	15,267 7 3¾
Expenditure	16,749 14 4	18,517 6 3	21,657 10 8
Excess Expenditure...	5,993 11 5	5,987 9 1½	6,390 3 4¼

These figures include also the revenue and expenditure of the Uganda posts and telegraphs, the two services being amalgamated. The expenditure includes sums of £1,510 9*s.* 8¾*d.* and £3,302 0*s.* 10*d.* for telegraph construction in East Africa and Uganda, respectively, and of £746 10*s.* 10½*d.* for postal buildings in the latter Protectorate. (The East Africa buildings are included in the general vote for Public Works.) These amounts may fairly be considered capital expenditure, and if they are deducted, there is a net deficit on the working and maintenance of the joint departments of £831 1*s.* 11*d.* only. All the sources of revenue have expanded in a satisfactory manner, and it would not, perhaps, be too rash to anticipate that in a few years' time these services will be self-supporting.

The following table shows the general growth of postal business:—

—	Letters.	Postcards.	Newspapers.	Book Packets.	Parcels.	Telegrams.
1904-5.. ..	787,260	41,602	274,201	51,441	9,255	42,031
1905-6.. ..	890,070	52,142	236,706	78,735	12,803	71,688
	+102,810	+10,540	- 37,495	+27,294	+ 3,548	+29,657

Every item except newspapers has increased largely, and the total number of transactions is 1,342,144 in 1905-6, as against 1,205,790 in 1904-5, a difference of 136,354, or 11¼ per cent.

Mail Subsidy.

A subsidy of £9,000, of which the Protectorates contribute £45 a year, is paid to the British India Steam Navigation Company for the conveyance of mails to and from Aden. The service is, however, of no great value, as it frequently clashes with the faster vessels of the Deutsche Ost-Afrika Company.

Money Orders.

This department of postal work is also developing as the following figures will show:—

Year.	Money Orders Issued.		Paid.		Total Increase.
	No.	Value.	No.	Value.	
1904-5	12,909	£ s. d. 61,276 18 9	1,603	£ s. d. 6,742 6 2	Number .. 9,240
1905-6	17,694	94,872 1 9	6,048	28,600 1 7	£ s. d. Value .. 55,452 18 4

This growth is almost entirely due to internal business, which has increased enormously, while transactions with the United Kingdom and India remain much the same as before. The number of post offices has increased from 28 to 32, of money order offices from 13 to 18, and of telegraph offices from 10 to 17.

Telegraphs.

The total mileage open for traffic in the East Africa Protectorate is as follows:—

District.	Miles.
Mombasa to Lamu, single wire	200
Mombasa to Port Florence, three wires	1,752
Port Florence to frontier of Uganda Protectorate ...	96
Londiani to Ravine	18
*Nairobi to Kiambu	10
*Njoro to Lord Delamere's estate	13
Naivasha to Morandat	8
Mombasa to Kilindini...	2
Mombasa Telephone Lines	8
Nairobi Telephone Lines	25
Port Florence Telephone Lines	5
*Lumbwa to Kericho	18½
*Kibigori to Nandi	11½
Total	2,167

* Constructed in 1905-6.

IX.—MILITARY FORCE AND EXPENDITURE.

The Forces of the Protectorate consist of 6 companies of the 1st Battalion King's African Rifles, recruited mainly from the Yao and Atonga tribes in British Central Africa, and the 3rd Battalion, composed partly of Sudanese and partly of various East African tribes. The strength of the former, which is a reserve battalion for service in any of the four African Protectorates, is 20 officers and 600 men, and of the latter, 24 officers and 1,000 men, approximately. The headquarters of both battalions are at Nairobi, but the 1st has also a depôt at Zomba for recruiting. The whole of the King's African Rifles, including the British Central Africa, Uganda, and Somaliland Battalions, are under an Inspector-General, who spends six months in each year in tours of inspection, and six months at the Colonial Office.

There is also a Volunteer Reserve which receives a capitation grant from the Government for each efficient member. In the year under review it numbered:—

Mombasa Section	19
Nairobi Infantry Section	81
Nairobi Railway Section	40
Nairobi Mounted Section	20

The expenditure incurred during 1905-6 in connection with military defence is shown in the following table:—

—	Amount. £	s.	d.	Total. £	s.	d.
Inspector-General	—			1,118	18	4
3rd Battalion—

Total	—			104,980	15	7

X.—GENERAL OBSERVATIONS.

(A.) IMPORTANT EVENTS.

1. The Protectorate sustained a very severe loss through the lamented death of its Commissioner, Sir Donald Stewart, K.C.M.G., which occurred at Nairobi on October 1st from exposure while on tour.

2. Lieutenant-Colonel James Hayes Sadler, C.B., was appointed Commissioner and Commander-in-Chief in succession to Sir Donald Stewart, and assumed his duties on December 12th.

3. The Sotik, a tribe occupying a district to the south-west of the Lumbwa, proved somewhat refractory, and a small column had to be sent into their country. They were, however, quickly reduced to submission without any serious fighting, and are now quite peaceably disposed to the Government.

4. Another expedition, of a more serious character, had to be undertaken against the Nandi in the latter part of the year. This warlike tribe had on several previous occasions defied the Government, and though worsted in the military operations which followed, had never been thoroughly subdued. A

series of thefts and murders along the Uganda Railway rendered it necessary that they should be taught a severe lesson. A strong force of the King's African Rifles, accompanied by native levies from friendly tribes, accordingly entered the Nandi country, and by a number of "drives," accompanied in several cases by sharp encounters, succeeded in capturing a large amount of stock and inflicting severe losses on the enemy. The principal chiefs, perceiving the uselessness of further resistance, made their submission, and agreed to move into a reserve some distance from the railway. The Nandi have now almost all retired peacefully into this reserve, only a few small parties being left at large. Since the close of the year, the principal irreconcilables have been captured.

5. With the foregoing exceptions, the relations of the Administration with the various native tribes have been characterised by the utmost friendliness. The segregation of the Masai has so far proved successful, and they appear to be contented with the areas reserved to them.

6. The Land Commission, appointed in 1904, delivered a long and valuable report on the conditions attending the sale and purchase of freehold and leasehold property. In view of their recommendations, which are receiving the most careful attention, Lieutenant-Colonel J. A. L. Montgomery, C.S.I., has been appointed Commissioner for Lands, and a survey of the whole Protectorate has been commenced under the direction of Captain G. E. Smith, R.E. Expert advice is also being obtained as to the best methods of utilising the agricultural wealth of the country and the preservation of its valuable stretches of forest.

7. The Anglo-German Boundary Commission, which commenced the delimitation of the frontier between Uganda and German East Africa in 1902, and between British and German East Africa in 1904, concluded its work towards the end of 1905. The recommendations submitted by the Boundary Commissioners are being considered by the Home Governments.

8. The Protectorate had the honour to welcome in March, 1906, His Royal Highness the Duke of Connaught, who, accompanied by Their Royal Highnesses the Duchess of Connaught and Princess Patricia, travelled as far as Lake Victoria, stopping en route at Mombasa and Nairobi. To commemorate the visit, Their Royal Highnesses were graciously pleased to allow the new sea wall at Kisumu to be named the "Connaught Embankment."

(B.) PUBLIC WORKS.

An extensive programme of works was laid down for this Department for the year under review, the total expenditure being estimated at £85,313. The European and native staff was largely increased, and though it was found necessary for political and other reasons to postpone the erection of some of the contemplated buildings, as for example the station in the Kisii District, a great deal was accomplished.

Principal public works (other than roads and bridges) constructed or completed in 1905-6:—

SEYIDIE PROVINCE:—

Mombasa.—Quarters for Second Judge, Local Auditor, Inspector-General of Police, Medical Officer, Magistrate, Superintendent of Inland Revenue.

New Treasury Offices, Veterinary Quarantine Station, Leper Hospital.

UKAMBA PROVINCE:—

Nairobi.—Quarters for Medical Officer, Deputy Inspector-General of Police, two Assistant Superintendents of Police and other police officers.

Temporary office for Commissioner, Public Works office and yard, Veterinary office, laboratory, and store, landies for Public Works Department artisans, and military lines for 1st Battalion, King's African Rifles.

Kikuyu.—House for Assistant Superintendent of Police, police station and quarters, and Court House.

KENYA PROVINCE:—

Nyeri.—Houses for Military Officer and Assistant Collector.

TANALAND PROVINCE:—

Lamu.—Purchase of house for Sub-Commissioner.

KISUMU PROVINCE:—

Kisumu.—Houses for Collector, Magistrate, Veterinary and Treasury Assistants, and subordinate staff. Treasury office and strong room. Custom House, quarters, go-down, and pier. Seawall, drainage, and tanks. Public Works office and yard. Hospital.

JUBALAND PROVINCE:—

Kismayu.—Quarters for Police Inspectors and Instructors. Veterinary quarantine stations.

Roads.

A sum of £15,000 was estimated for the roads of the Protectorate, but, owing to delay in starting, occasioned by necessary preliminary surveys, the whole amount was not spent.

Notwithstanding this, the road from Nairobi to Fort Hall, about 56 miles in length, was completed with the exception of some bridging, which still remains to be done. The route now taken is some 10 miles shorter than the old highway, and forms a most valuable means of communication, running as it does through the Kiambu District, the centre of the homestead farm area, and connecting with the Kenya Province, whence the bulk of our native labour is derived. Other main roads upon which work has been done, are those connecting Kisumu and Mumias, Lumbwa and Kericho, and Naivasha and Nyeri.

The following is a list of the various roads, paths, and tracks which are principally used in the Protectorate. On several of those, practically nothing is spent at present, but as the country develops and the trade increases communication will be facilitated as occasion requires:—

Terminal Stations of each Line.	Length open for traffic.	Remarks.
Mackinnon Road :—	Miles.	
Mombasa to Kidong Valley	350	Owing to the building of the Railway these roads have in many places now fallen into disuse.
Sclater Road :—		
Kidong Valley to Port Victoria.	240	
Nairobi to Fort Hall ...	56	
Lumbwa to Kericho ...	19	
Kisumu to Mumias ...	28	
*Mombasa to Malindi ...	60	
*Mombasa to Vanga ...	50	
†Voi to Taveta	75	
*Mkonumbi to Witu ...	22	
†Malin dito Mambrui ...	10	
†Nairob ito Dagoretti ...	9	
*Machakos to Kitui ...	45	
†Machakos Road Station to Machakos.	22	
†Londiani to Ravine ...	22	
†Naivasha to Nyeri	45	
†Fort Hall to Nyeri	26	
Nairobi Township roads ...	22	

* Path. † Track.

Canal.

The only canal in the Protectorate is that known as the Belazoni. It is about 9 miles long and connects the Tana and Ozi Rivers. Of late years it has had the effect of diverting the whole of the waters of the former river into the latter, and the Tana at its mouth is now dry. The receipts from the canal dues amounted to about £50 a year, but as the collection of this toll cost more than the receipts and was found to be an impediment to trade, the levy has now been discontinued.

(C.) Railway.[*]

1. The only railway in the Protectorate is the (so-called) Uganda Railway, running from Mombasa to Kisumu, or Port Florence, on Lake Victoria. It is a metre-gauge line, 584 miles in length, and the total cost of construction up to March 31st, 1906, was £5,398,733 18*s.* 2*d.* There is an apparent discrepancy as compared with the figures given last year, viz., £5,404,920. This is due to adjustments of accounts and to a reduction in the authorised rate for the conveyance of construction material. It is now worked as a department of the Protectorate in conjunction with the steamer service on Lake Victoria. The telegraph is managed by the Protectorate Postal Department at the larger, and by the railway staff at the smaller stations. Two of the wires are leased by the railway, the third is used for public business.

2. The comparative figures for 1904-5 and 1905-6 for coaching and goods traffic are as follows:—

——	Passengers.	Goods.
	No.	Tons.
1904–5... ...	71,680	23,717
1905–6... ...	178,109	39,657
Increase ...	107,109	15,940

12,825 head of livestock were also carried in 1905-6, as against 6,195 in the preceding year.

3. The growth of revenue may be seen from the accompanying table:—

Uganda Railway.

Revenue.

Heading.	1904-5.		1905-6.		+ or –.
	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d*	£ *s.* *d.*
Passengers	28,716 0 6		36,195 12 4		+ 7,479 11 10

---

[*] Further information as to the Railway is contained in Appendix IX.

Expenditure.

Heading.	1904-5.		1905-6.		+ or -.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Maintenance of way and works.	55,846 5 11		47,838 3 10		- 8,008 2 1
Locomotive .. .. Carriage and waggon expenses.	44,522 16 3		46,438 9 5		+ 1,915 13 2
Traffic expenses	15,668 2 2		19,746 17 0		+ 4,078 14 10
General charges	14,437 1 4		15,128 16 2		+ 691 14 10
Special expenditure	10,373 14 4		8,784 19 2		- 1,588 15 2
Steamboat service	10,306 13 11		10,313 3 4		+ 6 9 5
Total Expenditure ..		151,154 13 11		148,250 8 11	- 2,904 5 0
Profit	—	2,639 9 0	—	56,678 7 3	+ 54,038 18 3

4. It is satisfactory to note that coincidently with the growth of the revenue from £153,794 2*s.* 11*d.* to £204,928 16*s.* 2*d.*—an increase of £51,134 13*s.* 3*d.*—the expenditure has been reduced by £2,904 5*s.*, as compared with that of 1904-5, thus giving a net profit of £56,678 7*s.* 3*d.*, as against £2,639 9*s.*, an improvement of over 2,000 per cent. on last year's figures.

5. It must not, however, be assumed that this reduction in expenditure can be permanently maintained. There are indications of a deficiency in the labour supply both for maintenance work and fuel cutting. Even as it is, it has become necessary to lay in a reserve of coal owing to the difficulty of providing an adequate supply of wood on certain sections of the line. It need scarcely be said that if coal has to be used in any quantity, the working expenses will be enormously increased.

This shortage of labour has also caused the abandonment of a contract for the re-alignment of the line near Mazeras by the firm which had undertaken it, and Indian coolies will have to be imported to carry on the work. A similar remark applied to the re-alignment between Mombasa and Kilindini Beach, which has also been suspended.

There are two main reasons for the disinclination of natives to serve on the line. The first is, that those from Kikuyu, where population is thickest, do not thrive away from their own country, and are liable to sickness if they are kept in the plains for long. In the second place, owing to the numbers of Europeans, and particularly sportsmen, now in the Protectorate, it is comparatively easy for natives to get work of a lighter and more lucrative nature as personal servants, gun-bearers, or porters.

The African, as a rule, dislikes permanent engagements. He much prefers to engage himself for two or three months only, and then enjoy himself on the proceeds of his labour.

He is also fond of change and variety. The absence of these amenities makes him unwilling to work on maintenance gangs, as a coolie or as a fuel cutter. Steps have been taken since the close of the year under report to try and place the labour system on a more substantial basis.

6. Turning to the very satisfactory revenue statistics, the success of the Lake steamer service is particularly noteworthy. The earnings amount to £22,340 1*s.* 5*d.*, an increase of £7,873 13*s.* 7*d.* on 1904-5, while the expenses were almost exactly the same. The actual profit on this service is £12,026 18*s.* 1*d.*, as against £4,159 13*s.* 11*d.* last year. Nor does this sum, substantial as it is, represent the whole of the indebtedness of the railway revenue to the Lake steamers. They are the main feeders of the line, as far as downwards traffic to the coast is concerned, and the goods they bring are the more profitable in that they are almost invariably consigned in bulk over the whole length of the line, thus giving a maximum return with a minimum of inconvenience in handling. The Acting Manager estimates that they contribute an addition of £25,000 to the goods receipts. The extent of the steamer traffic is due to the fact that the lacustrine districts of Uganda and German East Africa are much richer than the greater part of the East Africa Protectorate, and far the larger proportion of our exports is drawn from them. In a few years time, the slower-growing staples now being cultivated in the East Africa Highlands will no doubt take a more prominent place, but at present they contribute but little to the traffic receipts. The Lake ports, on the other hand, almost always have more cargo waiting than the steamers can take, and the contemplated increase* in the fleet is a most necessary measure and one which is certain to pay handsomely.

7. The increase of £34,951 14*s.* 11*d.* in goods receipts is entirely due to public traffic, small decreases being only observable in the amount of railway materials, horses, parcels, and revenue stores carried, and for postal services. Consignments "upwards," with 25,293 tons, still considerably exceed those "downwards," with 14,359 tons only. This is no doubt largely due to the increased consumption of imported articles owing to the presence of European settlers; building materials in particular having risen from 4,290 tons to 7,356 tons. Provisions and piece goods have also advanced considerably. The rates for goods proceeding up the line are somewhat high and press heavily on the settlers. The Acting Manager strongly recommends a reduction whenever the finances of the railway admit of it.

---

* Colonial Office Note.—A third steamer has now been launched on the lake, and the construction of a fourth in Scotland is approaching completion.

The "downwards" traffic, as has been explained above, comes mainly from the Lake ports, including almost all exported produce except beans. The principal staples were beans, chillies, ground-nuts, grains, and hides, all of which show satisfactory increases.

The goods traffic would have shown even better results had it not been for the grounding of the steamship "Sybil," which disorganised the steamer traffic for a time and necessitated the payment of £1,951 as compensation for jettisoned cargo.

8. The passenger receipts show an increase of £7,988 6*s.* 1*d.*, which, though satisfactory, appears scarcely in proportion to the much larger number of persons travelling, 178,789, as against 71,680. The explanation lies in the fact that a local service has been established between Mombasa, Changamwe, and Mazeras, which carried no fewer than 81,205 passengers during the year. The distance being very short the receipts per head on this traffic were small. The service is extremely popular, and largely patronised by the natives.

9. There have been no accidents involving injury to passengers, and very few delays to trains from wash-aways.

10. The principal recommendations put forward by the Acting Manager are, that the Steamer Service and Marine Department should be fostered and extended in every possible way, that a number of powerful locomotives, capable of hauling heavier loads than can at present be dealt with on the steeper grades, should be purchased, and that rates, more in particular the up rates, should be reduced where possible.

11. The year 1905-6 may justly be considered a memorable one in the history of the railway, as the first in which the earnings have amounted to an appreciable percentage, viz., 1·068 per cent. on the capital cost.

12. A separate account is kept of the revenue derived from the railway zone, which extends for one mile on either side of the line. The figures are almost the same as those for 1904-5, viz., £2,052 0*s.* 3*d.* and £1,988, respectively. This is exclusive of a sum of £619 derived from the sale of stands in the Nairobi Bazaar, which was originally credited to "Drainage Scheme" in 1904-5, but was subsequently transferred to the Railway Zone account.

(D.) EMIGRATION AND IMMIGRATION.

During the year 1905-6 there were no restrictions on persons entering and leaving the Protectorate, and it is therefore impossible to compute the number of those who can be classed as genuine immigrants and emigrants. An Ordinance prohibiting the ingress of undesirables has since been enacted.

Figures compiled from the shipping companies' lists show that 1,861 Europeans and 6,454 Asiatics and Africans landed in the Protectorate and 1,427 of the former and 6,724 of the latter left it during the year. No separate statistics of Indians were taken, but it is roughly estimated that about 1,200 arrived and 300 departed in the twelve months.

2. The experiment of allowing natives to go to Zanzibar and Pemba, to work on the clove plantations during the picking season, was continued with beneficial results to those islands and to the labourers themselves; the Administration is, however, aware that only limited assistance can be rendered to Zanzibar in this respect, as it affects the already insufficient supply of labour in the coast districts.

3. The Indian settlement at Kibos, alluded to in the Agricultural section of this report, is making very satisfactory progress. It originally consisted of Punjabi coolies who elected to remain after the completion of the Uganda Railway, but they proved not to be agriculturists of the right type, and have been gradually eliminated in favour of a more suitable class.

Settlers are given ploughs, seeds, and agricultural implements, and the loan of oxen. All the original advances have now been returned, and the occupants have in almost all cases purchased their holdings at Rs. 2 per acre, and paid the fees in connection therewith. They are building tin houses and bringing over their wives and families from India, a proceeding which indicates their intention of establishing a permanent domicile in East Africa.

4. The scheme put forward for a Jewish colonisation of the Uasin Gishu plateau was abandoned, at any rate, for the time being.

(E.) Game.

Lovers of big game shooting have during the past few years visited East Africa in ever increasing numbers, and many good "bags" have been obtained. Large herds of zebra and different kinds of gazelles and antelopes, and ostriches, with occasionally a lion, giraffe, or rhinoceros are to be seen from the Uganda Railway as the train crosses the vast stretches of prairie known as the Athi Plains and the Rift Valley; whilst away in the wilds where sportsmen delight to go almost every variety of game can be encountered.

A sportsman's licence, which enables the holder to shoot a number of heads of most species, costs £50; extra fees are charged for one or two of the rarer kinds. Settlers' licences, costing £10, permit of a limited number of the commoner kinds being shot; and landholders' licences, for which £3 is charged, enable farmers and others to shoot on their own estates.

The amount of game killed in 1905-6 is shown in the following table:—

Game.	No.	District.								
		Laikipia.	Rift Valley.	Athi.	Fort Hall.	Lake Victoria.	Uasin Gishu.	Coast.	Serengeti.	Jubaland.

With regard to the steps which are being taken to prevent the extermination of game, reference may be made to the volume of correspondence presented to Parliament in November, 1906. [Cd. 3189.]

(F.) RATES AND WAGES.

1. But little change has taken place in wages for permanent domestic service, but the rates for temporary employment have risen considerably, in consequence of the visits of sportsmen and travellers, and from Rs. 25 to Rs. 40 per mensem is frequently demanded and obtained for short periods during the busy season, which lasts approximately from November to April.

2. The cost of living also remains much the same as in 1904-5. The following differences in price may be noted:—Tea has risen from Rs. 1 to Rs. 1 4a. per lb., beef and mutton from 3*d*. to from 4*d*. to 6*d*. per lb., while butter has fallen to Rs. 1 4a. in Mombasa, Naivasha, and Njoro.

3. Rates for laundry work are unaltered, but the methods used are extremely primitive and destructive, and the introduction of a steam laundry would be heralded as a boon.

4. Labour rates show a tendency to rise, but the average remains about the same. There is a considerable scarcity in the supply in some districts. The causes and results of this are discussed elsewhere.

5. The cost of building remains practically unaltered, a thatched hut of moderate size costing £15, and a building of wood and iron or of stone from £200 to £1,000.

6. A recapitulation of the wages given in the 1904-5 report, with such slight alterations as seem necessary, is added for reference:—

—	Rate per mensem.
	Rs.
Domestic servants	10 to 30
" " (juvenile)	5 " 10
Porters, according to district	6 " 14
Cooks (Indian)	35 " 50
" (Swahili)	20 " 25
Kitchen boys	5
Labourers (coast)	10 " 14
" (interior)	4 " 8
Carpenters (native)	15 " 30
" (Indian)	30 " 60
Painters and masons	30 " 60
Ploughmen (native)	7 " 16
" (Indian)	20

When working away from home an additional food allowance, costing from Rs. 4 to Rs. 7 per mensem, has to be given. Certain articles have also to be provided for porters by Government Regulations when proceeding on a long journey, *e.g.*, blanket, water-bottle, &c.

(G.) SOCIAL CONDITION OF THE PEOPLE.

Materially the East African native is well off. Work is plentiful, food is cheap, and under British Administration he is secured from raids, and but lightly taxed in return for the protection he receives. As regards religion and education his wants are attended to by no less than eleven missionary societies, who, however, have had many difficulties to contend with, and their efforts have not yet affected the mass of the people. But little economic progress has been made by the tribes generally; they are neither thrifty nor ambitious, and are content to satisfy their immediate requirements, which are few, without making an effort to bring about an improvement in their social position. Hence the difficulty that has been experienced in meeting the increasing demands for unskilled labour.

The labour question requires careful handling; but there are signs that it will not prove so difficult of solution as has been anticipated. The Kikuyu of the district round Nairobi supply a considerable number of workmen; the Kavirondo have lately shown a decided willingness to work on the railway and have to a large extent replaced the Indian coolie, whilst the opening up of the Kenya Province has resulted in a practically unlimited field of labour being made available. There are, however, two difficulties to contend with; it has been found that those natives who are accustomed to a temperate climate, verging on cold, and to an unlimited supply of food, do not take kindly to work away from the uplands, and they are, in common with other agricultural people, averse from leaving their homes at the planting season, which comes twice in the year.

It has also been found that within the last few months Wakamba from the Mumoni Hills have taken to come of their own accord to seek for work in Mombasa, and some of these people are now employed in cotton cultivation at Malindi.

A labour bureau is about to be formed to deal with the various questions that arise. The duties will be to ascertain the requirements of the departments of Government, arrange with the labour-producing districts for their requirements being met, and assist private enterprise when sufficient labour is not obtainable on the spot. The settlers are wisely encouraging the natives to settle on their land, and this had been done in many cases to the mutual advantage of both parties. During a tour through the 640-acre homestead area it was found that settlers who were considerate to the natives had no difficulty in procuring as much labour as they required.

As civilization progresses the required inducement for more exertion on the part of the native will probably be found in a desire for cotton goods, but at present there are certain prejudices to be overcome. For instance, the Kavirondo, a record race for Africa, prefer to go naked, and, curiously enough, connect clothing, so far as their women are concerned, with immorality. Here time and the advance of trade and civilisation will work their own results. Inquiries from Indian merchants in the various stations show that the demand for cotton goods is steadily increasing, even in remote districts, and once this demand can be established it will mean a practical solution of the labour question and a large increase in the output.

(H.) EUROPEAN SETTLEMENT.

European settlement is now becoming a most important factor in the development of the Protectorate, and though we have by no means left behind us what may be called the experimental stage, through which every new country has to pass, matters have settled down, much useful experience has been gained, and valuable lessons learnt since the first rush for land took place some three years ago, and the Colonists, both the large ranchers and planters and the smaller holders, express themselves as fairly well satisfied with the prospects which East Africa holds out to them.

It must be admitted that the Colonists did, and to some extent still do, suffer from certain disabilities, owing to the fact that the influx of settlers came of a sudden, before the Administration was prepared with the necessary machinery for meeting the demands so newly created. We had no officers trained in dealing with land questions, no survey had been made of the area opened up to European settlement, certain provisions of the Land Laws did not meet with general approval, and in other respects dissatisfaction was expressed with existing institutions which had not had time to adapt themselves to the changed conditions. It has been the constant aim of the Government to remove these disabilities, where they were found to exist, and, though it has not been possible in so new a country as East Africa to concede all that the more advanced views of the Colonists would seem to demand, there can be no question that a great deal has been, and is being, done in the direction indicated.

An officer of high reputation and experience in land settlement has been appointed Commissioner of Lands, the staff of the Land Office has been increased, and the land laws are under revision; a proper survey of the country, both trigonometrical and cadastral, has been instituted; the right to trial by jury has been established; the currency is being amended; down freight rates on the Uganda Railway have been reduced to a minimum; Government competition, where it has interfered with private enterprise, has ceased; and the forthcoming representation of unofficial opinion on the Legislative Council about to be established, will be a measure as welcome to the Administration as it will be to the Colonists, affording as it will an opportunity for freer interchange of thoughts and ideas between the official and unofficial classes, which cannot but tend to the removal of impressions in many cases too hastily formed.

In addition we have well known experts on sanitation, stock, agriculture, and forestry investigating the conditions of the

Protectorate, whose reports will indicate the basis upon which developments can best take place in these important subjects, and form a useful guide for private enterprise. A branch of the Land Office is being established in Mombasa, where, as soon as the survey has made sufficient progress, maps and information to guide intending settlers in their choice of land will be available for newcomers, and save those who have no local knowledge the time, trouble, and expense involved in looking for unoccupied land in a new country.

Capital, the greatest need of a new country, is now being steadily attracted to East Africa; arrangements are in progress for working a number of concessions leased for the productions of fibres and rubber; extensive areas have been taken up for cotton cultivation; and progress in these directions may soon be looked for.

For the small farmer with limited means the first years of settlement have not been free from anxiety. In addition to the risks incidental to pioneering he was confronted with high steamer and railway freights and sometimes with difficulty in obtaining labour to work his farm, whilst the cultivation of such native staples as potatoes, beans, and maize for local requirements and for export to South African markets, which could not always be depended upon, in most cases offered but a bare living. Matters have since improved in this respect, but what is required is the cultivation of more valuable products for the home market. The increasing local demands for dairy produce have materially assisted the smaller settlers, who now recognise the importance of keeping a certain quantity of stock on their farms, both for the manure, which is so essential for the soil, and with a view to a co-operative scheme for the export of the products of the dairy.

These remarks do not apply to the ranchers and large holders who have capital to tide over the time until their investments begin to repay them.

In the 640-acre homestead area in the Kikuyu district a great deal of real work has been put in, and a few days spent on tour amongst these farms left a pleasant impression of the development which has taken place in a large number of the farms, and of the steady determination shown by the settlers to succeed. Enquiries as to the conditions of the various holdings, the amount of land under cultivation, and the prospects of the various crops were answered with a readiness which showed a friendly appreciation of the interest taken in their work. Still both among the larger holdings and the small farms there are several estates upon which no development whatsoever has taken place, and which are apparently held for speculative purposes. It is neither beneficial to the country nor to the settlers that this should be allowed; and whilst the Administration will insist on the terms of the leases being carried out, this will be done with tender regard to the interests of *bonâ fide* settlers, the object of the Administration being to discourage speculation pure and simple, but to encourage and assist by all means in its power the settlers who are really taking an interest in their properties and are exerting themselves to develop the land.

(I.) Openings for Investment of Capital.

Under this head there is little to add to the remarks made in the report for 1904-5. Much attention is being paid to rubber and fibre, and there seems little doubt that these products have a great future before them. Cotton has done very well at Malindi, a good crop being harvested and a satisfactory price obtained. In the Highlands ranching, sheep-farming, and dairying should yield profitable results, and on the coast cocoanuts and other tropical products would probably repay the investor.

The natural beauty of the country and the unique spectacle presented by its wild fauna are attracting travellers and sportsmen in large numbers, and the provision of good hotel accommodation, shops, and agencies at the principal towns *en route* should prove to be a profitable speculation.

(J.) Future Prospects of Trade.

The improvement in trade which was noted in 1904-5 has been well maintained during the year under review, and there have been very satisfactory increases both in imports and exports.

European settlement is proceeding on a firmer basis, many of the less desirable Colonists having left the Protectorate, their places being taken by men of a type more suited for the development of the country. Land has improved considerably in value, especially in the neighbourhood of Nairobi, though there is reason to suspect that the inflated prices now prevailing in the immediate vicinity of that town will drop to a more normal figure before long.

The railway returns, so far as they are derived from public traffic, are a fairly safe indication of the commercial prosperity of a country, and from the very gratifying results tabulated in a former paragraph of this report it would appear that the Protectorate is making satisfactory progress.

There is little doubt that in Mombasa, or to speak more accurately, Kilindini, the Protectorate possesses the natural port for the whole of this part of Africa.

APPENDIX I.

Comparative statement, showing the quantities, values, and duty of Imports (exclusive of Government stores, specie, and goods in transit) into the East Africa Protectorate during the years ending 31st March, 1905 and 1906.

APPENDIX III.

REPORT ON THE GOVERNMENT EXPERIMENTAL FARM AT NAIROBI FOR 1905.

Climate.

The most marked feature in the climatic conditions of the past season is the heavy rainfall compared with 1904—46·05 inches, compared with 25·62 inches. This has, of course, had a great effect on the crops. Those sown early in the year had too much rain: those sown in October are giving better results than have ever been obtained hitherto. Last year they failed entirely. It may be concluded from the available records that 1904 was abnormally dry, while 1905 was abnormally wet. The normal rainfall seems about 38 inches per annum. With a rainfall varying from 46 to 25 inches a certain element of risk in cropping is introduced, and this can only be allowed for when some regular rainfall cycle is deducible from a long period of records. A farm fully stocked for the wet years will, of course, be very much overstocked in the dry years; for the present, therefore, a certain amount of caution should be exercised in stocking farms. The rain usually falls at night, and consequently interferes very little with farm work.

General Crops.

The past season has generally been favourable for the growth of crops. The early-sown maize, receiving over 20 inches of rain, gave satisfactory yields, but the leguminous crops sown early in the rains suffered severely from disease. In future all bean crops will be sown at a later date, and the sowing of wheat will be delayed until a good part of the rains have fallen. Maize and linseed should be sown as early as possible, and sowing should be proceeded with in the order of oats, barley, potatoes, gram, wheat, and, lastly, beans.

The damage done by vermin to all crops makes it impossible to take the recorded yields as the crop which the land is able to produce. Without most expensive fencing, however, very little can be done to prevent the destruction of the crops. The advance of civilisation is gradually driving away much of the vermin, but for the present there seems to be no very feasible way of hastening that end.

The subsoil of the Kikuyu country is generally brick red, containing almost no organic matter. The soil is rather richer, but over much of the land it will be most profitable only to grow crops on manured ground. To some extent the poorness of the soil is due to the annual fires which sweep over the country and destroy the surface vegetable matter. The quality of the grazing improves very rapidly when the land is protected from fire.

Labour.

During the past year the labour supply has been quite satisfactory. For ordinary work, Wakikuyu at from Rs. 4 to Rs. 6 per month have come forward in satisfactory numbers, and the skilled ploughmen, mowers, and gardeners at wages from Rs. 10 to Rs. 16 have been on the farm since it was started. These skilled men reach a wonderful degree of proficiency, and are well worth retaining at exceptional wages. It is found that good housing is the greatest inducement that can be held out to natives to get them to settle permanently on the farm. All cultivation is now done by oxen labour, and transport by carts, so that there is little likelihood of future labour difficulties. The Wakikuyu, instead of working one month and going home to rest, are now often on the farm for from four to six months at a stretch, and it is a noticeable fact that the numbers of Wakamba seeking work are rapidly increasing. The cutting of crops and grass is done by a native with a scythe, at a cost of about Rs. 3 per acre. One acre costs Rs. 5 to Rs. 7 to plough. To thrash 100 lbs. of beans with the flail costs Rs. 1, with the thrashing machine, 2 annas. Oats are thrashed at a cost of 4 annas per 100 lbs. by machine, and Rs. 2.8 by flail.

Implements.

Without suitable farm implements, cropping in East Africa can scarcely be profitably undertaken. The hand thrasher, costing £13, and the winnower, £12, are indispensable for dealing with grain-producing crops. The thrasher has proved equally satisfactory in the preparation of both bean and cereal grains. When stock is kept, a chaff-cutter, costing £3, is of great service, and a scythe or mowing machine reduces the expense of reaping grain and forage crops. For breaking up new land, the Howard two-furrow disc plough, with five pairs of oxen, has given most satisfactory results. For deep ploughing of fallow land, the "Nile" plough is most suitable in the hands of natives, and for lighter work the small Holdings plough is all that is required.

Manure.

Very small plots (one-sixteenth to one-sixtieth acre) of various crops were dressed with farmyard manure. The smallness of the plots tends to make the results of doubtful value, but the idea was more to get ocular evidence than weight results. The circumstances preventing extensive manurial experiments were:—

(*a.*) The land on first breaking up is very unequal and practically no quantitative experiments can be reliably conducted.

(*b.*) The fresh manure ferments very slowly, and even when a year old is too coarse to apply to land. Manure pits have, however, been dug, and in those fermentation may not be interrupted in the dry season.

Besides enriching what appears to be rather poor land, the manure will have an excellent effect on the physical properties of the rather porous soil.

Seeds.

The distribution of seed has been continued and extended, to the convenience of the settlers. The supply is not yet equal to the demand, but each year sees a larger production of seed on the farm. The failure of the wheat crop increased the demand while it decreased the available supply. The seeds of forage plants have been gaining in favour, and 64 orders for amounts of from 1 ounce to 30 lbs. were fulfilled. Tree seeds are now being frequently asked for, but the chief demand is for Black Wattle and Eucalyptus. Vegetable seeds are seldom required, and in future only locally-produced seed will be supplied. There is a steadily increasing number of applications for young trees, and the area of the nursery has been extended. Fruit trees are in great request, but for some years there can be no great number available for distribution.

Oats.

Seed from the former season's crop was sown on the 21st October, 1904. The land had previously grown beans, and after a ploughing the oats were harrowed into the soil. The germination was satisfactory, but, as was natural on fresh land, weeds gave a good deal of trouble, and twice the land had to be cleaned. The crop was reaped on the 14th March, 1905, and although the birds had been very severe on the grain, a yield of 32 bushels per acre was got. The straw weighed 3,250 lbs. per acre. The total cost of cultivation, harvesting, and thrashing was Rs. 32, or 43*s*. The grain was sold at Rs. 3 4a. per bushel, giving a total return at the rate of Rs. 104 per acre. The straw was very coarse, but was keenly eaten by the stock.

This crop would have yielded about 1½ tons of oat hay, worth Rs. 75. Of course the expense of producing the hay is less than that of obtaining seed. At the present moment oats are certainly one of the most profitable crops. Period of growth, 140 days. Rainfall, 11·24 inches.

A second crop of oats grown from seed imported from South Africa gave very different results. This crop was sown on the same date as the above-mentioned, viz., 21st October, 1904. Instead of running into grain, this oat tillered out and produced a thick growth of fine leaf and stem. For the purposes of producing forage or hay, the South African oats were infinitely better than the coarse-leaved English oat, but the crop took much longer to ripen, being 250 days in the ground from the time of sowing until the grain was ripe. Further, the grain produced was only 10 bushels of 30 lbs. The total cost of production was Rs. 30, and the value of the crop Rs. 35. If the crop had been sold green, however, the value of the produce would have been over Rs. 90, for the yield of hay would have been at least two tons. The crop produced more than 30 bushels of grain, but it ripened unequally, and for three months it fed all the birds in the neighbourhood. The birds, unfortunately, would not be induced to feed on any grain except what they obtained from the ears of the standing oats.

Seed of the first-mentioned crop of oats was sown on the 21st March, 1905, on newly broken land. The cost of cultivation was Rs. 26 per acre, a third of which was spent in scaring birds. In spite of the presence of one boy per acre, the birds unmercifully robbed the grain, and during the last two weeks over 600 birds were killed on a two-acre plot. The crop was harvested on the 28th August, and yielded 14½ bushels of 40 lbs. seed per acre. The grain was of good quality; the 2½ tons per acre of straw was coarse. The produce was sold at Rs. 3 8a. per bushel, giving Rs. 51 per acre, against the cultivation cost of Rs. 26. The straw was chopped for feeding purposes, but on account of the abundance of grass its value cannot be estimated at more than the cost of harvesting, viz., Rs. 5.

A small manured plot yielded at the rate of 27 bushels per acre.

The three crops were:—

—	No. 1.	No. 2.	No. 3.
Period of growth	140 days.	250 days.	158 days.
Rainfall, inches	11·24	36·91	20·24
Lbs. of grain	1,280 per acre.	300 per acre.	585 per acre.

Wheat.

Considering the success which attends the cultivation of barley, oats, buckwheat and linseed, the comparatively poor yields of wheat must be attributed to one cause, viz., rust. With each successive season the rust (Puccinia graminis) has become more and more pronounced, and during the last rather wet season much of the wheat crop succumbed to its attack. It is hard to believe that a climate which suits the growth of barley, oats, and linseed can be unfavourable to the growth of the wheat plant. In the future the aim of the wheat grower must be to get even with the rust organism. There is no practical way of directly preventing rust, but by growing rust-resisting varieties of wheat fair success may be anticipated. A good deal can also be done by strengthening the growth of the wheat by the application of manure. Further, it would be desirable to treat all seed before sowing.

This season the main crops consisted of three varieties of Egyptian wheat:—

(*a*.) The M.A.W. wheat grew well, and produced ears but no grain.

(*b*.) B.U.H. wheat produced what at one stage promised to be an excellent crop, but the ears failed to fill out, and from the manured part of the plot a crop of only 850 lbs. per acre of grain was harvested. From the unmanured acre only 56 lbs. of grain was reaped. The crop was therefore a failure, but the comparative success of the manured plot indicates one of the ways in which improvement may be made. The manure was applied after the germination of the crop, but the best results can only be expected when it is worked into the land.

The best crop which has been recorded in the district this season is 17 bushels per acre. Other cultivators have not considered it worth their while to harvest their crops. A fatal mistake was made this year in sowing the wheat at as early a date as possible, viz., 11th March. The wheat got more than sufficient rain, and the wetness of the growing season favoured the attack of rust.

(*c*.) Two small areas of Indian wheats were tried for their rust-resisting qualities, and both suffered very little from the disease. Owing to the smallness of the area, however, and the extent to which birds robbed the grain, no yield figures can be given.

A consignment of "rust-resisting" wheats from Australia and India are to be tried next season. The production of a rust-resisting variety of wheat suitable for East Africa must be undertaken here, and with the farm on a permanent basis, this subject must receive very special attention. The wheat now growing on manured land has at present every appearance of producing a good crop.

Barley.

In spite of the ravages of birds, a very fair crop of barley can usually be harvested. This season the seed was sown broadcast at the rate of two bushels per acre, on rather poor soil. The crop was covered by the cultivator. Sown on the 23rd of March, the crop got the full benefit of the rains, and ripened after 105 days. The total cost of producing an acre was about Rs. 15, the thrashing proving a difficult operation. The yield was 34 bushels of 43 lbs. The barley makes a good horse food, but for this purpose there is no local demand; it is therefore given to the pigs and poultry. The barley crop is little affected by disease; it is in consequence generally possible to sow it early in the rains.

Buckwheat.

Buckwheat, lentils, and linseed are crops which are usually little affected by disease, and are therefore of considerable importance, as it is probable that they might prove a fair substitute for wheat where rust is severe on this crop. A successful crop of buckwheat produces a large quantity of useful grain in a very short time.

This season the crop was sown broadcast on ploughed land, and was afterwards harrowed into the soil. Two and one-half bushels, or about 100 lbs., of seed were sown per acre on the 25th March. The plants grew so well that this seeding proved to be rather too heavy. No weeding was required. The crop proved unequal, and it was therefore decided to cut it in two areas. From the better part of the crop 1,540 lbs. of grain was harvested, and from the whole area 700 lbs. per acre. It is pretty certain that the poorness of the yield was due to the poverty of the soil, and it is only to be expected that a quick-growing crop would well repay manuring. The grain weighed 43 lbs. per bushel. In South Africa buckwheat is quoted at 7*s.* 6*d.*, against maize 4*s.* 6*d.*, per 100 lbs. The cost of cultivation was about Rs. 10 per acre. Period of growth, 76 days. Rainfall, 17·5 inches.

An acre of buckwheat was sown on manured land on the 13th October at the rate of 60 lbs. of seed per acre. The crop harvested was 1,174 lbs. of grain. The cost, including manuring, was Rs. 21 per acre. For pig feeding the produce was worth Rs. 30. The straw was chopped and given to the cattle. Period of growth, 72 days; rainfall, 8·40 inches.

Buckwheat is a crop which should have far more attention than it receives. It gives a larger return of food stuff in a shorter time than any other crop; it leaves the land in a cleaner condition than any other crop; and, as it ripens early, its harvesting does not fall in the busy season.

Maize.

The heavy rains of spring proved favourable to the growth of the maize crop. Again all the maizes suffered severely from the attacks of birds, porcupine and gazelle. The porcupine is individually the most destructive of all animals to the maize crop, and he is the most difficult animal to catch or kill.

(1.) Long Yellow Maize (presented by Messrs. Sutton & Son) was sown 1st April, 1905, in rows two feet apart, the plants 15 inches apart in the rows. This crop was sown on rather poor soil, but grew well, and ripened after 132 days, yielding 1,800 lbs. of grain per acre.

(2.) Round Yellow Maize, sown under similar circumstances, ripened after 140 days, yielding 1,920 lbs. per acre. This crop was manured at too late a period in the rains for the manure to have had much effect. Although the yield of this crop was fair, yet the quality left much to be desired. This could only be the result of the very shallow hoeing which the newly broken land received. For maize a tillage of at least eight inches is required to allow of a root development, which will be capable of feeding the plant during the drier months. The maize root is generally unable to pierce through the compact, untilled subsoil.

(3.) The crop of Hickory King Maize was grown on well-cultivated deep soil, which had been cropped for three successive years without manure, the last crop being beans. The seed, at the rate of 30 lbs. per acre, was sown in rows 2 feet apart, the plants being 15 inches apart in the rows. This, for a large-grained maize, was rather close for the production of the finest quality of cob, but on the other hand it led to a very heavy yield, and no weeding was required.

Sown on the 15th March, the crop was harvested on the 11th August, after a period of growth of 150 days. The yield per acre was 2,580 lbs., or 43 bushels of 60 lbs. per bushel. Only about half the crop was maize of first quality, a good many of the cobs having been damaged by birds.

The cost of cultivating one acre was:—

	R.	a.	p.
Ploughing	3	0	0
Sowing	4	0	0
Guarding	8	8	0
Reaping	2	8	0
Shelling and cleaning	4	0	0
Total ... ... Rs.	22	0	0

The cost of guarding the crop nearly equals half the total cost of production.

Maize is worth Rs. 1 8a. per load of 60 lbs.; the value of the crop was therefore Rs. 65 per acre, the net revenue Rs. 43 per acre. This would leave a good margin of profit after deducting seed, rent, supervision, &c. The guarding expenses should decrease with the settlement of the country.

(4.) Another area of Hickory King on lower land yielded 2,272 lbs. per acre. This crop suffered more from enemies than the last.

(5.) Snowflake Maize imported from America was sown on poorer soil than the above at a later date. Thirty pounds of seed were sown per acre on the 8th April, and the crop was harvested on the 5th September after a period of growth of 150 days. The seed sown was of very fine quality, but, probably owing to the poorness of the land and the lateness of sowing, the grain harvested was in bulk only second grade. The yield was 2,484 lbs. per acre, worth about Rs. 42. It is impossible to sow two varieties of maize side by side, and for experimental purposes the different fields of the newly broken upland give scarcely comparable results. With longer cultivation the land will doubtless assume a more uniform texture.

(6.) Egyptian White Maize, sown on land similar to the above, took an equal number of days to grow, but only produced a crop of 1,250 lbs. per acre. Maize from Egypt has not done well in this cool climate, although at the Coast good crops have been obtained.

(7.) Cuzco Maize, sown 13th March on good soil, ripened after 175 days, but only gave a yield of 780 lbs. of grain per acre. This crop suffered more than any other from the ravages of birds and animals. Probably not more than half the plants reached the harvesting. The seed was of a mixed quality, the late rains causing some of the grains to germinate in the cob. The Cuzco does not give promise of being a heavy cropper.

Tabulated, the general results of the crops are:—

Variety.	Period of growth.	Rainfall.	Crop lbs. per acre.	Remarks.
	days.			
Hickory King	150	27·88	2,580	Good soil.
Snowflake	150	17·33	2,484	Poor soil.
Hickory King	150	27·88	2,272	Good soil.
Round Yellow	140	17·56	1,920	Very poor soil.
Long Yellow	132	17·56	1,800	" "
Egyptian White ...	150	17·33	1,250	Poor soil.
Cuzco Maize	175	27·88	780	Good soil.

Linseed or Flax.

One acre of linseed was sown broadcast with seed at the rate of 42 lbs. per acre on the 30th March. The plants came up well, but many of them were killed by red ants, which destroy the stems. The crop was therefore too thinly stocked. The crop was ripe after 170 days, and yielded at the rate of 520 lbs. of grain per acre, the grain weighing 49 lbs. per bushel. The total cost of cultivation was approximately Rs. 15, and the local value of the crop Rs. 48. The linseed has not done nearly as well as was anticipated, but better results might be expected if a heavier seeding were given. The red ant is only likely to prove destructive on fresh land. The linseed proved most useful in keeping the stud animals in good condition.

Groundnuts.

The seed was planted in a rather dry situation on 28th April, 1904, being sown 18 inches apart each way. The plants grew fairly well, but neither the soil nor climate seemed to be entirely suitable to the crop. The long dry season from June to October was unfavourable to the growth of the crop; the plants did not therefore grow to their normal size. A better crop would certainly have been got if the groundnuts had been sown with the first rains. At the same time it is still very doubtful if groundnuts will ever be a success at this high elevation, with its long dry seasons. Groundnuts are usually a crop of friable soil in a warm country, when rainfall is fairly abundant or irrigation is possible. On the 2nd March, 1905, the crop only yielded at the rate of 405 lbs. per acre of nuts, weighing 25 lbs. to the bushel. This would be equal to about 16 bushels per acre. In other countries 2,000 lbs. would be a fair crop. Besides giving a poor yield, the harvest was of very indifferent quality.

Red Beans.

The red beans were planted two seeds in a hole about one foot apart, on the 18th March, 1905. The plants quickly covered the ground, and practically no weeding was required. On parts of the land where the water of the heavy rains collected the beans died off, or at least failed to produce more than one or two pods. About the middle of June a leaf disease *(Uromyces fabae)* appeared and, making rapid growth, quickly caused the plants to lose their leaves and younger flowers. In this way a promising crop was more or less destroyed. The bean pod disease, *Colletotrichum lindemuthianum*, also did considerable damage.

The plants were pulled up by the roots on the 12th June, and the crop yielded on the best ¼ acre 635 lbs. per acre. All over, only about 450 lbs. of grain per acre was harvested. The land was heavily seeded, at the rate of 65 lbs. per acre. The cost of cultivation with seed was Rs. 12 per acre, and the value of 450 lbs. about Rs. 11. The grain weighed 60 lbs. per bushel.

The poorness of the crop is attributable to two causes; first, the crop was sown too early in the rains and got more rain than was desirable, and second, the yield was very much reduced by the attack of fungoid diseases. Dwarf beans should be sown after all other crops are in the ground, for they grow best with a very small rainfall.

A second crop of the same beans was sown on the 12th April, 1905. Seed at the rate of 60 lbs. per acre was sown. The crop required no cleaning, and was grown on very poor soil.

The cost of cultivation was Rs. 12 8a., including the price of seed. The crop did not suffer so severely from disease, and was harvested on the 7th July, yielding 578 lbs. per acre, of a value of about Rs. 14 8a. Even this must be considered a very unsatisfactory crop, the failure being due partly to the very poor nature of the ground and partly to the unfavourable season.

A year ago quite good crops of beans could be produced, but from the newly-imported seed the crop has grown more and more unsatisfactory because of the increase of the leaf and pod diseases. In future it might be well to grow such beans as a mixed crop with maize or millet.

Sutton's Perfection Dwaft Bean.

Sutton's Perfection Dwarf Bean, sown on rather poor soil on the 1st April, 1905. The seed germinated badly, and the land was only about half stocked. The plants grew well, and suffered less from disease than the ordinary red bean; the crop was slightly reduced by both the pod and leaf fungoid diseases. The crop measured 140 square yards, and was reaped 29th June, 1905, yielding 690 lbs. per acre.

Pigeon Pea.

The Pigeon Pea *(Cajanus indicus)* was sown in rows 8 feet apart between the lines of coffee. The seed from the crop, ripe in about eight months, pays for the cultivation, and the shade of the plants is of great advantage to the coffee. The pigeon pea is now being used as shade for the potato crop with marked success.

Various.

Field Beans, Lentils, and Fenugreek were again tried this season, but the results obtained only demonstrated that none of those crops find favourable growing conditions in this soil and climate. The field beans and fenugreek were practically destroyed by rust, favoured by the wet season. Both crops grow best in a heavy soil, and are unsuited to the light lands in this district. The lentils yielded at the rate of 150 lbs. per acre, which is a most unsatisfactory return. The average yield obtained from three harvests of lentils is 500 lbs. per acre; from two seasons' field beans, 120 lbs.; from fenugreek crops, 320 lbs. per acre. These crops are therefore proved failures, and will not again be tried.

Potatoes.

Only two very small plots of potatoes were grown during the past season on newly broken, poor soil. This soil became so hard that the crop could not be lifted in the usual way. The idea was to ascertain what effect a light dressing of manure would produce on the poorest class of cultivated soil. The crop was planted on the 25th March, and was manured in the drills. The crop ripened in 130 days. The yields were:—

1. Early Rose Potato, unmanured—1 ton 12 cwt.
2. Do. do., manured—2 tons 10 ,,
3. Up-to-Date Potato, unmanured— 12 ,,
4. Do. do., manured—2 tons 18 ,,

The crops were all poor, but nothing better could have been expected from land which, on drying, is as hard as a macadamised road and does not split. This hardness was probably the result of the cementing action of iron compounds acted on by the rains.

Forage crops.

Forage crops are now receiving a due amount of attention. Oat hay can be very successfully grown, and lucerne gives a continuous supply of green food. Egyptian clover is unable to withstand the dry season, but can be counted on to give a yield of about 5 tons of green material from one cutting. Plots have been planted out with the following plants:—

White Clover.
Digitaria horizontalis.
Andropogon sp.
Setaria imberbis.
Lucerne.
Reana.
Saltbush.
Paspalum dilatatum.

The three last-mentioned are growing very satisfactorily. The native white clover is likely to prove a particularly valuable forage plant. As the seeds become available, the number of plots of native grasses will be gradually extended.

Fibre Plants.

None of the fibre-yielding plants have yet reached the age when conclusions as to their ultimate success can be deduced. Ramie fibre plants are growing but slowly on dry land; sisal and Mauritius fibre plants are growing apace, and the indigenous fibre-yielding banana finds suitable conditions for its growth on the lands near the river.

Oil Plants.

The Nairobi climate is too cold for the sesame plant, and the enemies of the rape make it impossible to cultivate that crop. The first crop of castor oil proved a financial failure, and in the second year the plants produced no seed worth harvesting. This is not a crop which a European can successfully cultivate, and, if plants are required for giving shade, the pigeon pea is in every way preferable.

Rubber Plants.

Various rubber plants have been tried at Nairobi without any great success. Castilloa seed germinated, but the seedlings died off; Para seed failed to germinate. The year old Ceara rubber plants are thriving, and there are a large number of slow-growing Landolphia seedlings. These last mentioned will be ready to plant out in March.

Vegetables.

Only the following vegetables are considered worthy of mention:—

Jerusalem Artichoke.

Presented by Messrs. Sutton & Son.—The tuber sets, eight in number, were received through parcel post, and were immediately planted on the 13th January, 1905. The sets were planted one yard apart in soil varying from fairly dry to wet. Seven of the tubers grew and reached maturity, the eighth failing to sprout. To protect the plants, old wicker-work potato baskets were put over them, and saved them from the attack of porcupine and other mischievous animals. The plants grew quickly, but did not produce flowers, and the stems never reached a greater height than two feet. When the leaves began to fade and the stems to weaken on the 8th May, the crop was lifted.

After cleaning, washing, and drying, the yield from the seven plants was 14 lbs. This would work out at about 4 tons per acre. Certainly not a large crop for artichokes, but if the soil had been equally suitable for all the plants, and the plants two feet apart, the yield would have been twice as much. The plants growing in the drier situation gave much the better result.

Rhubarb.

Rhubarb seed was sown on the 29th July, 1904, the seeds germinating easily and fully. On the 20th January, 1905, the seedlings were transplanted into a well-manured bed, and each plant was surrounded by an old wicker basket. The plants, except when planted in a too wet situation, grew well, and in April yielded a good return of very fair rhubarb. Since the above date the plants have continued to yield a supply of rhubarb. A second lot of seed gave seedlings, transplanted after one month. Good stalks were obtained after six months.

New Zealand Spinach.

New Zealand spinach is worthy of attention on account of its producing a large amount of green vegetable on the driest, poorest soil.

Asparagus.

Asparagus promises to be very successful, and to produce good stems in the second year.

Fruit Trees.

During the last year fruit trees have been imported from England and South Africa. It will necessarily be a few years before any definite results are obtained. Stock trees have been introduced, and it is hoped in a few years that there will be a crop of fruit trees available for distribution. The least success has been got from the banana, pineapple, raspberry, currant, gooseberry, peach, and cherry. The apple, orange, apricot, loquat, mango, quince, and papaw are in a healthy state. The fruit trees presented by Sir Edward Buck, K.C.I.E., coming from an altitude of about 4,000 feet, are so far more promising than the trees got from either England or South Africa.

The seeds of trees should only be planted after the rains in a low situation. When planted before the rains the heavy downpours are apt to wash out a large proportion of the seeds and seedlings. Greatest success has been obtained with seeds planted in May and June; in the hotter months, unless the seed is always sown under shade, the land is apt to dry up too quickly. The larger seeds are soaked in water from 24 to 48 hours before sowing, and require no shade. Eucalyptus and other small seeds should be shaded until germination is complete.

No tree on the farm is yet as much as two years old, and it is therefore impossible to arrive at any conclusion as to their ultimate success. The following, however, have so far done remarkably well :—*Eucalyptus globulus*, *E. rostrata*, *Acacia decurrens*, *Cedrela serrata*, *Widdringtonia, Whytei*, *Thuja*, *Ficus glomerata*, *Grevillea robusta*, *Dalbergia sissoo*, *Erythrina*, *Aleurites triloba*, *Cassia fistula*, *Bauhinia*, *Spathodea* and *Cassia florida*. *Inga dulcis* and *Duranta Plumieri* form excellent hedges.

Houses.

Cattle sheds and enclosures are the only buildings which have been erected during the past year. An open circular yard of 120 feet diameter, with 100 by 10 feet roofed over, cost Rs. 180. This yard, with its lean-to roof, has proved very satisfactory. The cattle can either take shelter or not as they like, and, being large, it keeps clean while the manure is collecting. The sheep and goats are also kept in a partly covered-in enclosure. A good enclosure is absolutely essential to the well-being of the stock, to protect them from wild animals and high cold winds. A wooden pig-house, 280 superficial feet, costs Rs. 180 to erect. As a general rule in East Africa all young stock is housed by the natives.

Stock.

It is satisfactory to be able to record the very much improved prospect of stock-rearing on the farm. Without stock there is no manure, and without manure only poor crops can be raised. With the exception of the goats, the live stock returns are all that could be expected.

The stud animals have been much more in request last season. In fact the Polled Angus and Hereford bulls have had more work than would under ordinary circumstances be desirable. However, the lives of all imported stud animals are so uncertain that while alive they must be fully utilised. Both bulls have kept in good health, although neither has ever been allowed to run on pasture. Of the cows sent to the bull, there are a good number sent for re-service, but the farm cows are very seldom re-served. No doubt the re-service of strange cows is necessitated by the long distances from which the cows are sent and the rather rough way in which they are driven. The Arab stallion has fathered some very good foals, and his services have increased in number. The fowls have done indifferently well, 15 hens giving about 800 eggs in the year. With seven cows milking, a yield of about 980 lbs. of milk is obtained per month. Each cow therefore gives approximately 4½ lbs. of milk a day besides suckling its calf. One half-bred Polled Angus bull was sold for stud purposes, and there are still of half-bred stock, three bulls, two heifers (Polled Angus), and two bulls and two heifers by the Hereford bull.

Generally, the half-bred stock are better grown and healthier than the native calves of the same age. Thus :—

—	Age in days.				Remarks.
	40	80	120	160	
	lbs.	lbs.	lbs.	lbs.	
Native heifer calves	46	69	87	101	Average of 3 calves.
Half Hereford heifer calves ...	—	108	132	175	" " 2 "
Native bull calf	—	78	91	—	1 calf.
Half Hereford bull calf	77	94	118	141	Average of 2 calves.
Half Angus bull calf	68	84	107	145	" " 3 "

With a herd of 69 cattle, young and old, the total losses for the year have consisted of one cow, shot on account of an abscess in its udder, and one calf stolen. As Rs. 8 were recovered on the stolen calf, worth ordinarily Rs. 30, this cannot be considered a dead loss.

For the nine months during which the cows have been on the farm their record is as follows:—

DEBIT:

	Rs.
29 cows bought	2,900
Attendance	144
Housing-Manure	—
Total ... Rs.	3,044

CREDIT:

	Rs.
28 Cows	2,800
4 Heifers	280
22 Native calves	440
9 Half-bred cows	270
6 Native calves sold	65
1 Half-bred Angus	40
Milk	470
Total .. Rs.	4,365

—leaving a credit balance of Rs. 1,321 for the keep of 29 cows for nine months, or proportionately Rs. 1,640 for the year. This is at the rate of Rs. 56, or nearly £3 15s. per cow. The half-bred stock has been valued at only Rs. 30, to leave Rs. 10 on the service of the cows by a pure-bred bull. A young half-bred bull is worth about Rs. 40, and a year old heifer about Rs. 120.

The cows were selected with a view to their size and suitability for crossing rather than for their milking properties, and the yield of milk is therefore below the general average for native cows. Further, to give the half-bred stock a fair chance, the cows are only milked for from two to three months.

Goats were the one class of stock which appeared to be immune to all disease. However, in November pneumonia appeared in the farm herd, and in two months 48 animals died, nearly half of the whole stock. Until this outbreak of contagious pneumonia not a single goat had been lost, and they appeared to be one of the most profitable classes of stock. The herd of goats shows a total loss of Rs. 40 for the year. The diease unfortunately carried off the Cashmere ram. This ram was the only imported animal which died on the farm during the past season.

The native sheep lived well, but owing to only being served by a Welsh ram the number of lambs was below the average. More than half the sheep were only about four months on the farm, and the 38 lambs may therefore be taken as the produce of 70 sheep in eight months. The sheep have left from Rs. 1½ to Rs. 2 per head.

During the season two sows have given 29 young pigs. Unfortunately six were lost through the attendant taking the stock salt and feeding it to the young pigs. The services of the imported boar have been much in request.

The stock on the farm 1st January, 1906:—

Milk cows	29
Heifers	6
Heifer calves	10
Half Polled Angus heifer calves	2
Half Hereford heifer calves	2
Bull calves	2
Half Polled Angus bull calves	3
Half Hereford bull calves	2
Bull yearlings	6
Working oxen	10
Total	71

Sheep	93
Goats	46
Pigs	18

This stock grazed an area of about 175 acres.

ANDREW LINTON.

APPENDIX IV.

REPORT ON THE GOVERNMENT EXPERIMENTAL STATION, MERITINI (MAZERAS) FOR 1905.

This station is situated in a fairly well-sheltered locality about 3½ miles from the Government Offices at Rabai and about six miles from Mazeras Railway Station. It is most easily reached from Mombasa by boat, as it is only 1½ miles from the Bandarini Creek.

The soil at and in the immediate neighbourhood of the Experimental Station is a light-coloured, rich sandy-loam, containing a good percentage of humus.

So far the rainfall of the district is not known, but it would appear to be fairly abundant. The rainy season proper commences about the beginning or middle of April, and extends to the end of July. The lighter rains are from the middle of September to the middle of November. These observations have only extended over one season, and observations will be needed for several years to obtain reliable results.

Abundance of water is always procurable for drinking, watering of plants, and general purposes in the Mamba River, adjoining the Experimental Station.

Vegetation in the district is of a splendid and vigorous nature. Very fine specimens of Albizzias, and Ingas or Pithecolobiums are common. The latter are considered valuable for shade purposes. They also have the property of taking less nourishment out of the soil than most trees. Gum copal and other good trees flourish in the locality. *Panicum maximum* (guinea grass), so extensively grown in the West Indies and other places as a green fodder, does well in a wild state. Cocoanut palms are also thriving and bearing good nuts.

Broadly speaking, the soil, vegetation, climate, and general aspects of the neighbourhood of the Experimental Station are typical of parts of the West Indies, where the cocoa or chocolate tree *(theobroma cacao)* and many other valuable commercial products are most successfully grown.

There are hundreds of acres of splendid land suitable for tropical products, such as :—Cocoanut *(cocos nucifera)* and general fruits of the citrus family, including the orange. Cotton is promising, as is also sisal hemp *(agave rigida var. sisalana).*

The tropical plants recently introduced from other countries, and now under trial at the Experimental Station, are remarked on later on in this report.

With sufficient energy and capital, and a reliable labour supply, this part of the country would become in a few years' time very valuable. Unfortunately, labour is rather difficult to obtain. The Wanyika have no inclination to work for other but themselves, and then their occupation is principally that of collecting "tembo" (native beer), of preparing a certain amount of copra, and of making a few "makuti" leaves (thatch) and baskets. They cultivate a little of the land, but not more than is sufficient to give them a scanty supply of food. By far the greater part of the best land in the district is claimed by the Wanyika, but as not a hundredth part is put to any practical use, the acquisition of this valuable land could probably, if desired, be easily arranged for by the Government.

At and around the important Church Missionary Society's Station of Rabai there are many good native plantations, fairly well cultivated and containing the usual crops, *e.g.*, sweet potatoes, cassava, maize, bananas, pigeon pea, beans, &c. The missionaries are encouraging the people to give greater attention to their shambas, and cotton growing has been taken up with encouraging results. There are several fine healthy orange trees of a good age at the Rabai Mission Station that produce fruit of a large, sweet and juicy nature. Pine apples thrive well, as do all bananas, papaws, &c. The foregoing remarks are made with a view to showing the great agricultural capabilities of the district.

At the Experimental Station general tropical nursery work is made a strong feature, and from time to time seeds and plants of new and valuable products are being received from other countries with somewhat similar climatic conditions. Attention is also given to the raising of local plants of value for more extensive planting.

As a source from which supplies of plants can be obtained for planting in the coastal regions or other favourable places in the Protectorate, the nursery now being established should prove of great assistance.

The area of the Government Experiment Station is about 10 acres. It is conveniently laid out into plots with roads about 10 feet wide to facilitate transport.

Buildings.

A house has been built for the use of the Assistant Agriculturist. It is about 20 feet by 12 feet, divided into two rooms with a verandah on both sides, and ends 6 feet wide. The posts and rafters and other material are all native. The sides and ends are of wattle and mud, and the roof of thatch. A house of similar proportions and constructed of similar materials has been built for the use of the overseer in charge of the station. These houses are airy, cool and comfortable.

A house for the storage of crops, as they are reaped, has also been built of native material.

Galvanized iron and other necessary material has been purchased for the tool house.

A certain part of the station has been set apart for labourers, and the men are being encouraged to build their houses here and cultivate gardens, so that a regular supply of labour can be assured.

General Crops.

These were not as successful as could have been wished, and the partial or total failures were due to the newness of the land and unavoidable lateness in sowing the crops. Another season the land should be in a better condition to plant, and the experience gained in regard to the proper time to plant will be of great service.

Mountain Rice.—This crop proved successful, half an acre being planted on the 31st March, 1905, and reaped on the 16th and 28th August; 15 lbs. of seed was planted, and 140 lbs. of good rice reaped. The plants will produce another crop in the early part of 1906. The land was thoroughly prepared, and about six seeds dropped in small holes about 1 foot apart each way. The seed germinated freely, and the plants grew well and healthily. This is a good crop for a considerable area of land in the district, particularly in such soil as is retentive of moisture, though not water-logged.

Maize.—A large plot of "Hickory King" maize was planted at the end of May. Both germination and first growth were good, but the crop failed to mature. Newness of land and lateness of sowing were undoubtedly the causes of failure.

Cuzco Maize.—A plot of this planted at the same time as the above also germinated well, but the growth was weak. It is likely that under any conditions Cuzco maize will not prove a success in the coast districts.

Beans ("Canadian Wonder").—A plot ½ acre in extent was planted at the end of April with 30 lbs. of seeds. The crop was reaped on the 22nd July, and totalled 60 lbs. The growth of the plants was generally of a weak nature. This crop does not succeed as well in the hot coast region as it does at Nairobi and other places.

Cotton (Egyptian).—Ten lbs. of seed of this cotton was planted in a ¾ acre plot in the middle of May. The rows were 3 feet apart, and the distance between the plants 1½ feet. The young plants were in many cases bitten off by a species of fly, but afterwards there was no trouble and the trees were vigorous and healthy. The first picking was made on the 7th October. Up to the end of November 1½ cwt. of seed cotton had been gathered, and the trees are still thickly bolled. The cotton is of good colour and fair staple. There is promise that Egyptian will thoroughly succeed in the district, but it needs to be planted at least a month earlier.

Cotton (Sea Island).—Half an acre of this cotton was grown in the middle of May, but lateness of sowing seriously interfered with its success. A first picking was made on the 7th October. The colour was fair, but staple short. Sea Island is worthy of further trial, but it is not likely to succeed as well as the Egyptian kind. Up to the end of November about 60 lbs. of Sea Island cotton had been gathered.

Facilities for ginning and baling cotton are provided at the Government factory at Kilindini, and easy means of transport are by way of the Bandarini, previously referred to.

Tacca Pinnatifida.—This plant produces "wanga," or native arrowroot, and grows wild in the neighbourhood of the Experimental Station and in many other places. The Wanyika prepares a certain amount of this arrowroot for their use. A plot of ¼ acre is under trial at the station, so as to test its bearing qualities under cultivation.

Ten pounds of this starch were prepared for the Nairobi Agricultural Show, and about 30 lbs. have been likewise prepared for the Liverpool Colonial Products Exhibition. The colour is excellent, and in every way the starch compares most favourably with St. Vincent arrowroot, obtained from *Maranta arundinacea.* An effort will be made to find out the market value of wanga in England, and, if the result is favourable, a large quantity could be annually exported.

Bananas.—About two acres of the gently sloping land adjoining the river have been planted in bananas, about 12 inches by 12 inches each way. This has been done to provide temporary shade for cacao, nutmegs, cinnamon and other tender plants already introduced.

Sisal Hemp (Agave rigida var. sisalana).—Four hundred suckers were received from the Government Farm at Nairobi, and planted 8 inches by 8 inches square. The suckers are thriving. There is an enormous area of land at the coast, and in other districts admirably adapted to sisal hemp.

Rubber.—In the forests adjoining [illegible] Experimental Station, species of Landolphia are fairly common. [illegible]ts of 1,300 Landolphia have been raised in the nursery, and it is intended to plant these out in the forests referred to during the coming season.

Lagos Rubber (Funtumia elastica).—A consignment of seed of this tree was received from the Botanic Station at Lagos. It germinated well, and the young plants have grown very freely. Nineteen were permanently planted out in November of the year under review.

The same species of rubber tree has recently been discovered in Uganda, and a parcel of seed has been received from the Department of Agriculture and Forestry there. This seed also germinated freely, and the plants are healthy. Upwards of 2,000 Funtumia plants will be available for planting during the next rainy season. It is intended to plant out several acres of this tree near the station. If the Funtumia should succeed there, as would soon be seen, large areas could be dealt with.

Para Rubber (Hevea Braziliensis).—Plants of this most valuable rubber have been introduced from Ceylon and planted out. They appear to be doing well. This tree delights in abundance of moisture. It would probably thrive well in the Ramisi district, south of Mombasa, where the soil rainfall and general humidity are seemingly all that could be desired for the successful growth of Para rubber.

Central American Rubber (Castilloa elastica).—It is generally conceded that this tree will succeed under less humid conditions than that needed for Para, so that its growth in Mazeras district is practically assured.

Ceara Rubber (Manihot glaziovii).—Trees of this rubber are already established at Mombasa and Rabai. Though the market value is less than of all other rubbers, it is nevertheless considered a fairly profitable investment in some places.

Among other plants imported from Ceylon should be mentioned cacao (*theobroma cacao*), nutmeg (*myristica fragrans*), and cinnamon (*cinnamoum zeylanicum*).

It is specially hoped that the cacao plants will do well, as there are numerous sheltered little valleys in the Mazeras and Rabai districts that appear well adapted for this cultivation. The market for cacao is an ever-increasing one, and where the tree thrives the industry is highly remunerative.

Vanilla (Vanilla planifolia).—Upwards of 200 strong cuttings were obtained from the Government Experimental Station at Zanzibar. The plants are making good progress.

Mahogany.—A good batch of plants of this valuable timber tree was raised from seed received from the West Indies.

H. Powell.

APPENDIX V.

REPORT ON THE GOVERNMENT EXPERIMENTAL FARM AT MAKINDU FOR 1905.

Makindu Farm has experienced the usual East African vicissitudes of fortune. The farm was initiated to investigate the possibilities of the enormous stretch of country which may be termed the central dry lands. This district is characterised by a hot climate, with little available water. The soil is usually light and of no great depth, the surface vegetation being hard dry grasses and thorny dense bush. In the central dry lands there is no native population, except on the few scattered hills to the north and south of the railway. The country therefore offers scope for European enterprise if profitable undertakings can be discovered.

The district is further characterised by the abundance of sanseviera fibre, indigenous in the bush from Makindu to Voi, a stretch of over 100 miles.

Makindu was chosen as the point for investigation because of the presence of a good water supply, and because of the comparatively healthy reputation it possessed for both men and animals. As a matter of fact Makindu Farm, during the wet season, has proved very unhealthy. The farm lies only three miles from the railway station ; at the station tsetse fly this season caused no deaths, at the farm all the oxen were lost. Again, the progress of the farm was for some months absolutely stopped through the constant illness of the farm superintendent and labourers, in consequence of which both the crops and stock were neglected, and the farm had no chance of success. From July onwards good progress was made, but at the end of the year it was decided, owing to the unhealthiness of the site, to close the farm.

The aim of the farm was to investigate the suitablility of the central district for :—

(1) Stock rearing ;

(2) Production of food and seeds ;

(3) Production of fibre, rubber, &c. ;

(4) Growth of fruit and other trees.

The land in question is generally too dry for the successful growth of unirrigated crops and plants, but sanseviera, sisal and Mauritius fibres and Ceara rubber should not require irrigation, and if they can be successfully cultivated, the area of suitable land is unlimited. In the river beds Landolphia rubber is often found, but its occurrence is too limited to give the vine any important place in the natural products of the district. On the other hand, the extraction of the sanseviera fibre is being undertaken on a commercial scale. The fibre plant probably is workable over many thousand square miles, and the fibre extracted is worth, roughly, £30 per ton.

Houses.

The farm buildings are all of the galvanized sheet iron type. This kind of building is not the best suited for the housing of stock, but they are quickly erected and are vermin proof. Log houses could not be built, owing to there being no durable timber in the neighbourhood, and stone buildings take too long to build in the early stages of the work. The farm was not fenced. A good stone house was built for the farm superintendent.

Labour.

Makindu lies in the centre of the long, unpopulated tract of country traversed by the railway. There is therefore no available local labour, although about twenty miles distant there is a large Wakamba population. These Wakamba are, however, the most backward natives found near the civilised track. A few men have laboured on the farm from time to time, but a regular supply could not be relied on, and it has therefore been necessary to employ the coast labourers who appear in search of work.

Except from February to June, sufficient labour was always obtainable. During the above-mentioned period the men employed suffered severely from fever, and the place was in bad repute.

Stock.

It is scarcely possible anywhere in East Africa to farm on economical lines without stock. Oxen are required for work purposes, and sheep or goats for the production of at least as much flesh as is required for home consumption. Further, grazing is so cheap that it should be utilized to the fullest possible extent. The stock returns obtained are at first scarcely reliable, as the stock bought is not acclimatised and many of the animals often arrive infected with disease.

The farm started with six work oxen, which did good service and throve well for ten months, when after the heavy rains they all contracted tsetse fly disease and died in May and June. In July four more oxen were bought, and those also died.

In March 60 native sheep were bought in the Highlands and transferred to Makindu. Their record was as follows :—

March 1st	Stock	60
	Bought	0
	Born	45
	Total	105
	Sold	37
	Dead	25
	Total	62
January 1st, 1906	Stock	43

Of course, it would be impossible to raise sheep if this high death rate continued.

Goats did exceedingly well at Makindu, and there would have been a nice flock if the Wakamba had not stolen 58 of them in the month of October. From October, 1904, to October, 1905, their record was as follows:—

October, 1904 … …	Stock	19
	Born	16
	Bought	0
	Total	35
	Sold	6
	Dead	1

The number born was low on account of the females not being served until the arrival of the Cashmere ram. The Cashmere goat and merino ram both died.

It is because of the negative results which have been obtained at Makindu and which are typical of the results of the whole low country from Makindu to the coast that further investigation of the possibility of retaining stock is essential.

Crops, General.

The crops which have been produced have usually given good yields, in spite of the many enemies with which they have had to contend. Birds are proving very destructive to the grain crops, millet, maize, &c., and the cockchafer grub attacks every crop. The cockchafer probably deposits its eggs in November, and the damage done by this insect might in a great measure be avoided by planting the crops early in October or late in December.

While maize and cotton have given very satisfactory results, beans have never done well. The reason for this failure has not yet been discovered, but as the fact that the crop is not a success has been established, experiments should be directed towards obtaining an explanation of the failure. So much preparatory work has had to be done in erecting houses, making roads, canals, &c., that the area under cultivation is still only about 15 acres. Of this area, about three acres are planted with various fibre plants, two acres with lucerne, and the remaining 10 acres with other crops. The land is cropped at least twice per year.

Cotton.

Egyptian brown cotton was sown at Makindu on the 1st October, 1904. The seed was soaked for 24 hours before sowing in moist land on ridges 30 inches apart, the plants being 20 inches apart in the rows. Three seeds were put in each hole, and 12 lbs. was found sufficient seed to sow one acre. No manure was applied, and the crop only got one good hoeing, but was hand-weeded several times. The crop was irrigated in all six times, abnormally heavy rains falling in November, December, March, and April.

The first cotton was ripe about the middle of February, but owing to the rains breaking, the further ripening was greatly retarded and many of the nearly-mature bolls were shed and new wood was produced. The harvesting was carried out as follows:—

June 10th … …	806 lbs. per acre.
July 12th … …	284 ,, ,, ,,
July 27th … …	124 ,, ,, ,,
August 21st …	260 ,, ,, ,,

The total crop was 1,474 lbs. per acre. The plants were still bearing after the last picking, but it was considered advisable to cut back the crop in order to give the rather weak plants a rest.

Cotton should be sown about August in order that the crop may ripen in the hottest weather before the spring rains. The heavy autumn rains no doubt delayed the ripening of the above crop. This rain was quite unexpected and in opposition to all previous experience. In 1903 the rainfall at Makindu was 18·07 inches; in 1904, 38·27 inches; in 1905, 28·81 inches.

The cotton was sown on fresh land, and the expenditure of clearing the bush, &c., makes it impossible to allocate the expenses with any degree of accuracy. The cost of harvesting was ¼*d*. per pound.

Upland American cotton was sown in April, but at the end of seven months it was decided to destroy the plants without taking any crop. The variety of cotton showed spasmodic breaks of satisfactory growth, but the crop when it should have ripened never showed any signs of yielding a fair result. It is probable that the soil was unsuited for the satisfactory growth of this variety of cotton.

Maize.

American maize was sown on the 23rd November, three seeds in holes 20 inches apart. The crop chiefly depended on rainfall for water, but three irrigations were given. The crop grew well and suffered from no disease, being harvested on the 22nd March after a period of growth of 120 days. The crop yielded at the rate of 1,900 lbs. per acre, of a value of Rs. 48. The cost of cultivation was estimated at Rs. 40, but this includes the heavy cost of the first clearing of bush land.

Too much reliance must not be put in manurial experiments on unequal fresh land, but the following results are interesting:—

Hickory King Maize, sown on ridges 2 feet 6 inches wide, with the plants 20 inches apart, was harvested on the 14th September, 1905, after a period of growth of 145 days. The crop was grown partly by irrigation. From the manured area the yield was 2,478 lbs. of grain per acre, and from the unmanured 1,580 lbs. The manured area therefore produced nearly 900 lbs. more grain per acre than did the unmanured. The whole crop received but indifferent attention, and suffered considerably from being grazed by game.

Dwarf Bean.

Dwarf Bean was sown 6th October, 1904, on the flat, in rows 14 inches apart, the plants 9 inches apart in the rows. The crop grew exceedingly well, but suffered much from the heavy December rains which fell when the plants were nearly ripe. The crop was harvested on the 20th December, and yielded at the rate of 10 cwts. per acre. It would be advisable to sow this crop either in July or December.

Dwarf Beans sown in July, 1905, ripened after 74 days, having been irrigated twice. The yield was 588 lbs. per acre of beans, weighing 64 lbs. per bushel. The value of the crop was about Rs. 15 per acre.

Barley.

Egyptian Barley was sown broadcast on the 1st October, 1904, at the rate of 120 lbs. of seed per acre. The crop grew well, but suffered severely from birds. At the harvest (7th January, 1905) 1,150 lbs. of grain per acre was reaped. The difficulty of thrashing cereal crops makes them generally unsuitable for cultivation on a small scale.

Millet.

Millet was sown on the flat in moist soil, three seeds in holes two feet apart. Birds and aphidae did some damage to the crop, but the yield was nevertheless good. The period of growth was 135 days, the crop being harvested on the 13th March, 1905. The yield of grain was 2,800 lbs. per acre. The local value of this is about Rs. 70. The cost of cultivation was estimated at Rs. 40 per acre.

Potatoes.

Potatoes ripened in 90 days, having been grown partly by irrigation. The crop obtained was 7 tons 19 cwts. per acre of good quality. Another crop sown 24th December, three months later than the above, proved very unsuccessful, the plants suffering very severely from the attack of enormous quantities of the grub of the cockchafer. The crop was only 1 ton 6 cwts. per acre. On land just broken from thick bush there is always a danger of the crop being destroyed by grub, and at Makindu on the fresh lands the white ant has proved very destructive.

Lucerne.

Lucerne has proved a very successful forage crop under irrigation, and it is expected that the climate will be suitable for the production of seed. At first, owing to the land being new and dirty, a good deal of weeding was required. Ninety days after planting, the yield of green fodder was 5 tons 15 cwts. per acre.

Fenugreek, Field Beans and Rice.

Fenugreek, field beans and rice were absolute failures, the first two succumbing to the attack of white ants and the last dying out completely, owing probably to the lightness of the soil. Rice was sown by the cultivators at Kibwezi (13 miles from Makindu), but there also it proved a failure. The reason for this is probably that the drainage in light soils carries away all the available plant food.

Sesame.

Sesame was sown 27th April, 1905, and grew well until fruiting had begun, when the crop was practically destroyed by aphidae. The few surviving plants ripened 5th August, 1905. Sesame gives every promise of being a successful crop in this district.

Vegetables.

Various vegetables were grown at Makindu, but were without special interest, except that water melon seemed to find a suitable climate. Fruit trees, except papaw, have not grown quickly, but as all the fruit plants are still young, it is, at this stage, impossible to give any definite results. Bananas imported from the West Indies and Zanzibar have grown rapidly, but pineapples have made no great progress. Grape vine and fig ought to be a success, but the young plants look none too healthy. On the strength of the wild date palm being found growing in the river, cultivated palms were introduced, and some have already started to shoot. The citrus trees and mango look healthy.

Timber Trees.

The indigenous trees of this scrub district are usually of little use for building purposes, and special attention is therefore given to the cultivation of good or fair timber trees. *Albizzia lebekh* makes rapid growth, and *Poinciana regia* is making satisfactory progress. *Cassia florida* and *Acacia decurrens* will, it is hoped, prove successful.

Rubber.

The only rubber likely to succeed at Makindu is the Ceara. Young plants and seeds of the Ceara have been planted, but the growth made is so far very unsatisfactory. However, when the plants are well established they may begin to thrive.

Fibre.

Sisal fibre plants are making good growth, and Mauritius fibre is healthy. Areas of *sansevieva guinensis*, *S. ehrenbergii*, *S. zelanica* have been planted both with bulblets and rhizomes. As opportunity permits other Sansevieva species will be planted at this station. It is most desirable to ascertain what, if any, species of Sansevieva will repay cultivation, and what are the responsibilities of growing such fibre plants without shade.

ANDREW LINTON.

APPENDIX VI.

REPORT ON MALINDI COTTON FARM.

The results of the experiments carried out at Malindi in 1904 showed the necessity of further experimental work and of establishing a seed farm.

The seed imported as best Egyptian threw up such variations from true type that the establishment of a seed-producing station, where quality could be preserved and seed produced for distribution capable of yielding crops true to type, became imperative.

A piece of lowland, apparently resembling in its alluvial nature the soils of the Nile delta, and adjoining the field of last year's experiments, was therefore cleared for planting with fresh imported seed. The land was thickly covered with low forest of great density; the kind of virgin soil always chosen by natives of the district for new fields.

The confidence gained from the results of the preceding season induced me at the same time to divide my work between the experiments at the seed farm and the furtherance of cotton-growing among the natives of this and the Bajoon Coast districts, in addition to the production of other experimental crops.

The result of pushing the industry among the Malindi native planters, who are for the most part Arabs, has been eminently satisfactory; and the labour of instructing them as to the method of cultivation, distributing the seed, inspecting their crops, purchasing and consigning their numerous small deliveries of the produce, has been amply justified.

From 400 lbs. of Egyptian seed distributed in the neighbourhood, 7,444 lbs. of seed cotton of good, fair long staple quality was received by 31st December. Bearing in mind that in the preceding year not a particle of cotton was produced for marketing or export, this result is gratifying.

The first pickings were purchased at the rate of Rs. 3 per frasila (35 lbs.) of seed cotton, equivalent to 4*d.* per pound of lint, the lowest price at which the natives could be expected to venture upon a new crop. This price was at a later date reduced to Rs. 2 12a. per frasila, the equivalent of nearly 3¾*d.* per pound of lint, at which price it is expected that private purchasers will in future be prepared to purchase, the cotton being now worth from 8*d.* to 8½*d.* per pound in Liverpool.

A considerable business may be confidently expected to spring up immediately, as the natives express their intention of largely increasing the area next year.

With regard to the experiments, the difficulty of working virgin soil consisting of heavy alluvium was accentuated by the abnormal season.

We have only extremely meagre records in this country ; and it may be well said of this climate that it bears such an element of uncertainty combined with its apparent regularity of season as to render it dangerous to the uninitiated.

Thus, with the intention of being well in advance with the preparation of the new land, clearance was commenced as early as October, 1904, the time when the picking of that year's crop was in full swing. 5·72 inches of rain fell in the following month, however, and effectually destroyed our work by rendering abortive all our attempts to burn the out bush, whilst at the same time it forced up a luxuriant new green growth upon the bared stumps. The calculated heavy cost of clearing this dense bush was undertaken for the value of a pure seed crop, produced upon land which may well be expected to retain the quality of the staple. Clearance had now to be done a second time over, and, owing to my frequent absence at the coast and elsewhere building the seed store, house, cotton store and nursery, during which the work had to be left to native supervision, the costs which would normally attach to the clearance and cultivation of the land were considerably overstepped.

Eventually hoeing had to be carried out before clearance was complete, the roots and stumps being left in the land for removal at some future time. In considering the yields of the crop grown upon new land, some deduction should certainly be made for the area taken up by these stumps and the shade of the green growth which sprang from them.

At the time hoeing was in progress we felt the full force of the insufficiency of hand labour upon the heavy soil, the cattle having been attacked by fly on the first appearance of rains without our having any opportunity of working them, although they were trained.

The deep black retentive alluvium, which is the most lasting in richness of any soil, became hard baked in dry weather, so that the hoes hardly penetrated more than three inches, while wetness rendered it unmanageably sticky for this form of implement.

It is not difficult therefore to explain why so few plants appeared after sowing, necessitating further and costly re-sowing operations.

The fields were found afterwards to be more or less water-logged by the infiltration of water from a swamp hidden in the impenetrable bush beyond. This could easily have been remedied, had it been anticipated, by thoroughly ridging the land before planting and connecting the furrows with a few open water channels, a poor attempt at which was afterwards made.

The facts remain that a series of misfortunes, the effects of which could certainly have been partially averted had we previous experience of similar lowland in similar weather, resulted in exceptionally poor yields.

The results are nevertheless valuable for comparison ; and good pickings of very long fibre were obtained, from which the seed may in all probability be relied upon to have retained the quality of its imported ancestor.

The monthly rainfall over the period from October, 1904, to September, 1905, inclusive, is supplied in the following table:—

—	1904.			1905.								
	October.	November.	December.	January.	February.	March.	April.	May.	June.	July.	August.	September.
Rainfall, monthly inches.	1·54	5·72	0·59	0·25	0·00	3·15	12·15	13·81	5·25	4·40	2·30	5·35
Field number ..	—	—	—	—	—	I.	2A 2B	3 7	4 8	— 9	— 10	— 11
Field per acre of cotton seed to 31st December.	—	—	—	—	—	Lbs. 430	274 Average.	200 Average.	113 Average.	To date. Nil	Nil	Nil.

It should be borne in mind that the object of this season's work was not only the production of a pure true-to-type seed, but to ascertain:—

(*a*.) The best season for planting.

(*b*.) The suitability of different soils.

(*c*.) The best kind of cotton to grow.

(*d*.) The value of permanent cotton crops.

(*e*.) The costs of cultivation.

The experiments therefore embraced a wide field of work. The new land had to be divided into various sized fields according to the amount we were able to break up and sow each month.

Last year fields were in part re-sown, part left standing, and on one part the cotton plants cropped in 1904 were cut down to within one foot of the ground and allowed to produce new branches on the old stock.

The results of this varying treatment of the preceding year's fields are summarised in the following table, and serve to answer the question as to the value of growing Egyptian cotton on the same land a second year.

—	Field I. of 1904.	Field II. of 1904.	Field III. of 1904.
Details of treatment ...	Plants of 1904 season cut down to 1 foot from ground.	Plants uprooted and field re-sown.	Plants thinned out to 2 feet 6 inches by 3 feet and left to crop.
Yield per acre 1st crop, 1904.	655 lbs.	444½ lbs.	799 lbs.
Yield per acre 1st crop, 1905.	200 „	227 „	58 „
Cost per acre, 1905 ...	Rs. 13	Rs. 17 4 0	Rs. 6 12 0

The yields of the new sowings upon last year's fields were similar to the yields upon the newly broken up low land, in being much smaller than those of the first crop in 1904, a fact which compels one to observe that the small yields were due not only to poor management of the new land, but to the effects of the season.

Pursuing this point, it should be observed that the latter part of May was exceptionally dry for that month, and the weakened plants were noted to become severely attacked by aphidae. Comparing the rainfall over the three general planting months, viz., April, May and June, of the two years, the record is 13·23 inches more in 1904 than in the same period of 1905.

Great interest attaches to Field I. of 1904, which has been described (*see* Report for 1904, Africa No. 2/05) as consisting of light, free-working red hill soil. On this field 200 lbs. of cotton were produced at an expense of Rs. 13 per acre. A sample of this cotton has been recently valued by the British Cotton Growing Association at 6¼*d.* to 6½*d.* per lb. In other words, 66 lbs. of cleaned fibre valued at £1 13*s.* 6½*d.*, were produced at a cost of 16*s.* 4*d.*

Field II. was cleared of its last season's plants, the residue of which was not returned to the fields. The difference in produce between this year's and last year's first crops cannot, however, be taken to fairly represent the loss to the soil from the removal of one crop, as the general diminution is evidently the effects of the season.

On Field III. the last season's plants were merely thinned out to allow 2 ft. 6 ins. by 3 ft. to each remaining plant, and the soil surface hoed. The resulting crop is little more than one-fourth of the weight of either of the other two fields, while the plants are now reduced to straggling skeletons. Comparing this with Field I., the value of cutting down the plants to encourage the growth of new branches springing clean from the main stem is obvious.

It was the earnest request of the British Cotton Growing Association that experiments upon the comparative suitability of different kinds of cotton should be undertaken.

While, however, it was not desirable to have more than one variety on the seed farm where one of the main objects was to produce pure seed, the small vote granted for the experiments did not allow the taking in hand of another farm at a sufficient distance.

A piece of the land presented to the Department for the purpose of a house, store, and nursery at the seaside 4 to 4½ miles away was therefore sown with comparative plots of Egyptian and Sea Island cotton between the lines of young fruit trees which are being reared.

It was intended at the same time to make this a check on the other experiment as to the effects of planting at different dates, but unfortunately the bags of seed became mixed in transit, and a plot supposed to be sown with Sea Island cotton in March turned out to be sown with Egyptian. Two fields planted similarly with test plots of the two varieties, belonging to a private owner near by and possessing the same kind of soil but rather more of it, have therefore been selected, measured, and the crops weighed. By this means a useful comparison is afforded of the relative effects of early and late sowings of the two varieties as set forth in the following table:—

Egyptian and Sea Island Cotton grown on Coral rag.

—	Egyptian Cotton.		Sea Island Cotton.	
Field number	15A Malindi	Field belonging to J. E. Jones, Esq.	31A Malindi	Field belonging to J. E. Jones, Esq.
Date sown ..	March 22nd	May	May 1st to 19th	June
	Lbs.	Lbs.	Lbs.	Lbs.
	1,597	1,118	514	639

The soil consists of coral rag, which is a red adhesive sand thinly covering underlying coral rock.

The results are both surprising and gratifying, the quality of the lint bearing comparison with the best Sea Island and Egyptian anywhere producible, while the crops in the case of the Egyptian appear abnormally large.

Caution is, however, necessary when comparing crop yields of small plots, in which only the actual area covered with plants is taken, with the yields obtainable from larger fields in which there is invariably a certain amount of waste ground, often amounting to a considerable percentage.

In the present instance the earlier sown Egyptian gave the greater weight, while later sowing had not the same effect upon the Sea Island crop. Second pickings now in progress may perhaps alter this result.

The produce of the Egyptian cotton is seen to be in each case far greater than that of the Sea Island variety. This difference would render the gross return, irrespective of the greater expense of picking the latter, at least £4 5*s.* per acre in favour of the Egyptian, taking the extra value of the finer and longer Sea Island Cotton at 6*d.* per lb. more than the Egyptian.

Before entering upon the question of costs, regard must be paid to certain particulars:—

Firstly, the supply of labour being very irregular, loss occurs through operations such as cutting and burning out not being completed at the right season, which is in the dry weather just before the greater rains.

Secondly, all the operations have been carried out by imported Wanyamwezi labourers paid at the rate of Rs. 10 per month, with exception of part of the cultivation in May, when a few score Wanyika at Rs. 8 per month were employed.

Thirdly, the supervision of the clearing operations at the end of 1904 when no European overseer was available, and part of the cultivation when the latter was being constantly changed, had to be entrusted to unreliable natives.

In the following table is given the cost of a man's work in days during the different months of the year on 22 acres of virgin forest-clothed alluvium-bottom land:—

—	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total—men-days.	Rate	Amount per acre.
														Rs.	Rs.
Number of men-days for clearing and burning.	791	526	9	152	—	—	—	—	—	—	—	—	1,522	10/30ths.	23 0
Cultivation, including ridging and cutting water channels, &c.	351	465	125	16	636	178	—	—	—	—	—	—	1,138 686	10/30ths. 8/30ths.	24 15
Sowing, including filling up blanks several times over.	—	—	20	150	29	140	47	—	—	—	—	—	386	10/30ths.	5 13
Surface hoeing several times over.	—	—	—	—	79	101	157	96	81	104	164	50	832	10/30ths.	12 9

Taking the labour at the rate of Rs. 10 per month, with the exception of 686 men-days in May at Rs. 8 per month, the costs were as follows:—

Clearance.—Rs. 23 per acre, to which must be added Rs. 12 per acre spent to practically no purpose on account of the heavy after rains in the last three months of 1904. This clearance work is of course capital expenditure, the value of which increases with the density of the cleared vegetation, the residue of which remains to the benefit of the land over many years. In this case, as the clearance was particularly dense, the cost should be spread over at least a term of six years.

Cultivation.—This has been taken to include, not only the original breaking up with the hand hoe of the hard dry or sticky wet soil, but a certain amount of root clearing inseparable from the hoeing, also ridging and all operations, such as cutting water furrows not included in the costs of sowing or after hoeing.

All estimates of a new country are uncertain, and the excess of the total of Rs. 24 15a. per acre thus incurred over our former estimates for primary hoeing can be easily understood when the costs of the additional items above mentioned are taken into account.

Sowing.—The costs again are large, owing to the inclusion of frequent re-sowings and filling blanks.

Surface Hoeing.—This had to be kept in progress every month following that of sowing, the frequent small showers again quickly choking the fields with rank grass.

Picking.—This is not included in the table, being paid for by piece-work at the rate of 5-32*d.* per lb. of seed cotton, equivalent to practically ½*d.* per lb. of lint.

Ginning and Transport.—The costs are still unsettled, as the gins which have hitherto been run singly at great cost in the Uganda Railway Works are now being replaced by a ginning factory, in which a number of gins will be run together.

Freight Costs.—Last year the freight costs amounted to practically ¼*d.* per lb. of lint, owing to the cotton bales having been pressed by hand-power to the weight of only about 3 lbs. per cubic foot. If this weight be increased four times, and a reduction obtained in steamer rates, we shall hope to be able to place freight costs at below 3-16*d.* per pound.

The total costs of breaking in difficult bottom lands by hand labour under the present drawbacks, as ascertained by one year's experiments, may therefore be thus summarised:—

	£	*s.*	*d.*
One-sixth of the capital expenditure of Rs. 35 per acre of clearing	0	7	9
Cultivation, including breaking-up, ridging, and draining, &c.	1	13	7
Sowing, including filling blanks	0	7	9
Surface hoeing	0	15	9
Total for cultivation of the crop ...	£3	4	10

This is far in excess of what the average cost of growing the crop need be, and for this the circumstances previously related are to be held responsible.

The expense of cultivating light land not subject to water-logging and not filled with roots and stumps would be much less.

If we take into consideration the costs of growing the crop in after years upon the same land, which is gradually improving in texture, the average yearly expense is greatly reduced.

In the following table the cost of growing cotton during the second year on the same land and the number of days required are given:—

Date.		Field I. of 1904 cut down in March, 1905, and allowed to grow.	Field II. of 1904 uprooted, hoed, and re-sown in 1905.	Field III. of 1904 thinned to plants 2 feet 6 inches by 3 feet apart only.
January ...	No. of men-days	—	—	—
February ...	„	—	—	—
March ...	„	21	2	10
April ..	„	—	113	23
May ...	„	—	—	—
June ...	„	15	69	20
July ..	„	—	69	—
August ...	„	—	8	29
September ...	„	—	15	8
October ...	„	—	—	—
November ...	„	—	—	—
December ...	„	—	—	—
Total days		36	276	90
Cost per acre		Rs. 13	Rs. 17 4 0	Rs. 6 12 0

It will be seen that clearing Field 2 of its old plants, hoeing, and re-planting, cost Rs. 17 4a., or 25*s.* per acre, which, compared with first year's costs, show a remarkable reduction.

The Field III. cost only 9*s.* per acre, but only 58 lbs. of poor cotton were obtained; while Field I., as previously mentioned, cost 16*s.* 4*d.* per acre to cut down, with several after hoeings, and yielded 66 lbs. of lint valued in Liverpool at £1 13*s.* 6½*d.*

E. Brand.

APPENDIX VII.

REPORT ON THE GOVERNMENT EXPERIMENTAL FARM AT MORENDAT (NAIVASHA) FOR 1905.

The rains and weather generally have been favourable for a dry farm. Both the heavy rains in the spring and the light rains in the autumn were very good, and the result is a strong head of grass all over the farm. The months of January and February were very dry, and the greater part of the grazing has been eaten into the earth by thousands of Masai sheep. The heavy rains started in March, resulting in a rapid growth of bushy green grass. The stock went back a bit owing to the sudden change, and I had great difficulty with the cattle, which suffered much from hoven.

The Merino Flock.

Nothwithstanding the losses amongst the ewes originally imported from South Africa, the increase in this little flock totals slightly over 133 per cent. in rather under two years. The losses have been almost entirely confined to the old ewes. During the year three died of heart-water, two of inflammation after lambing, one of blue tongue, and one of gangrene of the udder. On the other hand, the losses amongst the progeny of the imported ewes have been practically nil; out of 65 lambs born this year, there are now 61 alive and thriving. The young ewes from the first crop born in the country had their lambs last autumn, and are doing well. These and the yearling ewes are developing into finer sheep than the parent stock. The total losses amongst the progeny of the imported ewes during the year are:—One ewe after lambing, a pair of twins which never did any good, a lamb which accidentally had its tail cut too short—inflammation supervening—and another young lamb.

The young rams for sale, numbering only eleven, were eagerly sought after by the settlers at £5 each; in fact, there would have been no difficulty whatever in disposing of two hundred. Three rams have been retained for use in the home flock. The lambs dropped last autumn are thriving and doing as well as previous crops. It is regrettable that this small flock of merino sheep is not increased by further importations, seeing that the experimental stage is now passed, and country-bred rams would be of material assistance to settlers. I have received excellent reports of the young rams sold last year.

Lincoln and Welsh Ewes.

I have again to report a failure with both the above. There are now seven of the original 15 Lincoln ewes alive. They are fat and healthy in appearance, but they have never yet produced a lamb, and probably never will. They all, however, took the tup last season; three only proved in lamb, and they all aborted. The Welsh ewes have done very little better; there are six alive out of the 15 imported. Four were sent to Nairobi Farm, where one aborted, two lambed sickly lambs, which died, and one has a fair lamb at foot. There is one good young ram, however, about 18 months old, which is doing good service in the native flock. The above continued failure proves somewhat conclusively that there is little or no use in imported English females, when the merino, on the other hand, are so eminently successful.

Wool.

The sheep were shorn in May, the resulting clip being very satisfactory. The yearling merino rams averaged 8½ lbs., and the yearling ewes 7¼ lbs. of wool per head. The wool was of good quality with plenty of yolk, but rather short in the staple. This, however, is accounted for, as the stud ram carries a very dense but short-stapled fleece and is also somewhat small. A couple of stud rams, the best procurable, are now required for the merino flock. The Lincoln and Welsh ewes clipped out beyond my expectations, but their failure is so persistent in other respects that it is barely worth recording. The Lincolns averaged 11 lbs. and the Welsh 4½ lbs. of wool. The wool on the first-cross sheep increases with age both in quantity and quality, much hair falling out and being replaced by wool. The merino cross, as might be expected, is the most marked in this respect, and, when clipped, have the appearance of a somewhat leggy woolled sheep. Nine months' old lambs produced about ¾ lbs. of wool per head.

Progress of Breeding Experiments from Native Ewes.

These experiments are rapidly approaching a very interesting and instructive stage, clearly demonstrating the value of native sheep as foundation stock. I am much in favour of the Welsh ram for a first cross, and fancy that my theory, expressed a year ago, is a sound one: which is, that it is better to start low down in the scale of woolled sheep, breeding up by more gradual stages, than to introduce a high-class, old-established breed at the outset. The Welsh-cross yearlings are showing infinitely more uniformity in scale, substance and symmetry than the merino cross. Flock owners would understand and appreciate the term "pretty sheep," and this exactly applies to the Welsh cross yearling ewes. There is, on the other hand, no uniformity with the merino cross yearlings and they are all shapes and sizes, and in no sense are so pleasing to the eye. The following is another strong argument in favour of the Welsh cross: I was asked by a Nairobi butcher to send him a few first cross wethers for his Christmas trade, and I accordingly sent him a small batch of first cross Welsh yearling wethers. These sheep weighed 85 lbs.; after a 14 hours' fast they handled well, brisket, loins and tail, and were excellent butcher's sheep. There was, however, not a single merino cross wether of the same age fit for the butcher, although they were all running together in the same mob. The most advanced specimen amongst the sheep-breeding experiments is a second cross Welsh ram lamb, now seven months old. It has the appearance of a moderate pure-bred Welsh, the increase in the wool being a very marked feature. The value of the Welsh ram, however, lies entirely in the first cross, and, as the Welsh sheep is in no sense the type to be aimed at, a further cross of this strain would be a disadvantage and practically retrogressive. The initial object has been gained, that of introducing a strain of blood which nicks well with the native and establishes a good frame for mutton and wool. Two cross-bred lambs, two months old, command much attention from future flock owners; these are from first cross Welsh and native ewes by a Lincoln ram. They give evidence of great frame and style and a great increase in wool, compared to first cross lambs; in fact, contrary to expectations, the improvement of the second cross is even more marked than with the first. In my anxiety to bring forward the experimental stage with the sheep I ran all the first cross ewe lambs, seven months old, with the tups last spring, but none of them, excepting these few instances, came in season. As a matter of fact, although there is longer to wait for the development of these experiments, it will be of benefit to the flock and effect a more reliable result than if the ewes had been bred at such an undeveloped age. I have 50 first cross yearling ewes running with a merino ram, born on the farm, which is well grown and well matured. All, except ten of these, are first cross Welsh, the former being the merino cross, which are much slower to develop. Nearly all these ewes have been served, and will lamb at the end of April. With the advent of these lambs I hope to be able to demonstrate the advantages to be gained by producing a good mutton-framed sheep, by means of the Welsh cross, as a foundation for the wool to be produced by successive generations of the merino. It is of the utmost importance, with the native sheep as foundation stock, to breed up a good commercial animal, and not to follow in the footsteps of South Africa, where they succeeded in producing a wool-bearing animal—but one quite worthless for the butcher—by using the merino cross alone. A first cross Welsh and native ram, 12 months old, before shedding his two first teeth scaled 116 lbs., whereas no merino of the same age weighed over 70 lbs. Another feature this year is a crop of 32 lambs from native ewes, by a Lincoln ram. These lambs, at birth, were the largest I have seen of any breed, and the Masai herdsmen were of the opinion that a donkey was interested in their parentage. Notwithstanding this, I only lost one ewe and one lamb, as, anticipating trouble, only the largest ewes were selected. These lambs are doing very well but they are, with a few exceptions, being rapidly passed by the Welsh cross, although they were only half the size at birth. It is disappointing that, although the Lincoln ram appears to be in perfect health and condition, he would not work with the native ewes during the recent tupping season, or take any notice of them. The same ram, when first imported, although he served 50 ewes, failed to get a single lamb.

In order to demonstrate the value of lambs by half-bred tups on native ewes, 12 were put to first cross Welsh-native ram, the result at date being 11 lambs, now six months old. These lambs are very good and far superior to native in size and frame, five of them having been sold as fat lambs to a Nairobi butcher. This little experiment, and the appearance of the lambs, caused an immediate and ready sale of all the available half bred rams to settlers, and I was quite unable to supply the demand.

Native Flock, and Lambing Seasons.

This little flock, numbering only 300 head, has done well and shewn excellent returns, whilst both the spring and autumn lambing seasons were very good for those who have proper accommodation to cope with the rains; the best months for lambing are the latter part of April, and May, and again in October and November. It is not practicable to obtain two certain crops of lambs from the same ewes in 12 months, as it entails the dragging of one lambing season into another, and it is not desirable to extend a season longer than six weeks. The early lambers in the spring season will, however, come in again with the late lambers in November, whilst the late spring lambers would miss the autumn season altogether, and in their turn have two crops the following year. The history of one old ewe for two years has a particular interest, and is worth recording. She cost Rs. 6 with a ewe lamb at foot. She has had a lamb by a Welsh ram, one by a merino and one by a Lincoln, and is now in lamb again by a Welsh ram; whilst her native ewe lamb has had a lamb by a merino and is again in lamb to a Welsh. This old ewe's lambs by the Welsh and merino sold for Rs. 15 and Rs. 10 respectively.

The result of the autumn lambing is as follows:—40 ewes mated with the Lincoln ram produced 33 lambs; one lamb died at birth, three ewes cast their lambs, 5 ewes barren. One hundred ewes put to two Welsh rams produced 92 lambs; two died at birth, five ewes cast their lambs, and eight ewes were barren. Two merino rams had 110 ewes, and four cast their lambs.

The barrenness of some of the ewes was due to their having fat, heavy tails, and they have since been drafted out of the flock on that account. The lambs quoted above are now nearly three months old, and are in a very thriving condition. The only trouble I have had with these lambs this year has been the prevalence of tape worm during December, for which I found the following an immediate and effective remedy:—one tablespoonful Cooper's dipping powder to a gallon of water, mixed over-night, and one ounce of the mixture administered on a fasting stomach in the morning. A stronger dose can be given with safety, but that quoted is reliable and certain vermifuge. The Masai saying that "it is bad luck to have twins" is fraught with much sense, as twins appear to do no good in this country, except from a very exceptional ewe. It is, in fact, better to knock one of the twins on the head and thus make sure of having one good lamb. If a ewe, however, loses its lamb it will take very readily to a twin from another ewe. Native ewes also make excellent foster-mothers for a twin merino lamb, and there is little or no trouble to make them take to it.

Ram Sales.

The actual number of rams sold, for service, to settlers during the year are:—Nine pure-bred merinos at £5 per head, and 27 first cross rams at prices varying from Rs. 8 for merinos to Rs. 15 for Welsh.

There are a number of rams coming on which will command an immediate sale as soon as they are ready for service, and only a few of the worst are being castrated. There is, at present, a prejudice in favour of merinos, and the merino cross for mating with the native ewes; a mistake which will be dispelled as the experiments in other directions become fully demonstrated. It is a serious disadvantage to the furtherance of these experiments to have such a small flock of native ewes to work from, as, after successive generations, there must be a deadlock from want of females to carry on the line.

English Cattle.

With the exception of the loss of a Hereford cow shortly after calving, in April, these cattle have done equally as well, if not better, than they would have done on their native meadows at home. Counting calves, there are now seven young bulls on the farm, only one of which, a Guernsey, is imported. These comprise four Guernseys and three Herefords. A Hereford bull, now nearly two years old, has developed into a fine beast and is doing good work in the herd; whilst a nine months' old calf, out of the same cow, is promising well. Unfortunately it is the dam of these two bulls which died. The cause of death was probably heart-water, and the symptoms before death and also the post-mortem point to this being a correct diagnosis. This cow had never had a day's illness previous to her death, and was always in fine condition. Her loss leaves the farm with only one Hereford cow out of the three originally imported in October, 1903, the other one having cast her calf and died from the effects shortly after landing in the country. The one remaining cow is a fine specimen of the Hereford, and her condition is such as is seldom seen in grass-fed cattle of any other breed, being mud fat, with a curly, blooming coat. She calved a fine bull calf two months ago, to the young bull, and is milking well, giving far in excess of the requirements of the calf. The Guernsey cattle have done very well throughout the year, more especially two heifers that were imported during October, 1904, at a little over a year old. These two heifers were served within two months after landing, and have grown and thrived without a semblance of a check and produced two healthy and strong bull calves. Their yield promises well for their future career as milkers, four gallons per day being very fair for first calves. The older heifers originally imported, in calf, have not been nearly so successful as the younger ones; they all cast their calves. It was with great difficulty that they were induced to start breeding again; consequently their career in this country was seriously interfered with. This emphasises an opinion I have always held, that it is merely a policy of greed to import cows or heifers in calf. A young heifer, served shortly after her arrival in the country, settles down and acclimatises quickly; she is not so imbued with the conditions of her native land as an older animal, and, moreover, the fact of her first service being effected in the country induces a thrifty and settled condition at the outset, a state of things which is unobtainable with a cow already in calf. There is only one solitary instance of a cow imported into British East Africa, in calf, that has done any good, and that was the Hereford cow on this farm which died after giving birth to her second calf. In order to prove what I believe to be a fact, but what may be considered by some to be merely theory, it would be of great value to the country to import both heifers and cows in larger numbers for the guidance of settlers. With only two breeds, the Hereford and Guernsey, and such a limited number of either, it avails little to draw comparisons between the two as to their suitability for the country. I am of opinion, however, that both in rough districts, and also in those similar to the Morendat Farm, with permanent running water, Herefords would be eminently suitable either for crossing on scrub cattle or in bulk as a pure breed. The fact that the Guernseys have done so well speaks great things for the country as a whole, seeing that the Guernsey, together with other milking breeds, cannot claim to the hardy constitutions of the more robust half-breeds. Both the Hereford and Guernsey stud bulls are in the pink of condition, and have done good work both in the home herd and for settlers. My system of working them is to run them half a day each with the native herd, the cows thus getting familiar with their size and appearance, instead of being frightened to death on seeing them for the first time. They have daily allowance of 5 lbs. of maize meal and 1 lb. of bran. During the last four months these bulls have been in increasing request by settlers, and the time has now arrived when the work is too much for two bulls to command success. The present number of settlers' cows, that have been served, total 31, and the number now on the farm, for service, is 37. No cows leave the farm until they are known to be safely in calf. The arrangement I make with the settlers is to serve and keep the cows free of charge in return for their milk; but in the event of its being preferred that the calves should get all the milk, a fee is charged. The chief difficulty lies in a large number of cows requiring attention at the same time, so that actual numbers can hardly be considered. With the expected increase of 50 cows to the home herd from the Nandi captured stock these two bulls are quite inadequate, especially as the neighbourhood and the Rift Valley will shortly be stocked up by settlers who are even now clamouring for their services. The young pure-bred bulls will be of great value to the country, and have already been applied for by go-ahead settlers.

First-crosses by English Bulls from Native Cows.

The young stock are showing increasing promise with age, and are most satisfactory from every point of view. The yearling heifers by the Guernsey bull are both developing rapidly and are an extraordinary improvement, both in size and symmetry, on the native. All symptoms of the native's hump have disappeared, and they have the appearance of well-bred English stock. In fact, there appears to be so much possibility of success from crossing with the native cows that it is doubtful whether the importation of English females will warrant the risk and expense to the ordinary settler. All the young bulls, numbering eight, are applied for by settlers, even down to calves a week old, and these will be delivered as soon as they are old enough to be of use. There is, at present, a prejudice in favour of the Guernsey cross as being a milking strain, and against the Hereford, by those who are mistakenly of the opinion that they are worthless as milkers.

The Native Herd.

The native cattle have done very well, and there has been no disease of any kind. There was, however, a mysterious case of poisoning in March, when five cows died in two days. The nature of the poison was never determined, but the symptoms before death had all the appearance of strychnine or some alkaloid. The herd was increased, in August, by 30 cows from the Sotik captured stock, which were a fine class of native cattle, and for a small herd it is undoubtedly now the best in the country. There are 47 cows in calf to the Guernsey and Hereford bulls, so that the result for the ensuing year promises to be very satisfactory. These cows vary much in type and are selected in accordance with the suitability of the two breeds of bulls. The best cows will give from 10 to 12 bottles of milk per day, besides rearing their calves; but the calves, especially the bulls, are done very hard, as the milk is the most valuable product of the two. A bull or bullock calf at ten months old is only worth Rs. 15, whereas a heifer of the same age finds a ready sale at up to Rs. 75. It does not pay a stock farmer to keep his heifer calves over 10 months to a year old. Their value at that age is equal to, if not greater than, at two years old; and they are, besides, very slow to develop and are nearly three years old before they come into profit. The advantages, therefore, of selling the yearling heifers are obvious. With the money obtained from the sale of three calves, two good cows in calf, or with young heifer calves at foot, can be purchased, which come into immediate profit, instead of locking up capital for two years. On the other hand, yearling bullocks at Rs. 15 are not worth selling, and it would pay to run them on two years old, or more, when they would be worth from Rs. 30 to Rs. 40.

Goats

The increase in the herd has been steady and satisfactory, and there has been no disease amongst them throughout the year. The objective is the crossing of the Angora ram on native ewes for the production of mohair, the result of the first cross being all that could be desired. South African farmers, who are interested in and are anxious to introduce Angora goats, are much struck with the appearance of the first cross, and are confident of the future of this industry and the quick production of mohair by breeding up from the native. The stud ram has been nearly two years in the country and has never had a day's illness. As no other ram has been available, I had to use the sire on his own get to produce the second cross. There should be no ill-effects, seeing that the first out cross was so complete. The ram, however, is not suitable for any but the first cross on the native, as, although a hardy animal, he is very faulty in the hair, which is full of kemp. The best pure-bred rams are now badly needed, and it would also be to the advantage of the country to introduce some pure-bred ewes in order to have pure country-bred rams for distribution. The young first cross rams have all been bought up by settlers, who seem to be very pleased with them.

Pigs.

The Berkshire pigs have done well without exception, 24 young pigs having been distributed or are now ready for distribution amongst settlers during the year. Two of the three brood sows are gilts bred on the farm. The original boar imported by Sir Charles Eliot was sold to Lord Delamere, and the last importation, which arrived in the country in October, 1904, is now used in the herd. This boar has developed into a good long pig, and his stock show excellent quality. The pigs are raised and kept practically free of cost on separated milk, lucerne, mangolds and sweet potatoes, all grown on the farm.

Poultry.

The poultry have shown good returns considering the paucity of material to work with. Game fowls are, perhaps, the most difficult to rear of any breed; their chief value lies in the cross of native hens, which make excellent table fowls and also very fair layers. The number of pure Game disposed of, including eight hens and one cock to the Nairobi Farm, is seven cocks and 21 hens. Pure eggs, sold for sitting, number 175. The half-bred Game bred on the farm only came into profit during the last four months, as I had no opportunity of developing this live stock previously. Their eggs are larger than the pure Game, and command a ready sale at 14 per rupee; and the chickens, when dressed, sell at four shillings per couple. Eight-and-a-half couple dressed fowls and 987 eggs have been sold. Ducks also thrive well and are in great demand, but as the parent stock at my disposal only consisted of one Aylesbury duck and one drake, the actual returns are, perforce, somewhat limited. The young drakes are sold as soon as ready, but all the ducks are retained to increase the stock. The geese were disposed of early in the year, as they did no good. There is nothing to prevent poultry doing well and being a good asset to the revenue of a farm.

The Dairy.

Financially, and perhaps in every other respect, the dairy has been the greatest success of the year. The new dairy was finished and in working order in August, and the separator started just in time to utilise the milk from the Sotik cattle. There has been a constant demand for fresh butter at prices ranging from 1*s.* 6*d.* to 2*s.* per lb. The native cows are rather troublesome to work, and the methods which are essential at first strike English dairymen as laborious and unnecessary. The cows will not give down their milk unless the calf has first sucked and is standing by whilst they are being milked. I have tried taking the calf away at birth, but gave it up and resorted to the native method, as they otherwise would go dry altogether. In the event of the calf dying, the skin is hung up in front of the mother. Masai women, at Rs. 3 per month, are employed as milkers. Seeing that the calf has the first and last suck at the cow, the average yield of milk from the herd is very small indeed; as it can be quite understood that, until all the bad milkers are drafted out, there are several that can do little more than rear their calves. During December, taking an average of 63 cows for 10 days, the yield per cow only amounted to four pints per head. On the other hand, there are cows that give 15 to 17 pints of milk as well as rear their calves, which, at market rates, brings in Rs. 2 8a. per day, reckoning milk at 4 annas per bottle. As the stripping from the cow is the richest in butter fat, the fact of the calf taking it interferes with the yield in this product, and is thus apt to depreciate the true quality of the milk. During the rains in April, May, and June the milk gave the best returns. It then took 13 pints of milk to make 1 lb. of butter; whilst from July to the end of December it required 16 pints of milk to effect the same return; 1¾ pints of cream to each pound of butter. The great disadvantage of the native cows as milkers is the short period at which they are at their best, and the fact of their falling off soon after they have been served. This entails a large herd of cattle to keep a dairy going. It must be borne in mind that the calves are a great asset to the paying qualities of the cows, and that they must, therefore, not be taken purely from the dairyman's standpoint. The amount of butter sold during the year totals 2,659 lbs., the great majority being turned out during the last five months. The quantity sold monthly ranges from 23½ lbs. in January to 503 lbs. in December, whilst the largest number of cows in milk at one time was 63. The colour and quality of the butter has been very uniform throughout the year. There must be a great future for dairying in this country, as the cost of production is very low. There is no winter to contend with, no artificial feeding, no housing, and no expensive crops to be grown for the cows; so that, once the cows and plant are acquired, the gross receipts are practically all profit. The local market is, perforce, a limited one, but British East Africa should be able to compete successfully with other countries in the world's markets, and the Agricultural Department can do much towards furthering a foreign trade. Cheese-making, for export, could not fail to be a profitable undertaking, in which the Morendat farms, with a modern plant, might lead the way.

Cultivation.

The year has been very favourable to cultivation on a dry farm, and there is good evidence that, with irrigation, the soil would be very productive. On a stock farm, however, where there is no winter to provide for, only a few crops are worthy of attention, as native-grown gram can be purchased cheaper than it can be grown. Neither cereals nor maize are any use in the district in which the farm it situated, as the rains are not sufficiently constant or prolonged to bring them to maturity without irrigation. Roots, such as mangolds and kohl-rabi, can be grown to a small extent, but it is doubtful if, without irrigation, they are worth cultivating; more especially as such are not essential to the stock. Lucerne will not grow in this district, except on the shores of the Lake, but a patch of about ½ an acre, terraced out of the river bank, has done extraordinarily well and been invaluable to the pigs. Green forage crops cannot be grown to advantage, as, during the rains they are not required and in the dry weather they die down and are useless. The two native beans, kundi and ndigi, can be purchased cheaper than they can be grown, even given a good crop; moreover, no stock will eat either variety. The majority of the cultivated land was planted during the autumn with the large red maragwa beans. These beans are good drought resisters and heavy croppers, and can be grown to advantage. This crop will come to harvest during January, and there is evidence of a heavy yield per acre, and it should pay well. When the bean crop is cleared off I intend to plant the whole of the land with the sweet potatoes indigenous to the country. There is already about one acre planted, and I have little doubt that, for a stock farm, this crop will take the place of all others and fill a much-felt want. It is capable of producing a heavy crop of tops, which is eaten greedily by cattle, sheep and pigs; and tubers also make excellent food for pigs and native labourers. The plant, which is grown from cuttings, covers the ground in two months' time and smothers all weeds. Judging from the astonishing condition of fat to which the Kikuyu natives get their wethers, it must have fine feeding qualities for sheep, and it is my intention to feed off fat wethers by folding them on it in the same manner as rape or turnips at home. As the tops are fed off by the sheep the tubers will be dried up and either eaten or sold, and the land replanted.

Hay Harvest.

I had a most successful hay harvest in June and stacked upwards of 80 tons of hay, of first-rate quality. This is indispensable on a stock farm for calves, bulls, &c., in the houses, and is instrumental in keeping the stock in health during wet weather. The gathering of the hay was troublesome, as I only had wooden tools cut out of the forest to work with. The forks made for me in Nairobi all broke the first time of using.

Insect Pests.

During March the farm was visited by clouds of locusts, but there were none in the hopper stage, and the damage done was insignificant. These were followed by clouds of white butterflies, the larvæ of which ate off all foliage of the trees and spoilt a crop of beans. They were rapidly spreading over the grass when the rains started and put an end to their depredations. Generally speaking, the district is very free from troubles arising from insects.

Buildings.

There has been no expenditure on buildings during the past year, beyond the completion of the dairy. A quantity of old and waste material has been worked up and utilised for extra sheep and cattle sheds. A post and wire fence was erected on the southern confines of the farm, enclosing the extra land granted by the late Commissioner, which raised the average to about 3,000 acres, all of which is now in a ring fence.

Labour.

No difficulty has been experienced with labour, and all the best stockmen remain at their posts. The Masai, who have been with us nearly two years, are reliable and attentive, and are, without exception, the best natives for the care of stock.

Finance.

It is satisfactory to be able to report that the revenue of the farm is considerably in excess of the expenditure and that, during the financial year, all the affairs under my charge will have been worked free of cost to the Government. Whilst being fully aware that it is not the objective of a Government experimental farm to make a revenue, the fact that it is capable of doing so, in spite of the many difficulties working against a financial success, speaks very forcibly for British East Africa as a stock-raising country, and for the prospects of farming generally. I can, moreover, state without hesitation that, if the Morendat farms could have been worked on a sound business footing, the revenue would have been doubled if not trebled. From a business point of view nothing works so much to the disadvantage of a farm as not having control of its revenue; whilst the hampering effect of having to be continually on one's guard not to overshoot sub-head votes, on a farm that is making a gross revenue of from £50 to £70 per month, is very great indeed, especially when it is considered that £42 4*s.* 6*d.* constitutes the collective votes available for all expenditure—exclusive of labour and railway transport, which amounts collectively for the two farms to £380, plus £20 for building material. The understocked condition of the farm must also be taken into consideration, as it adds very considerably to the evidence of what it would be capable of had it been worked to its fullest capacity. The farm is capable of carrying six times the number of breeding ewes, and at least four times the number of cows that there are at present.

The excellent returns, therefore, from the small number of stock available must be most encouraging for the settler with a limited capital. In giving the following figures for the past six months I have included the expenditure of the zebra farm, as, although the accounts of the two farms have been officially kept separate, for practical purposes both farms have been worked as one. Capital expenditure in the purchase of stock is not included in the monthly expenditure.

—	Receipts.			Expenditure.		
	Rs.	a.	p.	Rs.	a.	p.
July	869	2	0	439	14	0
August	345	7	0	374	6	0
September	765	3	0	640	7	0
October...	1,201	4	0	443	11	0
November	939	3	0	456	15	0
December	1,283	15	0	453	8	0
Total ...	...		...	2,808	13	0
Credit Balance	...		...	2,595	5	0
Total ... Rs.	5,402	2	0	5,402	2	0

The increase in the value of stock born on the farm during the present year, and the appreciated value of those born during November and December of the previous year, amounts to Rs. 6,750, or £450. This is exclusive of the Sotik cattle or their calves since born. From a financial point of view the farm should do well during the ensuing year, more especially if it were possible to work it on a business footing.

The Zebra Farm.

The zebra farm, as such, has practically ceased to exist. This unfortunate ending to an undertaking full of promise is due to the complete failure of the drive in March. A great deal of trouble was taken to fence a large tract of grazing land, with roping yard, crush kraal, &c., to cope with a newly captured mob of zebra; but, with the exception of a few foals, all of which died but one, none were caught. Three broken-in stallions have been sold during the year, and one savage, unreliable brute I shot as being useless for any purpose. The remainder, five mares, one two-year old stallion and two yearlings, were turned out into the large enclosure, where they have done very well. Of these one mare has foaled, and two more will probably foal during the ensuing month. Without more fencing to separate the young ones from the mares, it is very difficult to do anything with them, as there is too much risk in rounding up mares heavy in foal, and the young foals at foot are almost certain to get knocked over and injured in the yards. It is not possible now to obtain more zebra by drives, as the district is all taken up by settlers, and the major portion of the old driving ground is fenced in. As the zebra experiments in the past have been the reverse of popular, and the farm has received neither encouragement nor support, I am of the opinion that the future does not warrant any further expenditure in this direction. The expenditure in fencing and building the yards has not been wasted, as they are a valuable asset when taken in conjunction with the stock farm; neither has the zebra farm been a source of expense during the past year, as the two farms have been worked as one and the labour voted to the zebra farm has been used entirely for developing the stock farm, whilst the money voted to "other charges" was used for the purchase of stock.

John K. Hill,
Manager.

APPENDIX VIII.

REPORT OF THE VETERINARY DEPARTMENT.

CATTLE DISEASES.

African Coast Fever.

This disease was unfortunately introduced from German East Africa by Somali traders, and for some months past we have kept it from spreading by fencing for about a mile and a half around its original location. Until a few weeks ago we considered that its spread had been checked, but unfortunately several cases occurred in February and March, 1906, outside the area.

Every precaution had been and is being taken to prevent the spread of this disease, a disease which threatens the whole of the live stock industry of the Protectorate with disaster, for, should coast fever spread to the cattle of the numerous pastoral nomad races, we cannot hope to stamp it out except at tremendous cost.

Pleuro-Pneumonia.

A number of outbreaks of pleuro-pneumonia have occurred during the year. In all cases inoculation and quarantining have been resorted to. We can only hope to deal with this disease with a regular system of compulsory inoculation and the institution of a fencing ordinance. Many rules and restrictions have been promulgated with very indifferent success, as a native will evade regulations wherever possible. It is to be hoped that the permit system now in force will in some measure aid us.

Rinderpest.

No case of rinderpest has occurred during the last twelve months.

Texas Fever.

This disease is prevalent throughout both Protectorates, and is well-known to the natives.

The greatest mortality is seen in herds changing altitude. It is worthy of note that when natives are trekking their cattle from one district to another, they take about three weeks to cover a distance of 50 miles. This is done to acclimatise the cattle.

The symptoms and post mortem appearances do not differ from those already well-known.

Importers of cattle would do well to obtain their animals from countries where the disease is common, thus insuring a certain degree if immunity.

"*Mkebbe.*"

This disease first came under my notice in Uganda in 1899. It is prevalent in both Protectorates, and well-known to the natives. It is the cause of a heavy mortality amongst calves ; and in Uganda it accounts for a considerable death rate in grown-up stock.

The disease is characterised by sudden onset, and quick and high rise of temperature. The coat stares, the muzzle becomes dry, and the breathing accelerated. The lymphatics in the pectoral and precrural regions become much enlarged, and may attain the size of a cricket ball.

The glands are never firmly attached to the underlying tissues, but can be grasped in the hand and moved about ; in many cases pain is exhibited on manipulation. As the disease progresses, marked emaciation and anaemia take place.

Dr. Ross, who has reported on this disease, has described the circular bodies which he has demontrated in the gland juice and blood of animals suffering from mkebbe, and has given an accurate description of the post mortem appearances.

Epizootic Lymphangitis.

An ox manifested this disease round the throat and submaxillary space, the growths were large, round and hard, varying in size from a hen's egg to one's fist. They were not ulcerated, but extensive ulceration was found on the dewlap, extending between the fore-legs, along the line of the penis, to the groins. These ulcers were about the size of a sixpence, they lay close together, and each contained a slight amount of pus ; in smears taken from the ulcers, the Cryptococcus was demonstrated. This beast was destroyed, and the carcase burned.

Ringworm in Calves.

This disease is fairly common among young animals, but surrenders easily to treatment.

DISEASES OF THE HORSE.

Horse Sickness.

A severe epidemic of this disease broke out in March, 1905, and continued until the middle of September.

The first case to come under notice in East Africa was that of a mule belonging to the Uganda Transport which suddenly became ill and died at Kiboko Camp, mile 217, on the 8th April, 1898.

During 1898 and 1899 a heavy mortality was sustained by both the Uganda Transport Service and the Uganda Railway Transport Service. In 1901 a renewed manifestation of the disease took place, causing the death of 16 ponies in the then newly occupied Nairobi.

During the following three years, 1902 to 1904 inclusive, no renewed manifestation of horse sickness was recorded.

In March, 1905, an imported gelding, belonging to a settler, became suddenly ill after a hard gallop. The symptoms were those of weariness, disinclination to move, and muscular tremors. During the second day of illness large quantities of yellow-coloured serum were blown from the nostrils, the breathing became laboured, and the animal died on the 8th of March. It was not, however, until the month of May that horse sickness broke out in epidemic form.

In all, 84 deaths were recorded.

Coley's intravenous injection was the chief medicinal means used to combat the disease, and in a few cases with satisfactory results. It was conclusively proved, however, that this treatment did not in any way confer immunity, but was only useful in the initial stages of the disease.

Nairobi, with its comparatively small number of horses, may be justly considered to have been a large experimental station, in which every horse was known and the conditions under which it was kept. The following observations were made:—

1. That the disease commenced and travelled along the banks of the Nairobi river.
2. That no cases occurred on the higher land until the epidemic was well established.
3. That the horses on the plain suffered most, more especially those in the livery stables belonging to Messrs. Jevanjee & Company and Mr. Ali Khan, whose stables were open, and in the case of the latter, situated on the bank of the river and in close proximity to a papyrus swamp.
4. That horses tended with greatest care and fed on the driest of provender, did not escape infection.
5. That a sudden rise of temperature, in an epidemic of horse sickness, is always to be regarded as a premonitory symptom.
6. That horse owners who made their stables mosquito proof, suffered little loss during the course of the epidemic.

Five captive zebras, the property of Colonel J. H. Bailey, Athi River Ranch, also died of horse sickness.

Biliary Fever of the Horse.

Piroplasmosis of the horse is not so common as might be expected, only three cases having come under notice during the last twelve months, none of which proved fatal. Treatment adopted was hypodermic injections of hydrochlorate and hydrobromide of quinine with arsenic and iron per os.

Glanders and Farcy.

No cases of glanders and farcy have occurred in the interior during the past year. One case occurred at the port of entry, and was immediately destroyed. No equine is allowed to proceed up country until it has passed the mallein test satisfactorily.

Trypanosomiasis.

A number of cases of tsetse fly disease have come under notice during the year. The advent of a large number of sportsmen, who purchase safari ponies to penetrate into the remoter parts of the Protectorate in search of big game, has done much to produce evidence of the districts in which fly exists; thus, ponies which have traversed the districts of Baringo, Tana Valley, Tkika, Athi River, and Kisumu have died, on reaching Nairobi, of trypanosomiasis. Also several cattle and dogs have died from this disease, contracted on the Island of Mombasa.

As already reported, specimens of fly *(glossina pallidipes)* have been caught at Mombasa, necessitating the removal of the quarantine and testing stations to Nairobi.

It may be of interest to note that the following varieties of the genus glossina are prevalent in the Protectorates of East Africa and Uganda, *i.e.* :—

Name.	Distribution.
Palpalis	See Mr. Austen's report included in No. 6 of the Royal Society's Reports on Sleeping Sickness. This variety only occurs in the East Africa Protectorate in a few places along the north-eastern shore of Lake Victoria.
Pallidipes	Coast line and Athi River.
Fusca	Kibwezi.
Longipennis	Kibwezi, and Guaso Nyiro.
Morsitans	Gondokoro.

Operations.

A large number of operations of all classes have been performed during the year. Several animals have been castrated, most of them over five years old; the operation was also performed upon four aged stallions that had become unmanageable. All have done well.

Epizootic Lymphangitis.

One mare, two mules, and one ox suffered from this disease during the year 1905. The mare, a valuable polo pony, showed ulceration in the submaxillary gland. She was strictly isolated, and the parts cauterised with the actual cautery; a good recovery ensued. The two mules were affected about the legs sheath, and perineum. Both were destroyed.

In 1900 the transport mules suffered considerably from this disease, and in nearly every case ulceration commenced in the lower portion of the limbs, due, I consider, to the cryptococcus gaining an entrance by the wounds made by Bont ticks.

Pulex Penetrans.

The jigger attacks very frequently the coronets of horses, causing nasty, indolent sores, which tend to extend and become gangrenous.

The treatment is careful evacuation of the engorged female, and dressing with strong antiseptics.

Other Diseases.

Cases of intractable eczema, colic, and other dietetic diseases, due to the large amount of maize used, are constantly occurring.

DISEASES OF SHEEP.

Sheep pox.

Four outbreaks of this disease occurred during 1905-6, and all of them were confined to the Rift Valley.

The native sheep, more particularly those belonging to the Masai and Kamasia, possess a high immunity. Ovination has been practised in every outbreak, with satisfactory results.

Importers of sheep will require to exercise the greatest caution to prevent the introduction of this scourge into their flocks. My best advice to them is "Fence," the stockowner's safeguard.

Scab in Sheep.

Until quite recently we have only had one outbreak of sheep mange, and I had considered that East Africa was free from this disease. Two outbreaks have, however, occurred quite recently, one on the Government Farm, Nairobi, and one at Lord Delamere's farm at Saysambu. Compulsory dipping is being instituted, and every means possible will be enforced to get the disease in hand.

The danger from this disease is increased by the constant moving of native flocks, such movement being so difficult to control. It is worthy of note that on the hairy native sheep the disease is not of a virulent nature, one dipping having proved sufficient to destroy the acari.

Heart Water.

Heart-water is seen at considerably higher altitudes than is recorded in South Africa.

The Bont tick *(Amblyomma hebraeum)*, the progenitor of this disease, is found in this country at altitudes as high as 6,000 to 7,000 feet.

Nostril Fly.

The larvæ of the *oestrus ovis* cause considerable loss to stock owners in various parts of the Protectorate, more particularly in the Machakos district and in the humid atmosphere of Muhoroni. It is common on the Nandi Plateau and in the Rift Valley.

In many cases the frontal sinuses have been found packed with larvæ, and in one case as many as 58 larvæ were taken from the sinuses of one sheep.

Subdural abscesses, due to the irritation set up, are of frequent occurrence.

This pest is indeed a serious one for the sheep farmer, as treatment becomes difficult, for no sooner is one brood of larvæ ejected than the animal is reinfested.

Although the mortality cannot be considered a high one, yet the loss accruing from the falling off of the animal's condition is decidedly serious.

This low condition favours the development of intestinal and other parasites, particularly the *distoma hepaticum* and the *strongylus contortus;* indirectly, therefore, the nostril fly is accountable for serious ravages amongst flocks.

Foot Rot.

Only one outbreak of contagious rot has come under notice. The sheep, unfortunately, at the time were in the lambing season, so that extra care with regard to treatment had to be exercised. The flock has now, I am glad to say, practically recovered.

During the dry weather numbers of sheep suffer from extensive sores in the interdigital space, from injuries received from the hard, coarse grass, which, after being burnt, is of a very stubbly nature.

Strongylus Contortus.

This parasite (wire worm) is common over the whole Protectorate, and during last year was the cause of a high mortality among the lambs in the Rift Valley. Top dressing the pasture with lime or salt for prevention of this disease is at present out of the question, as the quantities of salt and lime required are not procurable on a practical and economical basis.

Sulphate of iron has been tried in small flocks with fair results.

Fluke.

Fluke is common to every province in both sheep and cattle, and in Lumbwa and Nandi scarcely a sheep can be found free from this parasite.

The soil of the Rift Valley being of a sandy nature, the fluke is not as common as in other districts of the Protectorate.

As the country becomes settled and owners drain away stagnant pools and cultivate their land generally, abatement of this pest is sure to follow.

Piroplasmosis.

Only two cases of piroplasmosis have come under notice during the past year.

Ulcerative Stomatitis.

A large number of lambs and kids died from this affection in the Rift Valley; sheep owners, however, are fast becoming conversant with this disease, and, with the treatment adopted, the mortality has been reduced to a minimum.

DISEASES OF THE DOG.

Piroplasmosis.

This disease kills a very large percentage of imported dogs. The progeny of imported animals also suffer severely. The native dog is peculiarly immune, and if affected, the disease runs a very benign course.

There is nothing peculiar in the symptoms more than has already been recorded, except that there is a marked tendency to dropsy of the abdomen (ascites) in young animals.

The *haemaphysalis leachii*, the tick which propagates this disease, is common all over the country.

Varieties of drugs have been experimented with, but generally with indifferent results.

Eczema.

This disease is a common complaint among dogs, and is one of the usual sequelæ of tick fever. It is to some extent intractable, and yields very slowly to treatment.

Snake Bite.

Five cases (two foxhounds, three native dogs) of death from snake bite have been recorded. In most cases the species of snake has been the puff adder *(batisarictons)* and the black mamba.

The site of the inoculation was tremendously swollen, and on dissecting the part extensive necrosis was found to have taken place.

Ankylostomiasis.

Ankylostomiasis is a common disease among all classes of dogs in Uganda, but no case has come under notice in the East Africa Protectorate.

DISEASES OF PIGS.

Swine Plague.

Only one outbreak of contagious disease amongst swine has occurred in the country.

In December, 1905, 91 pigs succumbed, and 16 were slaughtered owing to an outbreak of swine plague.

No further outbreak has occurred.

DISEASES OF FOWLS.

Fowl Cholera.

Two outbreaks of cholera occurred last year. It is noteworthy that the native fowl exhibits a high degree of immunity, while a high mortality is sustained by imported poultry.

Fowl Flea.

The pulex avium is exceedingly common in this country, and is a source of great trouble to poultry-keepers, causing loss of condition in their fowls.

MUSEUM.

The nucleus of an Entomological and Pathological Museum has been commenced, and has proved not only of interest but of great usefulness to stock owners and settlers in helping them to a better knowledge of the stock diseases of this country.

Ticks.

The following varieties of ticks have been collected and classified:—

Species.	Distribution.	Altitude.
		Feet.
Rhipicephalus Appendiculatus (Brown tick) ...	Muhoroni	4,140
	Lumbwa	6,220
	Nairobi	5,450
	Machakos	5,250
	Ngongo	5,700
Rhipicephalus Decoloratus (Blue tick)	Muhoroni	4,140
	Nairobi	5,450
	Machakos	5,250
Rhipicephalus Pulchellus—		
Extremely common	Athi Plains	4,850
Also found	Nairobi	5,450
	Kiambu	5,600
	Ruiru	5,400
Hæmaphysalis Leachii	Everywhere	—
Rhipicephalus Evertsi	Everywhere	—
Rhipicephalus Simus	Nairobi	5,450
Amblyomma Hebræum (Bont tick)	Muhoroni	4,140
	Lumbwa	6,220
	Molo	7,940
	Naivasha	6,230
	Njoro	6,990
Hyalomma Ægyptium	Muhoroni	4,140
	Lumbwa	6,220
	Molo	7,940
	Naivasha	6,230
	Njoro	6,990

Three other varieties of amblyomma were found on rhinoceros, eland, and other game. In appearance these are similar to the Bont, but as yet we have not been able to identify them.

Also one or two unidentified varieties of rhipicephalus have been discovered.

Helminthes.

The following worms have been collected and classified:—

Amphistoma Conicum.
Ascaris Canis.
    „ *Lumbricoides.*
Fillaria Papillosa.
Strongylus Armatus (*Sceclerostoma Equinum*).
    „ *Tetracanthus.*
    „ *Contortus.*
Spiroptera Megastoma.
Taenia Cucumerina.
    „ *Perfoliata.*
    „ *Plicata.*
Various forms of *Cysticerci*, particularly in game (hartebeeste), and *Echinococcus* in wild pig.

MEAT INSPECTION.

A daily inspection of meat is carried out at the slaughter-houses in the various townships. This inspection has effectually prevented the sale of diseased or injurious meat.

IMPORTATIONS.

The schedule below shows the numbers and species of live stock imported into the Protectorate during the financial year:—

—	April.	May.	June.	July.	August.	September.	October.	November.	December.	January.	February.	March.	Total.
Horses	8	19	30	7	16	5	9	2	2	34	31	18	181
Mules..	5	1	—	—	29	—	1	—	12	10	—	1	59
Donkeys	22	—	—	—	—	1	—	—	1	26	8	35	93
Cattle..	—	—	—	—	—	—	26	2	1	41	32	46	148
Buffalo	4	—	—	—	—	—	4	—	—	—	—	—	8
Camels .. .. —	—	—	—	—	—	—	—	—	—	25	13	7	45
Sheep and Angora goats	38	40	—	—	—	6	—	50	171	5,528	488	410	6,731
Pigs	—	—	—	10	—	—	22	6	—	—	—	—	38

Quarantining Station and Dipping Arrangements.

A concrete dipping tank has been constructed at the Kilindini Quarantine Station, 40 feet long and capable of dipping 3,000 to 4,000 sheep per diem.

One is in course of construction at Naivasha, and another will shortly be commenced at Nairobi.

Cruelty to Animals.

Several convictions under the Cruelty to Animals Act, 1890, India, have been made during the year.

The chief offenders have been Indians and Somalis.

Species of Animals Treated.

Besides the usual domestic animals (horses, mules, donkeys, camels, cattle, sheep, goats, pigs, dogs, cats, and fowls) the following wild animals have been treated:—Lions, leopards, cheetahs, rhinoceros, zebra, monkeys, bush-buck, dik-dik, and ostrich.

CONCLUSION.

The past year has done much towards furthering our knowledge of the nature, modes of propagation, and best methods of prevention and suppression of many of the diseases that affect stock in East Africa and Uganda. East Africa is a young country, whose future prosperity largely depends upon the success of its live stock and agricultural industries, and a moderate expenditure at the present time in supplying the machinery necessary for controlling and properly supervising the Protectorate's grazing and pastoral districts, will do much towards the furtherance of the prosperity of the country.

R. J. STORDY,

Chief Veterinary Officer.

APPENDIX IX.

REPORTS RELATING TO THE WORKING OF THE UGANDA RAILWAY.

EXTRACT FROM REPORT OF THE ACTING MANAGER FOR 1905-6.

1. I have the honour to submit the annual report on the working of the Uganda Railway for the official year 1905-6.

Following the practice which pertains on Colonial railways, I pass on in original, uncommented on, the reports submitted by the Departmental Officers, and only remark on the detailed results where it appears necessary for the purpose of bringing some circumstances prominently forward. The accounts are in themselves so far complete as to render it unnecessary; it is, however, a privilege to be able to show such satisfactory results even in the baldest manner.

2. The financial statement, Table III., clearly shows how the railway stood on 31st March, 1906. The result of the year's working was a net profit of £56,678 7*s.* 3*d.*, compared with £2,639 9*s.* in the previous year and a dead loss of £60,100 in the year 1903-4.

3. The gross receipts amounted to £204,928, as against £153,794 in the previous year and £131,567 in 1903-4, an increase of 33·25 per cent and 55·76 per cent. in each succeeding twelve months.

4. The percentage of expenditure to gross earnings in the year under review was 72·34, against 98·29 in the previous year and 145·68 in 1903-4. In these figures lies the secret of the success which has been attained.

Confining comparison to the previous year's working, which is more in line with our present development, the percentages for the departments are:—

—	1904-5.	1905-6.
Maintenance of way, works, and Stations	36·51	23·34
Locomotive and carriage department ...	28·95	22·66
Traffic department	10·19	9·64
Steamers	6·70	5·03
General	9·39	7·38
Special	6·75	4·29
Net profit	1·71	27·66
	100·00	100·00

5. The fall in rate under maintenance is due, as explained in the accounts, to less work having been carried out. It is a department under which an increase in traffic at first is less felt than in any other, but one which later asserts itself, and work which is left undone in one year must be carried out later on.

6. The drop in percentage under locomotive, carriage and wagon working is due to the more economic conditions which pertain under increased mileage and larger traffic, it is a department which will always spend more, yet look better, as the business increases; for information as to its internal working, *see* the report attached.

7. The Traffic Department (for the success of which all other departments practically exist) was, with a very substantial increase in turnover,

run on a reduced rate, a rate which but for the misfortune to the s.s. "Sybil" would have showed still better, but really it is quite immaterial whether this loss referred to stands against general traffic or steamboats, they are for practical purposes one and it is simply a question of accounts and the net results are the same. The actual figures of merit for 1904-5 and 1905-6 are 10·19 per cent. against 9·64 per cent., an improvement of 0·55 per cent. (one-half per cent.).

8. The steamboat service stands well at 5·03 per cent. for the year under review, compared to 6·70 per cent. in 1904-5, and when it is borne in mind that the expenditure incurred in working the steamers in the two years under comparison was almost exactly the same, and that the earnings increased from £14,466 to £22,340, it will be seen how substantial is the improvement; it means that we did a business larger by over 50 per cent. for the same money, and is a very clear demonstration of the fact that increased traffic spells economy in working the railway.

9. General and special charges, in sympathy with the increased earnings and larger mileage, are both lower than in the previous year, standing more than 2 per cent. better in each case.

* * * * * * * *

10. The length of the line worked was the same (584 miles) as in the previous year, and the composition of miles run as below:—

Total Train and Engine Mileage.		1904-5.	1905-6.	Increase.	Decrease.
1. Train miles run for public traffic.	Passenger miles	1 740	16,154	14,414	—
	Goods "	92,535	161,393	68,858	—
	Mixed "	230,525	251,662	21,137	—
	Light "	3,070	8,703	5,633	—
2. Train miles run for locomotive department.		24,754	33,575	8,821	—
3. Miles of construction and water trains		60,128	58,491	—	1,637
Total train mileage		412,752	529,978	117,226	—
4. Miles of assisting engines		—	—	—	—
5. Miles of engine shunting and in steam for traffic purposes, &c.		58,525	77,115	18,590	—
6. Miles run for miscellaneous services ..		2,288	2,298	10	—
Total miscellaneous engine mileage		60,813	79,413	18,600	—
Total engine mileage ..		473,565	609,391	135,826	—

Results per Train Mile.

Profit per train mile	− 0·07	1·58	1·65	—

* * * * * * * *

11. Coaching traffic shows less improvement than earnings under goods and steamers, yet it has increased from £35,199 to £43,188 (some 22·69 per cent.), but the margin of profit is small, viz., 1·40 pies, say, 1*s.* 9*d.* per passenger per mile, nor is it at all likely that any reduction in fare would largely increase the number travelling or induce a more paying business. The rates, compared to African railways, are not high, nor, until

the country becomes more populated, need we expect material improvement under this head; yet, notwithstanding what I have stated, the proportion which the coaching receipts bore to the total earnings in the two years do no differ largely, being 22·89 per cent. in 1904-5 to 21·07 per cent. in 1905-6.

12. Goods traffic is much more encouraging, and although a reduction in rates on some important staples and on machinery have been effected, the earnings have increased from £102,357 to £137,299, or by 34·15 per cent., and average receipts were lowered from 33·36 pies to 29·21 pies per ton per mile, indicating a reduction in rate of over 12 per cent. The rates are, however, still high for a poor country.

13. The earnings from steamers have improved from £14,466 to £22,340, an increase of £7,874 or just on 54 per cent., but the steamers have really done much more for the combined system than is shown by these figures, for not only have the steamers actually earned the sum shown, but in addition have directly contributed to the increased earnings on the railway, insomuch as practically the whole of the steamer-borne traffic, representing over 10,000 tons, has been carried over the whole line between the Lake and the Coast, and I approximate the additional earnings to the railway at fully £25,000 and that, correctly appreciated, the steamers might claim a larger proportion of the success than shown. The steamer system is the real feeding ground and mainstay of the railway.

Projects which East Africa is now developing are yet in their infancy and need time to mature, and it will be years before any of these can yield much traffic to the railway. Of the two countries, Uganda is far the richer.

14. In the immediate future, it is a hard struggle for the pioneers, and although it may be encouraging to see rates for fibre, rubber, cotton, &c., lowered, yet (except where capital is behind them), the growers are sorely pinched by the high rates of many of the principal necessaries of life—flour, rice, sugar, &c.—all of which are exceedingly expensive up-country, entirely due to the high cost of carriage, and although a railway officer's business is to take what the traffic can bear, it is possibly not in the best interests of the country. The Uganda Railway was not projected as a money-earning system; its aims are far broader—the development of a new country—and if I dare offer an opinion, it is that the smaller the surplus over the working expenses for the next few years the better. By all legitimate means strive to increase traffic and lower expenses with due regard to the up-keep; but, as stated, for some years to come at any rate we should use a proportion of the increased earnings for the improvement of the line and the reduction of rates. By and by the time will come to reap the benefit of forbearance. Foremost among the improvements or additions must be placed 10 of the most powerful locomotives that the road can carry, to be used on those sections where at present we are handicapped by the grade. The initial outlay cannot be great, while the immediate effect will be a marked economy in haulage.

For any further detail, I refer to the numerous statements accompanying this report.

15. I have pleasure in certifying to the excellent conduct of the staff and to the zeal and ability with which they have carried out the duties entrusted to them. The increased earnings and almost immunity from accident carries its own confirmation. The new form on which the accounts have had to be submitted has somewhat delayed the compilation and added to the labour, which principally fell on the Accounts Department.

C. Sandiford,

Acting Manager, Uganda Railway.

REPORT OF THE LOCOMOTIVE SUPERINTENDENT FOR THE YEAR ENDING 31st MARCH, 1906.

I have the honour to submit the annual statements and a report on working the Locomotive, Carriage and Wagon, and Marine Departments for the year ending 31st March, 1906.

The length of line working was the same as in the previous year (viz., 584 miles). The lake service was also the same.

The total engine mileage run rose from 473,565 in the previous year to 609,391 in that under review, but the ratio of train to engine miles was better than in 1904-5, showing a more economical service.

The increase in mileage has, I am glad to say, contributed to an improvement in the rate of expenditure noticeable under all heads directly effected.

The cost of fuel was low in 1904-5, and although still lower in cost per mile, having dropped from 2·85a. to 2·51a. per mile in 1905-6, I must sound a note of warning and predict that no further reduction can be expected ; on the contrary, the cost is now abnormally low for a 2 per cent. graded road like the Uganda railway, and even a partial return to the use of coal will at once run up the cost per mile.

The greatest difficulty has been experienced, and is now felt, in securing a supply of wood fuel, entirely due to labour difficulties ; the present contract price is certainly exceedingly low, but so long as labour was procurable we found no great difficulty, except on the 250 miles nearest the coast. It is, however, more than probable that even a moderate increase in traffic cannot be met by any immediate improvement in the wood fuel supply on this particular length, while training wood fuel long distances is impracticable ; wood was forthcoming so long as the mileage was very small and there was abundant leisure to collect and distribute it, and the labour required to cut and carry was procurable, and I may state in this connection, that although much larger numbers of Africans are now employed on the railway than formerly, yet at the particular time that we substituted wood for coal, viz., in 1901-2-3, large numbers of coast natives were thrown out of employment as porters for caravans, the carrying trade being monopolised by the railway, and for a time the men were willing to cut wood, never a very congenial occupation.

I have commented on this wood fuel question rather fully, remembering that in 1901 we spent Rs. 849,962 on fuel alone, in fact, more on fuel alone than we do now altogether in working the Locomotive and Carriage Department ; the cost ran out to 9a. per train mile and in quantity to over 27,000 tons of coal and 4,000 tons of wood. The mileage was of course greater (about double), but immediately the Magadi traffic or other large increase in business comes, we must look to coal or liquid fuel at fully three times the price of wood, and are now laying in a few thousand tons of coal to meet it.

A year ago this difficulty in providing wood fuel was not fully appreciated ; indeed the indications did not exist, nor was the substantial increase in traffic we now run, counted on, so our difficulties are largely discounted ; indeed, to the extent of the greater prosperity.

The labour difficulty commented on is mainly due to the advent of shooting and excursion parties, requiring the use of porters for caravans, a very congenial work, and to an extent to the absorption of African labour by settlers and residents of all sorts, and lastly, yet most important of all, to the material improvement in the condition of the natives. Thanks to the security of our rule they are now safe in the enjoyment of their herds, crops, and above all in their idleness, safe from raids, a sufficient number of helpmates to cultivate a fruitful soil, an occasional trip with a caravan to break the monotony of home life; under these conditions an African is supremely happy and despises work.

I will not make much comment on the other sub-heads under B. and C. directly effected by an increased mileage, all of which show the satisfactory results discernable in the accounts; some are more or less independent of the mileage, such as supervision, office establishment, upkeep of buildings, machinery, &c., the outlay on which varies little within large limits; on others the expenditure is commensurate with the mileage, only to a moderate extent, such as the labour connected with fueling, water, &c., and exhibit best results when a good mileage is run.

Drivers' and firemen's wages, an important item under running expenses, show improvement, having fallen from 3·74a. in the previous year to 3·17a. in the year under review, while in 1903-4 the rate was 4a. Again, maintenance and the general upkeep of locomotives and rolling stock are lower, standing at 5·32a. as against 8a. in the previous year.

It may be mentioned that, adhering to the principal of bettering everything at the expense of earnings (with a closed capital account there is no option) a good deal is done and appears under this head in revenue accounts, which on a new line usually goes to swell the capital account. This explanation particularly applies to the workshops, which were fully employed, and the whole of the outstanding repairs from former years have been cleared off, no less than 24 locomotives, or 34 per cent. of the whole, passed through the shops, yet never more than 8 per cent. were at any one time withdrawn.

Under carriages and wagons, 621 vehicles, or 54 per cent. of the whole, were overhauled and repaired, but never more than 4 per cent. were withdrawn at any one time, giving traffic the fullest use of the stock. Among special works may be mentioned the widening of 43 third-class carriages, increasing the carrying capacity by 25 per cent., with only an appreciable addition to the tare. Five saloon carriages were also widened, and one second-class carriage reconstructed to hold 40 passengers, as against 12 in the old vehicle.

Over and above the purely locomotive and carriage repairs executed in the Nairobi shop, a great deal of general manufacturing work for engineering, stores, and traffic departments was carried out, while Government and outside enterprises are constantly calling for assistance, which, although attended with little or no profit, is distracting. However, in a new country where there is no other establishment with skilled labour, assistance cannot be refused.

To sum up, the result of the year's working shows an expenditure of Rs. 696,577, against a sanction of Rs. 737,909, a difference of Rs. 41,332 (under 6 per cent.). The rate per mile, which perhaps is the surest test of economy, runs out at 18·29a., as against 22·56a. in previous year, a 4·27a. reduction, which can only be looked at as very satisfactory.

Turning to the personnel of the staff from the returns submitted, it will be seen that no considerable change has taken place in the totals. The number of men employed rose from 1,053 on 1st April, 1905, to 1,226 on 31st March, 1906, including the staff employed in the Marine Department and men engaged for the erection of the steamer "Clement Hill."

The proportion of Indian to African labour changed little during the twelve months, as will be seen by comparing the 585 Indians and 402 Africans on 1st April, 1905, to 690 Indians and 461 Africans on 31st March, 1906, the increase in Indians being due to artizans imported to build the third steamer. These figures of course do not include Africans employed by contractors—and on fuel cutting operations (fully 1,200 men).

I am glad to record that the conduct of the staff was satisfactory; the general health of the men employed was on the whole good, and except from plague, which appears to be a pretty constant visitor, the number of deaths was not great. Still it is disquieting, and when I state that in three years I have lost two head accounts clerks out of the small locomotive office, men very difficult to replace, it will be seen that it is not comfortable and keeps us constantly on the alert.

The difficulty experienced in housing men, turned out of their quarters after cases of death from this cause, is very great, and there can be no disputing the fact that, although a fairly sufficient amount of menial accommodation is provided, we are greatly crowded in the subordinate quarters, none of which can be called commodious and all of which are far from sanitary.

So long as the staff was almost, if not entirely, a bachelor staff, we had house accommodation enough, but now that a good many men have brought their families (many more would do so and marry if they could only find accommodation) it is difficult to house them. I hold, and a long experience has confirmed the opinion, that a married railway staff is infinitely preferable to a body of men living single or away from their families, and any arrangement under which more men could be enabled to settle down and make this country their home, would add to the comfort and well-being of the staff.

Steamers and Barges.

During the year ending 31st March, 1906, little could be done to improve the service, beyond running the two steamers as constantly as practicable, and the "Winifred" and "Sybil," with the exception of the short time the latter vessel was laid up, ran regularly, but were quite unable to cope with the tonnage offered, and a large quantity of goods lay for months, particularly at Mwanza, and there can be no question that the third steamer, the material for which has lately arrived, is much wanted, but she will be found insufficient, and the additional craft lately sanctioned by the Colonial Office will be fully employed in the future.

The tug "Percy Anderson" was utilised in running the Munyonyo service, and during the temporary withdrawal of the "Sybil" was found useful in keeping down accumulations of goods for Entebbe. The loan of the Uganda Protectorate steamer "Sir William Mackinnon" also helped by running the mails.

It did not need the grounding of the "Sybil" and the great inconvenience of her withdrawal from the service, even for the short time she was laid up, to emphasize the important increase to our resources afforded by the completion of the Port Florence Dock, the provision of which enabled us to execute the repairs necessary, and increases the desire to see it restored as speedily as possible, which is rendered more difficult due to the unusual height of the lake.

The extension of the Port Florence Pier has reduced the difficulties under which the service was worked, while the completion of the piers at Entebbe, Mwanza, and Jinja (now in course of erection) this year will not only further do so, but will reduce the length of the stoppages at these ports and make the voyages shorter. Both the "Winifred" and "Sybil" had a thorough overhaul when in dock last autumn, and it is a satisfaction to know that in the case of the "Winifred," which had been afloat three years, the bottom plates show little, if any, signs of corrosion and goes to establish a long life for lake vessels.

The total expenditure on the flotilla was Rs. 154,697, within a few rupees of the sum spent in the previous year (Rs. 154,600), but the service was much better and far more profitable, while a good deal more work was carried out. The expenditure is Rs. 23,000 under the estimate (Rs. 177,156), almost entirely accounted for under the head of fuel, due to favourable prices and to a smaller quantity being used than anticipated, through the vessels being in dock. Other small economies made up the difference.

The superior staff of the steamers is difficult to keep up; men are not so easily found as for the railway, we are quite out of touch with the sources of supply, and can only recruit in Europe, which is expensive, or from India, where engineers and navigating officers are by no means plentiful. Holding no surplus staff, when a man falls sick (and the lake has not proved particularly healthy), we are at once in difficulty. The provision of the bare number at work on a service of this sort is a faulty arrangement, and we must in future arrange for spare officers to meet sickness or accident. It is in the long run more economical than laying up a vessel, or worse still, being forced to run her under-manned or incompetently officered.

The conduct of the officers and men in the Marine Department was during the year excellent with one exception, that of the Commander (Captain Hutton) of the "Sybil," whose services it was judged desirable to terminate in connection with the grounding of that steamer.

The material for the third steamer "Clement Hill" arrived at Kilindini on 26th March, and is being carried up to the lake.

In conclusion I must remark that so far as practicable I have followed the instructions contained in Colonial Office Despatch dated the 5th October, 1905, but it has been quite impossible to produce the mass of detailed matter exhibited in the Ceylon Report, much of which can serve no useful purpose, and as a system of accounts they are not to be compared with the more modern practice in force on Indian railways. The reason it is impossible to go into such minute detail is that the initial compilations necessary to reproduce it are not kept, clerical labour is probably three times as expensive in East Africa as in Ceylon, and further, the suggestion comes too late in the year, even had we the staff necessary to carry it out. I feel certain, however, that Government will find in the accounts, as submitted, amply sufficient information for all practical purposes.

C. SANDIFORD,

Locomotive Superintendent.

May 8th, 1906.

REPORT OF THE TRAFFIC MANAGER FOR THE YEAR 1905-6.

1. *Coaching Traffic.*—The passenger service throughout the year was worked satisfactorily and with an entire immunity from accident to the travelling public. As regards injury to passengers, this applies also to the steamer service on the Victoria Nyanza, which is run as part and parcel of the railway. Unfortunately, however, one of the two vessels, the s.s. "Sybil" (Captain Hutton), while on a trip round the lake, struck a reef on the 26th of June, and a considerable amount of cargo had to be jettisoned

to save her. Much inconvenience was caused, and there was heavy delay and disorganisation to the lake traffic while she was being repaired. There are no mail or purely passenger trains run on the system, and the traffic was carried by mixed trains only, three each way weekly from Mombasa to Nakuru, mile 448, and to each way from that point to the lake. So far this has been done in the interests of economy and because of the small passenger traffic offering. With the rapid development of the country, however, and the ever increasing influx of sportsmen, tourists and settlers, a faster and more frequent service of passenger trains will become a necessity in the near future. Several extra mixed trains had to be run to clear the traffic. In connection with the Nandi War a number of troop trains were run for the field force.

2. The following statement shows satisfactory improvement over the previous year under practically all the various heads, viz.:—

—	Passengers carried.		Increase.
	1904-5.	1905-6.	
1st Class	2,233	3,342	1,109
2nd „	3,687	8,393	4,706
Intermediate Class...	802	735	-67
3rd Class	65,767	166,319	100,552

3. The earnings for the above were Rs. 542,934, against Rs. 430,740 for the previous year, or an increase of Rs. 112,193. Receipts on passengers' luggage show the large increase of Rs. 21,699; this is due chiefly to the large number of sportsmen and tourists who visited the country from October to March.

4. On the lake steamers there was also the following improvement in passenger traffic, viz.:—

—	Passengers carried.		Increase.
	1904-5.	1905-6.	
1st Class	469	558	89
2nd „	415	490	75
3rd „	3,633	5,089	1,456

The earnings on the above were Rs. 65,735, against Rs. 43,660, or an increase of Rs. 22,074. On live stock carried by steamers there was a small increase of Rs. 305, while the increase on luggage carried amounted to Rs. 2,662.

5. *Goods Traffic.*—The tonnage in "upwards" public goods on the railway amounted to 25,293 tons, against 15,460 tons in the previous year. The tonnage in "downwards" goods was 14,359 tons, against 8,255 tons in the previous year. The "upwards" goods traffic continues to exceed considerably the "downwards" traffic, and in consequence there is necessarily a certain amount of light running of vehicles in the latter direction. In the interests of economy merchandise is, therefore, moved up from the coast in full train loads only. In the next few years, I anticipate, the

balance will become more even, at any rate in bulk, as the development of bulky staples such as fibre, cotton, chillies and ground nuts has now got a start and will undoubtedly prove a success.

6. The results of both coaching and goods working for the year under report are far above expectations, and show a surplus revenue over expenditure of £56,678, as against an estimated deficit of £8,640. The undertaking has, therefore, earned over 1 per cent. on its large capital cost.

7. The following figures show the comparative monthly earnings in coaching and goods for the railway, excluding the steamers, as against the previous year:—

—	Coaching.		Goods.		Total.	
	1904-05.	1905-06.	1904-05.	1905-06.	1904-05.	1905-06.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
April	55,695	45,290	94,949	117,362	150,554	162,652
May	48,703	51,998	93,860	137,971	142,563	189,969
June	39,609	42,905	124,726	116,843	164,335	159,748
July	45,276	49,658	111,690	124,973	156,966	174,631
August	42,092	53,244	102,058	159,129	144,150	212,373
September	42,121	48,103	116,331	178,954	158,452	227,057
October	45,548	73,800	107,619	153,368	153,167	227,168
November	42,578	51,698	116,014	162,903	158,592	214,601
December	52,211	61,634	143,206	173,549	195,417	235,183
January	49,090	65,968	108,408	213,214	157,498	279,182
February	40,768	60,406	108,970	137,657	149,738	198,063
March	40,752	74,645	128,062	207,452	177,814	282,097
Rs.	553,353	679,349	1,355,893	1,883,375	1,909,246	2,562,724
Increase	Rs. 125,996		Rs. 527,482		Rs. 653,478	

8. The comparative figures for the traffic carried by the two steamers on the Victoria Nyanza for the same period are as follows:—

—	Coaching.		Goods.		Total.	
	1904-05.	1905-06.	1904-05.	1905-06.	1904-05.	1905-06.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
April	4,486	5,000	9,236	15,579	13,722	20,579
May	5,059	6,880	9,547	17,895	14,606	24,775
June	4,983	5,336	12,807	13,539	17,790	18,875
July	3,817	3,993	12,633	18,080	16,450	22,073
August	3,842	4,822	12,013	26,201	15,855	31,023
September	4,301	5,532	14,272	24,163	18,573	29,695
October	4,582	7,342	14,785	20,824	19,367	28,166
November	5,124	6,640	13,799	22,998	18,923	29,638
December	5,174	9,448	15,650	25,157	20,824	34,605
January	3,590	6,890	15,366	23,915	18,956	30,805
February	3,683	7,947	16,882	17,597	20,565	25,544
March	6,311	9,945	15,024	29,378	21,366	39,323
Rs.	54,982	79,775	162,014	255,326	216,996	335,101
Increase	Rs. 24,793		Rs. 93,312		Rs. 118,105	

For the railway and steamers combined, the total increases were:—

Coaching.	Goods.	Total.
Rs. 150,789	Rs. 620,794	Rs. 771,583

9. "*Upwards*" *Traffic.*—The following statement gives the commodities in which there were important improvements in this traffic over the previous year:—

—	1905-6.	1904-5.	Increase.
	Tons.	Tons.	Tons.
Building material	7,856	4,290	3,066
Rice	1,281	991	290
Wheat flour...	1,089	882	237
Agricultural implements ...	187	153	34
Ale and beer	205	157	48
Spirits	233	156	77
Wines	174	108	66
Machinery	224	127	97
Paint and tar	115	61	54
Provisions	888	742	146
Sugar	636	490	146
Trade goods	794	738	56
Piece goods	2,061	1,269	792

10. An important factor in connection with the foregoing figures is that a large share of the traffic was for the lake ports, for which we get a lead over the entire length of 584 miles of railway, apart from profitable freights on the steamers themselves.

Below are the figures showing the improvement in this respect over the previous year:—

—	Upwards traffic to Lake Ports.					
	1905-6.			1904-5.		
	Tons	cwt.	qrs.	Tons	cwt.	qrs.
April	367	3	3	212	9	2
May	447	3	0	264	7	2
June	329	2	0	318	2	1
July	420	18	3	299	7	1
August	500	6	1	251	6	2
September	462	8	2	314	17	1
October	455	18	1	379	19	2
November	467	19	2	312	19	0
December	521	1	1	328	17	3
January	476	2	3	454	7	3
February	376	3	3	424	14	2
March	656	16	2	357	12	0
Total	5,481	4	1	3,919	0	3
Increase	1,562	2	3	—		

11. The various commodities comprising the above tonnages were distributed over the British and German ports on the lake as follows:—

(i.) British—

	Tons.	Cwts.	Qrs.
Entebbe	2,077	14	3
Munyonyo (Kampala)	1,410	6	1
Jinja	647	15	1
Karungu	19	5	1
Total Tons ...	4,155	1	2

(ii.) German—

	Tons.	Cwts.	Qrts.
Mwanza	1,327	13	0
Bukoba	328	4	1
Shirati	45	0	1
Total Tons ...	1,700	17	2

Of the above, the Congo Free State took 312 tons of general trade goods, machinery, cement, paint, and Burmah rice. It was booked in about equal proportions to Entebbe and Mwanza.

Country Produce Traffic.

12. There is a considerable increase on the previous year's tonnage and the following comparative statement will show the progress made in the various staples carried:—

Commodity.	1905–6.			1904–5.			Increase.		
	Tons	c.	q.	Tons	c.	q.	Tons	c.	q.
Beans	929	0	0	379	0	0	550	0	0

*Carbonate of soda (crude)	111	10	0	60	4	0	51	6	0
*(Raw sugar) Jagree	77	0	0	39	0	0	38	0	0
*Sugar-cane	12	0	0	6	0	0	6	0	0
*Eggs	9	13	2	6	3	1	3	10	1
*Timber	2,259	0	0	558	0	0	1,701	0	0
*Soap (country)	2	0	3	—			2	0	3
Gum	5	18	0	—			5	18	0

* These articles were not exported.
† A portion only of these was exported.

13. A very large share of the above staples came from the lake ports, comprising practically all the traffic for export with the exception of beans and potatoes. Thus, but for the steamers serving through the railway, the lake districts in "upwards" traffic, and as valuable feeders to the railway system in "downwards" traffic, the year's working would show very poor results indeed.

This is also accountable to a great extent for the large increases in the Mombasa customs receipts.

14. The British and German ports contributed the more important staples referred to above in the following proportions, viz. :—

Staple.	British.	German.
	Tons c. q.	Tons c. q.
Bark cloth	17 8 2	0 15 3
Cotton	23 0 0	5 0 0
Coffee	23 0 0	152 0 0
Fibre	150 0 0	—
Chillies	1,545 0 0	—
Ghee	55 16 2	137 3 2
Ground nuts	55 12 0	1,123 8 0
Ivory	42 18 0	6 2 0
Rice	26 0 0	237 0 0
Hides and skins	501 0 0	692 0 0
Rubber	44 6 2	45 13 2
Sim Sim seed	99 7 2	4 12 3
Wax	—	180 0 0
Jagree	72 0 0	—
Total	2,655 9 0	2,583 15 3

The total export tonnage carried by the steamers was 5,482 tons, against 2,599 in the previous year.

15. *Live Stock.*—Taking the combined figures shown under coaching and goods, the improvement in this traffic over the previous years was as follows :—

—	Number carried.		Increase.
	1904–5.	1905–6.	
Horses	338	439	101
Mules and donkeys... ...	447	745	298
Cattle	754	2,632	1,878
Sheep	1,798	6,269	4,471

The increased earnings amounted to over Rs. 33,000.

The following animals were imported into the country, viz. :—

Horses	178
Mules and donkeys	240
Cattle	16
Pigs	39
Sheep	5,042

The sheep were practically all imported by the East African Syndicate from Australia for their farm in the Rift Valley.

16. *Traffic Working.*—Referring to the statistics accompanying the accounts for the year and the Chief Accountant's memorandum thereon, it will be observed that on practically all heads of working of the traffic department satisfactory results appear.

Excepting the sum of Rs. 29,000 paid in claims for cargo jettisoned by the s.s. "Sybil," which was debited to this department, there was an actual saving in the estimated expenditure of some Rs. 20,000, while the percentage of expenditure on gross receipts fell from 10·19 to 9·64.

As regards "coaching," two items show slightly unfavourable results, viz., receipts per train mile and fewer intermediate class passengers carried. Both are easily explained. The train mile receipts, owing to 80,000 passengers carried by the local Mombasa-Mazeras train service instituted in October, and over 5,000 labourers for contractors, carried for longer distances, both at considerably reduced rates; also to a considerable amount of light running of troop trains from point to point to meet the requirements of the Nandi Field Force from October to the close of the year.

As regards intermediate passengers, in the previous year, during the heavy influx of Europeans from South Africa, a large number travelled in batches in this class of carriage.

In all other cases figures of vital importance, such as goods receipts per train mile, train and vehicle tonnage per mile, haulage cost of a train, a vehicle, and goods unit per mile, all show improved results.

17. *Claims.*—Excluding the amount paid for the s.s. "Sybil" jettisoned cargo, the amount of compensation paid was Rs. 2,725 (£181) only. To the railway proper the share of this was extremely small, damage by rain and loss in handling to and from the steamers and thefts at lake ports owing to unsatisfactory police arrangements, were accountable for the main portion of it.

18. *Rates.*—During the year important reductions were made in rates on edible stuffs and seeds with a view to assist settlers to export. Deductions were also made in a few cases for upwards traffic, such as machinery and building material.

These reductions have been a great benefit in the development of the country, but they likewise explain the decrease in receipts on cost per ton mile carried.

The upwards rates in several commodities which now vitally affect the existence of a struggling white population might be reduced to a more reasonable figure, and recommendations to this effect will be made the subject of a special memorandum.

19. *Staff.*—On the whole the staff have worked well during the year. Considerable inconvenience, however, was caused through sickness amongst the Indian station-masters, signallers, and clerks during the two rainy seasons. This was further accentuated, due to sickness amongst their families, who have come from India in large numbers, and in the more unhealthy districts black water fever and malaria were not uncommon. A large proportion of European guards was also sick, at the close of the year especially, and one lately died of black water fever.

I wish to express my thanks to my assistants, Messrs. Sweenie, Wilson and Stanley for their good work during the year, also to Mr. E. H. Biffen and Mr. A. E. Stobbs, District Station Masters.

Mr. Biffen had a very large share of work to do as District Station master of Nairobi, while Mr. Stobbs, as District Station Master at the lake, worked hard until he had to be withdrawn on account of his bad health.

Mr. Berry, the District Station Master of Mombasa, though a comparatively new hand, gave general satisfaction.

20. *General Remarks.*—The present capacity of the two steamers on the lake has proved insufficient, and for several months during last busy season cargo offered had to be left behind.

This was especially the case with the ship doing the round trip to German ports, and during the current year matters will be much worse, as the coming crops are reported to be far heavier.

The construction of the new ship s.s. "Clement Hill" has just been started, and she will be ready about a year after she was needed.

To meet the expected traffic next year, another large cargo boat in addition to the s.s. "Clement Hill" should be arranged for at once.

The rapid development of the valuable staples produced in both the British and German regions around the lake requires serious and immediate attention, and ships must be provided to cope with it, for without this, the only means of transport, disaster would result to producers and traders, while the Government revenue and the railway must also suffer.

In the present season, should anything occur to take either of our two ships off their regular running, the above would actually happen. The lake vessels were originally intended as feeders to the railway, but from the accounts it will be seen how very handsome a dividend they have themselves earned on their capital cost.

In short, in the lake Victoria we have an equivalent to a free gift of some hundreds of miles of railway requiring no maintenance, and therefore no reasonable sum to provide it with necessary facilities should be grudged, nor the supplying of such facilities be delayed.

The first-class cabin accommodation on the present steamers is too limited, and passengers have frequently to sleep in the dining saloon.

The question of extending the railway terminus to a deep water pier I have before brought to notice, and every year the necessity for this will become more apparent. The lake rises and falls considerably, and should it ever fall as much as it has risen this year, our ships could not enter Port Florence.

In the East Africa Protectorate no staple of importance for export (except a small out-turn of potatoes and beans) has been produced, and I do not anticipate much in the way of export traffic from the farmers in the Highlands for the next year or two.

At Voi an American firm is turning out a certain amount of fibre, but so far it has not got much beyond the experimental stage.

Postal Facilities.—These have greatly improved throughout the system, and, under an arrangement with the Postmaster-General, all roadside station masters where post offices are too expensive to be kept up act as post masters.

A. E. CRUICKSHANK,

Traffic Manager.

Traffic Manager's Office,

Nairobi, 22nd June, 1906.

TABLE I.

Abstract of Chief Statistical figures relating to the working of the Railway in 1904–5 compared with 1905–6.

No. 557.

EAST AFRICA PROTECTORATE.

(For Report for 1905-6, *see* No. 519.)

THE GOVERNOR TO THE SECRETARY OF STATE

Governor's Office, Nairobi,
6th March, 1908.

MY LORD,

I HAVE the honour to submit the Annual Report of the Administration of the East Africa Protectorate for the year ending the 31st March, 1907.

2. The submission of this report has been delayed as it was intended that it should accompany the Blue Book for the same year, which it has not yet been found possible to get through the press.

I have, &c.,

J. HAYES SADLER.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 34282 6/08 D & S 5 31991

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1906-7.

I.—FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

Revenue.

1. The estimated revenue for the year ended March 31st, 1907, was £381,646; and the actual revenue collected exclusive of a Parliamentary Grant of £164,000 was £461,362 14*s.* 8*d.* This shows an increase of £191,000 11*s.* 3*d.* over the revenue of the year 1905-6, which, exclusive of a Parliamentary Grant of £214,000, amounted to £270,362 3*s.* 5*d.* The gross receipts of the Uganda Railway were, for the first time, shown under Protectorate Revenue.

2. The following table shows the detailed actual revenue collected in 1906-7. The total revenue only for 1905-6 is given, the details being of little use for purposes of comparison owing to the reclassification of revenue in accordance with the financial instructions:—

—	Amount collected in the year 1905-6.			Amount collected in the year 1906-7.			Increase.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Parliamentary Grant	214,000	0	0	164,000	0	0			
Total Grants	214,000	0	0	164,000	0	0			
Customs				81,302	13	0			
Port, Harbour, Wharf, and Lighthouse Dues.				666	12	8			
Licences, Excise, and Internal Revenue not otherwise classified.				83,200	19	1			
Fees of Court or Office Payments for specific services, and Reimbursements-in-Aid.				19,703	1	3			
Post Office and Telegraphs				15,734	1	10			
Government Railways				231,375	1	1			
Rents				10,991	13	4			
Interest...				1,825	1	2			
Miscellaneous Receipts				8,720	4	1			
Sale of Government Property ...				3,974	4	5			
Total exclusive of Land Sales.				621,493	11	11			
Land Sales				3,869	2	9			
Total	484,362	3	5	625,362	14	8			
Total exclusive of Grant	270,362	3	5	461,362	14	8	191,000	11	3

3. It is still possible, however, to compare some of the main sources of revenue, and of these the most gratifying is the Uganda Railway, whose revenue amounts to £231,375 1*s.* 1*d.*, being an excess over expenditure of £68,838 10*s.* 11*d.* for the year. These figures indicate a general steady increase of the total traffic, and are the more encouraging inasmuch as great difficulty has been experienced in obtaining suitable labour, and as the goods traffic during the last part of the year under review was disappointing, owing partly to the very scanty rainfall and partly to financial difficulties among the traders in the Protectorate.

Customs show an advance of £7,626, which is due to increase in trade and to the low rates of freight introduced by the Dale Line of steamers. It should be mentioned, however, that this sum includes £2,600 import transit duty, which is liable to be repaid.

Hut Tax also has risen from £44,541 to £61,292 18*s.* 7*d.*, owing largely to the more extensive area brought under administrative control and partly to the increase of the tax from Rs. 2 to Rs. 3 in various provinces during the year.

Although, as noted above, the reclassification renders comparison between the two years, except in a few instances, of but little value, yet the total increase of revenue shows a very gratifying development of the Protectorate's resources.

Survey Fees show a decrease of £6,927, but it should be noted that the 1905-6 figures include the balance of the old Survey Fee deposit account, and further that these fees are payable in advance and the larger amounts were naturally paid when the first rush of settlers arrived in the country.

The apparently large increase in the revenue derived from rents of land must be largely discounted by the fact that a sum of £7,274 from the Railway Zone Suspense Account was credited under this head.

Expenditure.

4. The following table shows the actual detailed expenditure for 1906-7:—

—	Expenditure.					
	1905–6.			1906–7.		
	£	*s.*	*d.*	£	*s.*	*d.*
Rent and Interest to H.H. the Sultan ...				17,000	0	0
Pensions				1,349	11	9
H.M. Commissioner				2,691	15	10
Deputy Commissioner and Secretariat ...				5,425	4	6
Provincial Administration				34,407	12	4
Treasury				5,522	12	10

—	Expenditure.	
	1905–6.	1906–7.

Famine Relief		86 18 4
Nandi Expedition		1,481 1 7
Total	418,839 3 10	616,088 13 11

5. For the same reason as mentioned above with regard to the detailed revenue, the detailed expenditure for 1905-6 is omitted, but the total for 1906-7, viz.: £616,088 13*s.* 11*d.*, shows an increase of £197,249 10*s.* 1*d.* over the preceding year. This is to a certain extent to be expected as a natural outcome of the largely enhanced revenue which necessitates in many cases a larger initial outlay—*e.g.*, building new stations, additions to the staff—but the large increase shown above is mainly attributable to the inclusion of the Uganda Railway expenditure of £193,156 6*s.* 5*d.* (including special expenditure of £31,619 16*s.* 3*d.*), whereas in the previous year only the profit on the working was shown.

The military expenditure shows a decrease of some £30,000 on last year, which may be ascribed largely to the reduction of the strength of the 1st and 3rd King's African Rifles by two companies each. Moreover the Zanzibar Government contribute a sum of £10,000 on account of the two companies stationed in Zanzibar.

6. The totals of the revenue and expenditure for the last six years, exclusive of Parliamentary Grants, are as follows:—

	Revenue			Expenditure.		
	£	*s.*	*d.*	£	*s.*	*d.*
1901-2 ...	68,453	8	9	278,151	12	7
1902-3 ...	95,283	12	11	311,469	0	5
1903-4 ...	108,856	19	3	418,877	0	3
1904-5 ...	154,756	1	1	302,559	12	9
1905-6 ...	270,362	3	5	418,839	3	10
1906-7 ...	461,362	14	8	616,088	3	10

(B.) TAXATION.

The only direct tax levied in the Protectorate is the Hut Tax, which shows an increase of £16,751 over 1905-6; with a total of £61,292, as against £44,541. This advance may partly be ascribed to the fact that the tax was raised during the year from Rs. 2 to Rs. 3 in several provinces; but in a far greater degree to the extension of the area under administrative control. Increases to the staff of Collectors and Assistant Collectors were sanctioned enabling the Government to get more closely into touch with the natives of the existing districts and to open up and develop hitherto unadministered country; a new station was built in the Kenya Province with the most satisfactory results, inasmuch as the Hut Tax in that province showed an increase of £7,587. In certain cases the natives are allowed to pay the tax in labour or kind, but as a rule they now prefer to pay in specie.

(C.) ASSETS AND LIABILITIES.

The surplus of assets over liabilities on March 31st, 1907, was			£225,708
From this must be deducted:—			
Sanctioned in aid of expenditure, 1907-8 ...		£81,177	
Nairobi, intercepting sewer		12,000	
Nairobi, removal of bazaar (on account) ...		8,000	
Removal of Treasury and Audit Offices to Nairobi		23,500	
Railway Surveys		10,000	
Remanet Expenditure on Railway Special works:—			
S.S. "Clement Hill"	£772		
Kilindini Pier	7,574		
New Cargo Boat s.s. "Nyanza" ...	6,225		
Piers and goods sheds at Jinja and Entebbe	696	15,267	149,944
Balance available to be placed at interest ..			£75,764

(D.) PUBLIC DEBT.

The Protectorate has no Public Debt.

(E.) CURRENCY.

The East Africa Currency Order in Council, 1905, was brought into force as far as notes were concerned on April 1st, 1906; the subsidiary decimal coinage was not circulated during the year under report and the rupee currency continued in use. The actual amount of paper money in circulation during the year was £160,333 6*s.* 8*d.*

(F.) BANK.

The National Bank of India, Limited, under the authority of the Companies Acts, with branches at Mombasa and Nairobi, is the only bank which does business in the Protectorate. It has a paid-up capital of £5,600,000 and a reserve fund of £600,000.

(G.) MUNICIPALITIES.

There are two municipalities in the East Africa Protectorate, Nairobi and Kisumu. As pointed out in the previous reports, the possession of treaty rights by foreign Powers has hitherto prevented the creation of municipalities on the coast strip.

2. The comparative revenue and expenditure for the last five years are given in the following table:—

Name of Municipality.	Revenue and Expenditure.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.
		Rs.	Rs.	Rs.	Rs.	Rs.
Nairobi ...	Revenue ...	12,770	17.233	40,866 0 0	44,036 0 0	58,742
	Expenditure	12,770	17,233	40,866 0 0	51,191 0 0	48,257
Kisumu ...	Revenue ...	—*	—	8,779 12 3	12,843 14 6	15,432
	Expenditure	—	—	8,418 4 3	15,727 3 6	14,409

* Kisumu was only made a municipality in 1904–5.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) IMPORTS AND EXPORTS.

1. The annual value of the Protectorate trade for the last five years was:—

Year.	Imports.	Exports.	Total.
	£	£	£
1902–3	443,032	148,060	591,092
1903–4	436,947	159,815	596,762
1904-5	518,143	234,664	752,807
1905-6	672,360	332,838	1,005,198
1906–7	753,647	440,705	1,194,352

Imports.

2. The above figures do not include importations on behalf of the East Africa or Uganda Administrations or for the construction and maintenance of the Uganda Railway, of specie or goods in transit. Including these figures, the total imports for the years in question amount to:—

Year.	Amount.
	£
1902-3	700,660
1903-4	604,367
1904-5	741,785
1905-6	974,402
1906-7	1,226,649

There is a satisfactory increase of £81,287 in trade goods imported as compared with the previous year.

3. Comparing the principal articles imported in 1906-7 with those of 1905-6, the following call for notice:—

Agricultural implements have increased from £12,893 to £19,104, showing that serious work is being undertaken by landholders.

Wood consisting principally of scantlings and ceiling boards from Norway, has advanced from £14,560 to £22,670, an increase of over 50 per cent. As stated in the report for 1905-6 a decrease in the importation of timber will probably take place when the working of the large areas of forest in the Protectorate is commenced. Towards the end of the year under review a report on the Kenya Forests was submitted by Mr. D. E. Hutchins, which shows that they are of even greater value than was supposed.

Furniture shows a slight decrease, owing to the fact that indigenous woods are now being used for local manufacture.

Iron and steel wares show an advance from £23,919 to £33,406, and machinery, consisting principally of plant for fibre, cotton, and timber industries, has increased from £4,478 to £15,516.

Bags and sacks, chiefly imported from India and used mainly for packing produce, have risen by 33 per cent.

Provisions have increased by £10,000, a fact attributable to the importation in excess of actual present requirements, induced by the cheap freight of the Dale Line of steamers referred to above.

The import of spirits remains approximately the same, although the average price has increased.

Beer has advanced by 40 per cent. from £2,924 to £3,963, of which Great Britain and Germany each contributed half. The import of tea has doubled, partly owing to consumption by the natives.

Live stock shows a slight diminution, but to account for this it should be remembered that a consignment of 5,000 Australian sheep was imported in 1905-6.

Of trade goods, cotton is still far in advance of other importations, although only showing a slight increase as compared with 1905-6.

Exports.

The value of exports in 1906-7 amounted to £440,705. This sum, which, as in preceding years, includes the exports of produce from the East Africa and Uganda Protectorates, as well as goods in transit from German East Africa, Italian East Africa, and the Congo Free State, shipped through Mombasa, shows an increase of £107,867 on the figures of 1905-6, and of £206,041 on those of 1904-5.

The principal products exported were hides, rubber, ivory, mangrove poles and bark, chillies, beeswax, grain, cotton, fibre, copra, and potatoes.

The value of *hides and skins* exported has risen from £103,558 to £141,209. The trade in this commodity is almost entirely in the hands of Italian and American houses, who have agents in Uganda and German East Africa, as well as in the East Africa Protectorate.

Rubber has increased from £44,061 to £55,734. This is in a great measure due to the larger output from Uganda, which has advanced from £11,919 in 1905-6 to £20,403 in 1906-7.

The exports of *Ivory* have risen from £62,603 to £68,217. An analysis of the returns shows a slight increase in the quantity obtained from the East Africa Protectorate, and a corresponding decrease from Uganda. The amount shipped in transit from the Congo Free State has risen from £6,836 to £12,362.

The shipments of *mangrove bark and poles* show a slight increase in value (£10,036, as compared with £9,365 in 1905). The bark, used for its tanning qualities, fetches a good price in the home markets.

Chillies have advanced from 1,202 tons to 1,712 tons, the whole of which comes from Uganda. The price has gradually fallen from two rupees four annas to one rupee two annas per frasila of 36 lbs., so the export value in sterling remains the same. Half the chillies are exported to the United States and 20 per cent. to France.

The quantity of *copra* shipped has doubled in the past year, nearly the whole quantity exported being destined for France.

The export of cotton, which is now emerging from its initial stages, has increased in quantity from 80 to 200 tons, and has been mostly shipped to Great Britain, the value being £7,408, as against £2,726 in 1905. Considerable attention is now being paid to this industry, which promises to furnish one of our staple exports. The coast districts and the country near the lake are comparatively well suited for the cultivation of cotton, and the quality produced is of high marketable value.

Fibre shows a slight falling off, due to the machinery of the principal firm getting out of order and work being retarded for some time in consequence. Early development in this direction may be looked for.

A novel feature in our exports is 30 lbs. of *gold*, which came from the mines of Ikoma in German territory close to the lake.

Sixteen tons of wool from imported Australian sheep, belonging to the East Africa Syndicate, appear for the first time as an export.

Potatoes have increased by 50 per cent., and nearly half the quantity is shipped to South Africa.

(B.) Mines, Manufactures, and Fisheries.

There was a reported discovery of diamonds on the Thika River during the year, but though many prospectors pegged out large claims, no results of any value were forthcoming. A copper reef was found at Tsavo, close to the Uganda Railway, but the ore has so far not proved of such a grade as to repay the cost of working. A mining expert has been sent out to investigate the possibilities of the existence of paying minerals in the Protectorate, and his report should throw some light on the question. Stone and lime quarries still continue to be worked, but in this connection there is little to add to the remarks made in the report for last year.

A most encouraging feature is the advance made in the fibre industry, which shows considerable progress, especially at the works of the Afro-American Trading Company at Voi. There can be little doubt that this will in time become a most important factor in the country's development. Another step in advance is the establishment of a cotton-ginning machine in Mombasa, which has done a considerable amount of work as reported last year.

Native manufactures in the coast districts include the extraction of vegetable oils, the production of copra and coir, the weaving of cloth, and the making of mats and baskets.

Ice and soda-water factories also exist in Mombasa and Nairobi. Many of the European farmers in the Highlands have met with success in the preparation of bacon for local consumption.

The fish supply in the coast towns still remains plentiful, and fish are now regularly sent from Mombasa to Nairobi.

The trout, the introduction of which was reported last year, have proved a successful experiment, and some of the fish have now reached a not inconsiderable size.

4. Indigenous woods are used in large quantities for the construction of furniture, and for building purposes, and with the further development of the large forest areas in the Protectorate, the import of timber will, to a very large extent, cease.

(C.) Agricultural Industries and Farms.

Highlands.

Considerable progress was made on many of the farms, and live stock including cattle, sheep, pigs, goats, and poultry increased in numbers on most of the homesteads; sheep breeding for local consumption and wool purposes is progressing in the Naivasha Province, where the mortality is on the decrease.

The local demand for milk butter and cheese still continued good, and pig breeding proved a success in many districts.

Several varieties of wheat, more or less rust-resisting, were introduced with promising results, and potato growing for local consumption and export is still a feature on many farms.

Attention is still being given to ramie growing, but the want of a cheap decorticator is retarding the development of this industry.

The exploitation of forests has made considerable progress, and largely increased quantities of local timber have been used for building purposes. Coffee-growing has made a very marked improvement, and fruit-growing is receiving attention.

Lowlands.

In the lowlands, that is, the coast districts and the low-lying country in the vicinity of Lake Victoria, all tropical fruits and plants do well. There are large cocoanut plantations, and a considerable quantity of rice, which forms the main article for consumption by the natives, is grown in the coast districts. As pointed out in previous reports, this area is a very fertile one, and in return for a minimum amount of labour, the native can produce sufficient for his immediate wants.

Cotton has made considerable progress at Malindi, and the export of this commodity is increasing rapidly. This industry is also carried on at Kibos and in other suitable districts. The output of Sanseviera fibre has made great strides, more especially at the Afro-American Company's works at Voi, referred to elsewhere in this report.

The cultivation of sisal hemp is being largely taken up in the coast areas, and there is a considerable demand for these plants.

Experimental Farms.

Nairobi.—This farm has given on the whole satisfactory results; many seeds and plants were distributed and the fibre industry, to which great attention is being paid, should shortly show considerable progress. Fruit trees have also done well; but the trees are still young, and it is impossible to say how they will turn out eventually.

2. It is regrettable to have to report the total failure of a series of experiments of various kinds of wheat imported from India and Australia, owing to the depredations of caterpillars which also affected other crops to a greater or less extent. It is proposed to appoint an entomologist whose services should prove of value in checking the ravages of these and other insect pests. The question of manures suitable to the soil is one of primary importance and requires careful study.

3. It is proposed to move the situation of the farm inasmuch as the area of good land is very limited on the present one, and for general agricultural purposes a better one is desirable, and steps were taken in this direction after the close of the year under report.

Naivasha.—Much good work has been done at this farm during the past twelve months, and much information gained on various points tending to make farming in the East Africa Highlands more successful.

Tick fever is at present one of the greatest obstacles to successful stock farming, all imported stock being particularly liable to contract this fatal disease though native cattle on the farm have been immune. Inoculation, it is hoped, will ultimately provide a remedy, but pending this, good results are being obtained by cross breeding with native cattle and then grading up with purer bred bulls, and it has now been clearly established that cattle can be bred successfully once they are acclimatized.

In the graded herd with 65 head of calves and yearlings only two deaths were recorded and those shortly after birth, and though several cases of tick fever occurred none of them were fatal. The cross-bred animals in the first generation showed a distinct advance on native stock, and in the second generation this was even more marked.

Sheep have proved very satisfactory during the past year, though, as in the case of cattle, pure bred stock have not answered when grazed on the veldt.

Cross-bred and graded stock have again been most successful, yearling rams producing 8½ lbs. of wool and yearling ewes 7¼ lbs. Insistence is laid on the necessity of crossing a pure breed of mutton sheep with native ewes and thus obtaining hardiness and a large framed animal before introducing a merino strain for wool purposes.

Crossing a native sheep at once with a merino ram does not seem to be productive of good results.

Pigs would seem to hold out special hope of success, though until a bacon curing industry is established the market for store pigs must necessarily remain uncertain.

Attention is drawn to the somewhat erroneous notions that have hitherto existed as to the carrying capacity of farms in the Highlands. Applicants for land consider a 5,000 acre farm too small; the Government farm of 2,600 acres, 300 acres of which is rough land outside the ring of fence, has proved sufficient for nearly 3,000 head of various kinds, mainly sheep, and even then the whole area has not been utilized.

The farm has once more been of great service to settlers in supplying them with young stock.

Mazeras.—Many valuable commercial plants and trees have been experimented with at this farm during the past twelve months with most encouraging results as regards rubber, fibre, cocoa, coffee, cotton, and tobacco.

This farm is now being moved to a more accessible situation in the vicinity of the railway line, and will be placed under the charge of skilled West Indian cultivators, so that it may prove of real service to intending settlers in the tropical coast region.

Kibos.—This farm, which is situated near mile 575 of the Uganda Railway, was established mainly with a view to ascertaining the possibilities of cotton in this district, and though the site chosen has since proved to be not particularly good, the experiments as far as they go may be said to be a success, though complete statistics are not yet available.

Proposals for selecting another larger and more suitable site are now being considered, and it is hoped that this farm may be instrumental in introducing cotton into the surrounding Kavirondo country where, the natives being largely agriculturists, good progress should be made in this increasingly important industry.

Forests.

1. A considerable amount of planting was done in the coast areas during the year, and the teak trees at Shimba and Mazeras have done well. At the latter place they have now an average height of 22 feet and an average girth of 6 inches, at a height of 5 feet from the ground.

A new rubber tree was discovered in the Shimba Hills, which has been very favourably reported on, and should prove of value. A large number of trees have been planted out and are flourishing. The experiment of taking cuttings from Landolphia Kirkii has proved successful.

2. The more successful plantation in the Highlands was that of Croton Elliottianus and Mlangi cedar, but other varieties of trees planted during the year were totally ruined by the excessive drought.

3. There is an increasing demand for podocarpus and juniper for building purposes, and 11,710 fencing posts, made from Muhugu trees, were supplied to the Veterinary Department; these should last a considerable time.

4. 47,309 tons of fuel were delivered during the year to the Uganda Railway, as against 27,947 tons in the preceding year.

5. *The actual revenue of the Forest Department exclusive of rents and royalties on Forest Concessions amounted to £2,439, in addition to which timber to the value of £3,523 was supplied free to the Government Departments, more especially the Uganda Railway.

6. The possibilities of the forests on Mount Kenya have been referred to elsewhere in this report, and have been thoroughly discussed in the report submitted by Mr. Hutchins.

Diseases of Plants and Animals.

The country may be said to have been singularly free from plant diseases during the year under review, though in some cases caterpillars have proved destructive to the crops. The bean crops at Kibos suffered through want of rain, and on the coast much damage was done by insects in many of the cocoanut plantations.

2. Isolated cases of coast fever have occurred among the cattle, and there have been eight outbreaks of pleuropneumonia involving some 1,200 head of cattle.

Rinderpest was reported to be prevalent in Jubaland, and the first outbreak of quarter evil known in the country occurred. Trypanosomiasis proved fatal to a large number of cattle in the neighbourhood of Taveta, and tsetse fly was discovered on the banks of the Voi River.

3. Mortality from horse sickness decreased, the deaths being 36 as against 80 in the previous year, a considerably lower proportion, if the increase in the number of horses is taken into consideration. A number of donkeys died of trypanosomiasis in the Malindi District.

4. Scab was fairly prevalent among sheep, and many deaths were due to nostril fly and intestinal worms.

5. Tick fever and distemper were the cause of a high rate of mortality among dogs.

---

* The system by which rents from Forest Concessions are not credited to the Forest Department is somewhat unsatisfactory. In future years all rents will be credited to the Forest Department.

(D.) LAND GRANTS, VALUE OF LAND, AND SQUATTING.

During the year 1906 the total number of land grants amounted to 292,741 acres, as against 549,828 acres in 1905. The apparent decrease is accounted for by the grants of 320,000 acres to the East Africa Syndicate, and two grants of 64,000 acres each to Messrs. Lingham and Grogan and the Afro-American Trading Company in 1905; so that the amount of land granted has in reality nearly trebled. Owing to the separation of the Land and Survey Offices and the increase in the staff allowed, applications were greater.

The land grants dealt with in 1906 were distributed as follows:—

District.	Acres.	—
Seyidie	1,280	½ Leasehold. ½ Freehold.
Tanaland	Nil	—
Jubaland	"	—
Ukamba	120,570	95,028 Leasehold. 25,542 Freehold.
Naivasha	116,123	110,123 Leasehold. 6,000 Freehold.
Kisumu	50,768	42,774 Leasehold. 7,994 Freehold.
Kenya	4,000	Leasehold.

The price of freehold for agricultural purposes averaged 3*s.* 5*d.* per acre, and for grazing 1*s.* 5*d.* All available land in the neighbourhood of Nairobi, Kikuyu, Limoru, and for some 30 miles along the Fort Hall road has been taken up. Many applications are being received for land on the coast belt for the purposes of growing cotton and rice and collecting rubber, and for land in the country between the highlands and the coast for fibre. Steps have been taken to survey land in the Fort Hall and Sotik Districts, which, however, owing to the increased expense of transport is less sought after.

(E.) SURVEY.

This department was separated from the Land Office during the course of the year under review, and divided into two sections, the trigonometrical and cadastral, and a considerable increase of staff was sanctioned, with the result that 870,267 acres were surveyed, as against 745,533 and 618,542 in 1905-6 and 1904-5 respectively. In view of the urgent necessity of setting the department on a proper footing, Major Hills, R.E., was deputed to report and make proposals. He laid great stress on the importance of the formation of a Land Board (which has since been sanctioned), of a full topographical section, and of the immediate survey of the coast districts, which is now being undertaken.

The expenditure on survey in 1906-7 was £15,105 1*s.* 1*d.*, as compared with £9,935 in 1905-6. The fees collected amounted to £3,020 4*s.* 11*d.*

(F.) LAKE SURVEY.

The survey of Lake Victoria was completed by Commander Whitehouse in September, 1906. The whole of the lake has now been carefully and accurately delineated, but a good deal remains to be done as regards soundings.

This work will be proceeded with as opportunity offers.

(G.) SHIPPING.

The two harbours of Mombasa and Kilindini, which lie respectively on the north and south sides of Mombasa Island, form the chief ports of the Protectorate. Kilindini is by far the larger of the two, and is used by the bigger steamers; Mombasa is narrow, and, though more conveniently situated owing to its proximity to the business quarter of the town, can only be used by the smaller steamers and dhows.

Landing facilities at Kilindini will be much improved by the extension of the harbour works, for which a sum of £56,000 was sanctioned during the year. Considerable progress has already been made with the work.

Of the five steamship lines which visited the Protectorate, one, the Austrian Lloyd, was definitely discontinued during the course of the year.

The Deutsche Ost Afrika Linie maintained a fortnightly service in both directions to Europe and to South Africa, the Messageries Maritimes Company a monthly service, to and from Europe. The steamers of this line proceed from Kilindini to Madagascar, but do not visit the South African ports.

Two British lines, the British India and British East Africa Line, ran a monthly service to and from Europe, the ships of the latter returning via Bombay, with which port the steamers of the British India and Deutsch Ost Africa Lines also maintained a service. These steamers call occasionally at Lamu, which port, as well as Wasin, Kilifi, Malindi, Kipini, and Kismayu, is regularly served by the Protectorate Steamship "Juba."

The two British lines are chiefly concerned with cargo. The establishment of a first-class service of British passenger boats would be an undoubted advantage, and it is earnestly hoped that some steps in this direction may be taken.

The accompanying table shows the gross tonnage and the quantity of cargo and the number of passengers carried by, these five steamship lines:—

Statement showing the number of steamers, gross tonnage, quantity of cargo and number of passengers landed and shipped by the different lines of steamers entered in the Port of Mombasa during the year ending 31st March, 1907:—

Lines.	Number.	Gross Tonnage	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengers.	
				Europeans.	Natives.		Europeans.	Natives.
			Tons.			Tons.		
Austrian Lloyd, Europe	21	96,760	978	445	408	1,647	310	401
British East Africa Line, Europe ..	14	52,824	8,468	96	110	1,624	26	240
British India, Aden	17	54,164	1,360	15	319	1,223	28	463
British India, Bombay	13	42,103	4,706	43	1,759	1,389	20	239
British India, Europe	11	38,418	12,923	15	38	76	9	130
Deutsche Ost Afrika Linie, Bombay	54	131,820	8,928	155	2,691	1,702	137	2,509
Deutsche Ost Afrika Linie, Europe	52	241,987	11,050	810	678	22,999	376	789
Messageries Maritimes, Europe ..	24	94,724	524	209	284	451	259	325
Total	206	752,800	48,937	1,788	6,287	31,114	1,165	5,096

2. The following table shows the increase which has taken place in the number and tonnage of both steamers and sailing ships:—

—	1905-6.		1906-7.		Increase.	
	No.	Tons.	No.	Tons.	No.	Tons.
Entered:—					(8,126	decrease.)
Sailing vessels	2,870	75,195	3,235	67,069	365	—
Steamers	426	961.410	484	1,007,655	58	46,245
Cleared:—						
Sailing vessels	2,763	72,142	3,445	72,816	682	2,674
Steamers	425	957,480	484	1,010,944	59	53,464
Total	6,484	2,064,227	7,648	2,158,484	964	94,257

3. The total revenue of the Port Office amounted to £2,515 5*s.* 4*d.* in 1906-7, as compared with £2,419 12*s.* 7*d.* in 1905-6.

III.—LEGISLATION.

The Ordinances enacted during the year 1906-7 included the following:—

For regulating the relative rights and duties of masters and servants.

For consolidating and amending the laws relating to the protection of game.

For providing for the registration of Mohamedan marriages and divorces.

For regulating the introduction of and traffic in arms and ammunition.

For prohibiting the immigration of undesirable persons.

For regulating the dredging of rivers and their navigation by steam vessels.

For providing for the registration of books and newspapers.

For empowering His Majesty's Commissioner to authorise certain persons to act as Notaries Public.

For regulating the constitution of the Police Force.

For amending the Mining Regulations.

The following Order in Council was also promulgated.—

The East Africa and Uganda Currency Order in Council, 1906, to make certain alterations in the East Africa and Uganda Currency Order in Council, 1905.

IV.—ECCLESIASTICAL STATISTICS AND EDUCATION.

As stated in previous reports, the natives of the interior can scarcely be said to have any religious beliefs, and although the inhabitants of the coast towns mostly profess Mahommedanism, it is only the higher class Arabs who strictly conform to its tenets. Eleven different missionary societies are at work in the Protectorate. The following table, though in some cases the statistics are approximate only, and in others are not available, indicates the extent of their work:—

Name.	Denomination.	No. of Churches and Chapels.	Average Attendance.	Seating Accommodation.	No. of Schools.	No. of Scholars.	Nationality.
Church Missionary Society	Anglican		Not available.		17	717	British.
United Methodists Free Church Mission.	Methodist	17	825	2,130	13	840	"
Church of Scotland	Presbyterian	1	40	50	2	50	"
Mission du St. Esprit	Roman Catholic.	8	1,360	3,200	The children are given religious instructions in their native languages.		French and Italian.
Algerian Mission	"	Two stations used as Rest Houses for Missionaries *en route* for Uganda, Congo, and German East Africa.					French.
Evangelical Lutheran Mission ...	Lutheran	3	260	520	5	150	German.
Neukirchen Mission	"	11	No statistics available.		14	299	"
African Inland Mission	Undenominational.	8	350	515	5	74	American.
Friends Industrial Mission	Quaker	3	140	675	3	61	"
American Evangelical Mission ...	Protestant		No statistics available.				"
Swedish Mission	"	2	30	70	2	39	Swedish.

2. At most of these schools elementary instruction in reading and writing is given; and a most valuable work will be the industrial training now commenced by some of the missions. The Church Missionary Society has a hospital on Mombasa Island, and medical work is carried on at dispensaries at most of the up-country stations.

3. At Mombasa the Church Missionary Society has established the Buxton High School, which is attended by Indian and Eurasian children as well as by natives. Here, and in the other coast towns, there are Mohammedan schools where Arab and Swahili children are taught to read and write the Arabic character and recite from the Koran.

4. There are two European schools at Nairobi, one at the Roman Catholic Mission, a boarding school, and one kept by the Uganda Railway. The average attendance at the latter is 24 boys and 16 girls. The total expenditure is Rs. 8,745, of which the Government contributes Rs. 7,363.

5. As the country developes and the white population increases, the problem of education must, *pari passu*, become more and more difficult, owing to the long distances which separate the farms from each other and from Nairobi, and to the lack of easy means of transport. Various schemes for solving this question are under consideration.

6. Attached to the Railway European School is one for Indians, which had an average attendance of 45 boys and one girl, the expenditure being Rs. 2,037, of which the Government contribution was Rs. 1,281.

7. There are no Universities or Higher Colleges.

V.—GOVERNMENT INSTITUTIONS.

(A.) HOSPITALS.

1. There are European Government Hospitals at Mombasa and Nairobi. In the former 23 patients were admitted, of whom 15 were cured, 5 relieved, and 3 died, *i.e.*, 13 per cent.; in the latter there were 52 admissions; 26 were cured, 19 relieved, and 6 died, or 11·5 per cent.

2. At the Gaol Hospital, Mombasa, there were 179 admissions, 11 of whom died, giving a death-rate of 6·1, and at the native hospitals the returns were as follows:—

	Kilindini.	Nairobi.	Kisumu.
Admissions	982	334	523
Deaths	59	93	77
Percentage ...	6·01	28·01	14·7

(B.) ASYLUMS.

1. There are, at present, no lunatic asylums in the Protectorate. Native lunatics are confined in the gaol, and Europeans placed under medical supervision and sent to Europe as soon as possible. Provision has now been made for the erection of an asylum at Nairobi.

There are a considerable number of lepers in the Protectorate, and during the year a small Lazaretto was built at Mombasa, but the situation is not a good one, and the building is too small to be of much use. It is proposed to provide for a larger one.

VI.—JUDICIAL STATISTICS.

(A.) POLICE.

The constitution of the Police Force on March 31st, 1907, was as follows:—

1	Inspector-General of Police.
1	Deputy Inspector-General of Police.
1	Superintendent.
9	Assistant Superintendents.
14	Inspectors.
9	Temporary Inspectors.
7	Sergeant-Instructors.
6	Native Sub-Inspectors.
11	Native Assistant Sub-Inspectors.
1,996	Rank and file.

The distribution of the force was as follows:—

Seyidie	395
Ukamba	527
Kenya	196
Naivasha	327
Kisumu	470
Tanaland	55
Jubaland	85

These are posted at 26 stations, at most of which there are no troops, so that their work is often semi-military, and includes such duties as escorts, guards of honour, &c.

The cost of the force was £37,072 6*s.* 7*d.*, as compared with £37,835 17*s.* 7*d.* in 1905-6.

(B.) CRIMINAL STATISTICS.

The number of offences reported to the police and the magistrates during the year 1906-7 was 4,569, composed as follows:—

Offences against the person 667, prædial larceny 43, offences against property (other than prædial) 1,219, and other offences 2,640.

2. The following table shows the number of apprehensions, convictions, and acquittals for the last five years:—

—	1902–3.	1903–4.	1904–5.	1905–6.	1906–7.
The number of persons apprehended by the police or summoned before the magistrates.	2,892	3,315	3,472	4,015	4,569
The number of summary convictions—					
1. For offences against the person.	250	567	431	450	442
2. For prædial larceny	1	48	34	40	35
3. For offences against property, other than prædial larceny.	559	262	761	889	910
4. For other offences...	860	1,821	1,585	1,853	2,371
The number of convictions in the Superior Courts—					
1. For offences against the person.	7	13	1	6	4
2. For prædial larceny	—	—	—	—	—
3. For offences against property other than prædial larceny.	1	—	—	8	1
4. For other offences...	1	10	6	3	13
The number of persons acquitted—					
1. In the Inferior Courts.	1,208	594	647	763	773
2. In the Superior Courts.	5	5	6	3	21

3. In 1906-7 39 cases were tried by the Court of Sessions, 18 of which resulted in convictions, the remainder falling through for want of prosecution.

4. There has been a general increase in the judicial work of the Protectorate. The number of persons summoned or apprehended was 4,569, as against 4,015 in 1905-6. The total number of civil cases tried shows a slight decrease, due to a reduction in the number of cases of small value in the Tanaland Province.

5. The revenue has increased from Rs. 43,432 to Rs. 122,091, an advance mainly attributable to fines in connection with confiscated ivory. Court fees, however, show an increase of over Rs. 10,000.

6. During the year the Criminal Procedure Ordinance was issued giving Europeans the right to trial by jury in the more serious cases.

(C.) PRISONS.

1. The number of prisons in the Protectorate is still 28, but, as reported last year, many of these are more in the nature of lock-ups, where long sentence prisoners are not confined. The principal prisons are in Mombasa, Nairobi, and Kisumu. Whenever possible, European prisoners are confined in the former. The Nairobi prison is unsatisfactory, and since the expiry of the year under review, the erection of a new one has been commenced, which should provide ample accommodation and replace the Mombasa Prison as the place of detention for Europeans, the latter being unsuitable on account of the heat, although necessity has compelled its use in the past.

2. The total number of convicted prisoners committed to the prisons in 1906-7 was 4,630, and the daily average 657·6. Sixteen prisoners escaped during the year, of whom two were recaptured. The daily average of sick was 49·1, and 31 deaths occurred.

3. Political offenders are as a rule interned at Kismayu, from which place escape is very difficult.

4. Prisoners are employed outside the prisons in road making, cutting wood, quarrying stone, cleaning bush, and work generally on the improvement of the stations. In some gaols they are employed in the manufacture of chairs, baskets, mats, and coir matting, and in Mombasa a considerable amount of tailoring work is done, including uniforms, prison clothing, and flags. Work of this nature has also been instituted in the Nairobi Gaol.

5. Vagrants are confined in gaol until they have earned sufficient to pay for their passage elsewhere—an arrangement by which the Protectorate practically, though not theoretically, is the loser, the work done not being worth the price paid for it. Deserving cases are assisted from a locally-subscribed fund known as the "Distressed British Subjects Fund."

6. The expenditure on the Protectorate prisons amounted to £7,012 18*s.* 1*d.* in 1906-7, as against £5,898 13*s.* in the previous year.

VII.—VITAL STATISTICS.

(A.) POPULATION.

A census of the population of the Protectorate has never been taken, and under present conditions such an enumeration would be quite impossible. Even in the administered districts it is very difficult to give more than a very rough idea.

A very approximate estimate gives the population of the Protectorate at 4,000,000.

Despite the mortality from sleeping sickness in the lake shore, and an abnormally high infant mortality, the native population should tend to increase as internal peace is secured to the administration.

The white population may be taken, roughly, as 1,600, including Government officials.

(B.) BIRTH AND DEATH RATES.

As reported last year, rules were published in February, 1906, under the Births and Deaths Registration Ordinance, making compulsory the registration of all deaths of Europeans, Americans, and Indians throughout the Protectorate, and of all deaths, including natives, in township areas; and the figures published this year are consequently much more complete than has hitherto been possible.

The registration of native births is optional, so that the returns of births and deaths cannot be compared with a view to ascertaining the increase or decrease of the population.

Moreover it must be remembered that the native deaths registered form only a very small proportion of the total population.

The returns for 1906-7 are as follows:—

Province	Births.	Deaths.
Kisumu	6	127
Naivasha	2	29
Ukamba	34	218
Kenya	4	1
Seyidie	139	770
Tanaland	—	181
Jubaland	5	21
Total	190	1,347

(C.) SLAVERY.

As pointed out in previous reports, the existence of domestic slavery is more theoretical than real. No additions to the number of slaves have been possible since the promulgation of Sultan Ali's decree in 1890, and they are in every case well treated, as is proved by the fact that no prosecutions for cruelty have taken place during the year, and no slaves have been freed on that account. Seventy-four slaves were freed during 1906-7, 69 in Tanaland and 5 in Seyidie.

Since the conclusion of the year under report steps have been taken to abolish the legal status of slavery and to compensate the owners.

(D.) CLIMATE AND PUBLIC HEALTH.

The division of the Protectorate into three zones for the purposes of climatic description is a convenient one, though it must be understood that even within these sub-divisions there are considerable ranges in temperature and rainfall, which have a strong influence on the healthiness or unhealthiness of the districts concerned.

1. *The Coast.*

The region described as the coast may be held to include a strip about 100 miles broad, extending from the Anglo-German frontier to the Juba River. The rainfall is greatest in the more southern districts and least in Jubaland. As a rule the temperature, as indicated by the thermometer, is not excessive, but owing to the moisture of the atmosphere the heat is more trying to Europeans than would otherwise be expected. In the coast towns, however, during the monsoons a cool breeze blows constantly, and this is particularly the case between May and November, when the south-west monsoon is prevalent. The hottest season is in January, February, and March, but the nights are generally fairly cool, except during the lull between the two monsoons, when they are apt to be very oppressive. Most rain falls during April, May, June, and November, but the seasons are somewhat variable, and cannot be predicted with accuracy. The climate of the coast stations may be summed up as on the whole not unhealthy for Europeans, but after a long residence it is apt to be enervating, and a change is desirable from time to time. Malaria and other tropical illness are not frequent. In Jubaland the climate is hot and dry and the sun powerful, but the nights are cool. It is not an unhealthy region except for nervous diseases, which have been responsible for the invaliding of several officers.

About ten or fifteen miles inland the scrub country begins, and the heat, untempered by the sea-breezes, is less bearable. The stations situated in this belt, such as Rabai and Voi do not enjoy a good reputation for health, malaria occurring with some frequency. The same may be said of the Valley of the Tana, which is at certain seasons rendered almost intolerable by the presence of swarms of mosquitoes.

2. *The Highlands.*

The greater part of the interior of the East Africa Protectorate consists of ridges and plateaux ranging from 4,000 to 9,000 feet in height, one peak (Mount Kenya) reaching an altitude of 18,000 feet. Though naturally the whole of this upland country is not equally salubrious, it may safely be said that it is, generally speaking, exceedingly healthy. The sun, as might reasonably be expected so near to the Equator, is powerful during the mid-day hours, but the air is brisk and invigorating, the nights are cool, and Europeans are able to exert themselves to an extent which would be impossible at the coast. This part of the country is regarded as well suited for colonization, and a large number of settlers have made their homes in it. A striking proof of the excellence of the climate is afforded by the healthy appearance of the children who have been born and brought up in this region. In fact, the only drawbacks appear to be a somewhat unduly great daily range of temperature and a prevalence of strong winds, which, in certain districts, are trying. Some stations, such as Kitui and Baringo, do not come up to the general standard, but they really lie on the outskirts of the highland region.

3. *The District round Lake Victoria.*

The shores of Lake Victoria are comparatively low-lying, and the heat consequently approaches and even exceeds that of the coast. Violent storms are frequent, and the climate is probably less agreeable than in any other part of the Protectorate. Malaria is common, and, if not carefully treated, frequently leads to attacks of black-water fever. Mumias and Kisumu have distinctly bad records in this respect, though an improvement in the accommodation and sanitary conditions of the latter station has rendered it less unhealthy.

4. *Public Health.*

The public health has on the whole been good, though there was a marked increase in the amount of malarial and black-water fever in the districts near Lake Victoria, corresponding with an unprecedented rise of the lake level. Only one European official died during the year and two were invalided. The death was due to blackwater fever. The total mortality among the white population amounted to 13, or about 6 per 1,000.

Sleeping sickness still claims a large number of victims, but the disease seems to be to some extent abating in Kavirondo.

Plague broke out in Nairobi during the year and 26 deaths resulted out of 31 cases. There was also a slight epidemic at Kisumu. Three cases of enteric fever, of which two terminated fatally, were reported in Nairobi, thus proving the existence of this disease in the country. No authentic case had been known previously.

As in former years, the most prevalent diseases were those of the respiratory organs, especially pneumonia and pleurisy, and of the digestive system, which show a considerable increase over 1905-6.

These remarks only apply to cases dealt with in the hospitals which form only a very small proportion of the total population.

(E.) SANITATION.

General Sanitary Condition of the Protectorate and of the Chief Towns.

1. The general sanitary condition of the Protectorate must necessarily fall far short of modern ideas, and though there has been improvement at the Government Stations as regards the control of the water supply, clearing bush, &c., progress amongst the natives, and to an even greater degree among the Indians, cannot but be slow.

2. Mombasa, the principal coast town, suffers from want of a sufficient water supply; the European supply is collected in tanks, but in the event of an insufficient rainfall, a shortage might easily occur. The natives drink well water, which, however, is brackish and is responsible for many deaths from ankylostomiasis.

The sanitation of the town is carried out by a Conservancy Department, and as far as the European quarter is concerned is satisfactory. Some improvement in drainage has been effected during the year, but owing to the narrowness and irregularity of the streets the work is slow and difficult.

A considerable amount of bush clearing has been done.

3. The above remarks may be taken generally as applying to Malindi, Lamu, and Kismayu, which are all old Arab towns presenting the same difficulties.

4. The conservancy of Nairobi is undertaken by the staff of the Municipal Council. Nightsoil is buried in trenches situated at some distance from the town. The roads have been greatly improved, but the drainage still leaves much to be desired.

During the year Mr. G. B. Williams was deputed to report on the township of Nairobi and the advisability of removing it; his conclusion was that removal was out of the question in view of the enormous expense and inconvenience which it would entail, and that efficient drainage would be comparatively easy.

He submitted a scheme, which has since been taken in hand, so that a considerable improvement in this respect may soon be looked for.

5. In Kisumu, where there is also a Municipality, the same system of conservancy as at Nairobi is in vogue. Much clearing work has been carried out, the roads and side ditches greatly improved, and a sea-wall has been erected along the lake shore, which has considerably reduced the number of mosquitoes.

The water supply, derived from the lake, is very unsatisfactory, and has been the cause of a large increase in the number of deaths from dysentery.

Steps have been taken, since the expiry of the year, to improve the supply by the erection of water tanks.

VIII.—POST AND TELEGRAPHS.

Comparative Statement of Revenue and Expenditure.

—	1904-5.			1905-6.			1906-7.		
	£	*s.*	*d.*	£	*s*	*d.*	£	*s.*	*d.*
Revenue	2,529	17	1½	15,267	7	3¾	15,734	1	10½
Expenditure	8,517	6	3	21,657	10	8	20,803	16	0¼
Excess Expenditure...	5,987	9	1½	6,390	3	4¼	5,069	14	1¾

These figures include also the revenue and expenditure of the Uganda Protectorate; the two services being amalgamated.

The figures for East Africa for 1906-7 are £13,161 18*s.* 3*d.* (revenue) and £14,809 8*s.* 11¾*d.* (expenditure), leaving a deficit of £1,637 10*s.* 8¾*d.*

The expenditure includes an item of £3,550 12*s.* 1*d.* for telegraph construction, so that the actual working of the postal department shows a profit of £1,923 1*s.* 4¼*d.*

The general growth of postal business can be seen from the following table:—

—	Letters.	Post-cards	News-papers.	Book Packets.	Parcels.	Telegrams.
1905-6	890,070	52,142	236,706	78,735	12,803	71,688
1906-7	1,194,475	78,381	262,172	132,057	16,476	75,627
	304,405	26,239	25,466	54,322	3,673	3,939

Every item shows a large increase on the previous year, and the total transactions exceed those of 1905-6 by 417,044—1,759,188, as against 1,342,144—or an increase of 31 per cent. The increase in the previous year only amounted to 11¼ per cent. An arrangement was made for a direct exchange of parcels with Natal, much delay being thus prevented.

Mail Subsidy.

A subsidy of £9,000 per annum is paid to the British India Steam Navigation Company for the conveyance of mails to and from Aden. No actual share of this sum is charged to Protectorate funds, but mail transit dues are paid to the different administrations by which the Ocean mail services are maintained.

The Ocean mail services still leave a great deal to be desired. It is hoped that it may be possible to effect improvement, and a direct British service is much to be desired.

Money Orders.

The following figures show the development which has taken place in this Department of postal work:—

Year.	Money Orders Issued.		Paid.		Total Increase.
	No.	Value.	No.	Value.	
		£ *s.* *d.*		£ *s.* *d.*	
1905-6	17,694	91,872 1 9	6,048	28,600 1 7	Number .. 4,063
1906-7	20,970	117,653 18 5½	6,835	36,054 3 8	Value .. £32,235 18*s.* 9½*d.*

As last year, the Inland Money Order transactions are mainly responsible for this increase, though the United Kingdom, India, Zanzibar, and Natal all show slight advance also.

The number of post and money order offices remains the same, and the telegraph offices have been increased by one.

There are in addition 28 post office agencies at different railway and customs stations.

An arrangement for the issue of British Postal Orders at Mombasa and Nairobi was made during the year, and the system was largely used, especially in the case of small remittances to the United Kingdom.

Telegraphs.

The total mileage open for traffic in the East Africa Protectorate is as follows:—

Districts.	Miles.
Mombasa to Lamu	200
Mombasa to Kilindini	2
Mombasa to Port Florence, three wires ...	1,752
Londiani to Ravine	18
Naivasha to Morendat	8
Nairobi to Fort Hall	55½
Njore to Lord Delamere	13
Lumbwa to Kericho	18½
Kibigori to Nandi	11½
Total	2,168½

This return does not include any telegraph lines in Uganda nor the telephone system, which extends over 38 miles in the Protectorate.

IX.—MILITARY FORCE AND EXPENDITURE.

The Forces of the Protectorate consist of four companies of the 1st Battalion King's African Rifles, recruited from the Yao, Atonga, and Angoni tribes in British Central Africa, and the 3rd Battalion, composed partly of Soudanese and partly of various East African tribes.

The strength of the former, which is a reserve battalion for service in any of the four African Protectorates, is 14 officers and 400 men, and of the latter 18 officers and 750 men, approximately. The headquarters of both battalions are at Nairobi. The 1st Battalion furnishes a detachment of 5 officers and 200 men at Zanzibar. The whole of the King's African Rifles, including the British Central Africa, Uganda, and Somaliland Battalions, are under an Inspector-General, who spends six months in each year in tours of inspection, and six months at the Colonial Office.

There is also a Volunteer Reserve, which receives a capitation grant from the Government for each efficient member. In the year under review it numbered:—

Mombasa Section	20
Nairobi Section	63
Railway Section	57

The expenditure incurred during 1906-7 shows a decrease on the previous year of some £33,000 in connection with military defence.

X.—GENERAL OBSERVATIONS.

(A.) IMPORTANT EVENTS.

1. The year 1906-7 is particularly noticeable owing to the decision arrived at to form Executive and Legislative Councils in the Protectorate. These Councils first met in July and August, 1907, respectively, and at once set to work to deal with the questions before them with a full sense of the responsibility attaching to their important functions. The Legislative Council, in particular, provides the non-official com-

munity with an opportunity of expressing their views through their representatives, and secures to the Government the advantages of independent criticism and advice. Its establishment marks a very definite step in the constitutional progress of the Protectorate.

2. With one exception, peaceful relations with the various native tribes prevailed throughout the year. The attitude of the Embo, a sub-division of the Kikuyu, necessitated a small expedition being despatched. Its object was very speedily accomplished, the tribe was completely pacified, and a rich and productive district was brought under direct Administrative control.

3. The Nandi have settled down quietly in their reserve, and their conduct is now exemplary, in fact, they bid fair to become one of the most industrious sections of the community.

4. Much attention was paid to the scientific and technical departments during the year, and highly interesting reports were furnished by Mr. G. B. Williams on the sanitation of Nairobi, by Mr. Macdonald on the Agricultural Department, and by Mr. Hutchins on the Forests of the Protectorate. The two latter gentlemen have been appointed heads of these respective departments, and the former is now Consulting Engineer in connection with a comprehensive scheme for the drainage of Nairobi.

5. The year was remarkable for several mining "booms," none of which, however, resulted in anything of practical value. An expert has, however, been appointed to revise the Mining Laws and advise as to the value of any discoveries made.

(B.) PUBLIC WORKS.

The development of the Protectorate and the opening up of new districts necessitated increases in the personnel of the Public Works Department Staff, both European and native, and in the expenditure on construction works. The total expenditure was estimated at £102,134, almost the whole of which sum was actually spent.

Roads.

A sum of £13,195 was allowed in the budget for the maintenance and repair of existing roads and the construction of new ones, and much valuable work was done during the year. A new road was opened across Mombasa Island. The Nairobi roads and the road from that place to Fort Hall were much improved, the latter involving the construction of several bridges.

The Kericho-Lumbwa road was completed, and the Mumias road repaired.

The following is a list of the various roads more or less cleared in the Protectorate:—

Districts.	Miles.
Mackinnon and Sclater Roads—	
Mombasa to Kedong Valley	350
Kedong Valley to Port Victoria	240
Nairobi to Fort Hall	56
Lumbwa to Kericho	19
*Mombasa to Malindi	60
*Mombasa to Vanga	50
†Voi-Taveta Road	75
†Mkonumbi to Witu	22
†Malindi to Mambrui	10
†Nairobi to Dagoretti	9
*Machakos to Kitui	45
†Machakos Road Station to Machakos	22
†Londiani to Ravine	22
†Naivasha to Nyeri	45
†Fort Hall to Nyeri	26
Nairobi Township Roads	22
Nakuro to Baringo	90
Nakuro to Rumuruti	67
Gilgil to Rumuruti	65
Total	1,295

Canal.

The Belazoni canal, which originally connected the Ozi and Tana Rivers, can now scarcely be properly so called.

It has diverted all the water of the latter stream into the former, and is now practically the main outlet of the two rivers.

(C.) RAILWAY.

1. The only railway in the Protectorate is the Uganda Railway, running from Mombasa to Kisumu, the terminus on Lake Victoria, a distance of 584 miles.

It is a metre-gauge line, and the total cost of construction up to March 31st, 1907, was £5,420,840 3*s.* 5*d.*

The railway is now worked as a Protectorate Department in conjunction with the lake steamer service. The telegraph is managed by the Protectorate Postal Department at the larger and by the railway staff at the smaller stations. Two of the wires are leased by the railway, the third is used for public business.

---

* Path. † Track.

2. The comparative figures for 1905-6 and 1906-7 are shown below:—

	Passengers.	Goods.
1905-6	178,789	39,657 tons.
1906-7	295,491	52,784 ,,

4,895 head of live stock were carried, as against 62,825 in 1905-6. This decrease is attributable to the fact that large numbers of cattle were carried during the Nandi Expedition in 1905-6, and to the importation of stock for the East Africa Syndicate's farms during that year.

3. The growth of revenue may be seen from the accompanying table:—

Revenue.

Heading.	1905-6.		1906-7.		+ or –.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Passengers	36.195 12 4		40,630 15 2		+ 4,435 2 10
Luggage	2,875 10 0		3,261 5 4		+ 385 15 4
Horses, dogs, &c.	1,273 11 3		1,216 5 11		– 57 5 4
Parcels	658 8 9		1,152 13 6		+ 494 4 9

Demurrage	122 18 1		166 14 6		+ 43 16 5
Miscellaneous	560 4 2		88 9 2		– 475 15 0
Total Goods		137,298 15 7		164,347 16 5	+27,049 0 10
Steamboat service	—	22,340 1 5	—	26,451 6 8	+ 4,111 5 3
Sundries	—	1,358 12 7	—	1,505 2 10	+ 146 0 3
Telegraph	—	743 9 1	—	590 17 4	– 152 11 9
Total	—	204,928 16 2	—	241,211 17 7	+36,283 1 5

Expenditure.

Heading.	1905-6.		1906-7.		+ or –.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Maintenance of way and works.	47,838 3 10		55,513 8 7		+ 7,675 4 9
Locomotive, carriage and waggon expenses.	46,438 9 5		55,148 2 2		+ 8,709 12 9
Traffic expenses	19,746 17 0		21,603 4 0		+ 1,856 7 0
General charges	15,128 16 2		15,784 9 11		+ 655 13 9
Special expenditure	8,784 19 2		6,306 5 5		– 2,478 13 9
Steamboat service	10,313 3 4		10,092 10 3		– 220 13 1
Total Expenditure		148,250 8 11		164.448 0 4	+16,197 11 5
Profit	—	56,678 7 3	—	76.763 17 5	+20,085 10 2

4. The working of the railway has given satisfactory results, showing a net profit of revenue over expenditure of

£76,763 17*s.* 5*d.* and an advance on last year's revenue from £204,928 16*s.* 2*d.* to £241,211 17*s.* 9*d.* Expenditure, however, has increased by £16,197 11*s.* 5*d.*, due mainly to the improvements which have been carried out. The total traffic is steadily growing.*

The receipts per train mile have decreased, owing to lower rates being charged, but in spite of this the profits per train mile and the average freight of a goods train have increased.

The local service between Mombasa and Mazeras at a reduced fare of ¼*d.* instead of ½*d.* per mile for natives was largely patronized. This, coupled with the fact that numbers of Wakikuyu prefer walking from Nairobi to Mombasa to paying the fare of Rs. 10 4 a. indicates the advisability of reducing the rates for natives all over the line.†

5. The labour question still continues to present serious difficulties. Until recently, skilled labour, *e.g.*, carpenters, masons, &c., as well as station masters and signallers, was easily obtainable from India; within the past year, however, partly on account of the ravages of the plague and partly on account of the increasing demand in India for this class of labour, the available supply has not been sufficient to meet the requirements of the railway.

The problem of native unskilled labour still remains unsolved, and work on the railway has in many cases been considerably hampered and retarded by the impossibility of obtaining sufficient workmen.

Notable examples of this are the Kilindini harbour extension works and the realignments between Mazeras and Mackinnon Road. Considerable progress has, nevertheless, been made in both cases.

The fuel question was also affected by the lack of labour, so much so that it was found necessary to order a large supply of coal.

It is hoped that the formation of the new Native Affairs Department will tend to mitigate this inconvenience.

6. Sanction was received towards the end of the year to the construction of a wharf at Port Florence, which will enable vessels to come alongside, and will give ample shed accommodation for handling the increasing traffic.

7. The survey of Lake Victoria was terminated during the year.

---

* The difference between these figures and those given under the heading of Revenue, paragraph 3 of this report, is due to the fact that the former show earnings and expenses, and the latter actual cash receipts and payments.

† Since the conclusion of the year this reduction has taken place.

8. No accidents involving loss of life or injury to passengers have occurred, and but a few minor accidents. Engine failures were of somewhat frequent occurrence, chiefly owing to bad water.

9. The most important event of the year was the completion and commissioning of the new steamer "Clement Hill" for the lake.

A cargo boat was also ordered.

The earnings of the steamer service show an increase of £4,111 5*s.* 2*d.* over those of 1905-6.

On the year's working there is a profit of 20 per cent. on the capital cost (excluding the cost of the "Clement Hill" but including that of the dry dock). As in previous years, the earnings included shipments for the Congo Government.

10. The goods receipts for the year increased by £27,049.

The upwards traffic shows an increase of 8,821 tons—25,292 to 34,113—consisting chiefly of building materials.

The rates have been reduced in respect of certain commodities, with satisfactory results, but there is little doubt that a further reduction would be beneficial, and every effort is being made towards this end.

The upward consignments are still far in excess of those "downwards," but it must be noted that the latter have advanced from 14,365 to 18,669 tons.

The lake ports are responsible for the main portion, the principal staples being ground-nuts, simsim seed, hides and skins, ghee, rubber, and copper.

A noteworthy feature is the first appearance of cotton as an export; 200 tons of this commodity were sent out of the country.

(D.) EMIGRATION AND IMMIGRATION.

1. The Restriction of Immigration Ordinance was brought into force during the year, and has proved most beneficial in keeping undesirables out of the country.

The returns show that 692 Europeans and 1,977 Indians landed in the Protectorate, and that 178 of the former and 1,046 of the latter departed.

The Indians included a number of sepoys for the King's African Rifles in Uganda, and of indentured coolies for the Uganda Railway.*

2. The Indian settlement at Kibos has given satisfactory results, sugar cane and mahindi being the chief crops. Cotton also grows well.

(E.) GAME.

The number of shooting parties which visited the country during 1906-7 showed a marked decrease; this may perhaps be ascribed to the fact that large tracks of land have been fenced in and cultivated by private individuals, with the result that much of the game has deserted the localities where it was formerly easily obtainable.

---

* For work on the Mazeras realignment due to the lack of local labour previously referred to.

Another consequence of the fencing and cultivation is that lions have been driven away, resulting in a large increase in the number of zebra, which do considerable damage to crops and fences. It would now seem unnecessary to preserve this species so strictly.

The latter part of the year was unusually dry, which largely affected the distribution of the game, and has led to the idea that the game is being shot out. So far, however, from this being the case, it has been unusually numerous where grass and water have been plentiful.

A sportsman's licence, enabling him to shoot a considerable variety of heads, costs £50, and extra heads of certain species and specimens of several animals not included under the licence may be shot on payment of a fee; a settler's licence, allowing the holder to shoot a limited number of the less rare animals, costs £10; and a landholder's licence, enabling farmers to shoot on their own land, £3.

The amount of game killed in 1906-7 is as follows:—

Game.	No.	District.												
		Laikipia.	Rift Valley.	Athi.	Kenia.	Lake Victoria.	Uasin Gishu.	Coast.	Serengeti.	Jubaland.	Sotik.	Naivasha.	Makindu.	Mau.

(F.) RATES AND WAGES.

1. Wages for domestic servants have shown a tendency to rise owing to increasing demand, and, as reported previously, servants working temporarily for travellers and sportsmen can command a high rate of pay.

2. The cost of living has also risen in many respects. Bread has advanced from 2½*d.* to 3*d.* a loaf, and milk from 2*d.* to 3*d.* a pint. Tea now costs 1*s.* 10*d.* a pound, as against 1*s.* 4*d.* previously, and sugar is ¾*d.* a pound dearer.

The price of beef and mutton has also gone up from 3½*d.* to 4*d.* a pound. The average price of cattle for slaughtering purposes is £3-£5, and of horses £50, an increase on prices formerly prevailing.

3. Payment for laundry work still remains the same, but, as previously reported, the methods are most destructive, and there is little doubt that a good steam laundry would supply a much-felt want and prove extremely remunerative.

4. The supply of labour is by no means equal to the demand, though the average rate of pay remains much the same. It is hoped, as already stated, that the establishment of the Department for Native Affairs will shortly place this whole question on a more satisfactory footing.

5. The following table gives the average rates of wages obtaining:—

	Rates per month.		
	Rs.		Rs.
Domestic servants	10	to	30
,, ,, (juvenile)	6	,,	12
Porters	6	,,	15
Cooks (Goanese)	40	,,	52
,, (Swahili)	20	,,	30
Kitchen boys	5		
Labourers (Coast)	10	,,	15
,, (Interior)	4	,,	8
Carpenters (Native)	15	,,	30
,, (Indian)	60	,,	90
Painters	60		

When working away from home an additional food allowance, amounting to a sum varying from Rs. 4 to Rs. 7 per month is given; porters also have to be supplied by Government regulations with blankets, water-bottles, &c.

(G.) SOCIAL CONDITION OF THE PEOPLE.

There is little to add to the remarks made on this subject in the report for 1905-6.

The tendency to make use of European products increases gradually, and it is hoped that in time it may prove strong enough to induce the native to work for longer periods than is the case at present.

The material condition of the various tribes has on the whole been good. Owing to a partial failure of the rains, scarcity prevailed in Kavirondo and Lumbwa during the early months of the year 1907, but prompt measures were taken to meet distress where it occurred, and relief works were put in hand which were of great assistance to the people in the affected districts, and ensured a supply of food until the crops sown during the rains of May, which fortunately fell in sufficient quantity, were available.

The abolition of the legal status of slavery, which was brought into effect on the 1st of October last, may have considerable results on the social life of the coast Arabs and their dependents, but it is as yet too early to appreciate them fully.

The very heavy clove harvest in Zanzibar and Pemba created a demand for labour in those islands, which was to some extent met from the Protectorate, the pay and conditions proving attractive even to tribes like the Wakamba, who are as a rule disinclined to engage themselves.

(H.) EUROPEAN SETTLEMENT.

The conditions as regards European settlement during 1906-7 differed little from those prevailing in the previous year.

On many of the farms and large holdings good work has been put in, and progress is reported. Further and valuable experience has been gained in the rearing of stock and the products best suited to the conditions of the various parts of the Protectorate.

The conditions are now easier than they were, thanks in a large measure to the efforts of the early pioneers, who made their homes in the country at a time when it was not possible to predict how their venture would turn out, and have steadily made their way, determined to succeed. Unfortunately all who followed them have not emulated their example, and there are a number of holdings where little or no development has taken place, and where the conditions of the lease will have to be enforced; absence of the requisite means has presumably been the reason, as well as too hasty an application for land before the applicant had fully determined to put in his lot with the Protectorate.

Applications for land were made in considerable numbers, but more attention was paid to the coast. Most of the land south of Mombasa had formed the subject of an application by the Uplands of East Africa Syndicate, and the new demands were mainly for grants around Malindi, to the north. It is the prevailing opinion that the coast lands will bring in good profits from the cultivation of tropical products, such as cotton, rubber, fibre, and cocoa-nuts; but here, as elsewhere, complaints are made of the difficulty of obtaining labour.

In the Uplands attention is mainly directed to rearing stock, such as cattle, sheep, pigs, and ostriches. Lord Delamere and the East Africa Syndicate have considerable numbers of sheep, and in this respect the former has been very successful. Pigs also have a promising future, especially as the Uplands of East Africa Syndicate are about to establish a bacon factory in the Highlands. As to the ostriches, seeing that they are indigenous, there is every hope of good profit from them.

Towards the end of the year a rumour was spread abroad that a native rising was imminent. This had the undoubted effect of stopping the flow of capital. The local bank also took steps to realize from many of its customers who had been allowed to overdraw their accounts. The combined result was a depression from which the country has even now scarcely recovered. In so far as it has stopped wild speculation in land, it has done good. The country needs solid men with some capital, who are not anxious for quick returns. There is no place yet for those who wish for quick returns; and it should be carefully noted that as at present situated the Protectorate does not offer inducements to the man, working by himself, who has not enough to keep him until he can realise the fruits of his industry. As plantations and industries develop, a demand for skilled European labour in various branches will arise, but there is as yet little room for persons seeking the country on the chance of such employment.

The Highlands combine beauty of scenery with a good climate, and will necessarily attract immigrants; it is only to be hoped that the immigrants will be of a good class.

For the rest the Survey Department did much good work in both the Trigonometrical and Cadastral branches, but owing to insufficient staff the year closed with considerable arrears. These arrears have since been largely diminished, as will be apparent when the report of the current year is submitted.

The new Land Law has not yet been passed. Soon after instructions were received from the Secretary of State on the proposals submitted from this country in December, 1906, the Land Board was formed, and the opportunity was taken to ask its opinion. The members of the Board gave the subject their careful attention, and submitted proposals, which have been forwarded to the Secretary of State. The delay is not to be regretted. If European settlement is to be encouraged as it should be, it is most important that the law relating to land should be very carefully drawn up.

(I. AND J.) FUTURE PROSPECTS OF TRADE AND OPENINGS FOR INVESTMENT OF CAPITAL.

The results of the year augur well for the future of the trade of the Protectorate.

Both imports and exports show a satisfactory and steady increase. Practically the net trade of the Protectorate has doubled within the last four years, and considering that it only started 12 years ago, the figure of £1,057,000, representing the net trade of the Protectorate for the year, shows that rapid progress has been made.

In the total is included the trade of the neighbouring Protectorate of Uganda and the German Lake Ports, from which hitherto most of the exports are derived.

In the matter of exports East Africa is still far behind Uganda and the Lake Ports, as is evidenced by the railway and customs returns. With the attention that is now being paid to stimulating the cultivation of payable products and as our industries advance, it is to be hoped that this disparity may soon disappear.

Of the indigenous products, to which we look with the most confidence as important factors in the commercial future of the country, rubber and fibre may be considered the most important. Allusion has been made elsewhere to the activity displayed on the development of these industries; several concessions for rubber have been given out and rubber plantations have been started, whilst two of the fibre concessions are working with new machinery, and machinery has been ordered for others. Rubber will, however, have to compete against the output which is now commencing to be placed on the market from plantations in various parts of the world, and it is discouraging to note the serious fall in prices which are now quoted both for rubber and fibre. But it is hoped that rubber can be utilized for many other purposes than those to which it is at present put, and that the rubber exhibition which is to be held in London next September will help towards advertising the merits of this commodity and raising its price again to former quotations.

The experimental introduction of wool-bearing sheep promises well, the shipments of wool already made being very favourably reported on; sheep, both native and imported, thrive well in the splendid grazing areas on the Uplands, and the improvement of the indigenous breed of sheep has been attended with marked success. The cattle industry has lately had a set-back, owing to the outbreak and spread of African coast fever, but the whole country has now been put in quarantine and a preventive system introduced for controlling the movement of cattle, and these measures, together with the facilities which are being given by the Government of the

Protectorate for fencing farms, should have the effect of controlling, if not extirpating, the scourge. The improvement of the breed of indigenous cattle by crossing them with imported bulls has been extremely successful, and we look forward at no distant date to East Africa becoming a large producer of dairy produce, for which industry a large area in the highlands is eminently adapted, owing to the fact that for the greater part of the year there is a sufficient supply of green succulent herbage to maintain a full supply of milk.

There are large numbers of cattle in the possession of the various tribes, but as the natives show great reluctance in parting with their animals, the settlers find some difficulty in obtaining the number of head they require to stock their farms.

The pig industry is one to which much importance is attached; a factory is about to be started, and it is hoped that before long it will not only supply the local market, but export largely to outside markets. The Government is paying particular attention to this project, as it is one which will greatly help the smaller farmer.

Another industry which is likely to become an important asset to the country is the domestication and breeding of ostriches. There are a large number of wild birds in the Protectorate producing a feather which compares very favourably with the average feather grown in South Africa, and the Government has given permission to registered settlers to collect eggs and capture many young birds. Advantage has been taken of the concession by a good many farmers, and we have now in the pens a very fair stock of young birds.

A good many horses and mules have been imported into the country, and some of the settlers in those parts of the Uplands which are considered to be practically free from horse sickness are taking steps to form small breeding studs of horses.

Turning to the agricultural products, there should be a large opening in the supply of various kinds to the continent. Wheat also is a product of which we have hopes of producing a sufficient quantity to meet local markets and possibly create an export trade. We have now been able to introduce one or two rust-resisting varieties of this cereal, which are well adapted to the soil and climatic conditions of the Uplands.

As regards other farm products, the area under maize has been greatly extended; the demand for this foodstuff is largely on the increase by the natives, and its cultivation has been taken up both by settlers and by natives. There is no doubt that if more money were spent on the importation of selected farm seeds the returns would be greatly enhanced in value.

The collection of beeswax and of various gums from trees indigenous in the forests is receiving attention.

The cultivation of sem-sem, ground-nuts, and other oil-producing seeds is being extended. The demand for these commodities is constant at a remunerative price, the natives are being taught everywhere the advantages of growing such products as these, and are responding satisfactorily to the efforts of the Government to develop remunerative tropical products. Of these, cotton may be looked upon as one of very great importance.

Of late years the disadvantages attached to the dependence of the Lancashire spinners on the United States for their raw material have become increasingly apparent, and the development of the cultivation of cotton on British soil may be now regarded as part of our accepted colonial policy. In the East Africa Protectorate there are large areas of country, particularly on the coast and in the lake districts, admirably adapted for the exploitation of this industry, which is being rapidly taken up by syndicates and settlers, and, in addition, vigorous efforts are being made to induce the natives to undertake its cultivation. Experiments are being conducted in various districts to compare the various merits of the different varieties of cotton. These experiments are being carefully watched by those interested in the development of the industry, and are being particularly undertaken and fostered by the representatives of the British Cotton Growing Association. Special attention is being paid to the importation of only sound, reliable seeds; measures are under discussion with a view to maintaining a high standard of output.

As far as imports are concerned it is to be regretted that Germany and America have secured a very large share of the market for cheap goods sold to natives, but it is understood that the British manufacturer considers this trade unremunerative, the raw African being unable to appreciate and pay an extra price for a reliable article in preference to a shoddy one.

The imports for European colonists are increasing, particularly building materials, implements, and machinery and tinned provisions.

One of the greatest needs of the Protectorate is a direct British service with the United Kingdom at regular intervals by vessels of reasonable speed. It might not at first be remunerative, but if our hopes for the development of the Protectorate are realized, it ought eventually to be run on a paying basis.

Certain minor enterprises which have been alluded to in previous reports, such as hotels and laundries, if efficiently managed, would probably be successful, more particularly now that the facilities afforded by the Uganda Railway are becoming more widely known and are bringing an ever-increasing stream of tourists and sportsmen into the country.

APPENDIX.

LAND, INDUSTRIAL, AND MINING CONCESSIONS GRANTED LOCALLY.

Return for half year ended 31st December, 1906.

SEYIDIE PROVINCE.

Name of Applicant.	Nature and Extent.	Locality.	Date.	Freehold or Leasehold.	Price or Rent.	Remarks.
A. G. Turnbull	Agricultural: 160 acres	Mazeras	24.2.04	Homestead... ...	Price, Rs. 320	Registered— 12.10.06.
Do.	480 acres	Do.	Do.	Pre-empted ...	Price, Rs. 960	Do.

No. 592.

EAST AFRICA PROTECTORATE.

(For Report for 1906–7, *see* No. 557.)

THE LIEUT.-GOVERNOR TO THE SECRETARY OF STATE.

Governor's Office, Nairobi,
October 20th, 1908.

MY LORD,

I HAVE the honour to transmit herewith in duplicate the Blue Book for the year ending the 31st of March, 1908, together with the Annual Report for the same period.

I have, &c.,

F. J. JACKSON
(In the absence of H.E. the Governor).

H.M. Principal Secretary of State
for the Colonies.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1907-8.

I.—FINANCIAL.

The estimated revenue for the year ended March 31st, 1908, was £547,392, and the actual revenue collected was £474,760, exclusive of a grant-in-aid of £152,975 and of a special grant of £40,000 for expenditure in connection with the abolition of slavery. This shows an increase of £13,397 over the revenue collected in 1906-7, which, exclusive of a Parliamentary Grant of £164,000, was £461,362.

The following table shows the comparative detailed statement of revenue for the years 1906-7 and 1907-8:—

—	Amount collected in the year 1906-7.			Amount collected in the year 1907-8.			Increase.			Decrease.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
Parliamentary Grant	164,000	0	0	152,975	0	0	—			11,025	0	0
Special grant for the abolition of slavery	—			40,000	0	0	40,000	0	0	—		
Total grants	164,000	0	0	192,975	0	0	40,000	0	0	11,025	0	0
Customs	81,302	13	0	78,717	6	0	—			2,585	7	0
Port, harbour, wharf, and lighthouse dues.	666	12	8	539	8	0	—			127	4	8
Licences, excise, and internal revenue not otherwise classified.	83,200	19	1	99,890	16	4	16,689	17	3	—		
Fees of Court or office, payments for specific services, and reimbursement in aid.	19,703	1	3	20,425	1	5	722	0	2	—		
Post Office and telegraphs	15,734	1	10	18,381	13	8	2,647	11	10	—		
Government railways	231,375	1	1	226,619	18	11	—			4,755	2	2
Rents	10,991	13	4	9,573	1	9	—			1,418	11	7
Interest	1,825	1	2	561	12	6	—			1,263	8	8
Miscellaneous receipts	8,720	4	1	15,366	6	1	7,146	2	0	—		
Sale of Government property.. ..	3,974	4	5	1,363	17	0	—			2,610	7	5
Total exclusive of land sales	621,493	11	11	664,914	1	8	67,205	11	3	23,785	1	6
Land sales	3,869	2	9	2,820	9	11	—			1,048	12	10
Total	625,362	14	8	667,734	11	7	67,205	11	3	24,833	14	4
Total exclusive of grant	461,362	14	8	474,759	11	7	27,205	11	3	13,808	14	4

The most gratifying increase is that of £16,690 in the amount of licences and taxes collected, of which the hut tax is responsible for £16,228, an excess of £3,298 over the Estimate; this is due to the spread of administrative control and the development of hitherto unknown districts rendere possible by an increase in the staff. There can be no d that this tax will continue to increase the more the is opened up.

The Post Office revenue is greater by £2,648 than in the previous year. This may be ascribed to the sale of new stamps to dealers, and to an increase in the telegraph revenue.

Miscellaneous receipts show an advance of £7,146, caused by the sale of confiscated ivory and the recovery from the Zanzibar Government of arrears amounting to £5,250 in connection with contributions on behalf of the military.

It must be confessed, however, that on the whole the year has been a disappointing one. The failure of the rains in the lake district, and the general depression of trade throughout the Protectorate, owing to a long and general drought, were responsible for a falling off of £2,585 and £4,755 in Customs receipts and Uganda Railway earnings, respectively, which otherwise would have been expected to show an increase.

A decrease of £1,419 in the receipts from rents is more apparent than real, as the figures for 1906-7 included arrears of revenue amounting to £5,159. The same remark applies to the decrease under sales of Government property, due to the transfer of woods and forests to the schedule for Rents.

Land sales contributed £1,049 less than in the previous year, owing to the policy of leasing rather than alienating land.

The following table shows the comparative detailed statement of expenditure for the years 1906-7 and 1907-8:—

Heads of Expenditure.	Expenditure.					
	1906–7.			1907–8.		
	£	s.	d.	£	s.	d.
Rent and Interest to H.H. the Sultan ...	17,000	0	0	17,000	0	0
Pensions	1,349	11	9	438	9	3

Total	616,088 13 11	691,676 17 4

* Land Office Special Expenditure for 1906–7 was £1,451 0*s.* 5*d.*

The total expenditure for the year 1907-8, including Uganda Railway expenditure of £195,534 17*s.* 2*d.*, amounted to £691,676 17*s.* 4*d.*, or an excess of £75,588 3*s.* 5*d.* over the previous year.

Transport charges were voted departmentally, and consequently show a reduction of £26,137; this sum is distributed among the various departments. The only other decrease worthy of notice is £19,482 on the military expenditure, due to a reduction in the number of troops stationed in the Protectorate.

The additions to the staff which, as has been stated, are responsible for the enhanced revenue, must of necessity also lead to a larger expenditure, and provincial administration accordingly shows an increase of £19,756.

The cost of the maintenance of the police exceeded that of the previous year by £9,443; this was partly due to the employment of a number of European police constables.

The Uganda Railway, while showing a falling off of £4,423 on account of slackness and depression of trade, shows an increased special expenditure of £5,802 on construction work and re-alignments.

The Forestry and Agricultural Departments, which were re-organised with larger staff, have incurred larger expenditure by £7,526 and £2,198, respectively.

The necessity for combating diseases of stock, particularly East Coast fever, caused an increase in the special expenditure of the Veterinary Department of £3,822, and special expenditure of £16,500 for the purchase of wire for fencing was sanctioned.

The additions to the staff of the Survey Department were responsible for an increase of £4,368.

The Public Works Department exceeded the expenditure of 1906-7 by £37,377 10*s.* 9*d.* This can be ascribed to the necessity for more buildings and roads in view of the advance of administrative control and the establishment of new stations, and to the growing needs of the towns and stations already in existence.

The totals of the Protectorate revenue and expenditure for the last five years exclusive of Parliamentary Grants were as follows:—

Year.	Revenue.			Expenditure.		
	£	*s.*	*d.*	£	*s.*	*d.*
1903-4	108,856	19	3	418,877	0	3
1904-5	154,756	1	1	302,559	12	9
1905-6	270,362	3	5	418,839	3	10
1906-7	461,362	14	8	616,088	13	11
1907-8	474,759	11	7	691,676	17	4

The hut tax is the only direct tax levied in the Protectorate. The amount collected in 1907-8 was £77,561, as against £61,333 in the previous year.

This gratifying increase, as stated in previous reports, is due in a very large measure to the extension of administrative control and the opening up of hitherto unknown districts. These remarks especially apply to the Kisumu and Kenya Provinces, where there is, however, still ample room for further development. With the increase of the administrative staff, future years should show a continued improvement in the sums realised from this tax.

The surplus of assets over liabilities on March 31st 1908, was			£201,765
From this must be deducted:—			
Sanctioned in aid of expenditure, 1908-9 ...		£23,314	
Remanet expenditure on Estimates re-voted:—			
Kilindini Pier Works	£36,585		
Railway Surveys	6,000		
Removal of Treasury and Audit Offices to Nairobi	10,500		
New Gaol	3,000		
General Post Office, Nairobi ...	2,000		
Nairobi Drainage Scheme ...	16,000		
Houses for Survey Department ...	800		
Special Vote for Abolition of Slavery	34,000	£108,885	
Additional Remanet Expenditure, which would have been re-voted if the position had been foreseen		24,299	156,498
Balance available to be placed at interest			£45,267

The Protectorate has no Public Debt.

CURRENCY.

The subsidiary coinage provided for under the East Africa Currency Order in Council, 1905, was circulated during the year, and the silver 50 and 25 cent pieces were in great demand, there being Rs.60,000 worth of the former and Rs.45,000 of the latter in circulation on March 31st, 1908. The 10 cent and 1 cent pieces cannot be said to have been an unqualified success. The former, of which Rs.39,200 worth were in use on March 31st, are too like the silver rupee, and lend themselves easily to fraud. The latter, of which Rs.49,200 worth were circulated, were found to corrode on the coast, probably owing to the damp salt atmosphere. Steps are being taken to replace them by coins of another metal.

The chief reason, however, of the unpopularity of these coins is that, owing to delay in minting, it has been found impossible to withdraw the copper pice, and the existence of the two coins side by side naturally causes confusion to the native mind. The amount of copper pice in circulation was Rs.351,335, and this figure has decreased since the end of the year.

The total value of currency notes in circulation on March 31st, 1908, was £117,433, as compared with £106,333 at the end of the previous year.

BANK.

The only bank doing business in the Protectorate is the National Bank of India, Limited, established under the authority of the Companies Acts, which has branches at Mombasa and Nairobi. It has a subscribed capital of £1,600,000, a paid-up capital of £800,000, and a reserve fund of £600,000.

MUNICIPALITIES.

Nairobi and Kisumu are the only two Municipalities in the East Africa Protectorate; the existence of treaty rights still prevents the creation of Municipalities on the coast strip.

The revenue of the Nairobi Municipality was Rs.78,953, including a grant of Rs.5,000 for the Nairobi fire engine, as against Rs.58,742 in the previous year, and the expenditure Rs.57,457, as compared with Rs.48,257.

The Kisumu Municipality showed a revenue, including a Government grant of £400, of Rs.19,745, an excess of Rs.4,313 over 1906-7, and an expenditure of Rs.19,745, or an increase of Rs.5,336.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

IMPORTS AND EXPORTS.

The annual value of the Protectorate trade for the last five years is given in the following table:—

Year.	Imports.	Exports.	Total.
	£	£	£
1903–4	436,947	159,815	596,762
1904–5	518,143	234,664	752,807
1905–6	672,360	332,838	1,005,198
1906–7	753,647	440,705	1,194,352
1907–8	799,717	515,052	1,314,769

The above figures do not include importations on behalf of the East Africa or Uganda Administrations or for the construction and maintenance of the Uganda Railway, of specie or goods in transit. Including these figures the total imports for the year in question amounted to:—

Year.	Amount.
	£
1903-4	604,367
1904-5	741,785
1905-6	974,402
1906-7	1,226,649
1907-8	1,251,027

Comparing the principal articles imported in 1907-8 with those of 1906-7, the following points are worthy of attention:—

Apparel, furniture and provisions show increases of £11,355, £6,640, and £8,191 respectively. These are due to the increased demand caused by the large number of Europeans coming into the country. The value of grain imported has advanced by £21,672, which may be put down partly to the failure of the local crops and partly to the fact that as the natives are called on more and more to work further from their plantations, they tend to stop cultivating, and the demand for imported grains increases. An increase of £8,126 in sugar is due to its greater consumption by the natives, and the same reason accounts for an advance of £3,591 in tobacco. An item which calls for special mention is the larger quantity of spirits imported, to the value of £5,857. This was due to the importation of large quantities in anticipation of the proposed increase of duty—but it is noteworthy that though the amount has almost doubled, the value has only risen by some £5,000. This points to inferior quality. A temporary falling off in revenue may be anticipated as a result of this overstocking.

Timber and building materials show decreases respectively of £13,560 and £6,307, the former due to the greater use now made of local timber, and the latter to overstocking of cement and other materials owing to the low prices that prevailed.

Machinery, which is imported free of duty, has advanced in value by £13,868. The increase of £1,404 in the value of seeds and plants is gratifying.

Cotton goods show a decrease of £31,244, which is accounted for by the general trade depression and the falling off in the demand owing to lack of money.

Other small decreases may be ascribed to fluctuations of trade.

As regards exports the increases which deserve mention are fibre, which has advanced from £491 to £2,590, owing to the more thorough working of the concessions, and gold, of which £29,883 worth was shipped as against £1,600 last year. A shipment of £28,000 from the Congo Free State was responsible for this increase.

A noteworthy point is the large increase of £30,017 in the value of beeswax and of £14,133 in the value of hides exported from German East Africa, as compared with increases of only £3,277 and £1,520 in the export of the same commodities from British East Africa.

The export of mangrove bark and borities would appear to have reached their maximum.

The value of potatoes exported is lower by £1,574, due to less demand from South Africa.

Rubber too shows an unsatisfactory falling off of some £5,500.

The total value of the Protectorate trade for the year amounted to £1,766,079, a satisfactory increase of £1,000,000 in the last five years, but it must be admitted that a large proportion of this is merely carrying trade on the Uganda Railway of goods in transit to and from German East Africa. The export trade from German East Africa amounted to £173,236, as against £157,097 exported from this Protectorate, having increased since 1903-4 by some £165,000. The question seems worthy of consideration as to whether the rigid enforcement of game regulations and the imposition of export duties do not tend to divert the trade of the Protectorate to the neighbouring countries. This applies particularly to the ivory trade, the value of ivory exported from British East Africa showing a decrease of £6,680, while the exports from Uganda, German East Africa, and the Congo all show more or less considerable increases. This points to the existence of smuggling, and it is a question whether, in the absence of a strong preventive service, which the expense and difficulty render out of the question at present, it would not be better to remove the restrictions altogether. It is satisfactory to note that while imports from the United Kingdom and British possessions show increases in value of £22,189 and £14,585 respectively, those from foreign countries are less by £2,464.

The value of exports to the United Kingdom was nearly double that of 1906-7, while exports to other countries only exceeded the previous year by 17 per cent.

MINES, MANUFACTURES, AND FISHERIES.

The supposed diamonds discovered during the previous year on the Thika River proved on examination at the Imperial Institute to be bipyramidal crystals of quartz.

The mining expert reported that the copper deposits near Tsavo Railway Station were of too low a grade to be of any commercial value, but that certain reefs about five to seven miles east of the station showed up fairly well on the surface and might repay sinking down, there being an abundance of water and small scrub near by.

Near these reefs there is also an outcrop containing well-defined crystals of graphite, but not sufficient to prove of commercial value.

In the Machakos district good marble has been found, and specimens of mica from surface have been seen about 4 in. by 4 in. in size; the colour, however, was poor, and the sheets did not split evenly.

In South Kavirondo small colours of gold can be obtained in most of the streams, and in the opinion of the mining expert this tract of country and also the Kisii and Lumbwa districts are worth prospecting.

In the coastal belt, which is carboniferous, lignite has been found, and a syndicate has been formed for the purpose of working it, operations being suspended at present pending the arrival of a diamond drill.

A new Mining Ordinance has been prepared in accordance with the recommendations of the mining expert, and will probably become law during the current year.

In conclusion, it may be said that certain districts of the Protectorate are well worth investigating, but that considerable capital would be required to do this systematically.

Ceara rubber at Kibwezi is satisfactorily reported on, and work has been undertaken on rubber concessions in the Malindi and Rabai districts, but it is as yet somewhat early to predict the results.

Lime is found in Lusinga Island, in Lake Victoria, but in inconsiderable quantities. A brick factory has been established at Maragoli, and has met with marked success, and there is also a brick and tile establishment at Frere Town.

Saw-mills have been erected at Kaimosi and Elburgon.

Native manufactures in the coast districts include the production of copra and coir, the extraction of vegetable oils, the weaving of cloth, and the making of mats and baskets.

Ice factories exist at Mombasa and Nairobi, and soda water factories at Kisumu and Kismayu, as well as at the two former places.

Considerable progress has been made in the highlands in the preparation of bacon for local use, as is evidenced by the marked decrease in price.

There is a plentiful supply of excellent fish at all the coast ports and in Lake Victoria, and consignments are regularly sent from Mombasa to Nairobi.

EXPERIMENTAL FARMS.

Nairobi.—The soil on the site originally chosen for the Nairobi farm for the greater part overlies an ironstone formation, and is not only very variable in quality but very uneven in depth, and has in consequence been closed down as an agricultural experimental station. The farm has, however, been retained for a Veterinary, Bacteriological, and an Entomological Station. The new site is some 1,250 acres in extent, and in point of climate and soil is more representative of the conditions appertaining in the 640-acre farm area.

It was not found possible during the year under review to commence operations; since its expiry, however, irrigation works have been undertaken, and a considerable area has been cleared and brought under cultivation. The farm is known as the Kabete experimental farm, and is situated six miles from Nairobi, on the old Kikuyu road.

Kibos.—The soil is of a porous nature, and owing to the low rainfall is quickly affected by drought. Expensive irrigation works would be necessary to overcome this drawback. Generally speaking, the soil is fertile, but a serious obstacle exists to permanent cultivation in the violent hailstorms which occur in the early part of the year.

Severe damage was done from this cause to the sisal plants and to other crops which were planted late in the season.

The cultivation of ramie was tried, but is hardly to be recommended, pending a cheaper process of decortication.

Potatoes can be successfully raised for local consumption, and the prospects of fruits of various kinds are good.

On the whole it may be said that much useful experimental work has been carried out during the year.

Meritini.—This farm was moved during the year to a more accessible site near Mazeras in the vicinity of the railway. The soil here is good, and so far the experiments carried out have been satisfactory.

The existing plantations at Meritini are still maintained, and the trees and plants have given encouraging results, and should form a valuable source of supply for the new farm.

Naivasha.—The health of the stock has been uniformly good, and the increase both in cattle and sheep has been very satisfactory, taking into consideration the shortage of grass. Imported bulls have done good service during the year with the native cows belonging to settlers, resulting in a marked improvement in the breed. A consignment of cattle from South Africa is shortly expected, consisting of Friesland, Shorthorn, and ordinary South African stock, which it is hoped will prove immune to redwater. During the year 118 calves were born, of which only four died. The number of half-bred heifers now amounts to seven, and there are in addition seven second-cross heifers and three bulls. These all show a decided improvement on the native stock, and everything points to the complete success of the grading up of native cattle.

Sheep may again be said to have met with very encouraging results, and cross-breeding and grading experiments have been successful. In view of the importance of obtaining hardiness before the introduction of a merino strain for wool purposes, Welsh rams were used at the outset. They are, however, poor wool producers, and a second cross is being used. An infectious scour broke out in the autumn lambing season, and was responsible for the death of some 10 per cent. of the young lambs.

There was also an outbreak of wire worm among the spring lambs after they were weaned. Various remedies were tried, and it is hoped to clear the farm of this pest.

A consignment of wool sold in London was favourably reported on and fetched satisfactory prices, especially so in the case of the second-cross wool.

One Merino ewe produced 15 lbs. of wool. The wool from imported ewes shows no tendency to deteriorate, and the future of wool production seems most promising.

The goats on the farm have shown a good increase; the proposed importation of South African Angora rams was rendered impossible on account of the duty of £100 imposed on them.

The Berkshire and large black pigs have done well. It is proposed to transfer all the pigs to the new farm in the neighbourhood of Nairobi.

Owing to the dryness of the season poultry have not done well.

The stock, to the number of 400 cattle and 3,000 small stock, have been grazed on an area amounting to 1,000 acres only.

FORESTS.

Much valuable work has been done in connection with the Protectorate forests during the year, and measures have been taken to prevent wanton destruction, damage by fire, and the utilization of valuable timber for firewood.

The most important timbers in the Protectorate are yellow-wood, cedar, sandal wood, and camphor; of these, although the two latter are intrinsically the most valuable, the two former are, on account of their general utility and abundance, practically so.

The reproduction of the forest is ensured in two ways, by assisting natural reproduction, by means of judicious thinning, and by planting trees from nurseries, which has been done extensively with satisfactory results on the whole.

In forming new plantations it is necessary to remember that in a country with so many varieties of climate, the species must be adapted to the climate, and that the nurseries must be furnished with an abundant water supply.

Nurseries have been formed at Nairobi, Dagoretti, Londiani, Muhoroni, in the Kenya Province, and other places.

Specimens of pencil cedar have been sent home for approval, but it appears that the American wood is softer, and as long as supplies of this are available, it will hold the market.

To find a paying market for East Africa timber, cheaper and easier means of transport are required.

It is hoped that in future the local timber will be more widely used for building purposes than at present—that this has not been done in the past is largely due to the difficulty of obtaining supplies of well-seasoned timber.

The revenue of the Forest Department during the year and the timber supplied to Government departments and chiefly to the Uganda Railway, which requires three to four million cubic feet yearly for fuel, represents a value of close upon £13,000.

DISEASES OF PLANTS AND ANIMALS.

The failure of the rainfall spoiled many of the crops, and the severe hailstorms ruined the sisal and some of the cotton at the experimental farm at Kibos.

Much damage was done by beetles to the cocoanut plantations, and a beetle pest attacked wheat experiments at Njoro, though little harm was done.

There was a serious outbreak of East Coast fever during the year, and it has been found very difficult to cope with this disease or to control the movement of cattle. A system of permits has been introduced, and a considerable amount of fencing has been done.

Thirteen outbreaks of pleuro-pneumonia have been reported, most of which were in the neighbourhood of Nairobi. There is, however, reason to suppose that this disease is very widespread throughout the Protectorate. Inoculation has been found to be unsatisfactory as a rule.

Rinderpest was reported in Jubaland, and although everything possible was done to prevent its spreading, this disease travelled down the coast and a further outbreak occurred in Tanaland.

Cases have occurred of Texas fever, more especially among imported cattle, of Mkebbe, of which but little is known at present, and of trypanosomiasis, where cattle have entered a fly belt.

The year has been noteworthy on account of its immunity from horse sickness. Cases have occurred of trypanosomiasis among horses and mules, and of epizootic lymphangitis and piroplasmosis among mules and donkeys. Sheep have suffered from nostril fly, with serious results to lambs, from intestinal parasites, and lung worms.

Tick fever has been the chief disease to affect dogs.

Several outbreaks of swine fever have occurred, and it has been found necessary to slaughter the infected herds.

LAND GRANTS, VALUE OF LAND, AND SQUATTING.

The land grants for the year 1907 are shown at 208, comprising a total acreage of 571,368, as compared with 209 and 292,741 acres for 1906, the number of applications being apparently maintained, though with a largely increased acreage.

This, however, is not the case. There was a considerable falling off in the number of applications, and the figures shown indicate the number of deeds actually issued, the large increase in the survey staff enabling the arrears of previous years to be worked off. The increased acreage is mainly due to the number of fibre concessions granted, which amounted to no less than 214,400 acres.

—	Deeds issued.	Agricultural acres.	Grazing acres.	Fibre.	Forest.	Total.
1906 ...	209	23,832	235,832	32,430	640	292,741
1907 ...	208	27,406	327,939	214,400	1,623	571,368

Attention is drawn to the fact that the past year has, owing to the drought, been a bad one agriculturally, and that several farmers with insufficient capital to tide them over the bad time have failed in consequence.

The Protectorate is at present suffering from a period of depression, with the result that the inflated prices for land have dropped to something like their true level.

From £700 to £1,000 is stated as the minimum with which a settler may hope to succeed. Until, however, our industries have been well established there is little opening for a man without capital coming to the country in search of work.

The coast belt is at the present time receiving considerable attention, the prospects of cotton, rubber, and cocoanuts being promising. This area, however, suffers from the drawback of an unhealthy climate, and residence for a prolonged period without a change is inadvisable. In addition the allotment of land is attended with considerable difficulty, a large part of the land being privately owned, and until the question of ownership has been definitely decided it is practically impossible to allot land with a secure title.

The new Land Ordinance is under consideration, and will shortly be introduced into the Legislative Council.

SURVEY.

The reorganisation of this department, alluded to in last year's report, has now been carried out.

The Survey Department, as now constituted, is distinct from the Land Office, and is divided into two sections, trigonometrical and cadastral, with a largely increased staff, and the results of this arrangement as regards the output of work have been most gratifying.

In the trigonometrical branch the area triangulated is nearly five times as large as in the previous year, and in the cadastral branch the total area surveyed amounts to 862,760 acres. This area, though less by 7,507 acres than in the previous year, actually denotes a considerably increased output, very few large areas being included, whilst a large number of applications for small farms and plots were dealt with.

The arrears in this branch have now been reduced to manageable proportions, due in a large degree to the fact that there has been a marked decrease in the number of applications for land.

Not included in the area surveyed by the cadastral branch are 20 farms of 2,500 acres each in the Uasin Gishu plateau, which have been provisionally surveyed under the system of rapid allotment.

This system, which was introduced during the year, has proved a marked success. 110 farms were marked out in 31 days, and the rapid settlement of a tract of country, if free from native or other complicated rights, can now be guaranteed.

The expenditure on survey during the year was £20,602, as against £15,105 in the previous year. The fees collected amounted to £2,605.

SHIPPING.

The principal ports in the Protectorate are the two harbours of Mombasa and Kilindini, lying respectively on the south and north sides of Mombasa Island. The latter is by far the larger of the two and is used by the bigger steamers; the Mombasa harbour has a narrow entrance, and though more conveniently situated owing to its proximity to the business quarter of the town, can only be used for the smaller steamers and dhows.

Progress has been made with the extensions to the wharf at Kilindini, but was somewhat retarded by difficulties connected with labour and European supervision, the necessity of work in the heat of the sun being the cause of much sickness.

The Protectorate is regularly visited by three steamship companies, the British East Africa, whose steamers call once a month on the outward journey only, the German East Africa, which have a three-weekly, and the Messageries Maritimes, which have a monthly outward and homeward service. The boats of the latter Company proceed to Madagascar, but do not visit the South African ports.

In addition to these steamers, there is a monthly cargo service by the British India Steam Navigation Company.

This Company, as well as the Deutsch Ost Afrika Line, also maintains service with Bombay, and occasionally visits Lamu, which place, as well as Wasin, Kilifi, Malindi, Kipini, and Kismayu, is regularly served by the Protectorate s.s. "Juba."

The accompanying table shows the gross tonnage, the quantity of cargo, and the number of passengers carried by these steamship lines during the year ended March 31st, 1908.

Statement showing the number of steamers, gross tonnage, quantity of cargo, and number of passengers landed and shipped by the different lines of steamers entered in the Port of Mombasa during the year ending 31st March, 1908:—

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengers.	
				Europeans.	Natives.		Europeans.	Natives.
British East Africa Line, Europe ..	11	42,746	Tons. 17,883	53	12	Tons. 323	30	272
British India, Aden	25	51,731	2,618	47	1,011	1,331	46	907
British India, Bombay	8	29.975	3,471	22	494	134	9	207
British India, Europe	5	17,670	5,161	8	—	4	4	10
Deutsch Ost Afrika Line, Bombay	53	139,649	6.317	210	3,299	1,070	106	2,830
Deutsch Ost Afrika Line, Europe	53	295,775	9,146	1,085	1,068	20,715	569	830
Messageries Maritimes, Europe ..	25	96,636	399	480	400	310	383	234
Total	180	674,182	44,995	1,905	6,284	23,887	1,147	5,290

The total steam tonnage entered in the Protectorate ports was 936,398 tons, represented by 447 steamers, a decrease on the previous year of 37 vessels and 71,257 tons; this is mainly due to the change in the German East Africa Line's service from twice a month to three-weekly.

The sailing vessel tonnage also shows a slight decrease on the previous year's figures.

The leading marks for Kilindini harbour have been fitted with lamps and hoisting apparatus, so that vessels will be able to enter and leave at night time.

The Port Office revenue for the year amounted to £2,428 11*s*.

III.—LEGISLATION.

The Ordinances enacted during the year 1907-8 included the following:—

To amend the East Africa Police Ordinance, 1906.

To abolish the legal status of slavery in the Protectorate.

To authorize the issue of licences to ostrich farmers to collect eggs and capture young birds.

To amend the Masters and Servants Ordinance, 1906.

To make provision for the registration of brands for stocks.

To define the powers of the High Court.

To amend the Criminal Procedure Ordinance, 1906.

To make further provisions for regulating the manufacture and sale of native intoxicating liquors.

To amend the Diseases of Animals Ordinance, 1906.

The following Orders in Council were also promulgated:—

The East Africa Order in Council, 1906:—

To make provisions for the appointment of a Governor and for the constitution of an Executive and a Legislative Council.

The Colonial Prisoners Removal Act, 1907:—

An Order in Council issued under the Prisoners Removal Act, 1884.

IV.—ECCLESIASTICAL STATISTICS AND EDUCATION.

The statement made in previous reports still holds good that most of the natives in the interior are pagans, and even on the coast it is only the higher-class Arabs who conform to all strictly to the Mahommedan religion.

Thirteen Missionary Societies have established themselves, and have stations in different parts of the Protectorate, at most of which there are schools at which elementary instruction is given—the most useful secular work, which has only lately been commenced, being industrial training.

The Church Missionary Society has a hospital on Mombasa Island. Medical work is carried on at dispensaries at most of the up-country stations.

There are two European schools at Nairobi, a boarding school at the Roman Catholic Mission, and a European day school kept up by the Government. At the latter the average attendance is 22 girls and 26 boys. The total expenditure for the year was £788.

With the increase of the European population the question of the education of white children becomes an important one. The problem is a difficult one on account of the distance of many of the farms from Nairobi and the lack of means of transport. Many of the settlers, moreover, are not in the position to pay the fees which a central boarding school would require. The whole question is under consideration, and it is hoped that a school will shortly be started by private enterprise with the assistance of the Government.

There is in addition an Indian day school, supported by Government. The average attendance during the year was 50.

V.—GOVERNMENT INSTITUTIONS.

There are European Government hospitals at Mombasa and Nairobi. In the former the accommodation is ample for the needs of the town, but the building is badly designed and in urgent need of repairs. It would probably be better to build a new one on more modern lines than to spend any considerable sum on repairs. The admissions in the year were 41, of whom 26 were cured and 14 relieved, and one died, giving a death rate of 2·4 per cent., a marked decrease on the previous year.

The new European hospital at Nairobi, a spacious and handsome building, was completed and opened after the close of the year under report. The admissions to the temporary hospital during the year amounted to 77, of whom 59 were cured, 17 relieved, and one died, or a death rate of 1·7 per cent.,—also a decrease on the previous year.

There are 30 native hospitals and dispensaries in the Protectorate, and the returns at the three principal ones were as follows:—

	Kilindini.	Nairobi.	Kisumu.
Admissions	1,368	517	485
Deaths	60	119	113
Death-rate per cent.	43·8	24·3	24·7

At the Mombasa Gaol Hospital 286 patients were admitted, of whom 12 died—a death rate of 4·19 per cent.

At present native lunatics are confined in the gaol, and Europeans kept under supervision until they can be sent to Europe. This system is not satisfactory.

A lunatic asylum is now under process of construction at Nairobi, and will be completed shortly.

There are a considerable number of lepers in the coast districts. As a temporary measure, two settlements, consisting of grass huts, have been formed at Mkonumbi, in Tanaland, and on the mainland south of Mombasa.

VI.—JUDICIAL STATISTICS.

The constitution of the police force on March 31st, 1908, was as follows:—

1 Inspector-General.
1 Deputy Inspector-General.
1 Superintendent.
9 Assistant District Superintendents of Police.
14 Inspectors.
7 Sub-Inspectors.
1 Non-commissioned officer.
15 European constables.
6 Native Sub-Inspectors.
13 Native Assistant Sub-Inspectors.
1,888 Rank and file.

This force is posted at 29 stations, distributed among the various provinces as follows:—

Seyidie	381
Ukamba	504
Kenya	218
Naivasha	300
Kisumu	418
Tanaland	55
Jubaland	83

The whole question of the reorganization of the Police is under consideration.

The force cost £46,515 17*s*. 4*d*., as against £37,072 6*s*. 7*d*. in 1906-7.

The number of offences reported to the police or the magistrates during the year was 8,185.

The number for 1906-7 was 4,569. Though there has been a considerable increase in the judicial work, the figures are somewhat misleading, inasmuch as the return for the previous year was based on the number of cases and not of individuals. The total now also includes all offenders tried under the Masters and Servants Ordinance. A noticeable fact is the regrettably high percentage of convictions of Europeans.

The revenue has decreased from Rs.122,091 to Rs.108,322, which is almost entirely accounted for by a large confiscation of ivory to the value of Rs.13,000 in the previous year.

During the year under review the Courts Ordinance was brought into force; it is too early yet to say how it will work.

The renunciation by the Treaty Powers of their right to exercise extra-territorial jurisdiction in the Sultan of Zanzibar's dominions has removed certain long-standing anomalies in the coast area.

Since the completion of the year it has been decided to sever our connection with Zanzibar in the matter of the Appellate Court for Eastern Africa on the mainland, the former system having proved most convenient in practice.

The number of prisons in the Protectorate is 28, but the large majority of these are only lock-ups, in which it is impossible to confine long-term prisoners. The principal prisons are at Mombasa, Nairobi, and Kisumu—European prisoners are generally confined in the former, the accommodation and structure of which have been improved during the year, but it is hoped, in view of the improvements and additions which have been made in the Nairobi prison to be able to utilise it for this purpose, situated as it is in a healthier and cooler climate.

The total number of convicted prisoners committed to the prisons in 1907-8 was 5,776, and the daily average 740·08.

Twenty-two prisoners escaped during the year, of whom eight were re-captured.

The daily average in the prison hospitals was 55·61, and 45 deaths took place.

Prisoners are employed under the supervision of warders outside the prisons in making roads, repairing buildings, stone quarrying and carrying, cleaning the streets, wood cutting, and clearing scrub and bush. In some of the gaols, notably Mombasa and Nairobi, a considerable amount of industrial and domestic work is carried out, *e.g.*, making chairs, baskets, mats, and coir matting and tailoring, chiefly consisting in the making of uniforms and prison clothing.

Vagrants are kept in custody until they have earned sufficient to pay for their passage elsewhere.

A fund, known as the Distressed British Subjects Fund, is subscribed locally to assist deserving cases of destitution.

The Protectorate prisons cost £8,200 during 1907-8, an increase of some £1,200 on the previous year's expenditure.

VII.—VITAL STATISTICS.

As stated in previous reports, a census of the Protectorate has never been taken, and would indeed be impossible under present conditions. A very approximate estimate gives the population of the Protectorate at 4,000,000.

The white population may be taken roughly* as 1,800, including Government officials.

The registration of all deaths of Europeans, Americans, and Indians throughout the Protectorate, and of all deaths including natives in township areas, is compulsory under the Births and Deaths Registration Ordinance.

The registration of native births, however, is optional, and the number of deaths registered bears but a small proportion to the number which occur, so that it is impossible in any way to compare the figures as a test of the growth or decline of the population.

The returns for 1907-8 were as follows:

Province.	Births.	Deaths.
Jubaland	5	63
Tanaland	14	138
Seyidie	82	668
Ukamba	43	300
Naivasha	4	35
Kisumu	11	219
Kenya	5	3
Total	164	1,422

SLAVERY.

A bill to abolish the legal status of slavery in the East Africa Protectorate was introduced in the Legislative Council in September and passed into law on the 1st of October.

By this Ordinance the legal status of slavery is absolutely abolished, but the master may claim compensation for damages actually suffered under its provisions, and compensation up to Rs.100 may be awarded by the District Court, before whom all such claims must be preferred. Due provision is made for preserving as far as possible the Arab domestic life, but the inmates of a harem, though not included in the provisions of the Ordinance, have ample means of redress if subjected to any harsh treatment.

Up to the end of March, 1908, that is six months from the institution of the Ordinance, 431 applications had been received, of which 243 have been settled, the total amount of compensation paid being £449 18*s.* 6*d.*

---

* This figure does not include a considerable number of Boers who have arrived since the end of the year.

A measure abolishing an institution which has existed from time immemorial could naturally not be expected to be popular, but the Arabs have known for some time that legislation in this connection was imminent; no opposition has been encountered, and the Ordinance is working smoothly.

Climate and Public Health.

The division of the Protectorate into three zones for the purposes of climatic description is a convenient one, though it must be understood that even within these sub-divisions there are considerable ranges in temperature and rainfall, which have a strong influence on the healthiness or unhealthiness of the districts concerned.

1. *The Coast.*

The region described as the Coast may be held to include a strip about 100 miles broad, extending from the Anglo-German frontier to the Juba River. The rainfall is greatest in the more southern districts at least in Jubaland. As a rule the temperature, as indicated by the thermometer, is not excessive, but owing to the moisture of the atmosphere the heat is more trying to Europeans than would otherwise be expected. In the Coast towns, however, during the monsoons a cool breeze blows constantly, and this is particularly the case between May and November, when the south-west monsoon prevalent. The hottest season is in January, February, a March, but the nights are generally fairly cool, except durin the lull between the two monsoons, when they are apt to be very oppressive. Most rain falls during April, May, June, and November, but the seasons are somewhat variable and cannot be predicted with accuracy. The climate of the Coast stations may be summed up as on the whole not unhealthy for Europeans, but after a long residence it is apt to be enervating, and a change is desirable from time to time. Malaria and other tropical illness are not frequent. In Jubaland the climate is hot and dry and the sun powerful, but the nights are cool. It is not an unhealthy region except for nervous diseases, which have been responsible for the invaliding of several officers.

About ten or fifteen miles inland the scrub country begins, and the heat, untempered by the sea breezes, is less bearable. The stations situated in this belt, such as Rabai and Voi, do not enjoy a good reputation for health, malaria occurring with some frequency. The same may be said of the Valley of the Tana, which is at certain seasons rendered almost intolerable by the presence of swarms of mosquitoes.

2. *The Highlands.*

The greater part of the interior of the East Africa Protectorate consists of ridges and plateaux, ranging from 4,000 to 9,000 feet in height, one peak (Mount Kenya) reaching an altitude of 18,000 feet. Though naturally the whole of this upland country is not equally salubrious, it may be safely said that it is, generally speaking, exceedingly healthy. The sun, as might reasonably be expected so near to the Equator, is powerful during the mid-day hours, but the air is brisk and invigorating, the nights are cool, and Europeans are able to exert themselves to an extent which would be impossible at the Coast. This part of the country is regarded as well suited for colonization, and a large number of settlers have made their homes in it. A striking proof of the excellence of the climate is afforded by the healthy appearance of the children who have been born and brought up in this region. In fact, the only drawbacks appear to be a somewhat unduly great daily range of temperature and a prevalence of strong winds, which, in certain districts, are trying. Some stations, such as Kitui and Baringo, do not come up to the general standard, but they really lie on the outskirts of the Highland region.

3. *The District round Lake Victoria.*

The shores of Lake Victoria are comparatively low-lying, and the heat consequently approaches and even exceeds that of the coast. Violent storms are frequent, and the climate is probably less agreeable than in any other part of the Protectorate. Malaria is common, and, if not carefully treated, frequently leads to attacks of black-water fever. Mumias and Kisumu have distinctly bad records in this respect, though an improvement in the accommodation and sanitary conditions of the latter station has rendered it less unhealthy.

PUBLIC HEALTH.

The public health during the year has been good, though the number of admissions to hospital and deaths shows an increase. This is explained by the fact that the number of Europeans in the country has increased, and that the natives now come in greater numbers for treatment, which they are beginning to appreciate.

Two deaths occurred among European officials, and four were invalided.

The number of deaths among the total European population was 19, or about nine per 1,000, a slight increase on previous years; the prevalent ailments were malaria, diseases of the digestive system, and skin diseases. Three cases of enteric fever occurred during the year among Europeans, and 13 cases with five deaths among the total population. This disease, though it has not appeared in epidemic form, is undoubtedly on the increase, a proof of the unsatisfactory state of the sanitation and the water supply of the Protectorate.

The number of natives treated has increased enormously with a corresponding decrease in the death rate, which is 2 per cent. lower than in the previous year. This, as explained above, is due to the greater readiness shown to submit to treatment at an earlier stage of the malady.

Sleeping sickness, though decreasing in North Kavirondo, has been spreading in South Kavirondo, 45 per cent. of the estimated population of 13,000 in an area of about 110 square miles round the river Kuja being infected.

It is hoped to be able to remove the native population from the infected areas, a step which should check the spread of this fatal disease.

The Protectorate was entirely free from plague during the year, though since its termination an outbreak has occurred at Kisumu. Malaria has been somewhat less prevalent, especially at Kisumu; this may be ascribed to the abnormal rise in the level of the Victoria Nyanza in 1906-7, referred to in the report for that year, and to the fact of extensive reclamation of the foreshore of the lake having been carried out. Syphilis is widespread and on the increase; the natives show considerable reluctance to come for treatment until the disease is far advanced.

Rheumatism is prevalent in the higher altitudes during and after the rainy seasons. The first case on record occurred of spirillum or tick fever, in which the infection appears to have been contracted in this Protectorate; it proved fatal to the patient.

Diseases of the respiratory system showed a slight decrease, and those of the digestive system a slight increase on the previous year.

Internal parasites accounted for a considerable number of cases—indeed their absence is the exception rather than the rule.

SANITATION.

The general sanitary condition of the Protectorate remains much the same as previously reported; some progress in the direction of sanitary improvements is indeed visible, but it is, owing to the low state of civilisation of the natives and the existence of large Indian communities, necessarily slow.

The condition of Mombasa shows little material improvement. The crying need of the town is a good water supply; under present conditions the wells cannot fail to become polluted with disease as a natural consequence.

Bush-clearing has been maintained in the European quarter, but much remains to be done in the native part of the town.

The conditions of all the old Arab coast towns are similar to those of Mombasa.

In Nairobi Mr. Williams's scheme for the drainage of the town was commenced, and there is no doubt that when it is completed a marked improvement will be shown. The conservancy is under the control of the Municipality, and it is hoped shortly to be in a position to flush the drains. The water supply is unsatisfactory and insufficient. To remedy the defect proposals are now under consideration, and it is hoped that the necessary funds will be forthcoming. The lack of a sufficient water supply is also responsible for the delay in erecting a suitable jail and police lines, and in moving the native locations.

The sanitation of the Indian bazaar is capable of much improvement, and steps are being taken in this direction.

Improvements have been maintained at Kisumu, and the reclamation of part of the foreshore has had the effect of diminishing the number of mosquitoes. A further extension of the sea-wall, built in 1906, should cause an almost complete disappearance of these insects from the European quarter of the town.

The water supply, derived from the shallow and land-locked bay, which is polluted by the lake steamers, is bad, and to this is no doubt due the increase in the number of cases of dysentery.

Boring operations were carried out with a view to obtaining better water, but so far results have been of no value.

VIII.—POST AND TELEGRAPHS.

The East Africa and Uganda services are amalgamated.

The revenue from East Africa in 1907-8 was £16,313, and the expenditure, including the sum of £1,341 for telegraph construction and material, was £17,836—*i.e.*, a deficit of £182 on the actual working of the Postal Department. This compares favourably with a deficit of £1,923 in the previous year.

The total transactions during the year including all letters, post cards, newspapers, book packets, parcels and telegrams, amounted to 2,028,576, as against 1,759,188 in 1907.

During the year important changes were made in the rates of foreign postage, and the unit of weight has been increased to 1 oz. The change of the Protectorate coinage necessitated a new issue of postage stamps.

The British India Steam Navigation Company receives a subsidy of £9,000 per annum for carrying mails once a month to and from Aden. This is not a charge against Protectorate funds; mail transit dues are paid to the different administrations by which the mail services are maintained.

The mail services cannot be said to be satisfactory, and the want of a direct British service is much felt.

The number of money orders paid and issued in the Protectorate during 1907-8 was 29,102, amounting in value to £164,688, showing an increase in numbers of 1,297 and in value of £10,981 on the previous year, when 27,805 orders were paid and issued, valued at £153,707.

Inland money order transactions were mainly responsible for this increase, India alone of all other countries showing an advance.

The money order service has been improved during the year by the provision of a direct exchange with German East Africa.

There are 82 Post and Money Order Offices in the Protectorate, including 32 Post Office Agencies.

The number of Telegraph Offices is 62, including 40 Railway Stations and five Telephone Stations.

The total mileage of telegraphs open for traffic in the Protectorate is 2,263, exclusive of the telephone system.

IX.—GENERAL OBSERVATIONS.

The most important event during the year was the establishment of Executive and Legislative Councils. The latter was opened with all due formality in the month of September, meetings of the Council were held almost monthly till the close of the year, and much useful and important legislation was enacted.

Relations with the native tribes were on the whole friendly. It was found necessary to send a small expedition against the Kisii tribe, who had attacked and wounded the Government official in charge of the station. The expedition was of short duration, and the country, which is very fertile, is now being opened up.

The Embo, whose punishment was reported last year, are now perfectly peaceful, and two stations have been established in this district, which have opened up a tract of very rich country.

Steady progress has been made with the scheme for the drainage of Nairobi.

Mining "booms" again occurred, but the mining expert was unable to discover anything of workable value, though being of opinion that certain districts would repay further prospecting.

The visit of the Right Honourable Winston Churchill in October was an event of great importance to East Africa. He spent three weeks in the Protectorate, visited our institutions in the towns, and made himself personally acquainted with the working of the various departments and of the local conditions, particularly as they affected European settlement and the administration of the natives. Time was found for a short but interesting trip to the trans-Tana districts of the Kenya Province.

The Protectorate was also visited by the German Colonial Secretary, Herr Dernburg, and the Governors of German and Italian East Africa.

PUBLIC WORKS.

The expenditure on the public works of a new growing untry must of necessity be an increasing quantity, as de- opment advances and more buildings and consequently a ger staff are required. The expenditure for 1907-8 was estimated at £148,465, of which £135,521 was actually spent during the year. This is an increase of £37,178 over the previous year.

A sum of £4,525 was allowed for the construction of new roads and bridges in the Protectorate, and for the maintenance and repairs of existing ones.

A considerable amount of work was carried through, though much yet remains to be done before the condition of the roads and bridges can be considered satisfactory. The following is a list showing the total mileage of the various roads, tracks, and paths in the Protectorate:—

Districts.	Miles.
Mackinnon and Sclater Roads—	
Mombasa to Kedong Valley	350
Kedong Valley to Port Victoria	240
Nairobi to Fort Hall (road)	60
Lumbwa to Kericho	23
†Kisumu to Mumias	48
*Mombasa to Malindi	60
*Mombasa to Vanga	50
†Voi-Taveta Road	75
*Mkonumbi to Witu	22
†Malindi to Mambrui	10
†Nairobi to Dagoretti	9
*Machakos to Kitui	45
†Machakos Road Station to Machakos	22

†Naivasha to Nyeri	45
†Fort Hall to Nyeri	30
†Nakuru to Baringo	90
†Nakuru to Rumuruti	67
†Gilgil to Rumuruti	65
Nairobi Township Roads	24
†Rumuruti to Baringo	42
Naivasha Station to west side of Lake	17
Kiambu-Limoru Road	19
Nairobi to Limoru Road	19
†Fort Hall to Embu	30
*Fort Hall to Kabarabara's	16
*Fort Hall to Karori's	30
*Nyeri to Naivasha	40
*Nyeri to Rumuruti	45
*Nyeri to Karori's	40
*Nyeri to Embu	40

RAILWAY.

The only railway in the Protectorate is the so-called Uga Railway, running from Mombasa to Port Florence, on the shores of the Victoria Nyanza, a distance of 584 miles.

It is a metre gauge line, and the total cost up to March 31st, 1908, amounted to £5,456,760 13*s.* 9*d.* The profit on the year was £64,713, as against £76,763 in 1906-7. These figures may, however, still be considered satisfactory when the general unfavourable conditions of the Protectorate and the failure of the rains in the lake districts are taken into account. The lower receipts are partly accounted for by considerable reductions in fares.

---

* Path. † Track.

The number of passengers carried was 255,700, as against 295,491 in the previous year, and 54,855 tons of goods were carried as compared with 52,784 in 1906-7.

12,217 head of live stock carried compare favourably with 4,895 in 1906-7. The receipts per train mile have decreased from Rs.4·57 to Rs.4·33. The receipts from goods traffic have fallen by £16,914 5*s.* 4*d.*; the reasons for this have already been stated. The gross total tonnage carried was 2,071 tons in excess of the previous year, but a large proportion of this was building-material and machinery—ordinary merchandize showed a falling off. It is gratifying to note an increase of 500 tons in the amount of cotton exported.

Considerable progress has been made in the extension to the wharf at Kilindini, to which reference has been made elsewhere in this report. It was hoped to finish it towards the end of this year, but lack of labour and the difficulty, owing to the trying nature of the work, of retaining satisfactory European supervision have retarded the work, which can now scarcely be completed before the middle of 1909. When complete it should provide ample accommodation for all cargo.

Realignments have been carried out, and all the 2 per cent. gradients between miles 44 and 62 have been removed. This work has been done with the assistance of a number of indentured Indian coolies.

The problem of the labour supply still continues to be a difficulty, more especially in the districts near the coast, and several contractors have been forced to give up their contracts owing to lack of labour.

Good progress has been made with the Port Florence wharf, but owing to the increase in the price of ironwork and creosoted timber the cost will be more than was originally estimated. The work should be completed shortly.

It is satisfactory to be able to record the low price of fuel, the continued use of which is of paramount importance, and it was found possible to maintain the supply at a lower cost.

No passengers were killed or injured during the year, and minor accidents were of rare occurrence. Engine failures were much less frequent than in previous years.

MARINE.

The Lake fleet consisted of four steamers, but the year has been a disappointing one owing, as stated above, to the failure of the rains.

The earnings from the steamer service show an increase over 1906-7 of some £1,820.

The future prospects may be said to be more favourable, though only a slight increase in traffic can be immediately looked for.

Exports from the Lake are unlikely to show any advance until the second year after the failure of the rains.

It appears probable that a future important article of export will be wool, and a reduction in up-freights on imported stock cannot be too strongly urged. Cotton, fibre, pork, ground-nuts, maize, and coffee are all more or less valuable articles of export.

At present the traffic area is confined to a narrow belt on each side of the railway, and it would be an undoubted advantage both to the development of the Protectorate and to the railway to make roads opening up the rich districts lying back from the railway, of the existence of which there can be no question.

The contemplated construction of a railway to Fort Hall, which would tap the fertile country round Mount Kenya, is a step in the right direction.

Attention has been drawn to the question of the extension of the railway to Lake Albert, and a survey party is now in the field. There is every reason to believe that such an extension would, in a very few years, create a paying traffic.

EMIGRATION AND IMMIGRATION.

The returns show that 1,895 Europeans and 4,005 Indians landed in the Protectorate, and that 1,051 and 3,356 respectively departed.

The Indian arrivals included 352 indentured coolies for the Uganda Railway and Public Works Department, and the departures 188.

A number of Boers have arrived in the country, and more are expected.

GAME.

A slight increase in the number of sporting parties has taken place during the year 1907-8, and on the whole good bags have been made.

Though the greater part of the country near the railway has been taken up there are still considerable areas where good sport may be had. Sportsmen made bigger bags of lion during the year than usual.

There has been a satisfactory increase in the numbers of eland, buffalo, giraffe, and ostriches. This is also the case with zebra and hartebeest, but as they do considerable damage to fences and crops, this is not so satisfactory.

The drought of the previous year continued over the greater part of the country, and game has been very local. Fortunately most of the spots where the animals congregated were in the Southern Reserve and in out of the way districts.

In Jubaland game has suffered severely from rinderpest—giraffe, lesser kudu, and pig being the species most affected.

On the Athi plains an outbreak of a so far unknown disease took place amongst the zebra, and also to a smaller extent affected the hartebeest.

Amongst the hyaena and jackal a severe outbreak of distemper caused very great decrease in numbers all over the country. Hunting dogs also appear to have suffered, as they do not seem to be so numerous.

RATES OF WAGES.

The rate of wages has remained about the same as in the previous year, but it is only to be expected that they should show a tendency to rise.

The cost of living has on the whole varied but little; the prices of bread, coffee, tea, sugar, salt, and rice remain the same; butter has fallen about 1*d.* a lb., and wine and beer are cheaper. Mutton can now be had for 3*d.* a lb., and pork has decreased considerably in price owing to the establishment of a local industry.

On the other hand milk, cheese, and beef have all advanced slightly in cost.

Horses can now be obtained for a price ranging between £30 and £40, as compared with the previous price of £50; sheep and goats are also cheaper, and are sold for 6*s.* 8*d.* and 5*s.* 4*d.* respectively.

Laundry works still remain expensive and destructive; a good steam laundry would undoubtedly be a great advantage.

The labour supply may be said to be on a somewhat better footing, but it still leaves something to be desired. Provincial labour boards have been established, consisting of officials and non-officials, to consider the best means of obtaining and regulating labour, and it is hoped that their efforts may lead to satisfactory results. There is no doubt of the existence of a plentiful labour supply—the difficulty is to induce the native to work for any length of time and to devise means which will minimise this difficulty, and at the same time be satisfactory to the employer and to the native.

The following table gives the average existing rates of wages:—

	Per annum.		
Domestic servants	£12	to	20
,, ,, (juvenile)	6	,,	12
Cooks (Goanese)	32	,,	42
,, (Swahili)	16	,,	25
Kitchen boys	4		—
Labourers (Coast)	8	,,	12
,, (Interior)	3-5	,,	6
Carpenters (Native)	12	,,	20

Labourers when working away from their homes receive an additional food allowance varying from 5*s.* to 9*s.* a month; and by Government regulations porters have to be supplied in addition with blankets and water-bottles.

SOCIAL CONDITION OF THE PEOPLE.

As administrative control spreads and hitherto unknown districts are opened up and developed, native tribes, formerly completely savage, come more and more in contact with European methods, and this is bound in the course of time to create a demand for European products, which will, it is hoped, induce them to work in order to obtain them.

Their growing confidence is evidenced by their increasing willingness to come for treatment to the Government hospitals.

The labour question still presents serious difficulties, but it is hoped that the establishment of Provincial Labour Boards will tend to a satisfactory solution of this problem.

On the whole the condition of the tribes may be said to have been good, though, owing to the failure of the rains, scarcity existed in the early part of the year in the Lake districts, and drought was prevalent generally throughout the Protectorate.

The supply of food is now assured, since plentiful rains have fallen.

A probable scarcity has been reported since the end of the year under review in the Kitui and Machakos districts; measures have been taken to deal with it.

The abolition of the legal status of slavery in the Sultan of Zanzibar's dominions on the mainland has removed a long-standing reproach against British administration in East Africa.

A considerable amount of work was done during the year in settling claims for compensation. The measure is working smoothly, and its introduction was not attended by untoward circumstances, but it is obvious that the abolition of an institution which has existed for centuries could not be looked upon with favour by the Arab community. It says a good deal for their loyalty and good sense that such a radical change in their social life was introduced as quietly as it was.

EUROPEAN SETTLEMENT.

The year 1907-8 has not been an altogether satisfactory one as regards European settlement, owing to financial depression, with a shortage of crops resulting from the drought in the agricultural districts and the prevalence of East Coast fever. Other reasons, too, tended to check for a time the inflow of capital. Many of the smaller farmers were unable to develop their farms except to a limited extent; a number who started without sufficient means, and often without agricultural experience, were unable to hold on, and there are now a number of farms unoccupied.

On the other hand in some of the larger estates a good deal of development has taken place, especially in the growing of such products as coffee, cereals, and leguminous crops; as also in the development of fibre and rubber plantations and the inauguration of the cotton industry. It may now fairly be said that, despite the prevalence of stock diseases, with which the Veterinary Department is dealing energetically, the future of farming with graded stock, both cattle and sheep, is assured over large areas of the Highlands, and the success obtained in the rearing of ostriches, which has lately attracted a good deal of attention, points to the establishment of a large and profitable industry, whilst the prospects of pig rearing and bacon-curing are decidedly hopeful.

In previous years applications for land were delayed for a considerable period owing to the difficulty of survey work, but owing to the increase of the survey staff and the system of rapid allotment it has been possible to complete a larger amount of work, and the arrears, which were considerable, have now practically been brought up to date.

FUTURE PROSPECTS OF TRADE AND OPENINGS FOR INVESTMENT OF CAPITAL.

The lack of capital, due to reasons enumerated elsewhere in this report and the failure of the rains over the greater part of the Protectorate, caused a temporary check to development and some financial depression, but the country has recovered since the close of the year under report, and the prospects today are brighter. Land value has risen, a good deal of capital has flowed in, stock has done well and increased, and the measures taken to combat stock diseases have inspired confidence.

The year was a trying one to the small farmers, especially those engaged in the cultivation of the soil and in the growing of general crops in the Highlands, and several failures took place.

The general volume of trade in the Protectorate, however, has increased, although the significant fact must not be overlooked that Uganda and German East Africa are responsible for a considerable portion of it, particularly as regards the export trade. As our industries develop this state of things will be altered, and East Africa will take its proper place in the export trade.

It is satisfactory to note that the value of the imports from the United Kingdom and British possessions has increased by some £36,000, and that exports to the United Kingdom have nearly doubled.

A trading company has now established itself in the northern and less well known parts of the Protectorate, and will, it is confidently hoped, open up a large field of trading operations with southern Abyssinia.

As regards indigenous products, much excellent work has been done, especially in connection with fibre, rubber, and cotton.

During the year a number of new decorticating machines were imported, and we now have in the Voi district alone three large companies dealing with the exploitation of fibre, in connection with which there are also rubber plantations.

Both in the Lake districts and on the coast the area under cotton has largely increased, whilst experimental planting has been carried out on an extended scale, both by the British East Africa Corporation, planters, and the Government in order to obtain thoroughly reliable data on which to base future operations. In Kavirondo, owing largely to excess of rain, the season has been unpropitious throughout; on the coast there is every prospect of a good and heavy crop.

The varieties considered most suitable for the country are the Abassi and Mitafifi. It is just possible, however, that other varieties may prove a success, and experiments are being conducted to test their comparative merits. A number of ginneries have been established, and in order to ensure that only a good quality of cotton is imported a bill is now before the Legislative Council providing for the inspection of ginneries and the control of seed for planting.

Very little has as yet been done to exploit the timber in the Protectorate, which undoubtedly exists in considerable quantities of excellent quality. It is a question, however, whether it can bear the heavy freight charges which would have to be paid before it could be put on the market.

The rubber vine Landolphia Kirkii is indigenous in most of our forests, particularly in the Coast area. The collection of the wild rubber has been much exploited by natives, in many instances to the detriment of the industry from overtapping, and a measure of control, which is not always easy to enforce, is called for.

As regards plantations of rubber, the prospects of a large industry in this line are hopeful on the coast and in the lower midlands, and there has been a large increase in the number of young plants set out in the plantations. Samples of rubber from all indigenous vines and trees, as well as from a few plantation trees now in bearing, have been sent to the Inter-Colonial Rubber Exhibition in London.

The production of coffee in the Highlands has made good headway, and the plantations are so far healthy and yielding heavy crops. Very favourable reports have been received from England and France on the berry grown. As an accessory branch of farming, coffee should pay well, but settlers are not recommended to depend solely on coffee, owing to the many diseases to which it is liable.

The value of the cocoanut plantations on the coast has depreciated, owing to the damage caused by beetles and to the custom which prevails among the natives of tapping the flowers, from which they obtain "tembo," a native intoxicating beverage which is largely consumed. The Government entomologist is investigating the life history of the beetle with a view to devising means for its extermination. There has latterly been a distinct movement to revive the cocoanut industry on the coast, where in past years it proved a large source of income to the Arabs before they lost the services of a number of their slaves.

Sim sim and ground-nuts are widely cultivated by the natives. As rotation crops they are worth the consideration of the European planter. We look forward to a large export trade in the near future in both these valuable oil producing products.

The prospects of wool are excellent, and with the successful grading up of the native sheep by the use of Merino rams, and with a better knowledge which is rapidly being obtained of local diseases and the methods of combating them, this commodity should soon play an important part in the export trade of the country.

The year was one of great anxiety to owners of cattle, owing to the spread of East Coast fever over certain parts of the country, and the unfenced condition of the farms and the difficulty of controlling the movement of cattle by Somalis and natives, added to our difficulties. The disease, however, was kept away from the larger stock farms on the Highlands, and with the fencing of farms which is now being carried on, the checks that have been placed on the movements of cattle by the introduction of the permit system, and the ready co-operation of the settler, it is hoped that it will be gradually exterminated.

A large number of bulls have been imported for the purpose of grading up native cattle, with most successful results, the Shorthorn being the favourite breed.

There is every indication that pigs will not only thrive, but can be raised at a very little cost. The establishment of a bacon factory at Limoru will give the desired impetus to an industry which should be profitable to the raiser of pigs and exporter of bacon.

Farmers have also cured bacon and ham with excellent results. These are beginning to take the place of those imported into the Protectorate.

Ostriches have done remarkably well during the year, and consignments of feathers have already been shipped with fairly satisfactory results. The wild bird of East Africa is generally said to be superior in size and plumage to the wild bird of South Africa. The period, therefore, to raise the quality of the feather to a high standard should be correspondingly shortened, especially if due care is taken at the outset in selection and breeding from only the best birds

A number of incubators have been imported, and an increase in the number of artificially-hatched birds is anticipated.

Horse sickness has been the cause of but little attention having hitherto been paid to horse breeding; but now that it is known that certain areas are singularly free from this disease it is expected that this branch of farming will develop. In fact two or three small studs have already been established.

As regards agricultural products, more attention is being paid to mealies, as they are rapidly becoming a staple food with the natives. It is not, however, expected that this will be an exportable product till the rates of transport are considerably reduced. On the other hand there is a practically unlimited demand in the European market for beans, at a price at which they should be profitably grown.

Wheat has done well, and so far the varieties experimented with have shown themselves to be rust resisting, and apart from a good and growing local market for this commodity, there should also be a market in South Africa.

A variety of wheat recently introduced into the country has been found to be rust resistant, and crops have been successfully raised in almost every district of the Highlands. Settlers are very hopeful that in this cereal a profitable industry will spring up, not only for the local market, but for export.

In connection with the development of the agricultural and stock interests of the country too much importance cannot be attached to the desirability of carrying not only products for export, but also stock imported for breeding and grading purposes, as also agricultural machinery by rail at the very lowest rates possible.

Any present reductions in such rates will be made up tenfold later on, and will prove in the end to be sound policy. All duties have lately been removed on the import of horses and mules.

A work of great value to all interested in the agricultural and pastoral development of the country was started in April last by Mr. A. C. Macdonald, the Director of Agriculture, in the form of an Agricultural Journal. This is issued quarterly, and it contains much general and special information on the various branches of farming pursued in the Protectorate; it acts not only as a medium of communication between the different farmers, but also affords the farmers a ready means of keeping in touch with the experimental work of the department and the general agricultural progress of the country.

There can be no doubt that the construction of branch railway lines would open up large and rich districts for trade, which are at present untouched, and as the districts further from headquarters are gradually taken under administrative control, the natives become better acquainted with European methods and commodities, and a demand is created which tends to the promotion of trade. There is, however, on the other hand a tendency on the part of the natives, as they go to work further from their homes, to neglect the cultivation of their own lands.

APPENDIX.

RETURNS FOR HALF-YEAR ENDED 30TH JUNE, 1908. THE HONOURABLE THE COMMISSIONER OF LANDS.

I have the honour to submit herewith the half-yearly returns and to make the following explanations and remarks with regard to the various causes of the delay in the completion of the deeds for various applications.

1 and 2. *Pending negotiations and pending survey.*—In the case of the coast applications, I am afraid that there may be some further delay in dealing with applications. It has been found to be almost impossible to ascertain the position and acreage of land which is free from native rights. In view of the difficulty which has been experienced I understand that it is proposed to close the coast area against applications.

The reason for delay in negotiations in the majority of cases in other provinces are as follows:—

In the Rift Valley district the question of the proposed extension of the Masai Reserve, the survey (now in hand) of native and forest reserves, and the proposed removal of the Indian Bazaar in the township of Nakuru, have been the cause of delay in dealing with applications. In all parts of the Protectorate the consideration of applications for isolated areas of land is delayed owing to the necessity of obtaining reports, and the completion of the deeds is delayed owing to the expense and inconvenience incurred in the survey of such areas far removed from the closely allotted settlements.

3. *Pending plans.*—I understand that the staff of the Cadastral branch of the Survey Department is now in a position to deal with and complete deed plans with promptitude, and most of the cases included in these returns will be disposed of before the end of the current year. In some cases, however, owing to disputes and questions arising by reason of failure on the part of licensed surveyors to properly beacon the areas surveyed, a certain amount of delay is unavoidable.

4. *Pending return of draft deeds.*—The Land Office cannot in any way be held responsible for the delay in these cases. I regret to say that this delay is, in many cases, intentional: applicants who have not asked for, or been given, temporary occupation rights delay the return of their deeds in order to avoid the payment of rent. I have referred this matter to the Honourable the Commissioner of Lands who has approved my proposal to draw up a notice advising the Public that in future rent will be charged from the day the draft deed is despatched from this office, except in cases where rent is already being paid by holders of temporary occupation rights. In order to deal with the cases mentioned in these returns I propose to give notice that after a certain date (giving a reasonable time) rent will be charged on all applications for which draft deeds have been issued.

5. *Pending registration, engrossment, &c.*—In most cases delay is caused by the inability, on the part of applicants, to meet the demands for payment of rent and fees which are issued with the counterpart deeds. In many cases the amounts asked for are large, and as payment must be received in full before the deeds can be registered, and the applicant may be up-country, delay is often unavoidable. In other cases, questions may arise after the deeds have been engrossed which render it necessary to keep them pending.

6. *Pending selection.*—These 62 applications include those in the Uasin Gishu Rapid Allotment Survey, and will be disposed of on August 1st. The Southern Guaso Nyiro applications are also included in the above and will require to be more clearly defined before deeds can be granted.

In conclusion, I am pleased to be able to report that there is every prospect of the arrears mentioned in these returns being considerably reduced during the next six months, and, with the co-operation of the applicants and provided that questions now pending with other departments can be promptly settled, I consider that all pending applications could be disposed of before the issue of the next returns.

With the help of the conveyancer, I will endeavour to dispose of all these arrears, but I must add that, owing to the absence of the Land Officer on leave and the amount of work on hand, our time will be very fully occupied.

C. H. Campbell.

Acting Land Officer.

July, 1908.

No. 635.

EAST AFRICA PROTECTORATE.

(For Report for 1907-8, *see* No. 592.)

THE GOVERNOR TO THE SECRETARY OF STATE

Government House,
Nairobi,
7th February, 1910.

MY LORD,

I HAVE the honour to transmit herewith, in duplicate, the Blue Book of this Protectorate for the year 1908-9, together with the Annual Report for the same period.

I have, &c.,
E. P. C. GIROUARD,
Governor.

The Right Honourable
The Earl of Crewe, K.G.,
Secretary of State for the Colonies,
&c., &c., &c.

(15949—2.) Wt. 27349—387. 1125 & 85. 4/10. D & S.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1908-9.

I.—FINANCIAL.

Exclusive of a Parliamentary grant-in-aid of £138,000 the actual revenue collected during the year 1908-9 was £485,668, which, though not so large as was anticipated, shows a slight increase on that of the previous year, viz., £474,760.

The following table shows the comparative detailed statement of revenue for the years 1907-8 and 1908-9:—

—	1907-8.			1908-9.			Increase.			Decrease.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
Parliamentary grant ...	192,975	0	0	138,000	0	0	—			11,000	0	0
Customs	78,717	6	0	81,655	6	5	2,938	0	5	—		
Port, harbour, &c. ...	539	8	0	528	18	0	—			10	10	0

Sale of Government property.	1,363	17	0	2,223	4	6	859	7	6	—		
Total exclusive of land sales.	664,914	1	8	620,367	10	1	19,490	0	7	20,061	13	2
Land sales	2,820	9	11	3,300	18	5	480	8	6	—		
Total	667,734	11	7	623,668	8	6	19,970	9	1	20,061	13	2
Total exclusive of grant.	474,759	11	7	485,668	8	6	19,970	9	1	9,061	13	2

Excluding the earnings of the Uganda Railway, the revenue is less than the Estimate by £6,372. One of the main factors in this deficit was the decrease in Customs revenue, which was considerably over-estimated, and showed a falling off of £8,325 on account of import duties and of £4,020 on account of export duties, due principally to the diminished export of copra, hides, and rubber. The net total of the Customs revenue, however, exceeded that of the previous year by £2,938.

It is worthy of consideration whether it would not be advisable to substitute a royalty on products natural to the country for export duties, which are a direct restriction on trade and encourage smuggling through unauthorised trade routes.

The revenue from hut tax, on the other hand, shows a very satisfactory increase of £12,000 over the Estimates, and of £17,000 over the previous year's collection. Revenue from this source should, with the opening up of new districts, continue to expand.

The deficit of £5,227 under the heading of Survey Fees, is due chiefly to a considerable falling off in the number of applications, to the introduction of the rapid allotment scheme (under which largely reduced fees are charged in the first instance), and to a change in the system of accounting for fees whereby they are in the first instance credited to a deposit account.

The sale of stamps produced £598 less than in 1907-8, when the new issue of stamps was responsible for large sales to dealers.

Miscellaneous receipts show a decrease of £6,807 on the previous year's revenue, due to the fact of the inclusion in 1907-8 of a sum of £5,250 from the Zanzibar Government for arrears of military contribution. There is, however, an excess of £3,360 over the Estimate, which is to a large extent the result of the arrangement by which Government purchased ivory, which would otherwise have been liable to confiscation, for Rs. 4 per pound.

The suggested abolition of export duties would, however desirable in itself, diminish receipts to an extent which the Protectorate can ill-afford in the present state of its finances, and if any steps are taken in this direction, serious consideration will have to be given to the substitution of other sources of revenue, with a view to the gradual reduction and ultimate elimination of the grant-in-aid. It is hoped that with closer settlement and the discovery of more remunerative markets the prosperity both of the European colonist and the indigenous tribes will increase to a degree which would justify the imposition of burdens somewhat heavier than either bears at present. Care must, however, be taken not to introduce enhanced taxation prematurely, and thereby hamper the development of young and growing industries.

The total expenditure for the year 1908-9, excluding the Uganda Railway expenditure of £164,446, was £538,657, which exceeded that of the previous year by £11,426, but fell short of the Estimate, again excluding the Uganda Railway figures, by £71,581.

The following table shows the comparative detailed statement of the expenditure for the years 1907-8 and 1908-9:—

Heads.	1907-8.			1908-9.

Abolition of Slavery	938	4	4	8,377	18	11
Famine Relief	2,760	4	1	—		
	£691,676	17	4	£703,112	17	2

The main increases in the Expenditure over the previous year are £4,717 under Provincial Administration, due to additions to the staff and expenses in connection with the inspection of the Abyssinian boundary; £4,137 under Police Expenditure; £10,566 under Military Special Expenditure, for which the cost of the relief of battalions is responsible; £7,080 spent on the suppression of diseases of stock; and £7,440 paid in compensation to slave owners.

On the other hand, a reduction in the number of troops and the relief of the 1st by the 2nd Battalion of the King's African Rifles caused a decrease of £5,736 over the previous year; and a reduction in the programme of the Public Works Estimate is responsible for the large decrease of £37,392.

The totals of the Protectorate revenue and expenditure for the last five years, exclusive of grants from Imperial Funds, are given below:—

Years.	Revenue.			Expenditure.		
	£	s.	d.	£	s.	d.
1904-5	154,756	1	1	302,559	12	9
1905-6	270,362	3	5	418,839	3	10
1906-7	461,362	14	8	616,088	13	11
1907-8	474,759	11	7	691,676	17	4
1908-9	485,668	8	6	703,102	17	2

It is interesting to note that during the same period the increase in Hut Tax amounts to £70,575.

	£	£
The surplus of assets over liabilities on March 31st, 1909, was		122,331
From this must be deducted:—		
Sanction in aid of expenditure for 1909-10	32,946	
Remanet expenditure on estimates re-voted:—		
Kilindini Pier	9,000	
Agricultural special expenditure... ...	400	
Nairobi drainage scheme	8,000	
Nairobi Gaol	2,000	
Treasury removal	1,000	
Abolition of slavery	6,000	
Additional remanet expenditure which would have been re-voted if the position had been foreseen	14,631	
		73,977
Balance available to be placed at interest...		48,354
Of which it will, however, be necessary to earmark £10,000 in view of the possibility of the estimated savings of £20,000 on the Slavery Abolition Vote of £40,000 not being realised, so that the balance available is really		38,354

CURRENCY.

The liability of the aluminium 1 cent pieces to corrosion, which was mentioned in the report for 1907-08, rendered it desirable to replace them by nickel coins, which appear to be entirely satisfactory and popular with the natives.

Owing to the failure of the aluminium coins, considerable delay was experienced in demonetising the old one-pice pieces, with the result that both coins were in circulation simultaneously, causing great confusion and bewilderment to the native.

There was only a balance of Rs.1,24,900 of subsidised coinage available on March 31st, 1909, to replace the Rs.3,55,273 in circulation, which will eventually be demonetised.

Since the end of the year, however, matters have improved, and steps are being taken to demonetise all the pice and aluminium cent pieces.

On March 31st, 1909, there were in circulation Rs.79,280 worth of 50 cent silver pieces, Rs.59,250 worth of 25 cent silver pieces, Rs.57,168 worth of 10 cent nickel pieces, and Rs.7,002 worth of 1 cent nickel pieces.

In addition to these there were Rs.2,72,543 worth of 1 pice pieces and Rs.82,730 worth of aluminium cent pieces, which will in due course be demonetised.

The total value of currency notes in circulation on March 31st, 1909, was £107,000, as against £117,433 at the end of the previous year. These figures are, however, somewhat misleading, and the fact should not be lost sight of that a large proportion is really held by the banks as a reserve.

MUNICIPALITIES.

Nairobi is the only town in the Protectorate which has a Municipal Committee, the creation of municipalities on the coast being prevented by the existence of treaty rights.

The total revenue of the Nairobi Municipality was Rs.74,624, as against Rs.78,953 in the previous year, and the expenditure was Rs.64,642, compared with Rs.57,457.

The existing legislation is not altogether satisfactory, and certain classes of ratepayers have successfully evaded their obligations, but an amending Ordinance is being introduced to put matters upon a more satisfactory footing.

The Kisumu Municipality was abolished, and the control of the town resumed by Government.

The revenue amounted to Rs.13,521, exclusive of a grant of Rs.12,000, an increase of Rs.5,777 over 1907-8, and an expenditure of Rs.23,521, an excess of Rs.3,776 over the previous year.

BANKS.

The National Bank of India, Limited, established under the authority of the Companies Acts, is the only bank doing business in the Protectorate with branches at Mombasa and Nairobi. It has a subscribed capital of £1,600,000, a paid-up capital of £800,000, and a reserve fund of £700,000.

A Mombasa firm act as agents for the Chartered Bank of India, Australia, and China.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

IMPORTS AND EXPORTS.

The annual value of the Protectorate trade for the last five years is given in the following table:—

Year.	Imports.	Exports.	Total.
	£	£	£
1904–5	518,143	234,664	752,807
1905–6	672,360	332,838	1,005,198
1906–7	753,647	440,705	1,194,352
1907–8	799,717	515,052	1,314,769
1908–9	797,158	436,313	1,233,471

With the addition of the importations on behalf of the East Africa and Uganda Administration, or for the construction and maintenance of the Uganda Railway, or of specie or goods in transit which are not included in the above table, the total imports for these years amount to.—

Year.	Amount. £
1904-1905	741,785
1905-1906	974,402
1906-1907	1,226,649
1907-1908	1,251,027
1908-1909	1,174,014

The receipts fell considerably short of the estimate owing to the non-fulfilment of the previously-entertained hopes of a large increase in trade. In spite of this stagnation it is, however, satisfactory to be able to record a slight increase in the revenue over the previous years.

Among the most noteworthy increases in the value of imported goods are agricultural implements, cotton goods, grain, provisions of all sorts, and sugar.

Of these agricultural implements have risen by £9,492—a fact which appears to denote a continued endeavour to develop the agricultural resources of the Protectorate.

The increase of £10,501 in the value of cotton goods, though satisfactory when the large decrease in this commodity during the previous year is taken into consideration, cannot be looked upon as denoting the probability of a rapid recovery in this branch of trade, in view of the fact that large stocks of cotton goods are being held in anticipation of a demand, which has not yet been realised. The failure of the local crops, owing mainly to drought, is the cause of the increase of £10,297 in the value of grain imported. The advance of £7,482 in provisions of all sorts is to be accounted for by the opening of new business in the provision trade. It remains to be seen whether a field for such increased trade exists.

Sugar shows an increase of £8,927, but in this case also it appears that there are large stocks on hand, and it is not yet proved whether the natives will be able to afford this luxury.

The quantity of tobacco imported has increased, though the value has fallen off; a fact chiefly due to a large importation of cheap tobacco from German East Africa which the native appears to prefer. Other small increases call for no comment.

The importation of apparel, beads, brass and copperwares, coal, furniture, iron and steel wares, machinery and parts thereof, silk and woollen goods, have all decreased; of these the decrease of £12,657 in the value of apparel imported practically corresponds to the large increase reported last year, which was due to the anticipated demand. To the same cause must be attributed the falling off in beads, brass and copper wares, furniture, iron and steel wares. The decrease in coal was to be expected in view of the large importation in the previous year. This would account also for the fall in the value of imported machinery, the fibre industry not having made such rapid strides as was hoped for.

In considering these decreases due regard must be paid to the paralysed state of trade in the Protectorate and the depression amongst the settlers.

The most notable increases in the value of exports are those in cotton, fibre, ivory, and wool. Of these cotton shows an increased value of £4,068, and everything points to the ultimate success of this industry. The decision of the Government to purchase all ivory in the possession of the natives at Rs.4 per lb., irrespective of weight, resulted in an increased export to the value of £3,334—an amount which should be considerably higher during the current year. It is, however, probable that large quantities of ivory are still being smuggled across the frontiers, and until it is found possible to establish an effective preventive system on the frontiers, this is bound to continue. In view of the great progress made in German East Africa in the development of the fibre industry, the small increase of £1,531 in the value of fibre exported cannot be considered satisfactory. It must be remembered, however, that the season was a dry one. Conditions, however, seem now to have improved, and it is hoped that considerable strides will be made in the near future.

The increase in the value of wool exported, though slight, is interesting in view of the great hopes which are entertained of the ultimate success of the sheep industry. In spite of these increases, however, there is a large net decrease of £16,679 in the value of exports—a most disappointing record. The chief commodities at fault are copra, hides and skins, and rubber. Copra shows a falling off of £5,099, due to shortage of labour and consequent want of care of the trees. The abolition of slavery has deprived the Arabs on the coast strip of the means at their disposal for the cultivation of coconut trees, and the plantations have consequently been neglected with a disastrous effect on the trade. It is hoped that this state of affairs may be remedied.

The large fall of £12,131 in hides and skins points to the fact that the supply of animals is becoming exhausted. The decreased exports from Uganda and German East Africa through our ports all point to the same conclusion.

The export of rubber has decreased in value by about half, which is not encouraging, but it is hoped that the progress made in the cultivated rubber may tend to an improvement in this respect.

There is a slight further decrease in the value of potatoes exported.

The total value of the Protectorate trade shows a falling off of £155,752, which cannot be loked on as satisfactory. It should, however, be noted that there has been an increase in the Customs revenue, and that the fall in the value of imports is largely due to a decrease in the amount of specie imported.

The decline in the value of exports is mainly to be ascribed to a fall in the exports from German East Africa through our ports of £71,117, for which hides and wax are chiefly responsible.

The exports of ivory compare favourably with those from German East Africa, Uganda, and Congo Free State. The value of imports from the United Kingdom fell to the extent of £30,271, while the value of those from British Possessions and foreign countries rose by £8,329 and £19,383 respectively.

During the year the Customs Tariff Bill passed the Legislative Council. It provides for the continuation of the present *ad valorem* tariff, which, though undesirable, is necessary so long as the treaty with the Sultan of Zanzibar remains in force.

The draft Customs General Management Bill, based on the English Customs Consolidated Act of 1876, has been under consideration, and will, it is hoped, shortly become law.

Negotiations are now being carried on for the amalgamation of the Customs Departments of this Protectorate and Uganda.

MINES, MANUFACTURES, AND FISHERIES.

Widespread prospecting operations have taken place during the year, but no very important or valuable discoveries were made.

An inspection of the Kisii Country did not disclose any very encouraging results from a commercial point of view, yet the wide dissemination of traces of precious metals is a remarkable feature. A small amount of lignite was found at Mwele, and there were rumours of a discovery of coal in Kisii, though no samples were forthcoming. Copper ores have been located in several districts, but the reports are not very favourable, and it is doubtful whether they can be profitably worked. A sample of manganese ore, said to have been found in the Protectorate, was well reported on. A deposit of graphite was found near Lake Victoria, and further prospecting is being undertaken. Traces of gold have been found but not in sufficient quantities to warrant operations on a scale which would prove commercially successful. Diatomite was found to exist near Lake Elmenteita, and if of good quality would pay for export.

A mineral survey of the Protectorate should certainly be undertaken, but this would be of little use unless preceded by a topographical survey, which is at present in an unfinished state.

During the year a number of special prospecting areas have been granted, with contingent rights to a mining or mineral lease, a step which has largely encouraged prospectors.

Lime, which is chiefly used for local building requirements, is found in Lusinga Island in Lake Victoria.

A brick and tile establishment, on the mainland near Mombasa, did good work during the year and produced an excellent class of brick.

An oil mill, for the extraction of oil from locally-grown simsim, was at work in Kisumu during the year; and saw-mills, for working locally-grown timber, have done good work at Kaimosi, Elburgon, Limuru, and Escarpment.

A soap factory and a tent-making and furniture factory, by means of electric power, have also been established.

Ice factories exist at Mombasa, Nairobi, and Kisumu, and soda-water factories at the above-named places and at Kismayu.

Native manufactures at the coast include the production of copra and coir, the extraction of vegetable oils, the making of mats and baskets, and the weaving of cloth.

The preparation of bacon for local consumption has again made good progress.

Fish is plentiful on the coast and in Lake Victoria, but beyond a regular trade between Mombasa and Nairobi, is used for local consumption only.

EXPERIMENTAL FARMS.

Nairobi (Kabete).—The farm, situated six miles from Nairobi, is 1,250 acres in extent, and consists wholly of a deep red, loamy soil, and is completely fenced and well watered; during the year 150 acres have been brought under cultivation and sown with different crops, including potatoes (32 varieties), maize, wheat, barley, oats, linseed, and beans, the majority of which germinated well, and the results harvested have been satisfactory on the whole.

There are altogether 291 head of live stock on the farm.

Mazeras.—Much clearing was done during the year, and 40 acres were brought under cultivation.

The short rains practically failed, and serious damage was done to the ordinary food crops, such as maize, millet, and beans, whilst permanent cultivations received a severe shock.

Ceara rubber trees stood the dry weather very well, and should prove a very profitable investment, while seeds of new varieties of rubber germinated fairly well. The success of an experiment in tobacco-growing was interfered with by rust.

Several varieties of maize were tried, which in the case of Brazilian flour corn, and Chester County especially, gave satisfactory results.

Orange, lemon, and lime trees have done well, and imported bananas have proved successful.

Bread fruit, Avocado pear, Mangosteen, Durian, and untimely trees have all been tried with varying results.

All planting operations at the old experimental farm at Meritini were discontinued, the only work done being the clearing of the permanent plots; Lagos and Ceara rubber are doing well, and the growth of sisal is encouraging.

Naivasha.—The exceptionally dry year caused a shortage of grazing, and necessitated the purchase of a considerable amount of forage for the imported stock. The pure-bred cattle have done extremely well, and now comprises a herd of 48. The up-grading from native cattle continued to be a success, notably the Hereford crosses; the shorthorn and Ayrshire first cross are both good. The losses among the cattle were few.

Sheep have on the whole done well, though the death-rate has been higher; the lambs of the home-bred Merino flock by the imported South African show great promise.

Graded sheep up to the third generation have been very successful and show no deterioration in constitution.

The year's clip of wool, more especially from the Merino and the second crosses, was remarkably clean. There is probability of an industry being started in the lower grades of wool for blankets for the local market.

Wire-worm and tape-worm have been much in evidence, the latter being very bad amongst the young lambs. Wire-worm appears to be more prevalent in a dry than in a wet year. The flock of goats now consists of half-breds and second crosses only.

Owing to the impossibility of procuring a pure-bred Angora ram, any further experiments are at a standstill.

Considering the dryness of the year and the absence of green food, the Berkshire and large black pigs have been a success, and 52 were sold during the year.

Towards the end of the year all the pigs were transferred to the Kabete Farm as being more suitable.

Leopard-proof fencing has been erected as an experiment, and has proved a great success. Further operations in this line are being undertaken.

A very successful stock sale took place during the year, one Ayrshire ram realising the high price of £71, native cows and heifers with half-bred calves went up to £16; while pure-bred rams averaged £4.

FORESTS.

During the past year satisfactory progress has been made in the many directions necessary for the proper conserving of the Protectorate forests.

Large areas have been surveyed and demarcated, fire-guard lines very widely extended, and much re-afforestation carried out, though, unfortunately, in the highlands the continued drought proved a serious obstacle to successful planting.

Notwithstanding extended precautions in the shape of fire lines, grass fires have destroyed large areas of forest, and in the Aberdare Hills the natives have also done much damage.

The value of forest produce given free during the year, including over three million cubic feet of fuel supplied to the Uganda Railway, was £14,200, whilst the revenue derived from rents, royalties, and other sales was £2,461.

DISEASES OF PLANTS AND ANIMALS.

The cotton crop suffered very much from the irregular distribution of the rainfall, which was excessive in the districts round the Lake and deficient at the coast.

A crop of flax was much damaged by the ravages of caterpillars at the Kabete Farm in Nairobi.

East Coast fever, which had formerly been confined to the Nairobi and Kyambu Districts, broke out among the cattle in the Fort Hall District and in Machakos, and considerable mortality ensued. Every effort is being made to prevent its further spread by means of fencing and stringent quarantine regulations.

There was only one small outbreak of pleuro-pneumonia during the year and, although rinderpest undoubtedly existed in the Boran Country on the Abyssinian frontier, there was no epidemic in the Protectorate.

Several cases of anthrax occurred in the Lumbwa District. This disease is known to the natives as "Brasta," and is said to spring from the poison of a certain tree.

Gastro-enteritis, the symptoms of which are in some respects similar to those of rinderpest, has caused a considerable number of deaths amongst young stock in the Northern Masai Reserve, and a few cases of quarter evil occurred on the Nandi Plateau.

Measles also is a prevalent disease.

Although there has been no serious outbreak of horse-sickness, cases have occurred all the year round, and it would appear that owing to climatic conditions there is no one particular season at which it is more liable to occur than at others.

Out of some 30 or 40 cases of ulcerative lymphangitis, two have proved fatal. This disease appears to have been introduced from Abyssinia.

A number of horses, mules, and donkeys have succumbed during the year to trypanosomiasis. Piroplasmosis also has been very prevalent. Strongylosis has been the cause of considerable losses among sheep, and scabies is widespread all over the Protectorate.

Two outbreaks of sheep-pox have occurred, which were, however, of small dimensions.

The nostril fly has caused much damage to lambs and yearlings, and pleuro-pneumonia has affected both sheep and goats in certain districts.

It is curious to have to record a case of tuberculosis in a goat, these animals being as a rule very resistant to tuberculosis infection.

Outbreaks of swine-fever occurred in the Kenya Province and near Nairobi, but these were not widespread.

Young ostriches suffered considerably from parasitic infection, and a number of birds were poisoned through eating quantities of castor oil beans.

Several cases of roup fowl cholera and airan tuberculosis among poultry have come under notice during the year.

Tick-fever is still the cause of a heavy mortality among dogs.

LAND GRANTS, VALUE OF LAND, AND SQUATTING.

The number of land grants for the year are 162, comprising a total acreage of 448,782, as compared with 208, with an acreage of 571,368 in the previous year—a decrease almost entirely due to a falling off in the applications for agricultural areas, the reason being that all land near Nairobi and the Uganda Railway available for this purpose has already been taken up. Although applications for grazing areas have been fewer, yet owing to the large number of pending cases which have been dealt with, the number of deeds registered has reached a higher figure than in the previous year. It is proposed in future to do away with the distinction between agricultural and grazing areas, which is admittedly ambiguous, and to divide all land into four classes, with rent at different rates, and the size of the farm will depend on the rent charged. Many farms have been demarcated under the rapid allotment system, which, although admirable in principle, does not do away with the necessity of an accurate survey and involves considerable expenditure.

The demand for business and residential plots has been small owing to the fact that so many of these plots are unoccupied that it is almost always possible to acquire by private purchase.

It is gratifying to be able to report that the estimated revenue was exceeded, a total of Rs.168,647 being collected.

The appointment of a Conveyancer has minimised the delay which must necessarily arise in connection with the granting of deeds, and the selection of Land Rangers has had excellent results. The new Crown Lands Ordinance, which was passed towards the end of the year, will, it is hoped, prove of great practical value and do away with any uncertainty as to the conditions on which land will be granted, which has been to some extent a cause of the small number of applications received during the year. The attached table gives the details of the land grants for the past two years:—

Period.	Deeds issued.	Agricultural acres.	Grazing acres.	Fibre acres.	Forest acres.	Total acres.	Building and residential plots.
1907 ...	208	27,406	327,939	214,400	1,623	571,388	83
1908 ...	162	6,514	375,020	66,892	356	448,782	40

The uncertainty of ownership in the coast areas hampers transactions in land considerably. It is proposed to deal with this by strengthening the staff of the Recorder of Titles.

SURVEY.

The Trigonometrical Branch of the Survey has been very shorthanded during the year on account of illness. As a result, the output of work has been smaller than would be the case under normal circumstances. The major triangulation has been carried from the Athi River base to Mombasa, a distance of some 400 miles, and from Mombasa about 70 miles northwards along the coast, and 20 miles inland both major and minor triangles were observed. This work was rendered difficult owing to the absence of prominent hills, the thickness of the vegetation, and the haziness of the atmosphere. In the Cadastral Branch 1,161,583 acres have been surveyed, as compared with 862,760 in the previous year. This increase is largely due to the scheme of rapid allotment, which considerably relieved the Survey Department. But little work was done in the coast districts during the year on account of the uncertainty as to land titles, but it should be possible in future to undertake systematic work there. The expenditure on survey during the year was £21,725, as compared with £20,602 in 1907-1908: the fees collected amounted to £1,380.

SHIPPING.

Of the two chief ports in the Protectorate, Kilindini, lying on the south side of Mombasa Island, is by far the larger, and is, in consequence, used by the bigger steamers. Mombasa harbour is small, with a narrow entrance, and is therefore only available for dhows and smaller steamers, though it is the more conveniently situated of the two owing to its proximity to the business quarter of the town.

As stated elsewhere in this report, considerable progress has been made with the extensions to the Kilindini Wharf, and it is hoped that the work will be completed during the current year.

The Protectorate has been served during the year by two regular lines of mail steamers, the German East Africa Line and the Messageries Maritimes. The British India Steam Navigation Company's steamers direct from Europe have only called during nine months of the year; their service is monthly.

The German steamer service is three-weekly, and that of the Messageries Maritimes monthly, outward and homeward.

In addition the British India Steam Navigation Company's steamers call once a month with cargo transhipped at Aden.

A branch of the German East Africa Line maintained an irregular service with Bombay, with occasional visits to Lamu.

Towards the end of the year the coastwise traffic was disorganised owing to the condemnation of the Protectorate s.s. "Juba," which was sent to Bombay and sold as useless. Since the end of the year negotiations have been carried on to provide a service to take her place, but up to the present no satisfactory arrangement has been come to.

The accompanying table shows the gross tonnage of, the amount of cargo and number of passengers landed and shipped by, the different steamship lines.

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengers.	
				European.	Natives.		European.	Natives.
			Tons.			Tons.		
British India, Aden ...	27	53,897	2,585	42	863	2,890	65	624
British India, Europe	10	39,744	18,859	20	8	213	34	1,134
German Line, Europe	55	320,169	8,347	1,526	1,032	15,872	701	690
German Line, Bombay	51	143,818	7,824	251	3,292	1,063	186	3,351
Messageries, Europe ...	25	97,219	917	579	612	587	522	275
Total	168	654,847	38,532	2,418	5,807	20,625	1,508	6,074

It is noteworthy that while the other figures show a decrease, the number of Europeans landed and shipped have both increased. The total steamer tonnage entered in the ports of the Protectorate amount to 922,276 tons, represented by 421 steamers, a decrease of 26 vessels and 14,122 tons.

The sailing vessel tonnage is also slightly less than the figures for the year 1907-08.

Three masonry beacons have been erected at the entrance to Kilindini Harbour and fitted with lights.

The revenue of the Port Office amounted during the year to £2,409.

III.—LEGISLATION.

The Ordinances enacted during the year 1908-9 included the following:—

To make provision for the protection of fish in the waters of the Protectorate.

To maintain and improve the quality of cotton in the Protectorate.

To make provision for the removal of doubts with regard to titles to land.

To amend the procedure on trial by jury in criminal cases.

To make provision for the removal of natives from one district to another in the Protectorate.

IV.—ECCLESIASTICAL STATISTICS AND EDUCATION.

The large majority of the tribes in the interior of the Protectorate are pagan, and even in the coast districts where Mahommedanism is the prevailing religion, only the higher-class Arabs conform at all strictly to its tenets, though amongst the Somalis of Jubaland there is considerable fanatical feeling.

There are 13 missionary societies of different denominations, with stations scattered all over the Protectorate, and with the opening up of hitherto unadministered districts the sphere of missionary influence is widening. Most of the stations have schools, at which elementary instruction is given, and in many of them industries of various kinds are also taught, which will, it is hoped, eventually prove of great practical benefit. Most of the up-country missionary stations have dispensaries attached to them, and the Church Missionary Society has a hospital on Mombasa Island, and has also established a brick-making factory and a laundry on the mainland, close to Mombasa.

There are two European schools in Nairobi, a boarding school at the Roman Catholic Mission, and a Government European day school. The number of children on the rolls at the latter has increased, and the average attendance has largely improved. The expenditure for the year was £1,585. There is also an Indian school aided by Government. The number of children has increased from 62 to 95, and the average attendance has been good.

In addition to the above mentioned, a school, which now accommodates nine boarders, was started by private enterprise towards the end of the year; the curriculum includes French, German, music, drawing, and painting.

In a country such as this, where distances are so great and means of communication so faulty, the educational question must always be one of considerable difficulty—the differences of races and labour also are important factors in the case.

During the year an educational expert visited the Protectorate to investigate and report on the possibilities of instituting some central, general scheme of education. The result of his labour will doubtless be to place the whole matter on a more satisfactory basis, but the question of expense must not be overlooked, and it should be remembered that many of the persons concerned cannot afford to pay large fees.

V.—GOVERNMENT INSTITUTIONS.

There are European Government hospitals at Mombasa and Nairobi. The former, one of the oldest buildings in the Protectorate, underwent some much-needed repairs, but it is questionable whether it will fulfil much longer the purpose for which it was intended. During the year 70 patients were admitted, of whom 49 were cured, 15 relieved, and 6 died, *i.e.*, a death-rate of 8·5 per cent., or nearly four times the percentage of the previous year. The new Nairobi hospital was opened during the year; it is a spacious and well-fitted building, and should provide ample accommodation for the needs of the town for many years to come. The number of admissions to this building, as well as to the old temporary hospital, were 85, or an increase of 10 on the previous year; of the admissions, 62 were cured, 19 relieved, and 1 died, giving a death-rate of 1·1 per cent., a slight decrease on the rate for 1907-8.

There are 30 native hospitals and dispensaries in the Protectorate, but the majority of these are quite unsuitable, not having been erected in the first instance for the purpose for which they are now used. Of the three principal ones at Mombasa, Kisumu, and Nairobi, the two former are new and spacious buildings erected during the year. The old Kilindini hospital is no longer used. The Nairobi native hospital is most unsuitable.

The returns at these three hospitals were as follows:—

—	Mombasa.	Nairobi.	Kisumu.
Admissions	2,042	718	543
Deaths	66	113	95
Death rate, per cent....	32·3	15·7	23·7

Three hundred and sixty-eight patients were admitted to the jail hospital at Mombasa, 6 of whom died, a death-rate of 1·6 per cent.

LUNATIC ASYLUM.

The new lunatic asylum was practically completed during the year, but owing to the lack of a proper water supply it was not found possible to open it for the reception of patients. It contains eight single cells for natives and two single cells for Europeans. It provides for dangerous cases which require confinement and restraint, but is not suitable for the recovery of such cases or for the milder forms of lunacy, where a less rigorous supervision only is necessary.

REFORMATORIES.

A Government reformatory, for the reception of juvenile offenders, has been established on the Government farm at Kabete, near Nairobi.

andronicus

VI.—JUDICIAL STATISTICS.

The actual strength of the police during the year was 1,941, posted at 28 stations. The whole question of re-organisation has been thoroughly considered, and it is hoped that the recommendations which have been put forward will tend to the greater efficiency and economy of the force. The cost during the year was £50,654, as against £46,516 in the previous year.

The total number of offences reported to the police or magistrates during the year was 8,397, an increase on the number for 1907-8.

The revenue shows a slight falling off of Rs. 4,000, but the actual court fees have increased by Rs. 5,000.

There are 24 prisons in the Protectorate, the majority of which are, however, only lock-ups, in which long-term prisoners cannot be confined. The principal prisons are at Mombasa, Nairobi, and Kisumu, and Europeans and long-sentence prisoners are generally confined in the former, where the accommodation is more suitable. Nairobi gaol is also utilised for this purpose.

The total number of convicted persons committed to the Protectorate prisons in 1908-9 was 5,709, and the daily average 852·89. 35 prisoners escaped during the year, 8 of whom were re-captured. The daily average in the prison hospitals was 62·11, and the number of deaths amounted to 38.

The prisoners are employed outside the prisons, under supervision, in road-making, stone-quarrying, bush-clearing, and wood-cutting. In Mombasa and Nairobi prisons, industrial and domestic work is undertaken by the prisoners, *e.g.*, chain-making, tailoring, basket and mat making; and in Nairobi gaol they are taught masonry work.

Vagrants are confined until they have earned sufficient money to pay their passage elsewhere; deserving cases of destitution are assisted from a locally subscribed Destitute British Subjects Fund.

The cost of the prisons during 1908-9 was £10,087.

VII.—VITAL STATISTICS.

Under present conditions the taking of a census is an impossibility. The population is very roughly estimated at 4,000,000.

The white population may be taken, approximately, as 2,000.

The Births and Deaths Registration Ordinance renders compulsory the registration of the deaths of Europeans, Americans, and Indians throughout the Protectorate, and of all deaths, including natives, in township areas. The registration of births among natives is not, however, required by the Ordinance, and the number of deaths registered is only a small proportion of those which occur. It would be obviously impossible to register all native deaths, and the figures given cannot be looked on as accurate or in any way a test of the growth or decline of the population.

publishing company inc

The returns for 1908-9 were as follows:—

BIRTHS.

Europeans, Americans, and Indians.

Ukamba Province	40
Seyidie Province	100
Naivasha Province	12
Kisumu Province	8
Jubaland Province	3
Tanaland Province	3
Kenya Province	6
Total	172

DEATHS.

Europeans, Americans, and Indians. Natives in Townships only.

Ukamba Province	254
Kenya Province	6
Seyidie Province	891
Kisumu Province	145
Naivasha Province	41
Tanaland Province	181
Jubaland Province	70
Total	1,588

SLAVERY.

The Ordinance for the abolition of the legal status of slavery has worked well and without friction during the year. Altogether 3,593 cases have been settled by the District Courts and compensation to the amount of £7,053 has been awarded.

It is, however, an undoubted fact that the Arab community, which has not been very prosperous of late, has suffered severely from the movement of emancipation. It is hoped that when the question of land titles at the coast is settled, an influx of fresh capital will bring about a better state of affairs.

CLIMATE AND PUBLIC HEALTH.

The year cannot be considered as a favourable one as far as the public health is concerned, and the death-rate has largely increased, although the actual number of admissions to hospital has not been much greater than in previous years.

Among European officers five deaths occurred, as compared with two in 1907-8, and four were invalided.

As regards the health of Europeans generally, the number of admissions to hospital is considerably more than in 1907-8, and there are probably many unrecorded cases occurring on outlying farms beyond the reach of medical aid, which have not been taken into account.

Nervous diseases play a prominent part, and, situated as the Protectorate is, practically on the Equator, and as far as the bulk of the population is concerned at a considerable altitude, it is, to say the least of it, open to question whether East Africa can ever become what is known as a "White Man's Country."

The climate is an ideal one for travellers and sportsmen, provided that they avoid certain districts, and there are few parts of the world where a holiday can be more enjoyably spent; but the general medical opinion is, that continuous residence on the high plateau has a cumulative effect on the nervous system, often culminating in a complete breakdown in cases where there has been overwork or mental anxiety. Settlers and merchants find it necessary to pay periodical visits to Europe, and suffer in health when unable to do so. It must, however, be admitted that the European population up to five years ago was so small that these observations are necessarily based on very insufficient data, and a fuller experience may prove them to be inaccurate.

The number of deaths amongst the Europeans was 16.

Twenty-three cases of enteric fever occurred with only one death, of which 14 were among Europeans, and, as stated in the report for 1907-8, it can safely be predicted that this disease will spread. Its existence points to the unsatisfactory condition of the sanitation and water supply in certain localities

The number of natives who presented themselves for treatment has slightly increased, and there has been a considerable rise in the death-rate.

In view of the widespread existence of sleeping sickness in Kavirondo, it was decided to form a segregation camp and to attempt to remove the natives from the Lake shores, but they showed great reluctance to leave their villages near the Lake and especially their fishing, which is not only the chief source of their food supply but also their amusement. It is also one of the most dangerous sources of infection. The scheme had to be temporarily abandoned before it had a fair trial, owing to the unfortunate death of Dr. Baker, and it is greatly to be feared that moral suasion by itself will effect but little in this direction.

There was an outbreak of plague, lasting over four months, at Kisumu, where, unfortunately, the disease appears to be endemic. There were 79 cases, 59 of which proved fatal, a death-rate of 74·68 per cent., considerably less than that during the last outbreak. This may be attributed to the prompt evacuation of infected villages and the use of Haffkine's serum.

The number of cases of blackwater fever has increased slightly amongst Indians and Goanese, but hitherto there has been no instance of an African native developing this disease.

Malaria is responsible for a considerably larger number of cases and deaths than in the previous years, and the deaths from tuberculosis have more than doubled.

There were a few cases of beri-beri in the gaol at Nairobi, due, probably, to the unsuitability of the building, which will shortly be superseded by a new and up-to-date prison.

Only two cases of leprosy came for treatment, but there is no doubt that this disease is very much more widely spread than is known, especially in the coast districts. Measures are being taken to enable the Government to exercise a stricter control than has hitherto been possible in this respect. There is a leper settlement at Mkonumbi, near Lamu.

The cases treated for syphilis were less in number, but this forms no criterion of the extent of the disease, which it is to be feared is very prevalent, as may be seen from the Provincial Commissioners' reports.

The number of admissions for rheumatism is considerably less than in 1907-8, the chief reason probably being the dry season.

There is an increase in the number of cases of diseases of the eye and ear and of the respiratory system.

Diseases of the digestive system, though forming a considerable item in the total number of cases treated, remain much the same as in the previous year.

SANITATION.

No striking developments or improvements in the sanitary conditions of the Protectorate can be chronicled during the year, but there has been steady progress along the lines of municipal improvment already laid down.

The lack of an adequate water supply must again be emphasised as a bar to efficient sanitation, and this applies especially to the four principal towns—Mombasa, Nairobi, Nakuru, and Kisumu.

In Mombasa it is not too much to say that the large majority of wells, from which the water supply is obtained, are polluted to a greater or less degree. The question of bringing an adequate supply into the town is receiving consideration. The existence of treaty rights prevents the introduction of municipal by-laws, but the erection of a public abattoir and a fresh fish market, and the removal to a special market of the trade in dried shark and salt fish, are all steps in the right direction.

In view of the existence of enteric fever, measures to control the milk supply are urgently required.

All the old Arab towns along the coast, Malindi, Lamu, and Kismayu, are governed by conditions similar to those which obtain in Mombasa.

In Nairobi a considerable advance has been made with the Williams Scheme, but here again progress is hindered by the absence of a sufficient water supply. This matter is under consideration.

The work of flushing the drains is now satisfactorily carried out, and the remetalling of most of the roads has caused a sensible diminution in the amount of dust, which is still, however, a source of considerable discomfort in dry weather.

The condition of the Indian Bazaar remains most unsatisfactory, although a beginning has been made in marking off the new areas recommended by the Williams Scheme.

Kisumu has been remodelled and definitely divided into racial and tribal quarters, and a strip of land has been cleared round the town on which no buildings of any sort are allowed. The reclamation of the lake foreshore, the importance of which cannot be overestimated, has been proceeded with, and there remains only a quarter of a mile to be finished. The work, when completed, should have a marked effect on the breeding of mosquitoes. The water supply is unsatisfactory.

The same remark applies to Nakuru, a town which is rapidly increasing in importance, and is likely to take the place of Naivasha as the headquarters of the Province.

Much good work has been done everywhere during the year in clearing bush and rank vegetation, and drainage has made satisfactory progress.

VIII.—POST AND TELEGRAPHS.

The Post and Telegraphs Services are amalgamated with those of Uganda. There are 84 post and money order offices in the Protectorate including post office agencies.

In spite of the generally depressed condition of trade, business, particularly in the inland traffic, increased, and the revenue amounting to £16,660 5*s*. 5*d*. exceeded that of the previous year by £346 15*s*. 10*d*.

The deficit on the actual working, including the cost of telegraph construction in East Africa, was £4,076, but it should be remembered that work to the value of £7,000 was done on behalf of the Government.

The total transactions during the year, including all letters, postcards, newspapers, book-packets, parcels and telegrams, amounted to 2,193,913, an increase of 165,337 on the previous year's total.

The sale of stamps shows a falling off of £2,000, but it should be noted that the figures for 1908-09 were unduly inflated owing to the new issue of postage stamps, large quantities of which were bought up by dealers.

The mail service with Europe still continues unsatisfactory, but there has been some slight improvement owing to the accelerated speed of the British India Steam Navigation Company's steamers which connect with the Peninsular and Oriental Line at Aden once a month. The service is otherwise irregular and results in an accumulation of mails at Aden.

The number of money orders issued and paid in the Protectorate was 27,781, amounting in value to £158,540, a decrease of £6,348 in value and 275 in number from the figures of the previous year. This decrease is mainly in orders sent to India.

There has been a considerable increase in the number of parcels dealt with, mainly to be ascribed to the growing tendency to purchase stores in England. The supplementary parcels service by the Deutsche Ost Afrika Linie has also shown satisfactory progress. A direct parcels exchange was arranged with Egypt, which is being extensively used.

The total number of telegraph offices is 66, including railway stations. The total mileage of telegraphs in the Protectorate is 2,234, excluding telephone lines.

General telephone systems were introduced in Nairobi and Mombasa, and a considerable number of private subscribers have been connected. The telephone mileage in the Protectorate is 145.

IX.—GENERAL OBSERVATIONS.

The year under review was not remarkable for any events of a salient character, but the Protectorate may be held to have made steady progress in spite of somewhat unfortunate meteorological conditions, which naturally militated against the success of those colonists who had embarked their capital in agricultural enterprise.

There was little or no friction with native tribes, and administrative influence developed steadily, especially in the Kenya and Kisumu Provinces. In the latter the Ketosh country round Mount Elgon at one time showed some slight signs of disaffection, but a short patrol was entirely successful in re-establishing law and order.

Round Nairobi, Naivasha, and Nakuru the European settlers are continuing to develop and improve their holdings, roads and bridges are being constructed, and communications generally put upon a more satisfactory basis. Labour difficulties still, of course, exist, but show a tendency to diminish.

The observations on the social condition of the people, rates of wages, &c., the prospects of European settlement, and commerce, which usually form part of this section, are dealt with this year in a précis of the reports received from the various provinces. This is really less misleading than would be the case if these subjects were discussed generally in their relation to the whole Protectorate, the different zones of which are so distinct, and the prevailing conditions so little comparable with one another, that separate treatment is desirable if not essential.

PUBLIC WORKS.

The expenditure on public works during the year was £110,145, less by £19,602 than that of the previous year. This was due to the necessity for economy in view of the somewhat unsatisfactory financial condition of the Protectorate; many important building works were, however, carried out. A sum of £15,000 was allowed for the construction of new roads and bridges and the maintenance and repairs of existing ones, and considerable progress was made with this work, the importance of which, in the development of the country, cannot be over-estimated.

RAILWAY.

The Uganda Railway, running a distance of 584 miles (with 42 stations) from Mombasa to Port Florence, on the shores of Lake Victoria, is the only railway in the Protectorate. It is a metre gauge line, and its total cost up to March 31st, 1909, amounted to £5,482,679 17*s*. 2*d*.

The profit on the year, £64,838, slightly exceeded that on the previous year, viz., £64,713, but in spite of this and of the fact that the rates for carrying passengers and goods were the lowest ever reached on the railway, the position cannot be regarded as altogether satisfactory. To render it so a large increase is wanted in the downward, without a falling off in the upward, traffic. In the year under review such a falling off took place to the extent of 5,716 tons, while the downward traffic was only increased by some 3,880 tons. The shortage of rainfall, extending as it did to

Uganda, and affecting in consequence the cargo carried by the railway steamers, is chiefly responsible for there being so moderate increase. To this reason also may be ascribed the shortage of money and the consequent falling off in the traffic by the local trains. The number of sportsmen and tourists, moreover, was less than in previous years, but it is to be hoped that in future years the effects of the extensive advertising which has been undertaken will be apparent.

The number of passengers carried during the year was 218,332, as against 255,700 in 1907-1908, while the goods traffic showed a decrease from Rs. 2,211,502 to Rs.2,199,106, or a fall of Rs.12,396. Live stock shows a decrease from 12,217 head to 9,528.

One feature is the marked decrease in the traffic to and from the Congo, which is largely attributable to the restrictions on the traffic in cow and immature ivory.

It is estimated that the loss of this trade will mean a loss of £4,000 revenue to the railway during the current year.

The receipts per train mile have fallen from Rs.4.33 to Rs.4.31, as stated, the lowest rate which has as yet been possible.

The gross total tonnage carried was 2,371 tons in excess of 1907-1908. Building material showed a marked falling off—a state of affairs due to depression in the country and over-building in the past. The development in the traffic in cotton from Uganda ports is maintained.

Experiments have been made in the use of Jarrah wood sleepers, and although it is as yet too early to predict their success, it is hoped that, as in other tropical countries, they will prove satisfactory. Progress has been made with drainage works in Nairobi and Port Florence, wharf and goods sheds have been completed, and a new pier built at Kampala Port, while permanent bridges have been erected between Muhoroni and Port Florence. The progress of the re-alignment work between Mazeras and Mackinnon Road has been satisfactory, in spite of the unhealthiness of the climate and the difficulties attendant thereon, and the whole of this work should be completed very shortly.

The Kilindini Harbour Extension Scheme has made great strides; the earthworks are completed, and the quay wall more than half finished. It is estimated that the work should be finished and all buildings erected in a month or two, though some slight delay may be caused by the necessity of filling the foundations of the goods shed.

Native labour still remains scarce in the coast districts, and although it is easy to maintain the ordinary gangs at full strength, any extra labour required for special work is very difficult to obtain. In Nairobi unskilled labour is plentiful, but the natives will not remain at work for any length of time.

A number of European overseers have been employed during the year, and have on the whole proved successful in supervising native labour. They are far more satisfactory than the Indian overseers who were, as a rule, formerly employed.

The supply of fuel was well maintained, and 33,671 tons were burnt, while it was only found necessary to use 478 tons of coal.

No passengers were killed or injured during the year, and the few minor accidents which occurred call for no remarks.

MARINE.

The Lake fleet consisted of four steamers, but the year was a disappointing one owing to the scantiness of the rainfall, and the steamers were not as busily employed as had been hoped for. The cargo steamer Nyanza, whose construction was reported last year, proved most useful, and will in future greatly facilitate the transport of goods from Lake ports. The earnings of the steamboat service show an increase of some £2,500 over the previous year.

Advantage was taken of the slackness of traffic to utilise one of the steamers in taking a line of soundings from Rusinga to Bukoba, also down the eastern shore of the Lake to Shirati. Other portions remain to be surveyed, before any new ports can be opened up.

EMIGRATION AND IMMIGRATION.

During the year 2,219 Europeans and 4,665 Indians entered the Protectorate, and 1,291 and 4,504, respectively, departed. A large number of the Indians were indentured labourers and artizans for the Public Works Department and the Uganda Railway.

Attempts to evade the Restriction of Immigration Ordinance were but few.

GAME.

Although there has been a considerable falling off in the number of sportsmen who have visited the Protectorate during the year, yet owing to the country being better known the bags of game have been larger and more varied.

Three hundred lions were killed during the year, a considerable increase on the numbers in previous years, and it would appear that they are still numerous, though the increase is possibly due in some measure to the larger areas of country now open to sportsmen. There has been a notable reduction in the number of bull elephants, though the number of cows and calves seem to have been maintained. Giraffe, buffalo, and eland are all increasing, and it is satisfactory to note a distinct increase also in the number of greater kudu, which for some years had remained stationary. Hyænas, hunting dogs, and jackal do not appear to have recovered from the outbreak of distemper reported last year, and there was a fresh outbreak on the Uasin Gishu plateau during the year.

On the Athi Plains game continues to be numerous, but, owing to the drought, somewhat local. Comparatively little shooting has been done in this district on account of the enormous quantities of ticks.

On the Tana River and east of Mt. Kenya game is very plentiful, but is little shot, being in a fly-infested and feverish district.

Owing to the amount of settlement which has taken place in the Rift Valley, this is not now such a popular resort for sportsmen as formerly, though many fine trophies are obtainable, especially in the Baringo District.

A considerable amount of preservation has taken place on privately-owned land, and the value of game as an asset has been more generally recognized.

New Game Regulations will shortly be brought into force, which will allow a landowner to invite a licence holder to shoot on his land, the game thus shot not counting on the licence. This provision should lead to a more careful preservation of game.

PROVINCIAL REPORTS.

SEYIDIE PROVINCE.

Population.—The population of the Seyidie Province is shown in the following table:—

	Europeans.	Natives.
Mombasa District	190	35,000
Rabai Sub-district	22	60,000
Malindi District	22	85,000
Vanga District	4	24,000
Teita District (including Taveta)	22	28,000

Hut Tax.—The amount of Hut Tax collected in the year 1908-9, as compared with that collected in 1907-8 is as follows:—

—	1908–9.	1907–8.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Mombasa District	131,464.00	133,869.00	—	2,405.00
Rabai Sub-district... ...	22,065.90	43,495.20	—	21,429.30
Malindi District	94,168.17	87,335.72	6,832.45	—
Vanga District	35,653.03	33,771.59	1,881.44	—
Mwatate Station	23,772.69	25,640.75	—	1,868.06
Taveta Station	7,205.47	7,357.32	—	151.85
Total ... Rs.	314,329.26	331,469.58	8,713.89	25,854.21

Total decrease Rs. 17,140.32.

The decrease is largely due to drought. The year under review and the previous year were both bad seasons, and the crops were so poor that the natives had but little money or produce. In the Rabai Sub-district the collection had to be postponed owing to the threatened famine, and when it was commenced the officer in charge died, whilst his successor had to be transferred owing to ill-health.

Agriculture.—Both European planters and Arabs in the Malindi District are discouraged in cotton-growing owing to the complete failure of the lesser rains during the past two years. The tendency to plant cocoanuts has increased. Rubber and sisal still continue to be planted by Europeans, but there is growing feeling against cotton, even as a catch crop. It is hoped that the Ceara rubber plantations will begin to yield next year. The Fibre Syndicates in the neighbourhood of Voi are not paying, and one, the London and South African Agency Fibre Concession at Maji

Mazuri, has suspended operations. It is said that the other two will follow suit shortly unless the price of fibre rises in Europe and America, and a more certain labour supply can be found. Throughout the whole Province there has been a shortage of food, and at times even famine was threatened. The only addition to concessionaires in the Province is the Uplands of East Africa Syndicate. Nothing further has been done by the Syndicates who applied for concessions to work Sanseviera fibre in the neighbourhood of the Sabaki River.

There are 12 European Syndicates working in the Malindi District, and the total area under cultivation is 1,500 acres. A further area of 1,350 acres has been cleared ready for planting.

Industries.—The cotton ginneries at Malindi turned out 62 tons of lint and 121 tons of seed; the Mombasa ginnery turned out a considerable increase on last year, but the cotton was everywhere of poor quality and the yield per acre very small.

The East Africa Industries Company have imported first-class plant on a large scale, and they are erecting buildings for a brick and tile manufactory at Makupa. The class of brick is excellent. The same Company has also erected a modern steam laundry at Freretown, which is not yet in full working order.

In Mombasa a house-to-house Electric Light and Power Company have commenced erecting buildings.

Labour.—With the exception of the fibre industries, which have had difficulty in obtaining labour, the work being not congenial and lying in an otherwise uninhabited district, planters have been able to recruit as much labour as they required. If next year the season is favourable to the Ceara rubber and tapping is undertaken on a large scale, there probably will be difficulty in obtaining sufficient labour. The labourers are mostly from the Kikuyu and Kamba Districts, the men walking 300 or 400 miles in search of work. The pay is higher than that offered in the highlands and the living cheap. There is also a small supply of Swahili and Nyamwezi labour.

Crime.—With the exception of the Malindi District, crime throughout the Province shows a decrease as compared with the corresponding period for last year. The criminal cases at Malindi show an increase of 58, *i.e.*, 448 as compared to 390 for the previous year, due mainly to petty thefts and directly attributable to the influx of labour needed for cotton cultivation.

Slavery.—The total number of applications made in the Malindi District, under the Abolition of Slavery Ordinance, amount to 1,704, distributed as follows:—

Malindi	1,157
Takaungu	547

Of these, 865 have been dealt with and settled. Rs. 62,147 have been paid in compensation. The slavery cases have entailed a large amount of extra work on the district staff.

In Mombasa 61 slaves were freed.

Native Affairs.—The native affairs of the Province call for but little special notice during the period under observation. The natives of the various districts have been uniformly peaceable, and have given little or no trouble. With regard to the coast districts, though possibly cases of drunkenness are still of somewhat frequent occurrence, it is particularly noticeable that those cases are confined for the most part to the strangers, such as the Kikuyu, Kamba, and Nyika tribes, who are always present in large numbers in Mombasa and Malindi to fill the labour demands. The same applies to the Kamba in the Sub-district of Rabai. The natives in the hinterland of the Vanga, Malindi, and Mombasa Districts are very tractable, and now that the Administrative Officers are able to visit their various villages more frequently, they are brought into closer touch with the Government, to the advantage of both. The establishment of gazetted headmen among the Nyika and Giriama tribes, seems to be having a beneficial effect. The state of the Teita District, with the sub-district of Taveta, is most satisfactory; the Teita can be reckoned among the most obedient and peaceful natives in the Protectorate.

TANALAND PROVINCE.

There are two districts in the Tanaland Province, Lamu and Tana River, and one Sultanate, Witu.

The total amount of Hut Tax collected is given in the following table:—

—	1907-8.	1908-9.	Increase.
	Rs.	Rs.	Rs.
Lamu (including Witu) ...	25,676	34,636	8,960
Tana River	11,633	12,672	1,039

Agriculture.—The British East African Corporation has done good work in encouraging cotton-growing amongst the natives, with the result that they exported over 100 bales during the year. The total value of the cotton exported exceeded Rs.18,000

Two European planters and one Indian are experimenting with rubber, cotton, sisal, and native crops. The plantations of the Arabs have suffered somewhat from the dearth of labour resulting on the abolition of slavery. The native crops consist of maize, millet, bananas, tobacco, sugar-cane, and rice.

Industries.—There has been a falling off in the export of mangrove bark, rubber, cattle, and hides. The decrease in the export of mangrove bark was due to the low prices in Europe; the rubber tappers were handicapped by the truculent behaviour of the Somalis; and the cattle and hide trade suffered from the closing of the ports on account of cattle disease.

Labour.—The few planters can usually obtain what labour they require, but, generally speaking, there is very little labour in the Lamu District and Witu. On the Tana River, however, the natives are numerous and industrious, and they are beginning to come to the coast in search of work.

Slavery.—The Slavery Compensation Court was kept very busy, and 1,800 cases were heard, over Rs.80,000 being paid in compensation.

Native Affairs.—Towards the end of the year under review the northern part of the Tana River District was thrown into a state of panic by the arrival of some 10,000 Somalis with large herds of cattle at Bura on the east bank of the river. These people had been forced to leave their own country owing to drought, and had migrated to the Tana to await the rains. Owing to the tactfulness of the District Commissioner, who was supported by a Company of the King's African Rifles, there was no trouble, and the Somalis quitted the river on the breaking of the rains.

The migration of Bajuns from the islands and mainland north of Lamu to Mombasa and German East Africa has become very noticeable. There is, unfortunately, but little going on in Tanaland, and they move to a sphere where they can obtain better prices for their services. Many freed slaves have also left the Province and settled in runaway slave villages on the Sabaki River. Others have squatted on the land of their former masters and are eking out a somewhat precarious but contented existence.

JUBALAND PROVINCE.

There are now two districts in Jubaland, Kismayu and Gosha, the latter having been opened in 1908. The Hut Tax was also extended to Gosha, with the result that Rs.14,505 were collected, as compared with Rs.8,520 in 1907-08.

Agriculture.—The district of Gosha is very rich, and cotton, maize, tobacco, millet, sim-sim, and bananas are grown. There are usually three crops in each year, and in favourable seasons four. A matter of great importance for the success of the district is the regulation of the Juba River; as a rule the river bank is higher than the land behind it, and when the river rises the whole country is flooded. Several applications for land have been received from Europeans, and one planter has made a start.

Trade.—The Emperor Navigation Company has two steam launches on the river and a fairly extensive trade is carried on with the Somalis.

Native Affairs.—The Somalis have been very quiet during the year under review, and efforts have accordingly been made to open up the trade route to Boran. Notable developments in this direction may be confidently expected as a result of the stricter control of the Abyssinian boundary, which it is hoped will in future be exercised.

UKAMBA PROVINCE.

The Nairobi, Kyambu, Machakos and Kitui Districts make up the Ukamba Province. An endeavour to find a suitable site for a Government station in Mumoni country failed, and the inhabitants consequently still have to be administered from Kitui. The population of the Province is approximately as follows:—

POPULATION.

Europeans	1,200
Asiatics	6,700
African	303,000

The natives belong to the Kikuyu and Kamba tribes. The Kikuyu in the Ukamba Province are estimated at 56,500, and the Kamba at 235,000. Other natives (Swahili, Somali, Kavirondo, Wanyamwezi, &c.), numbering about 11,500, live in and around Nairobi.

Revenue.—The revenue of the Province, in spite of adverse seasons and veterinary quarantine regulations, shows an increase of nearly Rs.30,000 over the preceding year. This is mainly due to an increase of Rs.21,450 in the Hut Tax collections—Rs.225,705 being collected, as against Rs.204,255 in 1907-08.

Industries.—The principal industries are the rearing of ostriches and pigs, the production of wheat, maize, potatoes, and dairy produce, the planting of fruit trees and coffee, and the growing and treating of fibre plants.

The rearing of ostriches promises good results, the pluckings of some of the native cocks being valued at £10 each. A bacon industry is gradually coming into existence, and good hams and bacon are cured locally. Wheat has done well, and has in several places averaged 20 bushels an acre. A flour mill with up-to-date machinery has been erected in Nairobi, and the locally-ground wheat is ground with excellent results.

American maize of superior quality can now be obtained at little more than that paid for intermixed native kinds; potatoes continue to be grown for local consumption and export to South Africa, and butter and cheese are regularly sent to Mombasa and other towns in the Protectorate. Fruit-growing, which hitherto had been confined to the Machakos District, has now been extended to Kikuyu with good results, and European fruits, such as apricots, apples, figs, plums, and strawberries, can be obtained as well as tropical fruits. Coffee has done well, and a considerable quantity has been exported. The fibre area taken up during the past year embraces large tracts in the lower Kamba country. Nine machines of the latest pattern have been erected; but the season has not been a good one, and the fibre leaves have consequently been dry and hard and difficult to work, besides which the price of fibre has fallen, and labour has been difficult to obtain. The conditions are, in fact, similar to those prevailing in the fibre areas of the Seyidie Province.

Agriculture.—It is estimated that the total area under cultivation in the Province amounts to 135,000 acres.

Trade.—The trade of the Province has been greatly hampered by the outbreak of East Coast Fever and the consequent veterinary quarantine regulations. It is estimated that 4,000 head of cattle died in the Machakos District alone, and it is greatly to the credit of the Veterinary Department and Administration that the disease did not assume larger proportions.

There are a number of Indian and Swahili shopkeepers in the various districts, and the value of the blankets disposed of in the Province amounted to Rs.38,500, while Rs.12,000 worth of beads and wire and Rs.9,000 worth of American cloth were sold. The trade in beeswax is assuming large proportions, Rs.35,000 worth having been exported from the Kitui District, as against Rs.4,000 last year. The trade in hides and skins has fallen off.

The trade of Nairobi has fallen, though business there is on a more stable basis than formerly. Bad debts have diminished, and the mercantile community is hopeful.

The present great drawback to the well-being of Nairobi is the absence of an adequate supply of good water. A new native location has been erected, but all the buildings are lying idle for want of water suitable for human consumption.

Labour.—There are occasional complaints of a deficiency in the labour supply, but it is really only a minority of the settlers which suffers in this respect. There are many Europeans doing good work on farms, who never have any difficulty in obtaining as much labour as they require. At the same time really hard work, such as working lime, cutting timber and fibre, and breaking stone is unpopular, and commands higher rates of pay. At certain seasons, too, when the natives are themselves planting and harvesting, labour is difficult to obtain.

During the present year large numbers of Kamba have, owing to drought, gone to the coast in search of work, the wages paid there being better than up-country.

Native Affairs.—Throughout the Province the natives have been quiet and orderly. The inhabitants of the Kibwezi Sub-District suffered severely from famine in December and January, and 16 tons of foodstuffs were loaned to the natives to tide over the scarcity. The famine was also felt in the Kitui and Machakos Districts, which also suffered from the outbreak of East Coast Fever. Amongst the natives of the Kikuyu many cases of phthisis have been reported, and venereal diseases are rife in the neighbourhood of townships, and especially in those where there is a resident Indian population.

KENYA PROVINCE.

There are four districts in the Kenya Province,—Fort Hall, Nyeri, Embu, and Meru.

Hut Tax.—The total Hut Tax revenue collected during 1908-9 amounted to Rs. 427,388, as compared with Rs. 414,978 collected during the corresponding period of the previous year, which shows an increase of Rs. 12,410.

No Hut Tax was collected in the Meru District during the year under review, as this district had only been opened a very short while, but it is proposed to start the collection next year, and it is estimated that the revenue will in consequence be swelled by Rs. 180,000.

Trade.—During the past year a large quantity of grain has been exported from the trans-Tana to Nairobi by Indian traders and by the natives. There has also been a brisk trade in beeswax in the Embu District, and a small trade in skins. Three sugar mills have been erected in the Fort Hall District, but the profits from this trade are very small. The Meru District as yet has not been opened up to trade, but several large markets have been established by the natives, where they barter and sell their produce.

Native Affairs.—The districts on the whole have been peaceful and orderly. The Suka Division has, however, been holding back, and does not seem inclined to accept our offer of friendship.

Excellent work has been done in Meru District. Not only has this country been opened up without friction, but the Igembi have been brought under our Administration. These people live on the Nyambeni Range, and they have for generations been hostile to all other tribes and to such traders as have attempted to enter their country.

As in other parts of the Province, excellent native paths have been cut in the Meru District and, except through the Suka country, communications between all the districts have been kept open, all the paths being maintained in order by the natives themselves.

Labour.—There is but little demand for labour in the Province itself, but many thousands of Kikuyu, Embu, and even Meru proceed to Nairobi and Mombasa in search of work, bringing their earnings back to their homes to meet their obligations as regards the Hut Tax, and to purchase sheep and goats.

NAIVASHA PROVINCE.

The Naivasha Province consists of six districts: Uasin Gishu, Ravine, Baringo, Naivasha (including Nakuru), Masai Northern Reserve, and Masai Southern Reserve.

Hut Tax.—The total amount of Hut Tax collected during the year amounted to Rs. 29,400, or an increase of Rs. 7,965 on 1907-8.

Public Health.—The Province may generally be considered very healthy, though in places malaria is prevalent, and several deaths occurred in consequence on the farms situated on the banks of the Molo River. The medical authorities have come to the opinion, after close observation, that European residents in the highlands require periodical changes to Europe just as they do in the lowlands. At the headquarter's hospital 50 per cent. of the cases treated were venereal.

Districts.—The Naivasha District is practically entirely occupied by white settlers, who devote their attention principally to the raising of stock. Many also breed ostriches, and experiments have been made in cultivating wheat, with favourable results.

The Uasin Gishu District was included in the Naivasha Province during the year under review, and has been surveyed into farms for white colonisation. The population at present comprises 166 persons, 156 of whom are of Boer origin. Small areas have been broken for cultivation, and several houses of stone or wattle and daub are in course of construction.

In the Ravine District outstanding sections of the Elgeyo and Kamasia have been brought under our influence during the year, and both of these tribes are now on friendly terms with the Administration. The Marakwet, previously notorious for their hostility, have also acknowledged our authority. The Uasin Gishu Masai have continued to do excellent work for the Administration, and some of their grazing ground, which had been allotted to settlers, has been recovered and returned to them. The skin trade of the district has improved, and the collection of beeswax encouraged.

The District Commissioner of Baringo has come into closer touch with the more distant clans of the Turkana tribe, and

publishing company, inc.

parties of these people have settled within easy distance of the station. It is feared, however, that this ingression may lead to trouble with the Suk, and it has been stopped.

The behaviour of the Masai on the whole has been very good, though the junior warriors have been inclined occasionally to become restless. The amount of Hut Tax paid by the Masai shows an increase of 50 per cent. on last year. Individual Masai have started selling some of their cattle—an unheard of event a few years ago—and a European firm has established a branch in the Southern Reserve for the purchase of hides. 42,000 sheep were sold and left the Northern Reserve, 37,000 being taken out by Somalis and 5,000 by Kikuyu. Those purchased by the Somalis are mostly destined to meet the demands of the Nairobi and Mombasa meat markets.

KISUMU PROVINCE.

The Kisumu or Nyanza Province consists of five districts. The area in square miles and the approximate population, are shown in the following table:—

District.	Area, Square Miles.	Total Population.
Kisumu	1,200	225,000
Elgon or North Kavirondo	4,000	525,000
Nandi	860	46,000
Lumbwa	1,260	68,000
South Kavirondo	3,200	224,000
Total	10,520	888,000

The non-native population is as follows:—

Europeans, including Government officials ...	147
Eurasians	6
Goanese	74
Indians	408
Africans not natives of the Province	1,825

Revenue.—The total revenue of the Province amounts to Rs. 645,000, that derived from Hut Tax being Rs. 564,450, or an increase of Rs. 204,975 over the preceding year. This satisfactory state of affairs is due to the increased staff and consequent better administration of the Province.

Agriculture.—The greater part of the Province is an extremely rich one from an agricultural point of view, the lower regions being capable of considerable development in exportable products, whilst in the highlands of Nandi and Lumbwa large quantities of food-stuffs can be grown. The Province is also rich in cattle. During the year under review great strides have been made by the Kavirondo and Nandi in growing crops of a better class, and the former people have had a rich harvest in sim-sim and groundnuts. Cotton has also been planted but without much result. The Nandi have taken to wheat planting, and their first crop produced five tons of good quality. Cattle disease (gastro-enteritis) made its appearance in the Kisumu, Lumbwa, and South Kavirondo Districts, and carried off large numbers of animals.

Trade.—During the year a good trade in various commodities has sprung up at different places in the Province. This is due to the throwing open of all the administered centres to traders, to the production of more valuable staples by the natives, and to the more thorough collection of the Hut Tax, which has obliged the natives to find money. The rubber-bearing forests of the Nandi Reserve have been exploited for the first time, and the rubber is found to be of good quality. The tapping is undertaken by the Nandi themselves, under instruction. Wild coffee is also found in the Nandi forests and will add to the resources of the Province. A considerable trade in cattle and hides is carried on, and in spite of the veterinary restrictions imposed on account of disease, the cattle sold amounted to over Rs. 250,000. During the famine in Uganda in 1908, Rs. 30,000 worth of grain was purchased and exported and since the famine over 200 tons of millet have been shipped to Jinja. The retail trade maintained by the Indian and Swahili traders has increased considerably, and large quantities of cloth, wire, blankets, knives, umbrellas, beads, European and Arab clothing, folding chairs, and safety pins are sold. The Kavirondo, hitherto known as a naked race, have now begun to clothe themselves in large numbers. Hoes are frequently used as an article of barter, and during the year under review no less than 240,000 were sold in the markets.

Industries.—The British East African Corporation have a cotton ginnery at Kisumu. Most of the cotton ginned comes from Uganda however, only a small portion being locally-grown. A mill for crushing sim-sim and extracting oil has been started at Kisumu.

Shipping.—A regular service is maintained by the four railway steamers between Kisumu, Uganda, and the German East African ports. Sailing vessels are also employed for cargo.

Minerals.—Gold, graphite, and coal are said to exist in South Kavirondo, but up to date no discoveries of importance have been made. Limestone has been discovered in South Kavirondo and a quarry opened, and clay is found near Kisumu and in North Kavirondo.

European Settlement.—There has been no increase in the numbers of Europeans who have settled in the highlands of Lumbwa and Sotik and started cattle ranches and dairy farms. Those who have taken up land in this Province realise that patience is required and a fair amount of capital must be invested, but they are all sanguine of ultimate success.

Public Health.—The country from the Lake to Fort Ternan is unhealthy, but the general health of the Europeans has, on the whole, been fairly good, though there were two deaths from blackwater fever at Kisumu. The systematic clearing of bush and filling in and draining of borrow pits has done much to improve the general health of Kisumu itself. Bubonic plague broke out in June and lasted till October, 1908. There were 79 cases and 59 deaths. Sleeping sickness has been responsible for many deaths on the Lake shores, both in Northern and Southern Kavirondo, but the actual area infected has not increased. During the latter part of the year an observation camp was opened in South Kavirondo and placed under a Medical Officer. An endeavour was also made to move the natives from fly-infected areas, but without much success.

Native Affairs.—The Kisumu District is developing gradually and satisfactorily, and nothing abnormal has occurred during the year under review. The Elgon or North Kavirondo District has been opened up to the Uganda Border. A company of the King's African Rifles patrolled a portion of the district during the course of the year, and an effective administration is now established in Kitosh. There now remains only one small portion of the District (Kabras) which is at all unsatisfactory. The Nandi have quite recovered from the effects of the punitive expedition undertaken against them in 1905-06, and have settled down quietly. Their reserve is being developed, and they have taken to planting wheat as well as native crops. The attitude of the Lumbwa was not quite satisfactory towards the end of 1908, but on the appointment to the district of an officer, who has considerable influence over them, order has again been established. The headquarters of the South Kavirondo District have been moved from Karungu to Kisii. The Kisii, who in the past were hostile and troublesome, have settled down in a surprising manner, and give promise to become a valuable asset to the country. Excellent work has been performed by the officers of the administration all through the Province in opening up the country, making roads, and encouraging the natives to grow economic products.

APPENDIX.

LAND, INDUSTRIAL, AND MINING CONCESSIONS.

Return for half-year ended 31st December, 1908.

SEYIDIE PROVINCE.

No. 669.

EAST AFRICA PROTECTORATE.

(For Report for 1908–9, *see* No. 635.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
31st October, 1910.

MY LORD,

I HAVE the honour to forward the Annual Report on the administration of the East Africa Protectorate for the year ended 31st March, 1910.

I have, &c.,
E. P. C. GIROUARD,
Governor.

The Right Honourable
The Earl of Crewe, K.G.,
Secretary of State for the Colonies.

(18402—2.) Wt. 31959—459. 1125 & 85. 2/11. D & S.

I.—FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

Revenue.

Exclusive of an Imperial Parliamentary grant-in-aid of £133,500, the actual revenue collected during the year 1909-10 was £503,040, which, though not so large as was anticipated, shows an increase of £17,372 on that of the previous year.

The following table shows the comparative detailed statement of revenue for the years 1908-9 and 1909-10:—

Head.	1908–09.	1909–10.	Increase.	Decrease.
	£	£	£	£
Parliamentary Grant	138,000	133,500	—	4,500
Customs	81,655	63,594	—	18,061
Port, Harbour, &c.	529	665	136	—
Licences, &c.	113,991	130,011	16,020	—
Fees of Court or Office ...	18,181	19,411	1,230	—
Post and Telegraphs	18,501	19,942	1,441	—
Government Railways	227,016	235,714	8,698	—
Rents of Government Property	10,417	12,414	1,997	—
Interest	794	935	141	—
Miscellaneous Receipts... ...	9,060	15,484	6,424	—
Sale of Government Property...	2,223	2,887	664	—
Total, exclusive of Land Sales	620,367	634,557	36,751	22,561
Land Sales	3,301	1,983	—	1,318
Total	623,668	636,540	36,751	23,879
Total, exclusive of Grant ...	485,668	503,040	36,751	19,379

The decrease appearing under "Customs" in the foregoing table is due to the fact that commencing from 1st April, 1909, it was arranged that a portion of the Customs import duties, the whole of which had in past years been credited to the East Africa Protectorate, should be handed over to the Uganda Protectorate. The amount so transferred during 1909-10 was £20,700, but for which Customs would have shown an increase of £2,639 on 1908-9, and the total revenue—exclusive of the grant-in-aid—an increase of £38,072.

Excluding the earnings of the Uganda Railway, the surplus on the estimate is £20,149. Hut Tax produced £13,257 more than estimated, export duties £4,442, sale of stores £2,167, commission and sale of confiscated goods £2,913, and sundries £4,413. The surplus in Hut Tax is due principally to the prosperous conditions prevailing throughout the Nyanza Province, and in export duties to the large exports of ivory and rubber. The £2,167 surplus in sales of stores includes £2,000 representing the sale price of the late Protectorate steamship "Juba." The large amounts credited to "Sale of Confiscated Goods" and "Sundries" are due to profit on ivory confiscated by the Government or purchased from natives.

A deficit appears under Customs import duties of £3,147, due mainly to the late promulgation of the new Customs Tariff Ordinance, the estimate having been framed on the assumption that the increased duty on spirits would have been imposed earlier. £2,000 estimated under "Registration of Titles" was not collected owing to unavoidable delay in applying the Ordinances. £2,500 estimated as revenue earned by the Protectorate steamship "Juba" was not collected owing to the decision to dispose of the vessel and not to replace her. Forest revenue brought in £1,518 less than expected.

Expenditure.

The total expenditure for the year 1909-10 was £669,405, against an original estimate of £718,023 and an expenditure in 1908-9 of £703,103.

The following table shows the comparative detailed expenditure for the years 1908-9 and 1909-10:—

Head.	1908–9.	1909–10.	Increase.	Decrease.
	£	£	£	£

Total	703,103	669,405	47,675	81,373

The main increases in expenditure over the previous year are: £12,438 under Provincial Administration, due to increased staff; £5,217 under Abolition of Slavery, due to more claims received for compensation from slave-owners; £4,300 under Post and Telegraphs, due to increased staff and arrears and increased cost of carriage of ocean mails; £4,284 under Medical, due to increased staff, special expenditure on epidemics, and a re-arrangement of the incidence of the charge for maintaining the Zanzibar Quarantine Station; £2,820 under Survey Department, due principally to increased expenditure on transport and labour; and £2,356 under His Excellency the Governor, due to an increase in the emoluments of that office and additional staff. Further, a change of system in paying salaries was introduced during the year, which had the effect of bringing thirteen months salaries on charge in many cases.

On the other hand a reduction in capital expenditure effected decreases of £27,157 and £23,580 under Public Works Extraordinary and Railway Special Expenditure respectively. There was no necessity for relieving the reserve battalion of the King's African Rifles during the year, thus causing a decrease of £10,482 under Military Special Expenditure. A decrease of £8,435 under Agricultural Special expenditure is due to the purchase of large quantities of fencing material in the previous year. £4,380 less was spent on Police owing to vacancies not being filled pending a decision on a reorganisation scheme. £4,093 less appears under Port and Marine, due to the Government steamer having been disposed of during the year; and £2,773 under Customs owing to a credit in respect of a contribution from the Uganda Government towards the cost of collecting import duties.

The totals of the Protectorate revenue and expenditure and grants-in-aid from Imperial Funds for the last five years are as follows:—

Year.	Grant.	Revenue.	Expenditure.
	£	£	£
1905–06	214,000	270,362	418,839
1906–07	164,000	461,363	616,089
1907–08	193,000*	474,760	691,677
1908–09	138,000	485,668	703,103
1909–10	133,500	503,040†	669,405

* Includes special grant of £40,000 for abolition of slavery.

† A proportion of the Customs Revenue was handed over to Uganda for the first time in 1909–10, but for which the Revenue would have been £523,740.

	£	£
The surplus of assets over liabilities on 31st March, 1910, was		89,466
This balance is, however, subject to the following deductions:—		
Amount sanctioned in aid of 1910-11 expenditure	30,341	
Amount revoted as remanet expenditure ...	17,656	
Additional remanet expenditure required to be revoted	8,009	
		56,006
Balance net available assets ...		£33,460

CURRENCY.

There was an increased circulation of the new subsidiary coins on 31st March, 1910, of Rs. 158,649 over the amount in circulation on 31st March, 1909, and a decrease of Rs. 50,698 in the demonetised bronze and aluminium coins.

On 31st March, 1910, there were in circulation the following values of the various denominations of the new subsidiary coins:—

	Rs.
50 Cents, silver	92,732
25 Cents, „	61,418
10 Cents, nickel	86,452
1 Cent, „	120,747
½ Cent, „	4,500
Total	Rs. 365,849

There was also a considerable quantity of the old (now demonetised) subsidiary coinage which was still in circulation or at least unaccounted for, viz.:—

	Rs.
Copper pice	246,839
1 Cent, aluminium	59,866
½ Cent, „	2,370
Total	Rs. 309,075

It is probable that a large proportion of this total will never be accounted for, having been melted down and otherwise disposed of.

The total value of currency notes in circulation on 31st March, 1910, was Rs. 1,832,500, as against Rs. 1,510,500 on 31st March, 1909.

II.—TRADE AND SHIPPING.

(A.) TRADE.

The annual value of the Protectorate trade for the last five years is given in the following table:—

Imports and Exports.

Year.	Imports.	Exports.	Total.
	£	£	£
1905–6	672,360	332,838	1,005,198
1906–7	765,407	440,705	1,206,112
1907–8	799,717	515,052	1,314,769
1908–9	797,158	436,313	1,233,471
1909–10	775,246	590,057	1,365,303

With the addition of the importations on behalf of the East Africa and Uganda Administration, for the construction and maintenance of the Uganda Railway, and of specie and goods in transit, which are not included in the above table, the total imports for these years amount to:—

Year.	£
1905-6	974,402
1906-7	1,238,409
1907-8	1,251,027
1908-9	1,174,014
1909-10	1,165,673

The revenue from Customs duties exceeded the estimated receipts by £1,289. The duty received on imports fell short of the estimate by £3,153, but the duty received on exports exceeded the estimate by £4,442.

The value of importations of rice, flour, wheat, grain of other sorts, provisions, tea, and sugar, have all decreased, the total decrease in value of these articles being no less than £44,857. These decreases may be accounted for by the fact that the year 1909-10 was in some districts a bumper year of locally-produced grain, whereas there was a heavy shortage in 1908-9. The establishment of Unga flour mill and other subsidiary mills must also be taken into consideration as affecting the importation of grain. At the same time the influence of stocks on hand on importation must not be lost sight of. The imports of rice, sugar, tea, and provisions in the previous year were large, and dealers were probably during 1909-10 working off old stocks.

Possibly also the reduction of the railway Asiatic staff on completion of construction works may have influenced the importation of these articles.

Building materials show a large decrease in value of £9,832, denoting either that local material is more extensively used or—which is more likely—that owing to two years' depression money has not been forthcoming for building purposes.

Another notable decrease is that in livestock of £7,497, although there was a large consignment of sheep from South Africa, valued at £13,145, during the year.

There is a falling off in the importation of spirits and liqueurs to the extent of £6,483. The duty on spirits was raised from Rs. 2 to Rs. 5 per gallon from January last, in consequence of which practically no spirits were imported during the last quarter ended 31st March. Old stocks were and are still being worked off.

The increase in the value of agricultural implements imported is distinctly encouraging, as also are the increases in the value of bags and sacks for produce, sheep imported for breeding purposes, motor cars, &c., machinery, and iron and steel ware. These all denote that the development of the agricultural resources of the Protectorate is not at a standstill.

Cotton goods show only a small increase, but in view of the large increase in 1908-9 over 1907-8, of the set back in the trade in these goods in the last three months of the year now under report, and of the remarks made last year, viz., that large stocks of cotton goods were held in anticipation of a demand, the rise in value of £2,189, even though it is small, cannot but be regarded as satisfactory.

The increase in the value of £12,628 in "All other sorts" of goods imported must not be ignored, and must also be taken as indicating the gradual development of the country.

It is also satisfactory to note the recovery of the trade in apparel, there being an increase in value of £6,894, as against a shortage in the previous year of £12,657.

Other increases and decreases in imports may be attributed to fluctuations of trade and possible working off of old stocks. In most cases where there has been an increase this year there was a shortage in the previous year, and *vice versa*.

EXPORTS.

The total value of exports of British East Africa produce exceeded that of the previous year by £50,250. The items which helped most to swell the value of exports were:—

	£
Copra	1,165
Fibre	2,191
Hides and Skins	29,463
Sim Sim	9,370
Ivory	9,567
Livestock	1,090
Potatoes	1,121
Rubber	15,493

These increases must all be regarded as satisfactory.

The increase in the value of hides and skins exported is due to—

(1) higher prices prevailing, which have induced natives to bring in hides from places not ordinarily tapped;

(2) cattle disease; and

(3) closer scrutiny over exports by the Customs Department which it has been possible to arrange for. The fear expressed last year, in connection with the fall in hides and skins, that the supply of animals was becoming exhausted, was groundless.

As anticipated, the increase in the output of ivory is due to the Government continuing to purchase all ivory in the possession of natives at Rs. 4 per pound, irrespective of size; it is however probable that large quantities of ivory are still being smuggled out of the Protectorate to our loss and our neighbour's gain.

The large increase in rubber is particularly satisfactory. It must be remembered that as yet plantation rubber has not been touched. When tapping of this rubber begins, further development can safely be looked for, to be followed by a still greater growth in this trade when the rich lands of the Jubaland and Tanaland Provinces come under intelligent cultivation.

The decreases in the value of exports of British East African produce are not large, and the only items to which it is necessary to draw attention are the following:—

	£
Borities and Mangrove Bark	2,162
Cotton	1,467
Grain and Rice	19,077
Beeswax	3,481
Wool	706
All other sorts	4,970

The fall in borities (poles for building) and bark is attributable to the working out of old concessions. The Chief of Customs, who has recently inspected the coast-line from Kismayu to Mombasa, reports that there appears to be a considerable extent of mangrove forest still untouched, and he is of opinion that with the better working of the Lamu concessions, and the possible opening up of the Port Durnford District, a good rise in the exports of borities and bark may reasonably be looked for.

The fall in cotton is disappointing, but although it has apparently proved a failure, cultivated as it has been up to now along the coast, there is every reason to believe that if cultivation is seriously undertaken on land adjacent to the Juba and Tana rivers it may prove as great a success as it has elsewhere in the world.

The exports of beeswax from German East Africa through British East Africa fell in 1908-9 to £22,296 from £43,970 in 1907-8, or about 50 per cent.; British East Africa wax showing a fall during the same period of £293. In 1909-10 there was a further fall of German East Africa wax of £13,323, and East Africa Protectorate wax of £3,481.

The fall in the value of grain is fictitious. Prior to 1909-10, particulars of goods carried coastwise from one port in the Protectorate to another, consisting principally of grain, were shown in the return of exports as "Exports to Protectorate Ports." The inclusion of such particulars was misleading and therefore discontinued. The apparent fall in grain is therefore due to the change in the manner of compiling statistics. The fall in "All other sorts" may be put down to the same cause.

It is pleasing to be able to report an increase in the total volume of trade, which corresponds with the fall in 1908-9, especially in view of the very large decrease in the value of goods imported on behalf of the British East Africa Administration, and smaller decreases in importations on behalf of the Uganda Administration, and for the construction and maintenance of the Uganda Railway. With these exceptions, and that of the decrease in value of Congo Free State exports, due to no gold having come through from that country, increases will be found in every item, in spite of the fact that by omitting coastwise-carried produce something like £20,000 to £30,000 has been struck out of the returns of exports. Attention is drawn to the large increase in the export of high priced cotton from Uganda, amounting to no less than £40,508, or nearly 50 per cent. more than the previous year.

The United Kingdom is holding its own with foreign countries in the supply to British East Africa of the following articles:—

Agricultural Implements.
Arms and Ammunition.
Furniture.
Machinery and parts thereof.
Provisions.
Spirits, Wines, and Liqueurs.

On the other hand foreign countries during the year under report increased their supply of the following goods:—

Apparel.
Building Materials.
Cotton Goods (largely).
All other sorts.

With regard to the totals, it is necessary to draw attention to a fall in imports of British goods of £30,000, in British Colonial imports of £7,000, and to a rise in imports of foreign goods of £10,000.

The United Kingdom bought in 1909-10 9 per cent more of our exports than in 1907-8, British Possessions 10 per cent. less, and foreign countries 1 per cent. more.

The Tariff Ordinance, 1909, became law on the 10th January, 1910. It provides for a continuation of the present *ad valorem* tariff and for an increased duty on spirits and liqueurs, viz. Rs. 5 per gallon instead of Rs. 2.

The Customs General Management Ordinance was completed and introduced in the Legislative Council, but will not become law until the 1st October, 1910.

The new Customs warehouses at the port of Kilindini are now practically completed, but, so far, there has been no indication that they are likely to be largely used, persons preferring, apparently, to land and ship their goods at the old port of Mombasa, notwithstanding the inadequacy of accommodation and the consequent congestion at that port.

During the year under review Import and Export Lists, with an Appendix, were compiled under the instructions of the Chief of Customs. They provide for much more comprehensive statistical headings than those now arranged for, and with an appendix should facilitate considerably the proper declaration of goods and the compilation of statistics.

The lists and appendix have been submitted by the Chief of Customs to the Commercial Intelligence Branch of the Board of Trade, London, for any suggestions or alterations the Board may consider desirable.

(B.) SHIPPING.

Of the two chief ports in the Protectorate, Kilindini, lying on the west side of Mombasa Island, is by far the more commodious, and is in consequence used by the larger steamers. Mombasa Harbour is small, with a narrow entrance, and is, therefore, only available for smaller steamers and dhows, though it is the more conveniently situated of the two owing to its proximity to the business quarter of the town.

The new Kilindini wharf, 550 feet in length, was completed in the month of October.

The Protectorate has been served during the year by three regular lines of mail steamers, the British India Steam Navigation Company, the German East Africa line, and the Messageries Maritimes; and in February the Union-Castle Steamship Company established a monthly service to England viâ South Africa.

The British and French lines have called once a month, and the German line once every three weeks.

In addition to the above, the British India Steam Navigation Company's steamers call once a month with cargo transhipped at Aden.

A branch of the German East Africa line maintained a regular service twice a month with Bombay, with occasional visits to Lamu.

The Bombay Persian line of steamers have also called here and at Lamu once a month.

The coast traffic has been carried out by a small steamer belonging to Messrs. Cowasji Dinshaw Brothers.

The table below shows the gross tonnage of the amount of cargo and number of passengers landed and shipped by the different steamship lines at Mombasa:—

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengers.	
				Euro-pean.	Natives.		Euro-pean.	Natives.
			Tons.			Tons.		
British India, Aden ...	27	80,882	2,070	67	1,146	5,500	62	362
British India, Europe	9	35,344	10,893	8	—	22	8	35
German Line, Europe	53	307,492	9,893	1,103	1,103	13,706	726	661
German Line, Bombay	54	155,854	6,698	170	3,919	1,083	153	4,146
Messageries, Europe ...	24	95,291	754	507	300	416	435	156
Bombay Persian Line, Bombay	25	51,895	820	27	1,937	762	5	1,767
Total	192	726,758	31,128	1,882	8,405	21,489	1,389	7,127

The total steamer tonnage entered in the ports of the Protectorate amounts to 1,008,014 tons, represented by 458 steamers—an increase of 37 vessels and 85,738 tons.

The sailing-vessel tonnage is 9,744 tons less than the figures for the last year, 1908-9.

Two light-buoys have been placed in the channel leading into Kilindini Harbour.

The revenue of the Port Office amounted during the year to £2,523.

III.—INDUSTRIES AND MINES.

(A.) INDUSTRIES.

Several important industries are now permanently established in the Protectorate.

Flour Milling.—Unga, Limited, has a flour mill established in Nairobi, worked by electric power furnished by a local company. With the large acreage of wheat now being sown, there is every possibility of this mill working up to its maximum capacity in a comparatively short time.

Saw Milling.—Apart from the Government sawmills, three firms are now turning out local timber:—The Equator Mills of Dr. Atkinson, at Molo; the Escarpment Sawmills of Messrs Waters and Nielsen; and the British East African Sawmills, situated at Nairobi.

The Forest Department has also begun to supply the railway sawmills with several hundred logs of suitable hard and soft woods.

Brick and Tile Works.—The East African Industries, Limited, have erected near Mombasa thoroughly up-to-date brick and tile works, with a capacity in bricks of 8,000 per diem. The raw material is of excellent quality and unlimited in quantity, and the Company hope shortly to extend their operations to the production of flooring and roofing tiles, drain pipes, &c.

Other Industries.—Inquiries have been made as to the possibility of establishing a brewery to meet East African, Uganda, and German East African requirements. The prospects for successful working would appear to be good. The local supply of barley would be ample in quantity, and is most excellent as to quality.

The firms who are working indigenous fibre concessions, as well as those who are about to produce cultivated sisal, have all erected, or are erecting, mills for decorticating purposes.

The cotton ginnery established by the British East Africa Corporation at Kisumu is now being worked to its utmost capacity. They have placed in position suitable presses, whereby they have overcome the difficulty of transporting loosely pressed cotton to the coast and ginning or pressing it there.

The bacon factory established in the Highlands by the Uplands of East Africa Company, Limited, has been working throughout the year. A change of management has recently taken place, which it is hoped will lead to a further extension of its business. The products from this factory have been uniformly of a high quality.

The Nairobi Electric Power and Lighting Company, Limited, have extended their operations to the lighting of many of the streets of Nairobi, and Nairobi promises to be one of the best lighted towns in Africa. A company has installed electric light in Mombasa—at present on a somewhat limited scale.

In view of the probable early exportation of grain, an option of Government land has been acquired at Kilindini for the purpose of erecting a grain elevator.

Prison industries are being carried on at the central convict establishments with a view to improving the inmates and allowing of their taking up more advanced walks in life on their discharge. Every care has been taken to prevent such industries competing with private enterprise.

(B.) Mines and Minerals.

Widespread prospecting operations have taken place during the year, but no very important or valuable discoveries were made. Copper ores have been located in several districts, but it is doubtful whether they can be profitably worked. A deposit of graphite was found near Lake Victoria, and further prospecting is being undertaken. Traces of gold have been found, but not in sufficient quantities to warrant operations on a scale which would prove commercially successful. Diatomite has been found near Lake Elmenteita, and, if of good quality, would pay for export. Certain manganese deposits on the coast are being submitted to expert examination.

A mineral survey of the Protectorate should be eventually undertaken, but should be preceded by a topographical survey; this is at present in an unfinished state.

Prospectors have been encouraged by the granting of special prospecting areas, with contingent rights to a mining or mineral lease.

IV.—AGRICULTURE AND STOCK RAISING.

(A.) HIGHLANDS.

Generally speaking, a very hopeful feeling as regards the future of the Highlands exists, not only amongst the farmers, but amongst the mercantile community as well. Agricultural associations are springing up all over the country, outside markets are being obtained for surplus products, money is more easily raised on land for further development, and there is a small but steady influx of would-be-settlers (with capital) prepared to develop partially developed land at enhanced values.

Much valuable information has been collected with respect to climatic conditions, the suitability or otherwise of various crops for various districts, the diseases and pests affecting stock and crops; and the year under review shows a slow, gradual, but certain movement forward in many branches of farming.

Pure-bred cattle have been imported during the year both by the Government and by farmers. It is doubtful if the total number of cattle in the country will show an increase on that of last year. This is due to the diseases gastro-enteritis, rinderpest, and East Coast fever.

Sheep have done exceedingly well, and there seems to be little doubt now that in the upper Highlands a large sheep and wool industry is likely to be established.

A fair fleece of marketable value has been obtained from the second crosses of native goats and Angora rams.

Ostrich farming is now an established industry, and troops of 50 to 150 are to be seen on a number of farms.

During the year a number of good breeding mares were brought into the country, and the Hunter Improvement Society stallion "Royal Fox" was imported by the Government.

In the pig industry there has been a marked development. The conditions are very favourable, as green food is available all the year round, and the expense of rearing and fattening is comparatively low.

An endeavour is being made to open up an export trade in maize, for the growth of which crop a very large area in the Protectorate is well suited. The yield compares favourably with that obtained in South Africa; the cost of production is, if anything, lower, and over a considerable area it is possible to reap two harvests in the year.

Analyses have proved that none of the beans grown in the country yield prussic acid when ground and macerated with water. This is a crop largely cultivated by the natives, and an endeavour has been made to get them to grow marketable varieties.

Rust has been responsible for the failure of the wheat crop in some districts, but on the whole this branch of farming continues to make satisfactory progress. A number of different varieties have been introduced to test their rust-resisting capacity, and the crossing of wheats to obtain new varieties, which will be rust resistant as well as heavy croppers, is in contemplation. 3,000 to 4,000 acres have been sown with wheat on the plains of Njoro.

The cultivated sisal plantations of the Highlands, which are of considerable extent, are about to become producers, and from next year several hundreds of tons will figure in the annual exports.

The coffee harvest has been very satisfactory, and the planters are well satisfied with the prospects of the industry. The original growers are still increasing their areas, and new plantations are being opened up. The quality of the coffee is of a high standard, and the prices obtained good.

(B.) Coast and Nyanza Basin.

Cotton has done well in favoured localities, and there would appear to be every reason to think that both the Juba and Tana Valleys will before long witness considerable development in this direction. The various classes of Egyptian cotton seem to be most suitable to our conditions on the coast. In the Kisumu Province or Nyanza Basin there is little reason to doubt the ultimate success of the Uplands varieties of cotton, as Uganda under similar climatic conditions, is expected to export this season some 10,000 bales, the bulk of which is ginned at Kisumu in this Protectorate.

The rubber plantations at Malindi, Witu, Matwapa, Mombasa, and Kibwezi are reaching the producing stage. They are mainly planted with Ceara, but other varieties are now being tried successfully. It is practically certain that a great extension of this industry will occur; the main factor which is arresting it is the condition of land titles in Seyidie and Tanaland, a matter which is now being adjusted. The sisal plantations on the coast now extend to several thousand acres, and will reach the producing stage next year. In the Nyanza Province, by the strenuous efforts of the Provincial Commissioner and his staff, the Kavirondo tribes have become large cultivators. Heretofore content to grow sufficient foodstuffs for their own requirements, they have now become enthusiastic agriculturists for markets even beyond the Protectorate. Sim sim, ground-nuts, chillies, and maize are being produced in large quantities, and every endeavour is being made to direct native effort towards better and more economical agricultural methods. The increase in the export traffic in sim sim of 1910-10 has been no less than 1,000 tons, the total for this year having been 1,360 tons, as against 380 tons last year.

(C.) Experimental Farms.

(1.) *Highlands.*

Nairobi Farm.—The rains in April, 1909, were a failure, but those in October were almost a record for duration and quantity. In June and July the pasture was almost completely dried up.

Field cultivation extends to over 200 acres, on which various crops have been grown.

Experiments have been conducted with a large number of different varieties of maize, wheat, oats, barley, potatoes, root crops, beans, millets, grasses, and clovers, to test their suitability for that part of the country.

Manurial experiments have also been carried out. In the orchard there are several hundred fruit trees of different varieties.

There are altogether 309 head of livestock on the farm.

Naivasha Stock Farm.—Although a condition of semi-drought prevailed for the greater part of the year, such is the nature of the grass when parched and dry that neither the sheep nor the cattle fell away in condition, with the exception of a few of the half-bred Guernsey heifers rearing their first calf.

The pure-bred stock was augmented during the year by the importation of 14 head from England.

The Merino flock has increased from 371 to 475, whilst 52 rams were sold during the year.

Notwithstanding the very dry weather, it has been a good year for sheep, and all classes have done uniformly well.

Shearing took place in January, and the Merino flock averaged 7½ lbs., the second cross Merinos 5 lbs. 2 ozs., the third cross Merinos 6 lbs. 5 ozs., and the first cross Welsh with two crosses Merino averaged 6 lbs. 2 ozs.

A considerable amount of fencing has been erected, together with vermin-proof sheep-houses, yards for young bulls, &c.

At the annual sale in October, 52 pure-bred Merinos made an average of over £4. Seven pure-bred bulls sold for £25 each.

(2.) *Coast.*

Mazeras Tropical Plantation.—Ceara rubber trees continue to make satisfactory progress, and yield latex of good quality and quantity. Other varieties of rubber are being experimented with.

Cotton experiments were spoiled by a severe thunderstorm at the end of October, and heavy rains in November.

The cultivation of cocoa promises to do well on the farm and on other selected areas in the coast belt.

Sugar cane, arrowroot, rice, giant papaw, pipe bowl calabash, and various other exotic plants such as breadfruit, Avocado pear, and Jamaica ginger, have done well, and many plants and seeds have been distributed.

A small experimental farm is about to be established at Alexandra, on the River Juba, with a special view to the selection of suitable varieties of cotton.

(3.) *Diseases of Animals.*

East Coast fever is still prevalent. A Quarantine Board consisting of officials and prominent settlers was formed, and a scheme drawn up for the suppression of the disease in the Nairobi-Kyambu District.

Experiments have proved that an immunity to East Coast fever exists amongst certain native herds, and a number of immune animals will shortly be available for use in the infected areas for transport and farm work.

Investigations with regard to gastro-enteritis have proved that this disease is due to a coccidium. In April of this year (1910) a disease resembling gastro-enteritis in symptoms and post-mortem appearances, made its appearance among the Masai herds and in the Rift Valley. This disease, unlike gastro-enteritis, is both inoculable and contagious. As a preventive and curative, anti-rinderpest serum has proved most beneficial, and steps are being taken to produce serum and inoculate cattle.

Several outbreaks of contagious pleuro-pneumonia have occurred in isolated kraals in the Northern Masai Reserve. Tail inoculation has been adopted.

The immunisation of pure-bred stock in England, before bringing them to this country, against Texas fever, has been highly successful, no fatal case having been reported amongst immunised animals.

There has been no severe outbreak of horse sickness during the past year. The decrease in the number of cases is to a great extent due to the more careful stable management adopted by horse owners, the building of a better class of stable, and the more intelligent interest taken by the native syces in the animals under their charge.

There was also a marked decrease in the number of cases of ulcerative lymphangitis, and with the establishment of a quarantine station at Marsabit there will be less chance of the disease being re-introduced from Abyssinia.

Strongylosis in sheep has caused considerable loss. Several small outbreaks of sheep-pox have occurred in Mau and the Rift Valley. The disease has assumed a benign form in all cases.

Scabies has been very prevalent in the Rift Valley. Compulsory dipping of trade sheep has been enforced at Nakuru and Rumuruti, and the majority of sheep owners have erected private dipping plant.

Several outbreaks of swine fever have been recorded, two being attended with heavy mortality. Inoculation experiments are being carried out.

The Trypanblue treatment for tick fever of the dog has greatly reduced the number of deaths.

Strongylus Douglassi has been found in one or two farms in the Ukamba Province. It has been the cause of a number of deaths among young ostriches.

The illicit movement of stock by natives is now much more under control owing to the permit system, which is working satisfactorily throughout the Protectorate.

The country is free from glanders, rabies, foot-and-mouth disease; tuberculosis amongst stock is virtually unknown.

(4.) *Insect Pests.*

On the whole, crops have been wonderfully free from insect pests, and anything like an epidemic has been unknown.

Considerable advance has been made in obtaining definite data with regard to the distribution of ticks and blood-sucking flies.

The cocoa-nut beetle is widespread on the coast, and is responsible for considerable damage.

Timber and fencing posts are attacked by carpenter bees.

Cetonids, blister beetles, aphides, scales, cut-worms, and white ants have been dealt with during the year.

The number of packages of plants and seeds examined by the Plant Import Inspector was 1,661.

(5.) *Plant Diseases.*

Rust has been responsible for considerable loss to wheat growers.

(6.) *Fencing.*

Two hundred and five miles of fencing have now been erected round stock areas, principally to check the spread of East Coast fever. In addition, 178 tons of barbed and plain wire have been issued to settlers under the provisions of the Fencing Ordinance.

(7.) *Branding.*

The majority of stock owners now have their own registered brand.

The branding of stock has prevented much illegal movement, and has enabled stolen or strayed animals to be traced and recovered.

The branding of ostriches has given trouble, as it has been found that the brand only lasts one or two years. Tattoo-marking is being experimented with.

V.—FORESTS.

Forest Reserves.—There has been no material alteration in the actual area of the forest reserves. A deduction appears against the estimated area of the Tana River and Juba River forest fringes as a result of the forest exploration of the year, and there was the loss of a scrub area of little consequence near the Menengai Crater.

Reforesting.—During the year vacancies in the previous year's planting were filled as required over an area of 270 acres, and 122 acres of new ground were planted at an average cost of Rs.65.7 (£4 7*s*. 7*d*.) per acre.

The nursery statement shows that there were nearly 1¼ million trees in eleven forest nurseries at the close of the year, of which the greater portion were planted out with the rains coming shortly afterwards. Nearly all this planting was near the Uganda Railway.

An amount of Rs. 410 (£27 6*s*.) was spent in cleaning under and around seed-bearing trees of good species in the forest at the various forest stations. The results obtained are sufficient to warrant the continuance of this work.

To encourage tree-planting 42,250 young trees were sold at cost price to the public and Government departments. Instructions have now been given for the free issue of trees for Government stations.

Forest Cultivators.—191 forest cultivators have been employed planting trees issued by the Forest Department along with their crops. This number should be largely increased with the progress of systematic reforesting. In many cases the forest will re-assert itself naturally if the natives and their goats can be removed from the vicinity of forests, or their actions completely controlled.

Forest Demarcation.—At the beginning of 1910 73,000 acres were reported as demarcated, and 300,000 as surveyed; but by April 280,176 acres were said to have been demarcated. This remarkable increase is due to a system of collaboration between the Forest Department and the provincial authorities, which has greatly facilitated demarcation and preserved much forest from destruction.

About 111 miles of roads and fire lines have been cut, and all the forest within reach of the forest stations has been protected from fire.

Forest Offences. There have been 83 prosecutions in the law courts for forest offences, of which 64 were successful and 19 failed; there were 81 cases settled out of court. Total 164 forest cases.

Mangroves.—The largest mangrove area has been let at £600; various other mangrove areas have been inspected pending leasing. £866 6*s*. was the royalty realised from bark and poles. There are six well-defined mangrove areas, all of which but one—Kilifi—are leased or in process of leasing.

Native Timber and its Utilisation.—Experiments have been made on the durability of native timbers, and a detailed list of the indigenous timbers drawn up, with their various native names, together with many of the botanical names, of which a large number were received from Kew during the year.

An increased quantity of native timber is being used locally. Nine sawmills and some 80 Indian pit sawyers are now employed in the working up of native timber; but none has as yet been exported, though there would appear to be good markets in South Africa and Egypt. The greater part of the State forests remains unworked for want of roads and capital.

Imported Timber.—£6,527 worth of timber has been imported this year, against £10,793 worth last year. Part of this improvement is due to the growing use of Colonial timber and partly lessened Government house-building. Some £40,000 worth of timber (manufactured and unmanufactured) and building material is imported yearly; this includes cement and corrugated iron, but a considerable saving in the amount will be witnessed when the natural resources of the country are more fully utilised.

Exploration.—New forest has been visited and explored—

(i.) throughout the whole course of the Tana River;

(ii.) the lower portion of the Juba River;

(iii.) the forest in and to the north of the Lingham grant, together with the Kakamega forest lying between this and the lake.

Uganda Railway Fuel.—The cutting of cedar and sandal in Government forests for fuel ceased two years ago, but about a million cubic feet of cedar was cut during the year in private forest and burnt on the Uganda Railway. This is regrettable in view of its possible value as pencil cedar and its poor quality as fuel.

3,138,734 cubic feet of olive and scrub hardwoods were supplied to the Uganda Railway from Government forests. These woods furnish first-rate fuel (70 lbs. per cubic foot dry weight), and are useful for little else.

Rubber.—Nearly 16 tons of vine rubber were collected and exported from the Nandi Plateau forests. This vine (*Landolphia* sp.) grows in a healthy climate, with a mean temperature the same as Sydney or Cape Town. The normal production is estimated to amount to 7 tons per year.

The Dodori rubber forest in the Lamu district is worked by Arabs and Bajuns. The rest of the coast rubber vines are in scrub areas not under the control of the Forest Department.

Arboriculture.—Results of widespread interest are coming to light with regard to the growth of certain valuable forest trees on these equatorial highlands, the most remarkable being obtained with Tallow-wood (*Eucalyptus microcorys*) and a Guatemala Cypress (probably *Cupressus benthami*). Growing particularly rapidly and healthily are Silky Oak (*Grevillea robusta*), *Casuarina cunninghamiana*, Brush-box (*Tristania conferta*), Turpentine (*Syncarpia laurifolia*). The Iron-barks and Eucalyptus botryoides, Blackwood (*Acacia melanoxylon*), have done well at the higher elevations.

An entirely favourable report has been received from the Imperial Institute with regard to Black Wattle plantations. Bark at the low elevation of 5,500 feet has an analysis of 43 per cent. of tannin, or, when quite dry, practically half tan. At higher elevations it grows more vigorously, and is better for railway fuel.

Financial.—During the year ended 31st March, 1910, the expenditure of the Forest Department amounted to £14,039. The main heads of expenditure were:—

	£	*s.*	*d.*
Controlling staff	4,902	16	5
Purchase and carriage of goods	1,348	0	0
Travelling	1,957	10	6
Horse allowances	89	17	8
Roads	119	4	3
Demarcation and surveys	1,097	0	0
Miscellaneous	171	2	11
Labour	531	4	5
Nurseries and plantations, reafforesting ...	1,710	7	8
Fire work	56	19	5
Buildings	1,622	14	10
Sea passages	369	8	6
Fencing	62	14	3

The revenue amounted to £12,365, of which £1,845 was cash and £10,520 value of wood and forest produce supplied free to Government departments and settlers. These figures include fuel for the Uganda Railway and others to the amount of £9,905, and royalties on Mangrove bark and poles £900, or £10,805 in all. The cutting of railway fuel was entirely entrusted to railway fuel contractors by the Railway Department, and fully two-thirds required no Forest Department supervision, as was also the case with Mangrove bark and poles. The revenue from timber disposed of to the public is still woefully small—the cash sales and royalties having only amounted to £401, as against £407, £248, and £413 in the previous years. The cutting of timber for Government departments—and notably the railway—has considerably increased and reached the figure of £600.

VI.—COMMUNICATIONS.

(A.) Railway.

No additions were made to the Uganda Railway during the year ended 31st March, 1910; the length therefore remains the same, viz., 584 miles. The total capital cost, excluding suspense account, now stands at £5,414,345, and including steamers on the Victoria Lake and works added from funds provided in the annual estimates, to £5,637,333.

Towards the close of the year under review, sanction was accorded by the Secretary of State to the construction of a short line, some 47 miles in length, from Jinja to Kakindu, in the Uganda Protectorate, estimated to cost £160,000. This line will belong to the Uganda Protectorate, but will be constructed and worked by the Uganda Railway administration.

The total revenue for the year amounted to £246,146, as against £232,661 for the year 1908-09—an increase of 5·80 per cent.; and the total expenditure on working to £180,279, as against £167,823—an increase of 7·42 per cent. The net profit is therefore £65,867, as against £64,838 for the previous year.

The total tonnage handled increased from 57,226 tons in the previous year to 60,213 tons, and the upwards and downwards tonnage more nearly approximated to each other than in any previous year. This was not so much due to a falling off in the upwards as in an increase in the downwards traffic, the actual figures being:—

	Upwards. Tons.	Downwards. Tons.
1908-09	35,869	21,357
1909-10	31,395	28,818

The increase in the downwards tonnage, which is an encouraging feature, was chiefly in chillies, cotton, fibre, beans, maize, sim sim, hides, potatoes, and rubber.

The total goods receipts show an increase of £12,492.

Towards the end of the year sanction was received from the Secretary of State to place maize and beans on a specially low rate for export. This rate should now enable these articles to be exported in large quantities, with a satisfactory profit to the grower, and should result in a very considerable increase in the tonnage handled.

There was a falling off of the total receipts from coaching traffic of £165, chiefly under second-class passengers; but the total number of passengers carried increased from 218,322 in 1908-09 to 226,571 in 1909-10.

There are four steamers on the Victoria Lake, three of which carry passengers and one is for cargo only. There was a slight falling off of the total receipts from these boats as against the previous year, due to the long droughts of the past two years. It is, however, satisfactory to know that the prospects of traffic on the Lake for the year 1910-11 are much better, and a considerable increase in the tonnage handled is expected.

The following figures, which are taken from the annual statistics, show the result of the past six years' working of the railway and the steamers:—

Steamers.

—	1904–5.	1905–6.	1906–7.	1907–8.	1908–9.	1909–10.

Average freight of a goods train.	37·42	43·63	44·55	42·47	45·48	50·35
Total tonnage handled	23,717	39,657	52,784	54,855	57,226	60,213
Tons of goods carried one mile.	11,007,959	16,299,975	23,056,979	21,569,652	23,131,115	26,900,078

Two important works were completed during the year, viz.:—

(i.) Kilindini wharf and sheds.

(ii.) Realignments between miles 16 and 60.

The completion of the former means that Kilindini is now in a position to deal efficiently with any tonnage that may offer, while the latter, by removing all gradients steeper than 1·5 per cent between Mazeras mile 14 and Nairobi mile 325, enables full train loads to be run between Mombasa and Nairobi.

A Railway Ordinance was placed before the Legislative Council and passed during the year, replacing the Indian Railways Act which had been in force in the Protectorate since 1897.

Labour was particularly plentiful throughout the year, no difficulty having been experienced in recruiting all the Africans that were required.

No accident occurred resulting in the death or injury of a passenger—in fact, the year was fortunately very free from any accident of a serious nature.

The railway administration is a most efficient one, particularly in all its higher grades. From much technical experience of railways in all parts of Africa, the capital outlay of some £9,000 per mile would appear to be below the average of African narrow gauge lines constructed in countries of somewhat similar physical character.

(B.) Post and Telegraphs.

The combined post and telegraph services of East Africa and Uganda include, with post office agencies, 65 offices in East Africa and 16 in Uganda. There are also 40 telegraph offices at Uganda Railway stations.

Revenue.—The revenue for the two Protectorates amounted to £21,242, or £1,514 more than for the previous year. The estimated increase for East Africa alone was £880. The additional revenue was largely derived from the growth of telegraph business.

Expenditure.—The total expenditure for the year, including telegraph and telephone construction in East Africa, amounted to £28,418, as compared with £23,805 for 1908-09, being an increase of £4,613. Of this amount £1,600 is in connection with the increased cost of the ocean carriage of mails, following the taking of fresh Postal Union statistics in 1907.

Including capital expenditure on telegraphs and telephones in East Africa the deficit was £7,175, an estimated division of which attributes £5,490 to East Africa and £1,685 to Uganda; but work to the value of £5,000 and £3,800 was done on behalf of the Governments of East Africa and Uganda respectively.

Mail Matter.—The estimated number of postal articles dealt with in the combined Protectorates during the year was 2,911,900, being an increase of 6 per cent. over the figures for 1908-09. The total for East Africa alone was 2,198,975, being an increase of 5 per cent. over the previous year. The increase is almost entirely confined to letters. Postcards, book packets, and newspapers remain practically stationary.

Parcels.—The total number of parcels dealt with numbered 39,544 (23,594 in East Africa). The increased use of the letter post for light packets, resulting from reduction in the United Kingdom letter rate from 1*d*. per ½ oz. to 1*d*. per oz., has contributed to a slight decrease in the parcels traffic.

Ocean Mail Service.—The service of steamers with Europe has been improved during the year by the intermediate sailings of the German East Africa line. The mail connections with South Africa and India have also derived advantage from the interest shown by the South African shipping lines in the East African trade, the Union Castle Company having established a regular monthly service between Mombasa and Natal, and the Bullard King steamers having made several calls at Mombasa *en route* to India.

Money Orders.—Money order business, both internal and that transacted with places over-seas, shows a general decrease, which may be attributed in part to the more extensive use now being made of British postal orders. The total number of money order transactions in the East Africa Protectorate was 27,410, and the amount £152,992, as against 28,823 and £158,340 in 1908-9.

A direct exchange of money orders between the Protectorate and British Somaliland was arranged during the year.

Postal Orders.—Postal order business shows an increase of over 50 per cent., 6,893 orders having been issued and paid during the year, as against 4,431 in 1908-09. The value increased from £2,658 to £4,157.

Registered Letters.—In the combined Protectorates 99,079 registered letters were dealt with during the year, as against 88,377 in 1908-09. There was no case of actual loss of a letter; only one case of theft occurred, when some of the contents of a registered packet were abstracted by a post office messenger, who was subsequently arrested and convicted.

Telegraphs.—The telegraph traffic of East Africa amounted to 84,046 telegrams and cables, being an increase of 4 per cent. over that of 1908-09; that of Uganda totalled 33,278 messages, giving a combined total of 117,324. The East Africa figures include 19,645 Government messages. A satisfactory feature is the increase of 18 per cent. in the telegrams forwarded by the public.

Telephones.—The public telephone services which were commenced at Mombasa and Nairobi in 1908-9 have been extended during the year by the joining up to the exchanges of 35 new subscribers. 75,265 calls were received by the exchanges—15,686 at Mombasa and 59,579 at Nairobi.

Telegraph and Telephone Construction.—Twenty-two miles of new telegraph line was constructed during the year, making the total mileage of telegraph line in the Protectorate 2,261. 56 miles of new telephone line was erected, making the total mileage 201, and 226 telephones are now in use.

Several interruptions to the telegraph lines are recorded during the year as having been caused by elephants and giraffes.

Miscellaneous.—A post office guide has been printed and is on sale at all post offices. A new form of time-table and handbook was also issued during the year and has proved to be extremely popular.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A.) Judicial.

In January, 1910, the Order in Council creating a new Court of Appeal on the mainland came into force. The address of the court is now at Mombasa instead of, as formerly, at Zanzibar; and, under the rules of court regulating the procedure of the court, the control and management of the work of the court rests with the judicial staff at Mombasa, the East African bench furnishing one-half of the total number of the members of the Appeal Court bench.

Only one sitting of the new court has so far been held at Mombasa, at which 10 appeals were heard, all arising from the East African Protectorate.

The court has as yet been such a short time in existence that it is not possible at present to discuss the manner or the cost of its working.

The provisions of the Ordinance recently passed providing for the appointment of Justices of the Peace have not yet been put into force, but there is no doubt that this Ordinance will prove of considerable use, particularly in those parts of the Protectorate where there is a scattered white population.

The removal of the work of the Administrator-General from the High Court and the appointment of an independent Administrator-General has proved satisfactory in every way. The work can now be done with greater promptitude, continuity, and efficiency than hitherto, to the advantage of the estates; and both the Administrator-General's and court fees are collected with greater regularity, to the advantage of the revenue.

The details of the cases dealt with by the High Court are as follows:—

Original civil cases	141
Original criminal cases	70
Appeals (civil)	50
Appeals (criminal)	28
Criminal cases taken in revision	32
Criminal cases taken in confirmation	236
Probate and administration causes	125
Insolvency causes (with liabilities of Rs. 59,510)	7
Total	689

There were also 26 trust estates administered by the court on behalf of minors, with property valued at Rs.61,000.

The total number of cases varies but little from that of the preceding year, with the exception of civil appeals, which are about 150 less, the larger number of the preceding year being due to appeals filed by the Government in slavery compensation cases.

Of the original civil work, 99 cases were filed at Mombasa, 38 at Nairobi, and 4 at Kisumu. These proportions show little variation from year to year, and as yet there is no indication of such an expansion of work at Nairobi as would justify more than a quarterly session being held there as hitherto.

Up to July last year two courts had been held at Nairobi—one presided over by the Town Magistrate for European and Indian work, and one by the District Commissioner for native work.

In that month it was decided to place all the work in the hands of the Town Magistrate, and the experiment has been found to work well—it being more satisfactory that there should be one magistrate for the whole township, the work not proving more than can be satisfactorily dealt with by the Town Magistrate.

The civil work of the Nairobi Court has fallen off somewhat since 1908-09, but as the great bulk of it is small debt-collecting cases, this may be taken as an indication of more satisfactory financial conditions prevailing in the local market.

The work of the subordinate courts has been satisfactorily done, and continues to show increased improvement. The magistrates in this country have considerable difficulties to contend with, and the majority of them are, to begin with, entirely without experience of legal procedure; but their work on the whole shows a conscientious and painstaking desire to arrive at a right decision in the cases before them.

The best test of the way in which their work is done may be perhaps found in the analysis of the cases which are sent for confirmation to the High Court.

The following figures show the steady improvement that has taken place in the last three years, though the number of cases dealt with has steadily increased:—

	1907-08. Per cent.	1908-09. Per cent.	1909-10. Per cent.
Percentage of convictions and sentences upheld by High Court on confirmation	75	81	85

The total civil work of the courts shows a slight falling off in the number of cases for the year but not of any importance.

The great majority of the suits brought still continues to be for amounts under Rs. 100, which, in fact, represents a large sum to the greater part of the population.

In suits of a higher value also, over Rs. 1,000, there has been some falling off in the last two years, which is to be attributed probably to the financial depression through which the country has been passing, as when the volume of business contracts fewer disputes arise, and the parties to them are generally unwilling to indulge in the luxury of litigation.

There has been a large increase in the number of persons brought before the magistrates on criminal charges, being 9,829, as against 8,397 during 1908-9; but it is satisfactory to observe that the increase of charges is under "Miscellaneous Offences," which include offences against township regulations and breaches of the Master and Servants Ordinance, while there has been a marked diminution in offences against property.

A separate return has been kept for the first time this year of cattle thefts, which shows that 159 persons were charged and 111 convicted.

On the more serious charges committed to the High Court, the convictions for homicide were somewhat fewer than last year. The death sentences passed for murder number 18, and of these 10 were commuted to varying terms of imprisonment.

The comparative figures of persons convicted for the last five years are as follows:—

—	1909-10.	1908-09.	1907.	1906.	1905.
Europeans	76	64	85	73	71
Asiatics	463	513	510	445	366
Natives	6,839	5,538	5,488	3,278	2,815

The number of Europeans convicted is somewhat larger than last year, but the convictions are mostly for minor offences.

There is a satisfactory decrease in the number of Asiatics convicted, while, with the increase of the range of the Administration, the number of natives convicted, as might be expected, shows an increase.

The total revenue for the year, Rs. 182,280, shows an increase of Rs. 77,773, which is almost entirely accounted for by fines and confiscations, and more particularly the heavy penalties imposed under cattle quarantine regulations and confiscations of ivory.

(B.) LEGAL.

Legislation effected.—The Ordinances enacted during the year 1909-10 included the following:—

To give further effect to the abolition of the legal status of slavery Ordinance, 1907.

To make provision for the punishment of persons practising or making use of so-called witchcraft.

To amend the law relating to sentences to be pronounced on young persons convicted of offences punishable with death.

To provide for the establishing of municipal councils in certain townships in this Protectorate.

To make provisions to prevent the spread of sleeping sickness.

To prohibit the reckless or negligent use of fire.

To make provision for the appointment of an official administrator of intestate estates, and to define the powers and duties of such officer.

To make provision for the appointment of justices of the peace, and to define the powers and duties of the same.

To regulate the relations between employees and natives employed as servants, and to control the recruitment and engagement of natives for service within or without the Protectorate.

Administration of Estates.—The 1909-10 report was the first annual report submitted separately from the report of the Judicial Department.

The Ordinance defining the Administrator-General's powers was published in December, 1909. This Ordinance deals only with the estates of non-natives, the estates of natives being dealt with under "The Native Estates Administration Rules and Orders, 1899." The rules under the Ordinance fix the rate of fees for the administration of estates by the Administrator-General at 5 per cent. on the gross value of the estate.

A large number of old causes were dealt with, and the majority wound up.

Probate Duty was no longer included in the Departmental revenue, being credited to the Judicial Department.

The revenue amounted to Rs. 14,093, of which Rs. 3,382 was for interest on unclaimed monies placed on fixed deposit with the National Bank of India. This is an increase of £252 over that collected for 1908-9.

Registration of Companies.—Three new companies, with a total capital of £26,500, were registered during the year.

Six companies went into liquidation.

The total revenue amounted to Rs. 826.

(C.) POLICE.

The actual strength of the force on 31st December, 1909, was 1,819, all ranks—1,779 of whom were Asiatics and Africans. A number of recommendations of the Inspector-General of Police in respect of the re-organisation of the force were carried into effect, resulting in increased efficiency and considerable saving. Discipline has been well maintained; the number of petty offences, however, is somewhat excessive. One hundred and eighteen men were dismissed during the year, but to a large extent this is accounted for by the fact that it was desirable to weed out those constables who had not achieved a favourable record, and were considered unfitted for service in a police force.

Two hundred and thirty-four recruits were enlisted during the year, and all received such instruction in both the police and military sides of their duties as was possible in the absence of a central training depôt.

The total number of cases investigated by the police—that is to say, in those districts in which European police officers are stationed—during the last six months of the year (for which period only statistics are available) was 1,904. 2,413 persons were arrested or summoned, and of these 1,857 were convicted and 41 permitted to compound their offences.

The estimated value of property reported stolen was £4,758, of which £1,988 was recovered.

The total cost for the year was £46,275, as against £50,654 for the previous year.

(D.) PRISONS.

Hitherto the prisons of the Protectorate have formed part of the Provincial Administration, and have been managed more or less independently of one another by the Provincial Commissioners and District Commissioners. It is hoped, however, that they will shortly be placed under the central control of a Prisons Board, which will render possible a more economical and effective organisation of the service as a whole.

As at present constituted, they may be roughly divided into two classes:—

(*a*.) The central jails at provincial headquarters, and particularly at Mombasa and Nairobi, where long-sentence prisoners are confined. In these, industrial instruction is given, and such crafts as tailoring, tent-making, mat-making, carpentry, cane-work, and tin-smithing taught.

(*b*.) The district lock-ups for short-term offenders, who are generally employed on road-making, bush-clearing, cultivation, and general work in keeping stations tidy.

When re-organised, it is hoped that the service may be made practically self-supporting, as far as rations are concerned, it being possible in many places to cultivate the necessary crops by the labour of the prisoners themselves.

The admissions for the year were:—

Seyidie	1,445
Tanaland	226
Jubaland	94
Ukamba	2,758
Naivasha	259
Kenya	612
Nyanza	618
Total	6,012

a slight increase on the previous year, with a total of 5,709. European admissions were 76.

VIII.—CLIMATE AND HEALTH.

(A.) Vital Statistics.

Europeans.—No general census has ever been attempted, but it is estimated that there are 2,500 in the country; of these, approximately, 2,100 are living in the highlands. During the year a census taken of the township of Nairobi showed that there were 799 Europeans; this number, compared with the 579 which was the census return in 1906, shows that there is an annual addition to the town's population of 11·3 per cent.

There were 63 births during the year, contrasted with 34 in 1908.

During the first quarter of the year 11 people died, in the second 12, in the third 9, and in the fourth 4—a total of 36, as against 31 for the previous year. Of these deaths, 25 took place in the highlands, 9 on the coast, and 2 in the Nyanza Province.

Natives (*including Asiatics*).—In the absence of a census it is impossible to do more than guess at the total population of the

Protectorate. From Hut-tax returns and other indications, this has been put down at four millions.

No information regarding births and deaths in the different tribes is available.

(B.) Public Health.

Europeans.—1,495 cases of sickness were dealt with by the Protectorate medical staff during the year, 17 of which died. In the previous year there were 1,470 admissions and 16 deaths. 373 of these admissions under report were drawn from the Protectorate staff, with 4 deaths and 8 persons invalided home. In the previous year there were 5 deaths amongst the staff, and 4 persons sent home.

The principal ailments were:—6 cases of small-pox; 1 fatal case of plague; 7 cases of enteric fever, with 3 fatalities; 9 cases of blackwater fever, with 3 deaths. There was an increase of 37 cases of malaria over the previous year, 396 cases in all coming under review. Of general injuries, lions and leopards accounted for 5 admissions. There were 5 cases of liver abscess. The number of admissions for diseases of the nervous, digestive, and respiratory systems remained nearly at the same figures as in 1908.

Natives (including Asiatics).—Some 12,000 more persons were treated during 1909 compared with the previous year, the numbers being, respectively, 89,429, and 77,133. This increase was in part due to the stimulation produced by the opening of the new and commodious Civil Hospital at Mombasa, and may be taken as evidence of a closer contact with Europeans by certain tribes, notably the Nandi, Nyeri, Kisii, and Meru. 7,389 cases were treated in hospital, as compared with 6,229 in 1908; of these, 389 died, or 7 more than in 1908.

Particular diseases affecting natives were:—1 case of anthrax, 9 fatal case of tetanus; bilharzia, not uncommon on the coast, where also ankylostomiasis was rife; intestinal parasites common to the whole country side.

The number of recorded cases of sleeping sickness afforded no criterion of the amount of infection; they all came from one small district in South Kavirondo. Curiously enough, it has been noted that the population in a certain number of the infected areas has begun to increase; from that and other indications it would appear as if the epidemic had begun to decline. It probably reached its acme in years 1904-5. Two medical officers arrived at the end of the year to deal with this question.

There were 28 cases of plague, with a mortality of 89·28 per cent. This year it was not confined to Kisumu; 4 cases occurred at Nakuru, and there is but little doubt that the infected rats were brought down by the railway.

The country was visited, for the first time for ten years, by an outbreak of small-pox, which originated in Nairobi and slowly filtered throughout the country. Vigorous vaccination controlled its spread. Altogether 59,374 vaccinations were performed. The lymph used was manufactured in the Nairobi laboratory, and, of the cases that could be followed, gave an average success of perfect vesicles in 95 per cent.

A diminution in the number of admissions for tubercle, blackwater fever, enteric fever, has to be recorded; while diseases of the nervous, circulatory, and digestive systems, diseases of the eye, ear, and nose, all showed a large increase. Fewer cases of malaria were recorded during the year, with a greatly reduced death-rate. Mombasa, as usual, headed the list with the largest number of admissions.

There was a sensible decrease in the spread of venereal diseases throughout the Protectorate; in fact, the percentage of cases to total admissions fell from 3·28 per cent. in 1908 to 2·88 per cent. in 1909.

Meteorological Conditions.—It is almost impossible to draw deductions as to how far health conditions are influenced by weather states; the collected data are too few, the rain is too variable in its fall, and too local in its selection of place, to be relied on. The following variations have been noted in the township of Nairobi:—

Public Works Department Yard...	26·74	inches per annum.
Nairobi Hill	27·94	,, ,,
Railway Station	30·50	,, ,,

and five miles up the line at Kabete Farm, 32·19 inches per annum.

As in the previous year, 1909 was characterised by a partial failure of the early rains, and, in certain districts north of the Kedong Escarpment, by an actual scarcity.

As might be expected in a hot and dry year, the rheumatic, respiratory, and malarial affections all showed a percentage decrease.

Sanitation.—Probably the outstanding feature of the year has been the great advance made in the construction of roads and drains throughout the country.

Of the chief towns, Nairobi has a water supply of excellent quality, but, as has been repeatedly pointed out, grossly insufficient in quantity for the needs of its population. The scavenging of the streets and the removal of night-soil has been satisfactorily performed. The dust nuisance has been greatly abated, thanks to improvements effected on some 42 miles of graded and well-constructed roads. A number of drains and storm-water cuttings have been constructed; but until the connection between the houses and these street drains, and the street drains and the main arteries of the Williams' sewerage scheme are joined up, no real improvement can be expected. It is significant that the malarial rate in Nairobi does not decrease.

Mombasa, under existing conditions of treaty rights which hamper legislative efforts towards sanitary improvements, with its polluted wells, underground tanks, narrow streets, and innumerable cess-pits, has, in spite of all, enjoyed a singular immunity from epidemic disease. A committee has been engaged all the year in formulating a plan for development of the whole island; so that, when the time comes, improvements little by little may be effected along connected lines. The absence of a decent pipe supply of water is still the most crying need of the town. Quite apart from all that an ample water supply would mean, its introduction would render imperative the drainage of the town. Water mains in a town must go hand in hand, not only with the means for the instant removal of waste and fouled water contaminated by use, but would also provide the means for the removal of surplus rainfall.

A noticeable amount of bush clearing in the European and railway quarters of the town has been done.

No town in the Protectorate has made such steady sanitary progress as Kisumu. The good effect of dividing up the town into racial quarters was apparent in dealing with the outbreaks of plague and small-pox which occurred during the year.

The clearing of bush, grass, and vegetation in this town has been thorough; while the sweeping of the drains, scavenging, and the close attention paid to rats and vaccination has done not a little in relieving the town of worse visitations of epidemic disease.

Of out-stations, Nyeri may be taken as a model of what can be effected by unremitting attention to a sanitary toilette in improving the amenities of the station.

So much has been written about the Indian Bazaar in Nairobi that it is not necessary to enter into details again, only to state that its worst features remain the same; but it should be pointed out that there are growing up in every single out-station in the country, miniature reproductions of this bazaar, embodying everything that is reprehensible and contrary to sound sanitary principles.

(C.) Government Institutions.

Hospitals and Dispensaries.—The two European hospitals in the country admitted during the year a total of 200 cases, 89 of which were treated at Mombasa and 111 at Nairobi. In 1908 the admissions were 70 and 88, respectively, with 6 and 1 deaths, as against 7 and 2 in 1909. There was an increase of 42 patients and 2 deaths.

At each of the headquarter stations of the provinces there is a native civil hospital in the charge of a medical officer, or in two instances of an assistant surgeon. In addition, there are some 20 civil dispensaries, to most of which is attached a small hospital. These, more or less, old buildings are being gradually replaced by more up-to-date structures of wood and galvanised iron. There are, at various depôts in the country, five native military hospitals. Both the civil and military hospitals and dispensaries are in immediate charge of Indian subordinate assistants, responsible to the nearest medical officer.

Bacteriological Laboratory.—The work of this laboratory showed a marked increase of routine work—more material, medical, and veterinary was sent in for report; there was a large number of water analyses made, and, owing to the small-pox epidemic, a greatly increased demand for vaccine. In all, 1,113 medical examinations were undertaken, 479 of which were for malaria, the parasite of pigment being found in 97 cases. Fifty-five chemical water analyses were made, and 47,094 tubes of glycerinated lymph manufactured. 1,127 veterinary examinations were performed during the first six months of the year, after which, owing to the arrival of the Veterinary Pathologist, the pressure of this work was relieved, though not *in toto*.

In consequence of all this, research work proper was much interrupted. The experiments undertaken were mainly to try and prove the possibility of other species of tsetse flies than the *Glossina palpalis*, viz., the *Glossina longipennis* and *fusca*, being able to carry the infection of sleeping sickness (the *Trypanosoma gambiense*). The results of these experiments were all negative. Similar experiments on the lines of Klein's work were undertaken, and are still proceeding, with, so far, a negative result. Observations were further carried out on a natural infection of a trypanosome occurring in a monkey from the bites of a freshly caught *Glossina pallidipes;* the Congo floor maggot; the Ornithodorus Tick (tick fever); the parasite causing epizootic lymphangitis in horses; and various blood parasites in birds.

Lunatic Asylums.—Owing to the delay experienced in getting out certain special fittings for the asylum and the total absence of a water supply, it was not found possible to open the new building during the year. Instead, the prisons at Mombasa, Nairobi, and Kisumu were formally gazetted for the reception of lunatics. The new lunatic asylum building was not altogether idle, as during the epidemic of small-pox it was utilised as a European infectious diseases hospital for patients and contacts, water being carted from two miles away. The total number of certified lunatics admitted during the year was 37; while 19 were detained under observation. There were three deaths during the year.

IX.—EUROPEAN SETTLEMENT.

(A.) Highlands.

There would appear to be very little doubt indeed that the Colony is about to witness considerable expansion in its European farming population. The progress which has been made in seven years in spite of many difficulties is very striking. Very few of even the oldest of our Colonies can provide the amenities of this, our youngest. There is hardly a farmer unprovided with communication by road—not always of a high-class character, but fully equal to that existing in any new country; one settlement only is fifty miles from the railway—the Uasin Gishu Plateau. The lands are mainly held in leasehold. This is held by some to be a deterrent to the country's progress—a contention which is, to my mind, erroneous. It is conclusively proved that the countryside will be agricultural as well as pastoral. Many of the farms, the bulk of which are from 3,000 to 5,000 acres in extent and have been granted on pastoral leases, will undoubtedly become agricultural. The rent charged is from a halfpenny per acre to threepence for the best agricultural lands.

It is a fact that in other countries, and notably Canada, freehold agricultural land is being granted. It is to be remarked, however, that it is limited to 160 acres, and that in most cases the best lands are in the hands of railway or other companies, and the settler seeking a free grant has to go far afield for it. If he seeks to come close to the railways, he finds virgin land standing at from £1 to £2 per acre. Moreover Canada, Australia, and New Zealand are purely European countries.

Few Colonies, and certainly no new Colony, have been so early equipped with scientific agricultural and veterinary assistance. Though some cavil at the expenditure involved, these must be the unthinking. The Department has done much in proving the country's agricultural resources. We now have, largely owing to its efforts, rapidly increasing wool-bearing flocks of sheep. On one farm there can be noted as many as nine thousand, and within a year there will be close upon 50,000 to 60,000 in the Highlands. Whereas a few years since the birth of lambs was markedly low, to-day it compares most favourably with any sheep country in the world. The sheep are in almost all cases the result of breeding up from the native sheep of the country, which are not wool bearing. The most pleasing aspect of the business is the evolution from hair to wool. The wool from the first cross fetches about 2¾*d.* per lb., the sheep producing about 1½ lbs. of wool; the second cross produces 3 pounds, valued at 7½*d.* per lb.; the third cross 4 to 5 pounds, valued at 8*d.*

Not only sheep but cattle too are making marked progress. Disease is perhaps more prevalent than in the case of sheep; but here again the Veterinary Department is giving most valuable assistance, and there is every reason to believe that we will eventually efficiently control, if we do not master, it.

The agriculturist has proved, under difficult circumstances, that grain and pulses will be his standard crops. The lack of meteorological data, and the variable classes of soil encountered, have retarded his advance. Beans, peas, and maize are fully established, and all these command the very highest market prices in Europe. Wheat has at times suffered from rust, but that it can be grown successfully is undoubted, and over very large areas. The wheat exported for test—the local flour mills at present absorb the local supply—has been almost enthusiastically reported upon, and it was stated that any quantity could be taken of the grades exhibited. As in other countries, it will be only a matter of time to attain a rust resistant East African wheat. One cannot help admiring the patience and pluck exhibited by those farmers who, notwithstanding setbacks, have stuck to wheat-growing. They realise that it is the backbone of agriculture in a European Colony, and a proof of their contention that in these highlands are being founded Englishmen's homes. In the next season, over 4,000 acres of wheat will be in the ground; if successful, £20,000 will be placed in the pockets of the farmers—an amount quite equal to the supposed enormous benefits accruing to the community by the operations of sportsmen.

Apart from grain and pulses, more highly paying articles are now maturing. Coffee is grown very extensively, and several thousands of acres of sisal will soon be available. Black wattle, the bark of which has been valued at a maximum figure, is being put in by many farmers, and some have taken it up exclusively.

What outsiders cannot realise with regard to these special crops, or in fact to any crops grown in East Africa, is that there are two growing seasons. Coffee, sisal, or black wattle mature in half the time witnessed in the single season country. The wattle bark is at its best in four years.

For such crops as these this country has a bright future. The double season also allows of the more rapid attainment of suitable wheats. In the single season countries which have developed local rust resistant wheat six years of experiment is necessary; here three will suffice.

The entire European population is a working one, yet like other Englishmen they have not neglected the benefits to health to be derived by sport. Race meetings, and a race-course which would not disgrace many older colonies, polo, football associations, hockey, golf, tennis, and many other recreations, are available at all centres.

Trout have been established in the highland streams, but it is too early as yet to predict their future, though specimens up to four pounds have been obtained.

(B.) European Plantation Work.

On the coast a considerable number of rubber plantations have been established and are promising well. At Malindi eight to ten exist, and contain probably 250,000 ceara trees, three to four years old. At Witu, Mwatate, and Mombasa, similar development is being carried on. At the mouth of the Tana, some 10,000 acres are being developed for cotton and rubber.

At Kipini and Mombasa, sisal plantations—close upon 2,000 acres—are rapidly reaching the producing stage. To the south of Mombasa, rubber is being developed.

On the line of railway at Mazeras and Kibwezi very considerable planting of rubber has also taken place, and this is now reaching the producing stage. In this same area a number of companies have been working the natural plantations of Sanseviera fibre.

In the Nyanza Basin, cotton and rubber are being cultivated, but not on a very extensive scale.

As soon as the question of titles on the coast is adjusted—and this is now being done—there would appear to be every possibility of an extension of plantations. Rubber, fibre, and cocoanuts all do very well. Cotton has not proved so successful, but there is every reason to believe that more progress in its cultivation will be witnessed upon the Tana and Juba Rivers when these parts of the country can be opened up.

X.—NATIVE AFFAIRS.

The native affairs of the Protectorate require consideration under four heads:—

(1) In native reserves.
(2) On the coast.
(3) In the Northern Frontier District and the Somali country.
(4) In European settlements and towns.

(A.) In Native Reserves.

The principal tribes which would be included under this category are:—the Kavirondo, Lumbwa, Sotik, and Nandi, of the Kisumu Province. The province is almost entirely subtropical; and, excepting a small white settlement in the Lumbwa District, and some plantations granted for the cultivation by Europeans of cotton, &c., out of waste lands over which there were no native claims, the whole province may be said to be a native reserve. The peoples here are mainly agricultural and fairly progressive.

In the Naivasha Province we have the Northern and Southern Masai Reserves, which were established by treaty a few years ago. The paramount chief resides in the southern reserve, which is entirely south of the railway line.

The social system and marriage customs of the Masai are of a most primitive character. The result upon their morals, more especially since they have come into contact with civilisation, is unfortunate.

In consequence of these customs, the mission bodies have been unable to make any impression upon this tribe, nor has any advance in civilisation been witnessed.

The whole situation is accentuated by the fact that this pastoral people are cattle owners, and not cattle dealers,—*i.e.*, they retain the whole of their wealth in stock,—though they are not averse to trading in sheep, goats, &c. Owing to the protection given by Government against cattle disease, their herds have increased very considerably; in consequence, in their northern reserve, they are constantly over-stepping their boundaries and coming into conflict with neighbouring native tribes or with white settlers. Ultimately this may create a difficult situation.

The other tribes in this province are the Turkana and Suk. They also are pastoral, and occupy country to the south of Lake Rudolph and along the Uganda border, and have been in constant conflict with one another until this year, when we came to terms with the Turkana, hitherto under no administrative control. Unlike the Masai, these pastoral peoples are not averse to trading in cattle.

In the Kenia and Ukamba Provinces are found the Wakikuyu, under six chiefs of whom, however, none is paramount. These people are almost entirely agricultural and occupy a fertile area. Quite 70 mission stations, of all denominations, are working

publishing company inc

amongst them. Reports go to prove that considerable progress has been made in improving their moral and material welfare; but the mission bodies themselves deplore the fact that they are imitating in a measure some of the Masai customs.

The Wakamba are the last great tribe in this category. They occupy a very large area of country, which is, however, subject to drought from time to time. Their native government is of a primitive type, distinctly lower than any that have been previously described.

Of all these peoples, the Masai alone have had their reserves assigned to them by treaty. I am somewhat adverse to this procedure, which amounts to the dedication of lands for the perpetuation of barbarism. It would appear to me desirable to place all native reserves in the hands of trustees, who might conceivably be drawn from the judiciary or mission bodies. Such a body or bodies, while protecting native rights, would undoubtedly favour proposals of Government which were for the immediate or ultimate benefit of the natives concerned.

All the tribes at present hold their lands under communal conditions, and difficulties have arisen as to the position of native Christians within the reserve. It will undoubtedly be impossible for them to obey some of the native laws and customs, more particularly with regard to marriage, divorce, and inheritance. At the same time grave troubles might arise if these native Christians were allowed to individualise themselves in native reserves and to be withdrawn from the control of their chiefs in regard to native law and custom applicable to their changed conditions.

Although it is premature for me, after so short a stay in the country, to lay down a fixed policy, or to dogmatise on the lines to be followed with regard to the administration in native reserves, I place on record some notes giving my views on methods to be employed, which, having been successful in other parts of Africa in dealing with peoples of a somewhat similar character to those living in East Africa, may be useful as guiding principles.

The fundamental principle, and the only humane policy to be followed in dealing with peoples who have not reached a high stage of civilisation, and are still dependent on a communal system of government, is to develop them on their own lines and in accordance with their own ideas and customs, purified in so far as necessary. Whilst retaining all the good in their government which makes for manliness, self-respect, and honest dealing, only that which is repugnant to higher ideals of morality and justice should be rejected. All authorities on African native government have deplored the great harm that has been done, not purposely but unwittingly, by administrative officers possessing little or no knowledge of the language, habits and customs, institutions, and traditions of the people they are called upon to administer. Impatient for so-called progress, they have at times trampled under foot the very institutions which should have been preserved if they had had any regard for the essential advancement of the people. Great and enduring patience is therefore expected from all administrative officers, for, exasperating though it may seem to see things go slowly, it is worse to upset ideals and customs so little understood. It is not from the present generation that we may look for much; the succeeding generations are in the hands of the administrative officers, and it is for them to mould the people as best they can with the educative means at their disposal. It must certainly be their endeavour to lift the natives to a higher plane of civilisation, but this can only be achieved by gradual methods and by observing existing conditions. Every improvement must be by a natural process of evolution which will cause no extreme dislocation of present circumstances. We should support the authority of the chiefs, councils of elders, and headmen in native reserves, and the prestige and influence of the chiefs can be best upheld by allowing the peasantry to see that Government itself treats them as an integral part of the machinery of the Administration. Native tribes vary greatly; and whilst some have a natural genius for self-government others are more primitively constituted. Many of the tribes in East Africa have no chiefs of recognised authority, but where this is the case tribal or family authority is vested in a chosen council of elders. By upholding the authority of the chiefs and elders it is not intended to imply that officers are to sit down and enforce blindly all orders issued by these men who, after all, are in a sense savages. The main object of administering the people through their chiefs is to prevent disintegration amongst the tribe; but active interest, supervision, and guidance on the part of the officers of the Administration are all necessary for the prevention of abuses. There are not lacking those who favour direct British rule; but if we allow the tribal authority to be ignored or broken it will mean that we, who numerically form a small minority in the country, shall be obliged to deal with a rabble, with thousands of persons in a savage or semi-savage state all acting on their own impulses and making themselves a danger to society generally. There could only be one end to such a policy, and that would be eventual conflict with the rabble.

The following details of native affairs in the reserves afford an indication of the progress made:—

(1) HIGHLANDS AND NYANZA BASIN PROVINCES.

(a) *Nyanza Province.*

Approximate population, 887,000.

Important Native Tribes—

Kavirondo.
Nandi.
Lumbwa.
Sotik.

The following are the amounts of Hut Tax collected during the year under review:—

	Rs.
Kisumu	215,688
North Kavirondo	207,294
Nandi	25,488
Lumbwa	37,212
South Kavirondo	224,580
Total	710,262

being an increase of Rs.145,809 on the previous year.

Generally the native administration in the whole of the province has been consolidated and brought into line with native law and custom, the effect up to date having been most beneficial. Several boundary questions have been settled between the East Africa Protectorate and Uganda. With few exceptions the chiefs and headmen are proving quite satisfactory; they are loyal and willing to maintain law and order in their respective districts. A local disturbance in Nandi resulted in the deportation of a prominent headman and the imposition of a tribal fine. Our relations with the German authorities over the boundary have been most friendly and pleasant. Roads have been thrown open to the public, as also have a number of trading centres. Considering the large population and the primitive ideas of most of the people, crime of a serious nature is singularly rare. In most instances native courts are working well, and are of great assistance to the Administration. Gradually the districts have been settling down under a system of administration by the chiefs, subject to supervision by the administrative officers. Trade has made very considerable progress in the various districts and has helped in the peaceful development of the country. Money has circulated most freely in most places, and as a consequence the revenue collections have surpassed all previous records.

The natives have been given seed and been guided as to the way in which they should plant and cultivate; the results are distinctly encouraging. The trade in this province from various sources should, within the next few years, become of great importance. The demand for imported goods is continually increasing, and will eventually be very large. It would appear that a very large percentage of such goods is of foreign origin, very little coming from England. The yield of cultivated produce is growing considerably, and hides and skins have shown a marked increase, mainly due to the fact that a large number of native cattle died during the year from gastro-enteritis. The wild rubber exported comes almost entirely from Nandi, where it is collected by the natives.

	Rs.
The estimated value of native produce railed during the year is	667,000
The total value of Indian produce during the year (including lime) amounts to	45,905
Total	Rs.712,905

Bubonic plague was prevalent in Kisumu from June to October, 1909, during which time the township was in quarantine; there were 26 cases, resulting in 23 deaths. A sleeping sickness observation camp, with hospital, was started in South Kavirondo in the early part of 1909. It appears that this disease is not making any serious inroad amongst the people at present. Smallpox has been present in each of the districts during the year. All the areas infected were clear, except Mumias, by the end of March.

Total cases reported during the 12 months	68
Total deaths reported during the twelve months ...	21
Total vaccinations reported during the 12 months ...	31,453

Apart from the above the general health of the province has been satisfactory.

Certain limited experiments have been undertaken by the Department at Kibos Farm. Sisal, ground-nuts, sim-sim, and different kinds of beans have been doing remarkably well. The Nyanza Province is peculiarly suitable for the production of produce suitable to tropical and temperate zones, and, with its large populations inhabiting the tropical areas, it deserves considerable attention in this respect.

(b) *Naivasha Province.*

Approximate population, 55,000.
Important Native Tribes—

Masai.
Turkana.
Suk.
Kamasia.

The revenue amounted to Rs.70,477.12; this does not include rents collected by the Land Office.

The total Hut Tax received during the year under review was Rs.38,567, being an increase of Rs.5,567 on the previous year.

A slight outbreak of plague occurred at Nakuru in the railway lines. A number of the railway staff and two or three natives succumbed, but the outbreak was of short duration owing to the stringent measures taken to suppress it. Smallpox appeared at the Government Farm at Nakuru, but it died out almost immeriately.

During the year the natives of the Ravine District have been thoroughly visited. In Baringo much trouble was caused by the Turkana of the Turkwell River raiding friendly Suk at Akulo, culminating in an attack on a Suk settlement in which 55 out of a total population of 60 natives were murdered. Our post at Kerio was in danger, and it was necessary to strengthen it and to afford protection to the friendly Suk. The Acting District Commissioner, considering a demonstration necessary, proceeded to Akulo, where he surprised Lobwin's village and captured a number of cattle, donkeys, sheep, and goats. The result was entirely satisfactory, and Lobwin was persuaded to come in and make peace and also to visit Nairobi with some of his chiefs. It has been decided to establish a new district to the north of Baringo, which will administer the whole of the Turkana tribe.

In the Masai Northern Reserve a brisk trade has been done by the Akikuyu in foodstuffs, tobacco, and calabashes, which they sold in the market at Rumuruti. There has been a large export of sheep during the year, amounting to 22,672, most of which went to the market at Nairobi; 3,130 of these were purchased by the Nyeri Akikuyu; the number of cattle exchanged for sheep was 1,203. In Ravine a good trade has been done in sheep-skins and ox hides. In Baringo 35,736 sheep and goats were exported in exchange for 1,200 head of cattle.

(c) *Kenya.*

Approximate population, 890,000.
Principal Native Tribes—

Wameru.
Wakikuyu.

The Hut Tax collected for the year under review amounted to Rs.416,622, being a decrease of Rs.10,764.

There are four districts in the Kenya province—Fort Hall, Nyeri, Embu, and Meru.

The deficit in the Hut Tax is due to an over-estimate last year.

There has been no combined lawlessness directed against the Government during the year. A system is now in vogue whereby the chiefs have their representatives in the Government stations, and it has ben found of great assistance. All the chiefs without exception appear well disposed towards the Administration.

Owing to an outbreak of East Coast fever all movements of cattle have been prohibited in the Province. Cases of gastro enteritis and redwater have occurred.

The value of trade goods brought in amounted to about Rs. 323,000. The chief exports are grain, bees-wax, native tobacco, fowls, and eggs; hides and skins when quarantine regulations permit.

The important prevailing diseases influenced by the seasons were malaria and respiratory, the latter being conspicuous in stations at high altitudes, and the former in the lowlands. Malaria may be regarded as the curse of the Province. In Europeans the benign tertian parasite was most frequently met with, and also amongst native children and boys. Pneumonia is common during the wet season.

Diseases of the eye are common, septic ophthalmia being most frequently met with. It is caused by the flies which swarm around the native villages where insanitary conditions prevail.

(d) *Ukamba.*

Principal Native Tribes—

Wakikuyu.
Wakamba.

Revenue and Taxation.

—	1908–09.	1909–10.	Increase.
	Rs.	Rs.	Rs.
Nairobi...	43,284.95	78,639.66	35,554.71
Kyambu	77,614.00	80,368.50	2,754.50
Machakos	93,169.79	114,808.29	21,638.50
Kitui	80,508.04	102,833.99	22,325.95
Nairobi Jail	8,281.21	8,097.65	—
Total increase			82,273.66

Population.

The population of the Province is approximately as follows:—

—	White.	Coloured.	Total.
Nairobi Township	834	13,362	14,196
Kyambu District	400	60,000	60,400
Machakos	90	103,182	103,272
Kitui	13	112,000	112,013
Total	1,337	288,544	289,881

During the year under review native government has made steady progress. In Kitui especially the situation is brighter, and the Kamba tribe is now more under control. The district has been well visited, which will tend to good understanding between the Government and the natives. Frequent tours have also been made among the Wa-Thaka, but they are still inclined to cause petty troubles, largely due to the bad influence of one chief. Topographical survey has been carried on by the officers, with the result that the district is now in possession of reliable maps. A native school was opened and has been a great success. In Kikuyu district the relations between the natives and the Government have been good, but the enforcement of the quarantine regulations is likely to impose a severe strain on their loyalty, and the situation will want careful watching. The natives in the Kikuyu reserve, through the willing collaboration of their chief, have agreed to the branding of their cattle—a most necessary and beneficial measure. In Machakos several very successful tours have been made by the Administration staff, and the whole district appears to be in a very satisfactory state.

The Kitui district is distinctly unhealthy, and in spite of all precautions European and native staff continually suffer from fever and gastric troubles—the latter may be put down to the water. The climate is also relaxing. In Machakos district there is a good deal of fever. About 150 people were vaccinated in this district.

The depression of trade in Kitui has been most marked. Owing to continued quarantine regulations prices have come down to a minimum, but a fairly brisk trade has been carried on in sheep and goats, though prices are low, and the later rains have brought the ghee trade to its normal condition. The trade in Kikuyu district is progressive. In Machakos the heavy mortality amongst the cattle has increased the trade in hides.

Various kinds of seeds were issued in Kitui to certain elders, but unfortunately only maize proved successful; ground-nuts are not yet ready, but a good crop is anticipated. Native chiefs have bought ploughs, and have trained their oxen in conjunction with the settlers.

(B.) Coast Provinces.

On the coast there are a few tribes, such as Wadigo, Wapokomo, &c., who still exist on a communal system, but their numbers are unimportant, and by far the largest portion of the coast was formerly held by Arab or Swahili owners on a freehold tenure and worked by slaves who have now been emancipated. Though compensation has been paid for these slaves the owners have not been able to rise to the occasion and to continue working their lands on a basis of free labour. As soon as the question of the title to these lands is determined, there will be a growing tendency to sell, and the result will undoubtedly be the establishment of European plantations. Some of the former owners will probably remain on their lands, but these will be comparatively few in number. Outside the native reserves, which are few, the coast population retains its ancient Arab system of government of Liwalis and Kathis, under the control of British administrative officers.

(*a*) *Seyidie.*

Approximate population (coloured), 230,000.

Principal Tribes—

Wadigo.

Wapokomo.

	Rs.
The revenue for the year 1909-10 was	322,796.48
And for 1908-09	305,851.72
Total increase	Rs.16,944.76

The increase is due to fines and forfeitures upon conviction for breaches of the Native Liquor Ordinance, 1907; also to Hut Tax, Customs Duties, Liquor Licences, and Post and Telegraphs.

The amount of Hut Tax collected in the year 1909-10, as compared with that collected in 1908-09, is as follows:—

—	1909-10.	1908-09.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Mombasa	12,474	15,744	—	3,270
Rabai	25,329	15,774	9,555	—
Malindi	58,338	52,098	6,240	—
Vanga	14,829	14,028	801	—
Mwatate	20,004	21,510	—	1,506
Taveta	5,712	5,283	429	—
Total	136,686	124,437	17,025	4,776

Net increase Rs. 12,249.

The decrease in the Mombasa district is due to the failure of the crops, and therefore late collecting, which was not complete at the end of the year.

The following were the principal items of trade:—

Gum copal	651¾	cwts.,	valued at	£1,084
Copra	125	tons	,,	1,653
Rubber	14½	,,	,,	3,844
Mangrove bark	1,760	,,	,,	1,408
Borities	123,662		,,	1,668
Grains	2,699	tons	,,	12,017
Cotton	82	,,	,,	1,582

The total amount of fibre produced at Voi during the year was 207 tons. The decrease in the production of copra this year is chiefly accounted for by the fact that the plantation owners find it cheaper to export the nuts whole to Egypt and the Red Sea than to go to the expense and trouble of making copra. Rubber shows an increase on the previous year; in the Malindi district alone 93½ cwts. have been exported, as against 30½ cwts. for the year 1908-09.

The native affairs of this Province call for but little special notice during the period under observation.

Considering the population and number of towns in the Province, serious crime is very rare, the bulk of the offenders being men from tribes outside the Province.

(*b*) *Tanaland.*

Approximate population, white, 30; coloured, 90,000.

Revenue, Rs.217,112.02, making an increase of Rs.31,816.38 over the period 1908-09. The total amount of Hut Tax collected amounts to Rs.49,920.29.

The British East Africa Corporation has continued to issue cotton seed to the natives. The Pokomo on the Tana are beginning to realise what is to be gained by raising crops for export. An easy means of transport is required to send produce to Lamu, as no vessels can leave Kipini during the south-west monsoon.

During the last six months about 180 deaths have occurred among cattle. The disease has now stopped. The Somali cattle which come to Lamu and furnish the chief supply of the island appear generally free from disease. Since the renewal of the restrictions on the shipment of cattle to intercolonial ports and Zanzibar, a brisk trade has sprung up.

The system of issuing arms and ammunition to the rubber collectors has proved most successful, as the men have confidence that they will get all they make, instead of, as formerly, having to pay toll to the Somalis in food and produce.

There is little or no poverty. The native civil administration is working well. The son of the Mudir of Wange has at his own request been placed with the Mudir of Mkonubi for instruction in official duties. About 200 old muzzle-loading guns have been handed in, and this should reduce the slaughter of elephants on the Tana River. The work of the Slavery Commission is almost finished.

ublishing company, inc.

(c) *Jubaland.*

Approximate population, white, 25; coloured, 88,000.

The revenue, under general heads of the estimates, Rs.64,383.99.

The most important agricultural district is Gosha, which borders the River Juba. Three crops of maize and sim-sim are easily obtainable. Cotton, tobacco, millet, and bananas are also grown.

The natives irrigate, but little effort is made to regulate the supply of water, and an ignorant use of canals often turns large areas into swamps, which in many cases become permanent.

In this district probably sim-sim is the most profitable crop. Elsewhere in the Province there is but little agriculture. Down the coast, south of Kismayu, Bajun plantations are increasing, and further extension may be expected as the administration becomes more effective. Somalis have increased their plantations on the Yakindinta plains.

Land Grants: No further concessions have been taken up. The land on the Juba has been classed as first-class.

Kismayu and its hinterland are hot but healthy. Gosha is unhealthy during the rains. The natives suffer a good deal from malaria and dysentery.

During the last year the Somalis have been very quiet and apparently amenable to Government orders. Probably the opening up of new stations will be an incentive to trade and thereby tend to do away with inter-tribal fighting.

It is satisfactory to note that within the last four months nearly two hundred men have gone on trading caravans to the interior. The Somalis in Jubaland are to some extent ringed round by a natural fence, and it is to be hoped that by the occupation of certain portions of their boundaries we can largely control the immigration of undesirables and check the importation of rifles.

(C.) NORTHERN FRONTIER DISTRICT AND THE SOMALI COUNTRY.

(a.) *Northern Frontier.*—This is entirely inhabited by pastoral tribes—Samburu, Rendile, Boran, and Somali. The first three occupy the country along the Abyssinian border. They are not numerous, and are entirely pastoralists and camel owners; the country they occupy is the most arid of the whole Protectorate. The entire population is pagan, and has only lately been brought under effective administration. They are of a perfectly peaceful disposition, and will continue so now that we are protecting them from the incursions of hunters and stock-stealers which took place annually from Abyssinian territory.

(b.) *Somalis.*—The last tribes to be considered are the Somali, who are divided into five principal sections, by no means peaceably inclined to one another and in many cases armed with guns or rifles. This people is a pastoral one, fanatical, Mahommedan, and somewhat undisciplined. They are said to hold a considerable number of slaves. There would appear to be no difficulty however in managing this population if we deal with them firmly, yet justly, more particularly with regard to their slaves.

andronicus

Opportunities have lately arisen for consultation with nearly all their principal chiefs, who appear to be quite amenable and wishful to work with Government. There has been considerable exaggeration in the past as to the intentions and conditions of this people.

(D.) In European Settlements and Towns.

The policy to be pursued with regard to natives in this category is a more difficult subject to deal with, and its solution is one of the most important tasks before us. The elaborate structure of native custom and belief is apt to fall when we touch it, and yet we express surprise at the disorder of our own creation. We hold out inducements to natives to leave their homes, and yet we are astonished that these natives will not always return to their reserves. We cannot comprehend why, because they have tasted the sweets of town life, they will not carry on their former occupation in their own villages or hamlets under the rule of their chiefs and headmen, which rule we are endeavouring to maintain and strengthen. We forget that by bringing the native into contact with civilisation his mind may be rudely awakened; he discovers that he is naked; he observes that others ridicule the superstitions, customs, and beliefs which he has hitherto held sacred; and he finds that his chief is, after all, not so important nor so rich as he imagined. In consequence he often prefers being a wage-earner to a capitalist, and following a free life to the discipline and restraint of his elders.

The opening up of the country by European settlement, and the construction of the Uganda Railway and other public works, have tended greatly towards denationalisation. Civilisation is everywhere, outside the native reserves, marching apace; officials, missionaries, planters, farmers, merchants and traders, sportsmen and globe-trotters, one and all require labour, and one and all are adding their quota to breaking down the tribal systems, to denationalising the native, and to emancipating him from the rule of his chief. Although the native in European employment is at times worse housed and fed than in his own village, and the habit of daily work may be irksome, he feels that he is to a certain extent his own master, and if the employment is uncongenial he can legally terminate it. It is therefore in the interests of the employer to make him as comfortable as possible, and to try and persuade him to settle down and accept permanent employment. If he is well treated, is given ground for a garden, and earns sufficient to enable him to marry and live comfortably, why should he wish to return to his savage or semi-savage life in a native reserve? Apart however from his material comfort, we must, if we are to ameliorate his status and make him a more useful member of society, do all in our power for his moral welfare, as also towards making his improved condition a more permanent one.

(E.) Slavery.

The Ordinance for the abolition of the legal status of slavery has worked well and without friction during the year. Altogether

ublishing company, inc.

5,949 claims for compensation have been made by slave-owners, of which 4,663 cases have been settled by the District Courts, and compensation to the amount of £19,553 has been awarded. 555 cases were dismissed, and 139 appeals were entered in the High Court against the disallowed claims, but only about 20 per cent. of them were allowed.

One hundred and twenty-nine claims for maintenance of aged and infirm slaves were made by such masters as were themselves unable to provide it. 73 of these have been dealt with, and their names entered on the maintenance list, for which £416 7s. was paid.

The total amount paid, both for compensation and maintenance, to decrepit slaves since the introduction of the Ordinance to March amounts to £19,970, as under:—

	£	s.	d.
1907-8	449	18	6
1908-9	7,199	17	5
1909-10	12,320	6	10
	£19,970	2	9

There are still about 2,000 slaves who have remained loyally in their masters' service, whose cases, I anticipate, will be deferred to the very last moment when probably a rush will be made on the Courts.

It is, however, an undoubted fact that the Arab community which has not been very prosperous in recent years, has suffered severely from the movement of emancipation.

It is hoped that when the question of land titles at the coast is settled an influx of fresh capital will bring about a better state of affairs.

Active administration of the Somalis in the Tana and Juba Provinces, which is now taking place, will undoubtedly lead to difficulties in the slavery question, and it would appear desirable to extend the coast slavery settlement to these tribes.

XI.—EDUCATION AND MISSIONS.

(A.) Education.

Government Schools.—During this year the Government has maintained the two Nairobi schools which were in existence last year, viz., the mixed school for Europeans and Eurasians, and the Indian school.

Mixed School.—Co-education of boys and girls has been carried on from a kindergarten class up to Standard VII., with an average attendance of 72 and a staff of four teachers.

Quarterly examinations were held by the headmaster, and an annual one by an outside examiner, whose report was quite satisfactory both as regards methods and results.

Indian School.—The Indian school was divided into two sections—the Urdu and the Gujerati—with an attendance of 83 and a staff of five teachers.

The results obtained were not satisfactory, to a great extent owing to the temporary nature of the appointments and the consequently low standard of the teachers.

Private Schools.—There are two private schools in Nairobi for European children, boys and girls being taught together.

Mission Schools.—The education Board has no official information as to the details of educational work at Mission Schools. The Missions which educate Europeans and Asiatics are the Mission of the Holy Ghost at their stations in Mombasa and Kikuyu, and the Africa Inland Mission at Kijabe. At Kikuyu and Kijabe boarders are taken, and, in all three, boys and girls are taught together.

These missions were the first to undertake education other than that of natives, and grants have been given as recognition of the services they have rendered to European children.

The Buxton High School at Mombasa has continued its work of educating all comers. All missions, however, including those mentioned above, educate natives; some teaching trades, as well as reading and writing and religious instruction. Among the foremost of these are the Church Missionary Society at the coast; and in Kavirondo the Church Missionary Society, the Friends Mission, and the Mill Hill Mission.

Dr. Fraser, who came to the Protectorate from India as educational expert, has issued his report, and a general scheme of education has been formulated, increasing the number of schools in order to meet the needs of the growing population, necessarily involving greater expenditure.

It is hoped that early in the coming year there will be fully established schools to meet the most pressing requirements of all sections of the population. With the aid of the missions, it is intended to take up the education of the sons of native chiefs and the general industrial training of the various native tribes.

(B.) MISSIONS.

A great many missionary societies of all denominations are working in the Protectorate. The relation between them, the Administration, and the native populations whom they are seeking to benefit have been of the most cordial nature.

XII.—LANDS AND SURVEYS.

(a) *Lands.* The number of land grants made during the year was 222, comprising an acreage of 373,570 acres, compared with 162, comprising a total acreage of 448,782 for the previous year.

The figures for 1908 (162) include 46 building and residential plots, acreage 267 acres; in 1909 the figure (222) includes 69 plots, acreage 193 acres. Furthermore, in 1908 one large fibre concession comprising 66,892 acres was granted, leaving an acreage of

381,614, representing 115 farms leased, with an average acreage per farm of, roughly, 3,318.

In 1909 one small fibre concession of 3,362 acres was granted, leaving an acreage of 370,015, representing 152 farms leased, with an average of, roughly, 2,434.

With increased staff and improved methods the number of pending applications is being steadily, if slowly, reduced, as shown in the subjoined tabular statement:—

Pending applications,	30th June, 1908	534
Do.	31st December, 1908 ...	520
Do.	30th June, 1909	505
Do.	31st December, 1909 ...	456
Do.	30th June, 1910	381

Allotment.—It will be readily seen that the system followed in the past of allowing a settler to apply here, there, and everywhere, registering his name, and dealing with his application when survey made it possible, threw a burden on the department which, with the available staff, made delays inevitable, swelling the pending list, and making the task of overtaking arrears well nigh impossible.

Until there was, as in other countries, land surveyed ahead ready to offer intending settlers, the procedure above indicated was, however, the only possible one. With the survey of 200 odd farms on the Uasin Gishu, which has been and is being followed by the partition into farms of large tracts of vacant land in other localities, it became possible to refuse to register applications, except for surveyed lands, and it is to this cause largely that the reduction in the pending list is due. It must be remembered, however, that there always will be on the pending list a number of what, for want of a better name, must be termed Special applications; these comprise mission grants in natives reserves, applications for dry lands and for town plots for special purposes, such as churches, schools, sports grounds, and so on.

New Crown Lands Ordinance.—The Land Bill passed by the Legislative Council in 1908 has not yet received the approval of the Secretary of State, and the old Ordinance of 1902, supplemented by rules and notices, is still being applied, thus making the work of the Land Office unduly complicated.

(b) *Surveys.* The trigonometrical branch of the Survey was again employed on the coast, completing the major triangulation as far north as the Malindi district and some way up the Sabaki River. Complicated country, the thickness of the vegetation, haziness of the atmosphere, and sickness among the staff, rendered the output small.

A base was measured near Malindi by M. Guillaume's new method with new instruments. The results were very satisfactory.

Before the conclusion of the year, work on the Laikipiak Plateau, west of Kenya, was begun.

The field work on five sheets of topographical survey was completed, the total area being 3,774 square miles.

The country surveyed was of a difficult nature.

The cadastral branch was shorthanded owing to sickness and changes of staff, the total area surveyed being 553,261 acres, against 1,161,583 for the previous year, though the number of plots and farms surveyed has increased. The fact that the department was shorthanded and principally occupied in surveying small areas and land in townships accounts for the smaller output.

The expenditure on survey was £22,024, as compared with £21,725 in the previous year.

XIII.—GAME.

There has been an increase of 38 in the number of sportsmen's licences issued during the year, and a general increase in revenue from licences alone of over £2,700, the resident's licence having proved very popular.

The settlers are in many cases assisting to preserve the rarer species of game animals. There is also a large increase in the number of farms where preservation of game is carried on to a certain extent.

The year has been a very bad one for diseases. On the Athi Plains thousands of head died from parasites while weak from drought and poor feed. Gastro-enteritis swept through the country, killing many buffalo, eland, kudu, bushbuck, palla, and some giraffe. This disease is still prevalent. As it seems mostly to attack weaklings, I hope that it will not very seriously affect the game.

Southern Game Reserve.—Some poaching has gone on, and this will continue to take place till we can police the border.

Surveys have been made for a railway to Magadi. If its construction is decided on, means will have to be taken to preserve the game.

Game in general has suffered less from disease in the southern reserve than outside, and is on the whole quite satisfactory.

Elephant have been more in the reserve than usual, and a troop spent many months near Kiu.

Northern Game Reserve.—Little information has been received from here during the year, but game seems plentiful and does not seem to have suffered very much from disease.

Athi Plains.—Owing to numbers of ticks this shooting ground has been but lightly touched during the year. A fair number of lions have been killed.

Rift Valley.—This area has been almost entirely given up to farms, but settlers are in many cases giving us assistance in preserving the rarer species.

Sotik and Loita.—This district has been heavily shot during the past year and many splendid bags made, though lions are not so numerous as formerly.

Uasin Gishu Plateau.—This country is almost entirely settled, and game has been much reduced in numbers, but north of the Nzoia River it is still plentiful.

Game Ordinance, December, 1909.—The new Game Ordinance and Regulations came in force in December, 1909, and have given general satisfaction.

XIV.—KING'S AFRICAN RIFLES.

There were no expeditions during 1909-10. The only military operations undertaken were—

(1) a patrol to Sankuri—a place nearly 600 miles up the Tana River—for the purpose of preserving order amongst the Somalis, who had appeared in that neighbourhood in unusually large numbers; and

(2) some minor punitive measures against Lobwin's Turkana on the Upper Turkwell River in consequence of their unprovoked attacks on the Suk.

The Inspector-General of the King's African Rifles did not visit East Africa during the past year, and the annual inspection did not, therefore, take place.

Electric light has recently been installed in the military lines, and a garrison mess has been formed at Nairobi for the use of the officers of both battalions serving in this Protectorate.

XV.—PUBLIC WORKS.

The expenditure on public works during the year was £86,346, which was £23,799 less than that of the previous year. The decrease on the previous year's total was due to the necessity for economy in view of the somewhat unsatisfactory state of the Protectorate finances.

The expenditure under recurrent heads, maintenance, and repairs of roads and bridges, and buildings, &c., amounted to £28,152.

Many important works were undertaken, including the completion of the New Treasury at Nairobi, which cost over £9,000.

Further major works were prosecuted as follows:—Continuation of drainage scheme at Nairobi, £6,414; new gaol at Nairobi, £2,560; electric light was installed along sixteen miles of Nairobi streets and in numerous Government residences at a cost of £2,083; a veterinary bacteriological laboratory, a school for European children, and additions to Government House and to the police lines were completed at Nairobi; and a Mohammedan school was built at Mombasa.

Under minor works, a total of £8,217 was expended on 48 different works in various parts of the Protectorate. A sum of £15,950 was spent on the construction of new roads and bridges, the principal items of work being in Nairobi township, on the Kisumu-Mumias road, on a new cart road from Fort Hall to Nyeri, and on roads round Molo.

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

No. 705.

EAST AFRICA PROTECTORATE.

(For Report for 1909–10, *see* No. 669.)

THE GOVERNOR to THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
3rd November, 1911.

SIR,

I HAVE the honour to forward the Annual Report on the administration of the East Africa Protectorate for the year ended March 31st, 1911.

I have, &c.,
E. P. C. GIROUARD,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(22297—2.) Wt. 29478—571. 1125 & 85. 1/12. D & S.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

Revenue.

Exclusive of an Imperial grant-in-aid of £130,000, the actual revenue collected during the year 1910-11 amounted to £609,586, which was £60,698 over the estimate, and an increase of £106,546 on the revenue for 1909-10.

The following table shows the comparative detailed statement of revenue for the years 1909-10 and 1910-11:—

Head.	1909–10.	1910–11.	Increase.	Decrease.
	£	£	£	£
Grant-in-aid	133,500	130,000	—	3,500
Customs	63,594	78,124	14,530	—
Port, Harbour, &c.	665	1,096	431	—
Licences, Excise, &c.	130,011	162,735	32,724	—
Fees of Court or Office, &c. ...	19,411	19,857	446	—
Post and Telegraphs	19,942	22,725	2,783	—
Government Railways	235,714	283,618	47,904	—
Rents of Government Property	12,414	18,351	5,937	—
Interest	935	1,103	169	—
Miscellaneous Receipts... ...	15,484	11,343	—	4,142
Sale of Government Property...	2,887	4,223	1,336	—
Total, exclusive of Land Sales	634,557	733,175	106,260	7,642
Land Sales	1,983	6,411	4,428	—
Total	636,540	739,586	110,688	7,642
Total, exclusive of Grant ...	503,040	609,586	110,688	4,142

Excluding the earnings of the Uganda Railway, the revenue shows an increase of £58,642 on that for the previous year. Customs import and export duties realised £13,685 and £845, respectively, more than in the previous year; Hut and Poll Tax, £27,883; Game licences, £1,852; Stamp duties, £1,491; Survey fees, £782; Post and Telegraphs, £2,783. Rent of lands, other than forest areas, increased by £3,720, and rent and royalties from forest areas by £2,217. The decrease of £4,141 in Miscellaneous Receipts is due partly to a reduction in the quantity of ivory confiscated, and partly to the fact that the previous year's revenue included the non-recurrent item of £2,000, being sale proceeds of the steamer "Juba." Miscellaneous Receipts, however, exceeded the estimate for 1910-11 by £5,142; this was mainly due to the profit on purchased ivory. Under sale of Government Property, the earnings of the Agricultural Department increased by £1,305. The receipts from Land Sales, which include premiums on leases, increased from £1,983 to £6,411, due mainly to a demand for township plots, and for godown and office plots on railway ground at Kilindini.

Expenditure.

The total expenditure for the year 1910-11 was £682,041, against an original estimate of £726,885, and an expenditure of £669,405 in 1909-10.

The following table shows the comparative detailed expenditure for the years 1909-10 and 1910-11:—

Head.	1909–10.	1910–11.	Increase.	Decrease.
	£	£	£	£
Rent and Interest to H.H. the Sultan	17,000	17,000	—	—
Pensions	1,778	1,877	99	—

Abolition of Slavery...	13,595	5,125	—	8,470
Coast Land Settlement	—	2,660	2,660	—
Total	669,405	682,041	62,731	50,095

Excluding expenditure on the Uganda Railway open line account, the expenditure during 1910-11 was less than that during 1909-10 by £21,192.

The principal increases in expenditure over the previous year are:—Provincial Administration (ordinary and special) £2,446, due to increased staff and the occupation of the Northern Frontier District; Prisons £1,569, due to the increased number of prisoners, and corresponding increase in staff and expenses; Education £1,369, due to the extension of Education Scheme; Military (ordinary and special), £2,620, due chiefly to increased expenditure on rations and travelling expenses; Miscellaneous Services £1,203, due chiefly to depreciation of Currency Board securities; Post and Telegraphs (ordinary and special) £3,399, due chiefly to increased staff, cost of carriage of mails by sea, and special repairs to the Mombasa-Lamu telegraph line; Agriculture and Veterinary (ordinary and special) £5,962, due to the steps taken to combat diseases of live stock; Coast Land Settlement £2,660, being new expenditure incurred on the scheme for the registration of coast titles.

On the other hand, considerable reductions were effected, amongst which may be noted the following:—Police £7,377, due to reorganisation of the force and consequent reduction of strength; Medical £1,861, due chiefly to less expenditure being necessary in connection with epidemics; Forest and Scientific £1,546, due to special expenditure having been incurred in the previous year on foresters' cottages, and in connection with Lake Magadi soda deposits; Survey £2,439, due to a decrease in local transport and labour, and to the deletion of the vote for payments to licensed surveyors; Land Office £2,364, due chiefly to the abolition of the post of Commissioner of Lands, and the transfer of the Recorder of Titles' pay and expenses to the Coast Land Settlement schedule; Public Works £12,064, due to a reorganisation of the department, and a reduction in staff and programme of works; Abolition of Slavery £8,470, due to fewer claims for compensation to slave owners.

SUMMARY FOR THE LAST FIVE YEARS.

The totals of the Protectorate revenue and expenditure and grants-in-aid from Imperial funds for the last five years are as follows:—

Year.	Grant.	Revenue.	Expenditure.
	£	£	£
1906–07	164,000	461,363	616,089
1907–08	193,000*	474,760	691,677
1908–09	138,000	485,668	703,103
1909–10	133,500	503,040†	669,405
1910–11	130,000	609,586	682,041

* Includes special grant of £40,000 for abolition of slavery.

† A proportion of the Customs Revenue was handed over to Uganda, but for which the Revenue would have been £523,740 in 1909–10 and £630,971 in 1910–11.

Financial position on 31st March, 1911.

	£	£
Surplus of assets over liabilities		147,010
Amount sanctioned in aid of expenditure for 1911-12	16,967	
Amount revoted as remanet expenditure ...	10,000	
Additional remanet expenditure required to be revoted	9,131	
		36,098
Balance net available assets ...		£110,912

(B.) CURRENCY.

The circulation of the new subsidiary coinage, which is current in both the East Africa and Uganda Protectorates, doubled during the course of the year 1910-11, as will be seen from the following table:—

Denomination.	In circulation.		Increase.
	31st March, 1910.	31st March. 1911.	
	Rs.	Rs.	Rs.
50 cents, silver	92,732	1,70,703	77,971
25 ,, ,, ...	61,418	90,192	28,774
10 ,, nickel	86,452	1,48,600	62,148
1 cent. ,, ...	1,20,747	3,16,952	1,96,205
½ ,, ,, ...	4,500	4,500	—
Total	3,65,849	7,30,947	3,65,098

Although the old copper pice and aluminium cents ceased to be legal tender as from 1st June, 1910, the following quantities were either still in circulation, or unaccounted for on 31st March, 1911:—

	Rs.
Copper pice	2,09,082
1 Cent, aluminium	30,734
½ ,, ,, ...	2,170
Total ... ...Rs.	2,41,986

The total value of currency notes in circulation on 31st March, 1911 was Rs. 28,29,000, as compared with Rs. 18,32,500 on 31st March, 1910, being an increase of Rs. 9,96,500.

II.—TRADE AND SHIPPING.

(A.) TRADE.

The following statement shows the value of the trade of the Protectorate for 1910-11, as compared with the annual value of the four preceding years, together with the centesimal variations, the value of the period ending 1906-07 being taken as 100.

Year.	Imports.	Centesimal variations.	Exports.	Centesimal variations.	Total.	Centesimal variations.
	£		£		£	
1906-07	765,407	100	440,705	100	1,206,112	100
1907-08	799,717	105	515,052	117	1,314,769	109
1908-09	797,158	104	436,313	99	1,233,471	102
1909-10	775,246	101	590,057	132	1,365,303	113
1910-11	1,000,346	131	962,911	218	1,963,257	163

From the above it will be seen that the export trade was lowest in 1908-09, which naturally reacted on the import trade in the following year. During the quinquennial period, the expansion of trade was in the proportion of 31 per cent. in imports, 118 per cent. in exports, and 63 per cent. in the total trade.

The above figures do not include importations on behalf of the East Africa and Uganda Administrations, or material for the construction and maintenance of the Uganda Railway, or specie and bullion, or goods in transit. The total imports inclusive of these figures amounted to:—

Year.	£
1906-07	1,238,409
1907-08	1,251,027
1908-09	1,174,014
1909-10	1,165,673
1910-11	1,606,525

The increase being £368,116, or 29 per cent. over 1906-07. This sum of £368,116 includes specie and bullion valued at £209,674, showing an increase of £152,739 over the previous year, due to the increased circulation among the natives and to the opening of new branches by the National Bank of India and the Standard Bank of South Africa.

REVENUE.

The gross revenue realised from trade imports (exclusive of Government importations and specie) was, during the year under review, £113,836, whilst refunds and drawbacks amounted to

£27,114. The net revenue from import duty therefore was £86,722, an increase of £14,375, or 20 per cent. over that of the preceding year.

The duty on exports amounted to £12,786, an advance of £844, or 7 per cent. over the last year. The total Customs revenue from import and export duties exceeded that of the previous year by £15,219.

IMPORTS.

The principal articles of the import trade are stated below, together with their value in pounds sterling:—

	£
Cotton goods	261,141
All other sorts	164,206
Provisions	77,351
Sugar	33,332
Building materials	27,905
Grain, including rice, flour, and wheat	80,654
Agricultural implements	29,265
Bags and sacks	13,691
Sundries	312,801
Total	£1,000,346

The total increase in the value of trade merchandise during the year under review amounted to £225,100, or 29 per cent. over the previous year.

The more noticeable advances are in cotton goods, brass and copper wares, building materials, provisions, sugar and "all other sorts."

The largest item of imports is that of cotton goods, which represents 26 per cent. of the total value. The quantitative increase over the preceding year is one of 10 per cent., while the rise in specific value is 14 per cent. The share in the imports of cotton goods contributed by the United Kingdom, which heads the list with 24 per cent., is followed by the United States and Holland, each with 20 per cent.

With the opening of new districts, improved means of communication, and the increasing confidence of the natives in the Administration, the demand for cotton goods is likely to assume large dimensions.

The class next in importance is "all other sorts." This composite head includes many unspecified items. It forms 16 per cent. of the total import trade, and shows an increased value of £67,112, or 69 per cent. over the previous year. The share of the United Kingdom amounted to 43 per cent. of the total value, viz., £164,206.

The trade in provisions has assumed respectable dimensions, and represents 8 per cent. of the total imports. The rise in value is one of £13,756, or 22 per cent. over the previous year. The United Kingdom continues to supply about half of this import.

There was a diminution in the imports of sugar during 1909-10 amounting to £9,746, but this trade revived, and has now assumed its former position. The total import amounted to £33,332, of which Austria-Hungary contributed 60 per cent.

Building materials, which showed a decrease of £9,832 in 1909-10, increased by £11,353 during the year under review, and showed activity in the face of the increasing local supply of timber, &c.

The importation of grain, rice, wheat, and flour, shows an increase of £5,774 over the preceding year, but a decrease of £18,819 as compared with 1908-09. There is also an increasing demand for locally-grown food-stuffs.

The continued increase in the importations of agricultural implements, bags and sacks for produce, motor cars for transport, machinery, and iron and steelwares, is indicative of the steady development of the agricultural resources of the country.

The increased importation of salt and tobacco is due to the growing demand by the natives, and the modest increase in the imports of ale, beer, and wines is to be ascribed to the growth of the European population of the Protectorate. The rise in value of £4,573 under ammunition and firearms is attributable to the increasing number of European sportsmen visiting the country.

The other noticeable increases occur under " Boots and Shoes," " Brass and Copperwares," and " Kerosine Oil," which are indications of the expansion of trade among the native population.

The aggregate value of decreases in various articles of imports amounted to £27,623, as against a total increase of £252,723 in the imports for the same period.

The largest single item of decrease, viz., £8,659, which appears under the head " Sheep," is due to a consignment which was imported specially for breeding purposes from South Africa during the previous year.

There is also a decline under the head " Furniture," amounting to £7,786, which is to be accounted for by the growing appreciation of locally-made articles of indigenous wood.

The quantity of spirits and liqueurs imported receded from 36,747 gallons in 1909-10 to 31,737 gallons in 1910-11, a decrease of 14 per cent. The value fell from £18,440 to £16,500, a decline of 11 per cent. The falling off is not, however, attributable to the decreased consumption, but is due to the carry-over of large stocks which were imported in 1908 and 1909, in anticipation of the proposed enhanced rate of duty on spirits and liqueurs which came into force in January, 1910.

The decrease of £988 in the value of seeds and plants imported during the year is due to their distribution to planters and farmers at reduced prices by the Agricultural Department and to the local supply.

The imports of wearing apparel, drugs, medicines, chemicals, earthen and glass wares, which showed advances last year, have receded owing to the accumulation of stocks.

The variations in the value of other minor heads are due to the usual fluctuations in trade, as importations of articles could not be evenly distributed over successive years. The trade for the year 1910-11 marks in almost every respect an advance upon its predecessor, and the future prospects for the trade of the Protectorate are very bright. With the exception of cotton goods, kerosene oil, sugar, and tobacco, the share of the United Kingdom in the various articles imported during the year under review is larger than that of all foreign countries combined.

RE-EXPORTS.

A small portion (about 7 per cent.) of the total foreign imports declared for home consumption was re-exported to neighbouring countries, and mostly overland to German East Africa by the Uganda Railway.

The value of these re-exports rose from £33,600 to £70,002 in 1910-11—an increase of 108 per cent.

EXPORTS.

The total value of exports during 1910-11 of British East African produce (exclusive of Uganda, German East Africa, the Congo Free State, and the Soudan), amounted to £276,480, as against £190,668 in the preceding year, the advance being one of £85,812, or 45 per cent.

The principal articles of exports are enumerated in the appended list with their values in sterling.

	£
Copra	30,608
Grain	59,156
Hides and skins	62,258
Ivory	21,975
Rubber	31,963
Domestic produce	276,480

The noticeable increases over the previous year in the value of the principal articles of export are under grain, hides and skins, copra, rubber, wool, wax, mangrove bark, cotton, and coffee.

The largest single item of export is that of "hides and skins," which forms 22 per cent. of the total export of the East African produce. The increase in quantity is one of 30 per cent., and in value 46 per cent. over the previous year, the difference between these two percentages marking a rise of 16 per cent. in specific value. The trade received a temporary set-back in 1908-09 due to the paralysing effect of the financial crisis in the United States of America at the end of 1907. It has, however, more than recovered its normal dimensions, and appears capable of further expansion. The hide and skin trade is essentially international in character. The passing of the Payne-Aldrich Tariff in August, 1909, which removed the 15 per cent. *ad valorem* duty on raw hides entering the United States greatly stimulated competition and, in consequence of the increasing external demand, prices rose to unprecedented figures. The principal buyers of hides are the

United Kingdom and France, whereas shipments of skins, with insignificant exceptions, go to the United States.

Grain is the next item of importance, the exports of which form 21 per cent. of the total exports. The value showed a rise of 110 per cent., while the quantitative expansion was as much as 225 per cent.

Sim sim (Sesamum seed) valued at £23,537 was shipped to France for the production of edible oils. The exports of maize amounted to £21,297, a rise of 237 per cent. in quantity, and 272 per cent. in value. The abnormal increase is largely due to the effects of the Administration, aided by the Agricultural Department, to improve the quality of this cereal and extend the area under cultivation.

The exports of rubber have beaten all previous records, and amounted to £30,903 (1,672 cwt.), as compared with £22,544 (1,582 cwt.) in 1909-10. The quantitative expansion of 6 per cent. in conjunction with a 35 per cent. rise in value, means an increase of 29 per cent. rise in specific value. Here, as elsewhere, the cultivation of rubber continues to excite a good deal of attention. The principal purchasers of rubber are the United Kingdom (£18,128), and Germany (£9,703).

After two lean years there was an appreciable increase in the exports of copra (the dried kernel of the cocoanut). The increase in quantity is 77 per cent., and in value 90 per cent., which means that the average price in 1910-11 hardened by 13 per cent. over the preceding year. The high price maintained has encouraged the natives to prepare larger quantities for export. Copra has steadily risen in price owing to the increasing demand for cocoa butter and to the shortage of animal fats of all kinds. The area under cultivation has increased steadily during recent years, and there is every prospect of there being a steady yearly improvement in this respect.

The trade in mangrove bark has recovered, the increase in quantity being one of 70 per cent. The outlook for wattle planting is very promising. The first shipment of ten tons of wattle bark has been made to the United Kingdom, and the quality is well reported on.

The exports of coffee amounted to £2,995, an increase of £1,927 over the last year. The increased local consumption of coffee has ousted the foreign imports, and the exportable surplus of this product will be greatly increased during 1911-12.

There is an increase of £3,680 in the value of beeswax exported. The increase of £6,754 and £3,037 in wool and cotton, respectively, is satisfactory. The production of wool in British East Africa is confidently expected to increase.

The other increases amounting to £7,339 which occur in sea shells, ostrich feathers, horns, live stock, and fine woods, are of minor importance.

The aggregate decrease in the value of exports of East Africa produce amounts to £11,550, as against a total increase of £97,362 during the same period. The principal decrease is in ivory.

The export figures of British East African ivory during the past nine years tend to show that after six consecutive years of diminution the exports took an upward turn in 1908-09, showed a further rise in 1909-10, and receded again in 1910-11. The shrinkage in the export is due to steps taken for the preservation of the elephant. Cow ivory and tusks weighing less than 30 lbs. each may not be exported.

The exports of fibre receded from £6,312 to £3,727, and from 11,403 cwt. to 6,388 cwt. This was due to the low prices obtained from Sanseviera, which brought about a partial cessation of production. The cultivation of sisal and cocoanuts will be the basis of agricultural prosperity in the coast regions.

The direct home trade has been better served by the steamer lines, and this has naturally attracted increased shipments of cotton, rubber, and hides to the United Kingdom, which purchased 5 per cent. more than in 1909-10.

Foreign countries have taken 2 per cent. more, due to the increased exports of copra and grain. There is a relative decline of 7 per cent. in the exports to British possessions, though an absolute increase in value of £1,389.

The produce of Uganda and German East Africa, and other neighbouring countries passing through the port of Mombasa, is included in the returns of exports (*vide* Appendix II.).

Reviewing the foreign export trade, the exports from the Uganda Protectorate show an excess of £96,033 over those of British East Africa, and consists principally of cotton, ivory, rubber, hides, skins, chillies, and grain. Uganda's position as a cotton producing country is particularly noticeable. The export of cotton amounted to £203,426, or 55 per cent. of the total trade. Five years ago it was £5,214 only.

Rubber valued at £23,963, hides and skins at £50,329, ivory at £49,533, cotton seed at £10,268, and other products at £371,513, were exported from Uganda, showing an increase of 80 per cent. over the previous year.

The exports of produce from German East Africa through British East Africa amounted to £285,538, an increase of 70 per cent. over the previous year. The principal items of exports are hides and skins, rubber, grain and oil seeds, coffee, and gold.

The export of ivory from the Congo Free State amounted to £27,349 during the year under review.

The import trade in 1909-10 seemed to have remained stationary, although the export trade was one of recovery. The healthy signs of revival in the import trade of 1910-11 did not appear until the third quarter, while the export trade was active throughout the year, as is evidenced by the regularity of shipments.

The increase in the imports of trade merchandise in the year under review is one of 28 per cent., and that of exports 45 per cent. over the previous year.

The financial status of trade in East Africa suffers periodically from the effects of overtrading. Petty merchants are tempted with long credit to increase the volume of their business beyond the margin of safety. This, of course, leads to bankruptcies, but with the elimination of this weakness everything would point to increasing confidence in the potentialities of the country, and greater activity in the next year's trade.

The opening of new branch lines as feeders to the Uganda Railway, improved means of transport and shipping facilities, the making of new roads to outlying districts rich in produce, and the establishment of the soda industry, are bound to increase the volume of the import trade.

The good prices at present obtainable for nearly all products stimulate the natives to sustained exertions. The export trade would, however, receive greater impetus should there be a reduction in the direct freight rates, thus enabling produce of low value to be exported.

Advantage has been taken of the improved shipping facilities now offered by the new working arrangement of the Kilindini wharves and sheds, which has already relieved the congestion of the Mombasa godowns, and has rendered it possible to turn out cargo more satisfactorily. The reduced handling of the goods appears to be appreciated by the mercantile community.

(B.) SHIPPING.

Of the two chief ports in the Protectorate, Kilindini and Mombasa, the former, lying on the west side of Mombasa Island, is by far the larger, and is, in consequence, used by all the principal steamers. Mombasa Harbour is small, with a narrow entrance, and is, therefore, only available for small steamers and dhows, though it is the more conveniently situated of the two, owing to its proximity to the business quarter of the town.

The Protectorate has been served during the whole year by three regular lines of mail steamers, the British India Steam Navigation Company, the German East Africa Line, and the Messageries Maritimes.

The Union Castle Line has been running for the last six months, and the Italian Mail Line for the last eight months of the year.

The British, French, and Italian Lines have called once a month, and the German Line once every three weeks.

In addition to the above, the British India Steam Navigation Company's steamers have called once a month with cargo transhipped at Aden.

The Clan, Ellerman, and Harrison Line, the Natal Line, and the Bombay Persian Line of steamers have also called once a month.

A branch of the German East Africa Line maintained a regular service twice a month with Bombay, with occasional visits to Lamu.

The coast traffic has been carried on by two small steamers belonging to Messrs. Cowasji Dinshaw and Brothers, and Messrs. Esmailji Jivanji and Company.

The following table shows the gross tonnage of ships, the amount of cargo, and the number of passengers landed and shipped by the different steamship lines at Mombasa.

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengors.	
				Euro-pean.	Indians and Natives.		Euro-pean.	Indians and Natives.
			Tons.			Tons.		
British India, Aden ...	26	85,943	2,581	130	517	2,808	127	613
British India, Europe...	14	41,939	4,722	5	9	2,119	6	118
German Line, Bombay	58	180,747	6,422	144	3,249	1,314	99	2,671
German Line, Europe...	56	323,519	9,676	883	1,177	13,833	610	487
Messageries, Europe ...	24	92,660	762	324	204	575	285	203
Bombay Persian, Bombay.	13	25,125	338	7	357	299	—	287
Union Castle, Europe...	21	129,509	10,928	477	143	6,605	408	220
Harrison Line, Europe	11	34,111	1,117	—	6	1,002	1	53
Italian Line, Europe ...	18	39,944	414	46	183	694	36	418
Total	241	953,497	36,960	2,016	5,845	29,249	1,572	5,070

The total steam tonnage entered in the ports of the Protectorate amounts to 1,301,750 tons, represented by 611 steamers, an increase of 153 vessels and 293,736 tons over last year.

The tonnage of sailing vessels entered in the ports of the Protectorate amounts to 62,990, represented by 3,628 vessels. This is an increase of 43 vessels, but a decrease of 2,227 tons compared with 1909-10.

A new leading mark has been erected at Ras Serani, off Mombasa, and a 4th order port light fitted on the top of it.

A new leading mark has been erected at Port Malindi.

The revenue of the Port Office amounted during the year to £2,971.

III.—INDUSTRIES AND MINES.

(A.) INDUSTRIES.

Flour Milling.—The firm of Unga, Limited, established in Nairobi, has started an export trade to German East Africa, and this extension promises well. The firm suffers from competition caused by the importation of flour from Bombay, but the areas under wheat are increasing annually to such an extent that it appears likely that in a short time the mill will be working up to its maximum capacity.

Six corn-grinding mills have been set up in the Nyanza Province. They are all worked by water power. At Maseno, near Kisumu, is a corn mill, worked by an oil engine, the property of the East African Industries, Limited.

Saw Milling.—The British African Sawmills, situated at Nairobi, report an increase of 65 per cent. in their trade, as compared with 1909-10. They have erected a new sawmill in Nairobi with all the latest machinery, and during the coming year propose to import further plant to the value of £2,000.

Cotton Ginning.—There is a ginnery, the property of the British East Africa Corporation, which is established at Kisumu. The present installation consists of 18 gins capable of turning out over 1,000,000 pounds of ginned cotton every year. Practically all the cotton at present dealt with comes from Uganda. During the year a new hydraulic baling press has been imported and is worked by gas generated from cotton seed. Other ginneries, which also belong to the British East Africa Corporation, have been erected at Kilindini and Malindi.

Dairies.—The farmers of the Lumbwa District have combined and brought into existence the "Lumbwa Creamery, Limited," which is under European management. A fair quantity of butter of good quality is turned out by up-to-date methods.

Near Nairobi there are three excellent dairy farms, and two others at Molo which produce milk and butter of the best quality, the demand for which is frequently in excess of the supply.

Brick and Tile Works.—Shortage of water has considerably lessened the output of bricks anticipated by the East African Industries, Limited, at their factory near Mombasa. Steps are, however, being taken to guard against this difficulty in the future, and there is every reason to expect that the works will in the future be most successful.

The Company have during the present year also opened a steam joinery.

Printing and Publishing.—These businesses report an increased turn-over during the year under review. Early in the year a daily edition of the East African Standard was published, and has attained to a considerable circulation. This firm has built new offices and imported much expensive plant, notably a Linotype machine costing £1,000.

Steam Laundry.—A steam laundry has been started in Nairobi, and is reported to be proving a successful venture.

Wattle Bark.—Wattle bark, exported by Messrs. Newland, Tarlton, and Company, realized the highest prices in the London market, and their consignments were estimated to contain 10 per cent. more tanning material than South African bark.

Other Industries.—The Uplands Bacon Factory in the Highlands continues to produce bacon of good quality, and its trade has considerably increased.

Several firms in the Highlands, notably between Nairobi and Fort Hall, are engaged in the cultivation of sisal. Most of them are erecting, or have already erected, mills, and some of the crops are ready for decorticating. When the Nairobi-Thika Tramway becomes an accomplished fact, this industry should derive a great impetus from it, as the heavy charges for transport to Nairobi will be thus avoided.

Messrs. McDonell Brothers and Smith have established an export trade with remarkable success, and since May, 1910, they have exported 608 tons of varied produce, representing a value of about £10,000.

(B.) MINES AND MINERALS.

Thirteen prospective licences have been issued during the year, but no very important or commercially valuable discoveries have been made.

The most important event of the year has been the discovery of coal near Mackinnon Road Station. The area was roughly inspected by the Commissioner of Mines, and the samples found were reported as real coal, but the outcrop was not determined. Further investigations are to be made, and the surrounding district is to be exploited by a geological expert.

Arrangements have been made for the construction of the Magadi Railway, and it is anticipated that the soda obtained from the lake will eventually prove a source of considerable revenue to the Protectorate.

Several samples of minerals received from prospectors have been tested, but up to the present nothing of commercial value has been declared.

An application for a concession to work certain mineral water springs in the Nandi Native Reserve was refused in view of strong local objections, as the springs have for years past been used by the natives as salt licks for their cattle.

Samples of diatomite deposit discovered in the Rift Valley, in the Naivasha Province, were forwarded to the Imperial Institute for examination, and a favourable report was received, but at present the steamer freight is a great impediment and does not admit of the profitable working of the deposit.

Mica is found near Machakos, and a German firm has applied for areas, but no work has yet been commenced.

An interesting discovery of fossils was made by Mr. Chesnaye in 1910 on the eastern side of Lake Victoria. These fossils include part of a jaw with teeth of a small extinct proboscidean of the genus "Dinotherium," portions of a small rhinoceros, and fragments of the shell of a giant tortoise. The great interest of the discovery is that hitherto no remains of Tertiary mammals have been known from Central Africa, although a considerable number of different species have been described from both the northern and southern portions of the continent. It seems probable that, when these new fossiliferous beds have been explored by trained investigators, very rich discoveries will be made of great importance in tracing the origin of modern mammals.

IV.—AGRICULTURE AND STOCK RAISING.

The hopeful feeling that came into being last year has increased considerably during the past twelve months as a result of the large inflow of money for development in many branches of farming. Other contributory causes are the continual influx of settlers, many of them possessed of substantial means, the general rise in the value of land, the increase in the exports and imports, and the formation of numerous companies for the exploiting of various industries, the data obtained from experimental results having been such as to induce business men and financiers at home to invest their capital.

(A.) HIGHLANDS.

In the Highlands the extended cultivation of maize, beans, wheat, coffee, and wattle has been most marked. Owing to a drought in both growing seasons, the yields from the maize and bean crops have been below the average, but there was a very large increase in the extent of land put under cultivation.

An export trade in maize was started last year, and during the year under review some 20,000 bags were forwarded to European markets, for which very satisfactory prices were obtained.

There has been a slight decrease in the export trade in beans due to climatic conditions, but the prices realized were good, and Rose Cocos and Canadian Wonders were sold at £11 to £11 15*s*. per ton in the Marseilles and Hamburg markets, prices which have well repaid the growers. Two harvests in a year can be depended upon in many parts of the Protectorate.

It is estimated that the yield from the recent wheat harvest will equal the local demand for the next 12 months, and there is every prospect of establishing an export trade next season. Rietti is the variety usually grown.

Coffee is making steady progress, and in one plantation 3 lbs. of berries per tree were harvested. The average price locally was £50 per ton, while as much as £68 per ton was obtained in Europe.

The very favourable reports received from the Imperial Institute on samples of wattle bark sent from the Protectorate have attracted increased attention to this industry. During the last 15 months it is estimated that some 2,000 acres have been planted out, and the cultivation of further extensive areas for sowing next season is proceeding rapidly. Wattle-growing is likely to become a great factor in the agricultural industry.

The number of cattle shows no increase on that of last year. This is due to outbreaks of gastro-enteritis, rinderpest, and East Coast fever; but notwithstanding the prevalence of disease the prices for cattle sold privately and at auction sales have been higher than in any previous year.

Sheep have developed in a marked manner; in fact, the increase —more especially in graded sheep—has surpassed all previous records. Great improvement has resulted from the up-grading of native sheep crossed with merinos.

Numbers of mares have recently been imported from South Africa which should serve as good foundation stock, and it is hoped that the hardy Abyssinian mare will prove useful for building up the industry generally.

Large numbers of mules have been introduced from Abyssinia, and as a result the prices charged for mules are considerably less than formerly.

It is hoped before long to establish an export trade in bacon; pigs are doing extremely well, but the local demand for good bacon still exceeds the supply.

Ostrich farming has made a striking advance; the numbers and size of the birds have increased, and the quality of the feathers has been of a higher standard. Enquiries have been made by breeders from South Africa as to the possibility of obtaining birds from this Protectorate for stud purposes.

(B.) COAST AND NYANZA BASIN.

The output of cotton has been practically double that of last year, but the dry land cotton areas are limited, and any great export of cotton from them must not be expected. On the other hand there are very extensive tracts of land along the banks of the Tana and Juba Rivers which, with the expenditure of money on irrigation works, might well become most fertile and productive. Experiments are being carried out on both rivers with a view to ascertaining the most suitable seed. It is estimated that some 500,000 acres of land along the south bank of the Juba River could be irrigated, which, under cotton, should make an appreciable addition to the world's output.

With the rise in price during the past year the exports of copra have doubled in value. Large areas are being planted out with young coconut palms, and in a few years the number of bearing trees will be considerably increased.

Next to copra the value of the rubber export for the past year is greater than that of any other agricultural or plantation export, and it must be remembered that as yet few of our plantations have reached the full tapping stage. The results obtained from consignments of Ceara rubber exported are very favourable. A number of companies have been formed during the year, and there has been a large inflow of capital for further development. When the land titles on the coast are settled it is anticipated that extensive areas will be put under this product.

A number of sisal plantations are now reaching maturity, and decorticating operations will shortly commence. On one plantation, where 800 acres have been planted, the sisal on 200 acres is now ready for cutting.

The export of sim sim has much increased, and natives are being encouraged to plant this commodity more extensively.

The maize crop in the coast districts has been more than double that of last year, and 800 tons were exported from Malindi alone.

(C.) EXPERIMENTAL FARMS.

Nairobi Farm.—An exhaustive series of experiments has been carried out with crops considered suitable for growth in the Protectorate, with the result that the satisfactory issues obtained from previous experiments have in many cases been confirmed, and it is now proved that certain introduced crops may be taken up as accessory or main branches of farming with good prospects of success. Very valuable data have moreover been collected with regard to the comparative yields of different varieties of maize, beans, wheat, potatoes, &c.

A cage has been erected on the farm, and experiments have been begun in the hybridizing of wheat. It is hoped in time to produce a variety which will be resistant to rust.

The station has also been utilized as a farm for the breeding of pigs, and a large number of pure bred sows and boars has been disposed of to settlers for the purpose of grading up their stock. The grading of the native cattle with the Red Polled breed, and also of donkeys with the Catalonian jack, has been taken in hand with marked success, and the station is now considered a very important centre to visit, at which much valuable information can be acquired, not only by the settler who has already taken up land, but also by the new-comer or prospective settler.

There are at present three Clydesdale mares on the farm, all of which have remained in good health throughout the year. There are also two pure bred South Devon cows, one pure bred Red Poll bull, and one Shorthorn bull. In September all the cattle were inoculated against rinderpest; one succumbed from the effects of the inoculation.

Four elands were procured and "broken" to work. They were found to be more tractable than might have been expected, and they are of better stamina than zebra, which were previously experimented with.

The total number of live stock on the farm is 502.

Mazeras.—This station has been responsible for the collection of further valuable data in connection with tropical crops considered suitable for development on the coast belt. In addition to supervising the work of the station, the Plant Instructor has made a series of tours along the coast to advise on the cultivation and growth of promising products.

Kibos.—It has been arranged for this station to be conducted mainly in the interests of the natives. Crops which are considered suitable for the Lake Districts are extensively grown, and all available improved seed is issued to the natives through the administrative officials of the Province. For three weeks in every month the Plant Instructor is occupied in travelling round the native districts and in giving instruction to the natives. This teaching is now beginning to bear fruit, and the chiefs are becoming more alive to the importance of better cultivation and the sowing of improved seed.

Naivasha.—The annual sale of stock at this station is an event which is always eagerly awaited by the stock breeders of the Protectorate, and the sale held in November last was strikingly successful. Dairy farmers were ready to pay high prices for cows with calves at foot, and pure bred cattle were in strong demand. The competition for pure bred sheep was very keen, and the fact that during the two days' sales over 200 merino rams changed hands is in itself sufficient indication of the growth of the wool industry in the Protectorate. Grade rams also were much sought after, and afforded an object lesson as to what can be done in grading up the native ewes.

The following are some of the prices obtained at the sale, and they show the readiness with which settlers are prepared to purchase high-grade animals to stock their farms:—

	Rs.
Pure bred bulls	555
Grade bulls	235
Grade cows and heifers	370
Pure merino rams	115
Grade rams	28
Pure merino ewes	36

The gross proceeds were Rs. 27,600 (£2,506).

(D.) DISEASES OF ANIMALS.

East Coast Fever.—This disease continues to prevail in the Nairobi-Kyambu District, but is practically quiescent in the Machakos District, where the mortality, even among calves, has dwindled down to a very small percentage; but, as the number of calves born on these large areas is not sufficient to maintain an equal infection throughout the pasture land, outbreaks of an epizootic character are to be expected from time to time.

There seems every indication that the disease is gradually assuming an enzootic character as regards the cattle in some of the known infected areas, and this can be largely accounted for by the restrictions placed on the movements of cattle within these areas.

Experiments with this point in view have been carried out during the past two years, and the results have been most instructive and encouraging.

The highly infected area at Kamiti has been used as a testing station to ascertain the resistance exhibited by cattle placed upon it; the infection being constantly kept up by introducing susceptible grade cattle which have, in the majority of cases, contracted the disease. The results of the experiments at the Kamiti testing station since July, 1910, are as follows:—

Animals entered.	Deaths.	Remaining.	Released as immune.
789	126	124	539

The further investigations which have been made regarding this disease have enabled the veterinary officers to gain considerable information both as to the manner of its occurrence in various districts and the resistance exhibited by cattle bred in such districts. The difference in the mortality in various outbreaks has been so extraordinary as to render the administration of measures by which to control it particularly difficult. Whereas in some outbreaks 80 to 90 per cent. have succumbed, in others the mortality has been extremely small.

Some 700 head of immune oxen are now in use along the public roads, and the transport difficulty has been overcome. The endemic areas have been opened up for trading, and movement of cattle under permit has been facilitated.

Rinderpest.—Rinderpest has caused heavy mortality in some districts. The native reserves have suffered most, and this is due in great part to the large numbers of cattle held by the natives, consequent co-mingling, and the carrying of infection from kraal to kraal by offal or pieces of meat taken from diseased carcases. During the last seven months of the year under review, 30,000 doses of serum were issued from the laboratory; its use has been most beneficial, and the natives of the Nyanza Province have supplied the department with cattle for serum purposes. In some districts, and particularly the Northern Masai Reserve, the disease has now disappeared.

Pleuro-pneumonia.—An outbreak of pleuro-pneumonia occurred in the Northern Masai Reserve, but the disease has been confined to a limited area.

Anaplasmosis.—Marginal points (*Anaplasmosis*) is the cause of some mortality among imported cattle, and experiments are now in progress in the hopes of obtaining an inoculation similar to that which has proved so successful against Texas fever.

Horse Sickness.—Notwithstanding the large importations of horses and mules into the Protectorate, no severe epidemic of horse sickness has occurred.

Lymphangitis.—Epizootic and ulcerative lymphangitis have been fairly prevalent among mules and the poorer class of pony.

Mallein Test.—All horses imported by sea without certificates are tested with mallein, and all equines imported from Abyssinia are tested at the frontier station.

Sheep-pox.—A number of outbreaks of sheep-pox have occurred in the Rift Valley, Mau, and Northern Kavirondo Districts. With the exception of the outbreak in Northern Kavirondo, where the mortality ran high, the disease has been of a benign nature.

Scabies.—Scabies is fairly prevalent throughout the Protectorate. This disease becomes of greater moment as the stocks of woolled sheep increase, and while all trade sheep have been dipped at Nakuru and Rumuruti, little advancement in the eradication of this disease has been made. Every endeavour is being made to increase the number of public dippers to facilitate and encourage the dipping of sheep throughout the Protectorate.

Swine Fever.—Swine fever has been the cause of heavy loss to pig owners. The East African form of this disease is peculiarly virulent, and is not amenable to treatment by serum which is effectual against the English and American form of the disease. Further experiments with a view to obtaining a preventive serum are now being conducted.

Glanders, &c.—The country is free from glanders, rabies, foot-and-mouth disease, and tuberculosis.

Permit System.—The permit system for the movement of stock is in force throughout the Protectorate, and has done much to control illicit movement. It also informs the farmer or native how he can move his stock with the greatest safety to himself and his neighbours.

The cattle belonging to the natives in the Kyambu and Nairobi Districts have been removed into the Native Reserve and branded. This has greatly checked illicit movement.

(E.) INSECT PESTS AND PLANT DISEASES.

In the Njoro district the wheat when from four to five inches high was attacked by beetles in such numbers as to threaten the crop, but, fortunately, the application of a mixture of Paris green, bran, and sugar, spread over the land, proved effective, the insects taking greedily to the poisoned bait.

Cut worms were responsible for a certain amount of damage to young coffee trees, maize, and potatoes, but, with the above exceptions, crops were comparatively free from insect pests.

Two fumigators have been erected, one at Kilindini and the other at Mombasa, and all imported seeds and plants found after inspection to be infected with insect pests or fungoid disease are either fumigated (if fumigation is considered effective) or destroyed. 1,861 consignments of imported seeds and plants were examined during the year. Of the 20,000 bags of maize exported, 2,000 bags were found on examination to be infected. These were fumigated before being passed for shipment.

Rust was again responsible for a certain amount of loss to wheat growers, but not to the same extent as in the previous year, a rust-resistant variety, Rietti, being more generally grown.

Fencing.—Wire for 228 miles of fencing has now been issued to settlers under the provisions of the Fencing Ordinance, and 274 miles of fencing have been erected by Government around areas infected with cattle disease and along stock routes. Owing, however, to the large number of tested oxen available for transport in the infected areas, and to the fencing of the Native Reserves, East Coast fever is now more under control, and further fencing by Government on any large scale is not anticipated. It is hoped that most of the 165 tons of wire now in the Government store will be available for issue to settlers for fencing to be erected by themselves under the provisions of the Fencing Ordinance.

Branding.—Two hundred and forty-nine cattle brands have been registered, and almost daily applications are being made for the registration of further brands. It is again pleasing to record that but few branded cattle have been stolen during the year.

V.—FORESTS.

Forest Reserves.—There has been no material alteration in the area of the forest reserves during the year under review.

Reforesting.—Blanks have been filled up in the previous year's planting, and weeding and cleaning of plantations has been carried on over 605 acres. 378 acres of new plantations were formed at an average cost of Rs. 29.38 per acre.

Nurseries.—1,856,316 young trees were raised during the year; over 900,000 were planted out, sold, or issued free to Government Departments, and 1,558,042 young trees were in the nurseries at the close of the year ready for planting out in the coming season.

Natural Regeneration.—Rs. 554.64 was spent in clearing under and around seed bearing trees of good species in order to promote natural regeneration, but the results were disappointing.

Railway Fuel.—1,141,613 stacked cubic feet of fuel were cut from the forests during the year.

Rubber.—4,505 lbs. of Landolphia rubber were collected in the Kenia Forests.

Expenditure.—The total expenditure of the Forest Department amounted to £12,272 19*s.* 7*d.*

Revenue.—The cash revenue amounted to £4,357 16*s.* 4*d.*, being an increase of £2,512 over that of the preceding year. Included in this amount is the sum of £1,407 realised from royalties on mangrove bark and borities.

The value of forest produce issued free was £4,232 13*s.* 11*d.* This amount covers the value of fuel extracted from the forests by the Railway Department.

VI.—COMMUNICATIONS.

(A.) RAILWAY.

(1) *Uganda Railway.*—The re-alignment between Mazeras and Mackinnon Road stations added slightly to the length of the main line, so for statistical purposes the length of the Uganda Railway was reckoned as 585 miles during the year ended 31st March, 1911. The total capital cost excluding suspense account now stands at £5,448,662, and including steamers on Lake Victoria and works added from funds provided in the annual estimates, at £5,683,297.

The total revenue for the year amounted to £300,116, as against £246,146 for the year 1909-10, an increase of 21·93 per cent. The total expenditure amounted to £201,596, as against £180,279 for 1909-10, an increase of 11·82 per cent. The net profit is therefore £98,519, as against £65,867 for the previous year.

The total tonnage handled advanced from 60,213 tons in the previous year to 77,478 tons. There was a considerable increase in both upwards and downwards traffic, as is shown by the following figures:—

	Upwards. Tons.	Downwards. Tons.
1909-10	31,395	28,818
1910-11	40,776	36,702

The additional downwards tonnage was chiefly in cotton, cotton seed, maize, ground-nuts, hides, coffee, wheat, and rubber.

The total goods receipts show an increase of £35,844.

The reduced rate granted last year for maize for export has resulted in an increase of 1,367 tons carried in a downward direction.

The export of cotton and cotton seed from Uganda has made a phenomenal advance, and it is anticipated that much larger quantities will be exported in 1911-12.

There is an increase in the total receipts from coaching traffic of £6,809, principally due to a greater number of passengers of all classes. The total number of passengers carried rose from 226,571 in 1909-10 to 301,703 in 1910-11.

The traffic on Lake Victoria is in a very satisfactory condition, the tonnage of cargo carried by the four steamers having increased from 18,733 tons in 1909–10 to 34,115 tons in 1910–11. The prospects of further increases in 1911–12 are very hopeful. The following figures, which are taken from the annual statistics, show the result of the past seven years' working of the railway and lake steamers :—

Railway.

—	1904–05.	1905–06.	1906–07.	1907–08.	1908–09.	1909–10.	1910–11.
Receipts.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Coaching Traffic...	527,994	647,818	724,751	804,330	788,216	785,740	887,876
Goods Traffic	1,535,205	2,059,482	2,465,218	2,211,502	2,199,106	2,386,479	2,924,132

Labour has been fairly plentiful throughout the year, and no difficulty was experienced in recruiting all the Africans required.

No accident occurred resulting in the death or injury of a passenger.

(2) *Magadi Railway.*—During the year under review negotiations for the construction by the Magadi Soda Company of a railway from mile 282 to the Magadi Lake, a distance of about 106 miles, were brought to a successful conclusion, and the Company was floated in London in February with a capital of £1,312,500. The line, when completed, will be worked by the Uganda Railway. In addition to the line from mile 282 to the soda lake a site has been granted to the Company on Government land at Kilindini for the erection of a pier, godowns, &c., to facilitate the shipping of the soda.

To enable the Uganda Railway efficiently to transport the soda that will be sent by the Magadi Company from the soda lake to Kilindini the Government has undertaken to provide a sum not exceeding £350,000 for the purpose of equipping the main line with buildings, rolling stock, engines, &c. This expenditure will be spread over a number of years to meet the requirements, but the following works will be started shortly:—

(1) The removal of all gradients steeper than 1·18 per cent. against the down load between miles 282 and 60 in order to enable larger loads of soda to be taken by down trains.

(2) The purchase of new locomotives and bogie trucks.

(3) The laying of a water supply by means of a pipe line from a stream of good water in the hills near mile 104 to mile 42.

(4) The provision of extra accommodation, plant, &c., to meet the anticipated increased train mileage.

(3) *Thika Tramway.*—Shortly after the close of the financial year sanction was accorded for the construction of a steam tramway from Nairobi to the Thika River, a distance of about 30 miles, at an estimated cost of £60,000. When completed it will be taken over and worked by the Uganda Railway. This line will open up one of the best parts of the Highlands, and there

is every indication that it will at once be called upon to carry a considerable traffic.

(4) *Deep-Water Pier at Kilindini.*—Intimation was also received after the close of the financial year that funds would be found for the provision of a deep-water pier at Kilindini.

(B.) ROADS.

A total sum of £6,966 was spent during the year on new road work and reconstruction of existing roads, and £7,425 on the maintenance and repair of existing roads.

The more important new works undertaken were as follows:—

(*a*.) The continuation of the construction of the Kisumu-Uganda Road. A sum of £1,366 was spent on the section between miles 4 and 26 from Kisumu. A sum of £181 was also spent in laying foundations for the Nzoia River suspension bridge, 48 miles from Kisumu.

(*b*.) The renewal of the temporary bridges over the Komo and Kamiti Rivers on the Nairobi-Thika section of the Fort Hall Road, at a cost of £247.

(*c*.) The regrading and metalling of a portion of the Nairobi-Kyambu Road over a distance of 1½ miles where the road passes through the Karura Forest, at a cost of £348.

(*d*.) The construction of a cart track from Gilgil Station through the Gilgil farms at Rumuruti, a distance of 68 miles, at a cost of £288.

(*e*.) The completion of the bridge over the Gurra River, on the Fort Hall-Nyeri Road, at a total cost of £968.

(*f*.) The construction of a road from Kismayu to Yonte and Gobwen at a cost of £122.

Numerous short lengths of roads have been constructed both in the townships and out-districts during the year.

(C.) POST AND TELEGRAPHS.

The combined post and telegraph services of Uganda and East Africa include 92 post offices and post office agencies, 39 money order offices, and 83 telegraph offices, of which 18 post offices and post office agencies, 10 money order offices, and 16 telegraph offices are in Uganda, the remainder being in East Africa. These figures include 40 telegraph offices at Uganda railway stations.

Revenue.—The revenue for the two Protectorates amounted to £24,329, an increase of £3,087 on that of the previous year. The estimated increase for East Africa alone was £2,253, of which £930 was increased postal, and £1,323 increased telegraph and telephone revenue.

Expenditure.—The expenditure was £31,876, or £3,458 more than in 1909-10. The estimated total for East Africa alone is £24,995, representing an increase of £2,720. These figures include capital expenditure for telegraph and telephone construction in East Africa, but not for Uganda.

The deficit on the year's working was £7,547, but work to the value of £8,776 was performed for other Government Departments of East Africa and Uganda.

Postal Matter.—The estimated number of postal articles, excluding parcels, dealt with during the year is 2,330,455 for East Africa and 737,220 for Uganda, or a total of 3,067,675 for the two Protectorates, representing an increase of nearly 6 per cent. in the case of East Africa and 3½ per cent. in the case of Uganda.

Parcel Post.—The returns of the parcel post service, which are given below, show a total of 45,132 parcels dealt with in the two Protectorates, as against 39,514 for the previous year. The greater part of this increase was in respect of parcels imported from the United Kingdom, the numbers of which advanced by 27 per cent. in the case of East Africa and 16 per cent. in the case of Uganda.

Parcels dealt with.

—	Internal.	United Kingdom.		Other Countries.		Total.
		From.	To.	From.	To.	
East Africa	5,032	11,338	1,288	3,587	6,256	27,501
Uganda	2,177	6,352	735	7,731	636	17,631

Value of Parcels Imported.

Year.	East Africa.		Uganda.		Total Value.
	From United Kingdom.	From Other Countries.	From United Kingdom.	From Other Countries.	
	£	£	£	£	£
1909–10 ...	11,197	3,992	5,710	2,121	23,020
1910–11 ...	17,183	4,576	7,520	2,520	31,799

Registered Letters.—The total number of registered postal packets dealt with in the two Protectorates was 111,233, and shows a satisfactory increase of 12,154 over the previous year's figures. Of the foregoing, 86,920 were posted in East Africa and Uganda, as against 76,799 in 1909-10. The registered correspondence received from abroad likewise shows a substantial addition, 24,313 articles being dealt with during the year under review, as compared with 22,280 for the previous twelve months.

Ocean Mail Service.—The ocean mail service has been considerably improved during the year by the inauguration of the Union Castle sailings of steamers to and from Europe *viâ* the

Suez Canal. Unfortunately the full benefit which this service could afford has so far not been obtained, as the intervals between the sailings of the Union Castle and British India Company's steamers have not yet been satisfactorily adjusted. Both lines are running in cycles of 28 days, outward and homeward, and at present one follows the other at an interval of seven or eight days. With a suitable adjustment of the sailings of the two lines a regular fortnightly service to and from Europe could be provided, and it is hoped that this will shortly be arranged.

Indian Mails.—The coastal steamer service has been irregular and unsatisfactory throughout the year, and communication between Lamu and Mombasa has suffered accordingly.

The runner mails have been extended and a combined runner and mule mail service has been established to the Uasin Gishu Plateau.

The regular mail services by relays of native runners have been well maintained: the following are the principal relayed mails and the times occupied in transit:—

Route.	Distance.	Number of relays.	Time occupied in conveyance.
	Miles.		Hours.
Nairobi to Fort Hall, via Kyambu ...	67	3	26
Jinja to Mbale	92	3	31
Kampala to Hoima	126	4	52
Entebbe to Mbarara	150	4	64
Entebbe to Fort Portal...	195	6	62

Money Orders.—The money order business in East Africa shows a slight increase both in the average value of the remittances and the number of transactions as follows:—

—	Issued.		Paid.	
	No.	Amount.	No.	Amount.
		£		£
1909-10	19,791	102,792	7,619	50,200
1910-11	19,454	106,846	8,021	55,099

New money order offices were opened at Nyeri, Chania Bridge, Sergoit, Eldare River, and Farm 45, Uasin Gishu, during the year.

Postal Orders.—The postal order business has also considerably increased, 11,669 orders having been issued or paid in the two Protectorates, as against 8,831 for the year previous. The number of transactions in East Africa alone was 9,466. The total value of the orders dealt with in both Protectorates was £7,104.

Telegraphs.—There has been a considerable increase in the volume of the telegraph traffic during the year. In all 141,282 telegrams and cablegrams were dealt with (98,585 for East Africa and 42,697 for Uganda), as against 117,324 for the previous year, representing an increase of nearly 20 per cent. for the two Protectorates. The Uganda traffic shows the largest increase, viz., 28 per cent.; that of East Africa shows an addition of 17 per cent. over the previous year.

During the year the telegraph line was extended to Rabai in East Africa and to Masindi Port in Uganda. A heliograph service, in extension of the telegraph service, has also been in operation between Nandi (Kapsabet) and the Uasin Gishu Plateau.

A staff of six female telegraphists recruited from the British Post Office is now being employed at Nairobi with satisfactory results.

Telegrams dealt with:—

—	Internal.	United Kingdom.		Other Countries.		Total.
		From.	To.	From.	To.	
1909-10.						
East Africa	48,598	1,909	2,171	16,334	15,034	84,046
Uganda	16,887	380	460	7,173	8,378	33,278
1910-11.						
East Africa	51,415	3,118	3,350	20,430	20,272	98,585
Uganda	19,216	470	577	11,259	11,175	42,697

Telephones.—The telephone exchanges at Mombasa and Nairobi, which were made available for the general public during the financial year 1908-09, show the following development:—

Exchange connections at end of year:—

—	1909-10.		1910-11.	
	Government.	Private.	Government.	Private.
Mombasa...	21	15	25	16
Nairobi	36	34	50	53

Number of calls during the year:—

—	1909-10.	1910-11.		Total.
	Government and Private.	Government.	Private.	Government and Private.
Mombasa	15,686	25,540	14,741	40,281
Nairobi	59,579	78,766	55,028	133,794
Total	75,265	104,306	69,769	174,075

The total telephone revenue collected during the year was £884 9*s*. 1*d*., of which £736 14*s*. 5*d*. accrued in East Africa and £147 14*s*. 8*d*. in Uganda. These figures include rentals of private lines, and receipts for "trunk line" conversations, *i.e.*, conversations between different settlements over the telegraph wires, as well as rentals for connections to the Mombasa and Nairobi telephone exchanges.

Savings Bank.—A post office savings bank commenced working on the first day of the year under review. At the end of the year there were 1,231 accounts opened with £15,569 due to depositors, an average of £12 12*s*. 11½*d*. for each account. Of the 1,231 accounts 165 are held by Europeans (average balance £24 10*s*.), 367 by Indians (average balance £16 2*s*. 6*d*.), and 684 by natives with an average balance of £7 15*s*.

General.—New offices or agencies have been opened during the year at Eldare River, Sergoit, Farm 45, Uasin Gishu, Chania Bridge, Karungu, Mariakani, and Homa Bay in East Africa. Three of these offices are situated on the Uasin Gishu Plateau, to which the postal service has been extended during the year.

A service of direct closed mails has been instituted between Nairobi and London in either direction, as a result of which the delivery of the incoming mails from England, and particularly the parcel mail, has been expedited.

The half yearly post office handbook has been enlarged and now includes lists of telephone subscribers and abbreviated telegraph addresses, in addition to the mail time table and other postal information for which it was originally issued.

The Department is experiencing a difficulty, which occurs elsewhere in Africa, in recruiting a satisfactory class of employee for delivery purposes. Neither Asiatics nor native Africans of sufficient education to perform these duties efficiently are prepared to undertake them.

Telegraph and Telephone Construction.—The total length of the telegraph lines amounts to 1,016 miles of pole lines of which 859 miles are erected on iron poles and 157 on wooden poles. The mileage of wires amounts to 2,261.

The length of telephone pole line is 60 miles, carrying 304 miles of wire.

There are 26 postal, telegraph, and telephone offices, and 42 railway telegraph offices.

There are 300 telephones in use, of which 149 are in connection with the Nairobi Exchange, and 50 with the Mombasa Exchange, the balance being in connection with the railway and private or separate lines.

The telephone exchange has been extended both at Nairobi and Mombasa. Sixty additional connections have been made at Nairobi with a total addition of 63 miles of wire, and 15 additional connections at Mombasa amounting to 33 miles of wire.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A.) JUDICIAL.

The total number of cases directly dealt with by the High Court during the year is 939, showing an increase of 250 over last year; the majority were criminal cases, of which 164 are accounted for by the larger number of cases sent up by magistrates for confirmation of sentence.

The particulars of the cases are as follows:—

Original civil cases	123
Original criminal cases	94
Confirmation criminal cases	390
Revision criminal cases	35
Appeals criminal cases	69
Appeals civil cases	78
Probate causes	146
Insolvencies	4
Total	939

The liabilities involved in the insolvencies were Rs. 127,792.

There were also 26 trust estates administered by the Court on behalf of minors with property valued at Rs. 63,115.

Monthly returns from 85 subordinate courts were received and dealt with during the year. Of the original civil work 25 cases were filed in the District Registry at Nairobi and seven at Kisumu. In the preceding year 38 cases were filed at Nairobi. There has been thus a considerable falling off in the High Court work there, which decrease also appears in the work of the Town Magistrate's Court. In actual practice the civil work of the High Court at the quarterly sessions did not take a day in all.

The percentage of sentences passed by subordinate courts in criminal cases and upheld unaltered by the High Court during the last four years is as follows:—

1907-08	1908-09	1909-10	1910-11
Per cent.	Per cent.	Per cent.	Per cent.
75½	81	85	88

The total civil work of the courts shows a considerable falling off over the figures for last year. This falling off is to be attributed partly to the reduction of work in Nairobi and partly to the establishment of native tribunals. It is deserving of notice that while the rest of the work has remained practically the same the reduction that has taken place has been almost entirely in the class of cases under Rs. 100.

The total number of persons brought before the magistrates during the year under review on criminal charges was 11,859, an increase of 2,030 over last year, but there were actually 213 fewer persons convicted, a very large proportion of the persons apprehended either being discharged for want of prosecution or on the merits of the case. These figures do not indicate any increase of crime, which in fact shows a tendency to decrease on the whole. The explanation lies in the fact that offences under the Master and Servants Ordinance and non-payment of hut tax, being punishable with imprisonment, come into the criminal returns. Added to this there have been a considerable number of prosecutions under the Diseases of Animals Ordinance. 366 persons were proceeded against under the latter Ordinance in the Quarantine Court alone and a large number in the other courts of the Protectorate.

There has been a diminution in the convictions for every class of serious offence tried before the magistrates with the exception of stock thefts, which have increased from 111 to 288. This heading covers all thefts of stock whether from Europeans or natives. The figures for last year, however, were confined to cattle, while this year sheep have been included, so that the increase is not so large as it appears though there undoubtedly has been an increase of sheep stealing from European owners, the offenders in a large number of cases being the herdsmen in charge of the sheep.

In the High Court there was an increase in the number of convictions for homicide, the death sentence for murder being passed in 39 cases. It was, however, carried out in nine cases only, the sentences in the remaining cases being commuted to terms of imprisonment and fines.

One Asiatic only was convicted of murder, the remaining homicide cases being all by natives, mostly from the more remote districts.

The comparative figures of persons convicted for the last five years are as follows:—

—	1906.	1907.	1908–09.	1909–10.	1910–11.
Europeans	73	85	64	76	77
Asiatics	445	510	513	463	328
Natives	3,278	5,488	5,538	6,839	6,698

The convictions of Europeans are mostly for minor offences by the magistrates and remain about the same as in late years. The steady decrease of convictions among Asiatics during the last three years is remarkable, while for the first time for 13 years there has been a check in the hitherto ever-expanding figures of convictions of natives.

The total revenue for the year, Rs. 131,086, shows an increase of Rs. 9,255. The largest increase is accounted for under the head of Court Fees, although there has been a considerable reduction in the number of small suits filed. This is attributed largely to a corrected system of accounting introduced during the course of the year, under which probate duty and fees for administration of estates by courts in out-districts are now credited under this head.

(B.) Legal.

Registration of Documents.—The actual revenue derived from all sources in the Registration of Documents Department amounted to Rs. 59,078 (2,858 transactions), as against Rs. 30,019 (2,305 transactions) of the previous year. The increase in the revenue is mainly due to the fact that many private concessions were floated into public companies for large considerations.

The value of land on the Island of Mombasa reached a very high figure. One block of seven acres on the Mombasa-Kilindini Road was leased during the year for 99 years at £30 per acre per annum and an option given to the lessee to purchase at the end of five years at the rate of £500 per acre. Other large blocks changed hands as follows:—

56 acres (freehold) at £300 per acre.
68 acres (leasehold, 99 years) at £135 per acre.

Administration of Estates.—During the year 1910-11 297 estates have been wound up; of this number 207 were native and 90 were non-native.

During the year 119 new causes have been opened as follows:—

European	11
Asiatic	22
Native	86

which, compared with those opened in 1909-10, shows an increase of 44. It appears that the native appreciates having a disinterested party to wind up estates, as in all native estates the consent of the heirs has first to be obtained before letters of administration are granted.

Bankruptcy.—During the year 1910-11 five fresh causes have been opened and five causes have been realised and wound up. In all the causes opened the debtor has been an Indian.

Patents.—During the past year five applications for patent rights have been received.

The total revenue from the above source amounts to Rs. 510, an increase of Rs. 60 over last year and an increase of Rs. 430 over the year 1908-09.

Trade Marks.—Fifty-eight trade marks have been recorded during the past year. The total fees collected on registration amounted to Rs. 245.

Bills of Sale.—Eighteen bills of sale have been registered during the past year.

The total revenue from this source amounts to Rs. 209.40.

Joint Stock Companies.—Six new companies have been incorporated during the past year, representing a total capital of £121,000.

The total revenue from the registration of companies for the year amounts to Rs. 1,548 (£103) or £48 in excess of last year.

An Ordinance for the regulation of banks established in the Protectorate was passed on the 29th April, 1910 (No. 10/1910).

Section 5 of the Land Titles Amendment Ordinance, No. 11/1910, exempts debentures from registration under that Ordinance.

(C.) POLICE.

As a result of the restrictions placed upon the police in their dealings with natives living in areas controlled by recognised native authorities, and the reduction of the numbers which had previously been employed as garrisons in outlying districts, the Asiatic and African establishment of the force was reduced by 527 from 2,031 to 1,504; the actual strength of the force on the 31st March, 1911, was 1,470, all ranks—1,429 of whom were Asiatics and Africans.

336 recruits were enlisted during the year and all were put through a course of training prior to being posted to units for duty. Owing, however, to the lack of proper accommodation in the absence of a training depôt it was found impossible to train sufficient recruits to fill all casualties as they occurred; and owing to the greater inducements offered by other employment some difficulty was experienced in obtaining recruits from the coast tribes, who, for climatic reasons, are most suited for service on the coast.

Discipline continued to be well maintained, and the number of petty offences showed an appreciable decrease during the year; 111 men were dismissed, 16 of whom were recruits under training.

The total number of cases investigated by the police in those districts from which statistics are obtainable—that is to say in those districts in which police officers are stationed—was 4,397. 5,753 persons were arrested or summoned, and of these 4,491 were convicted and 45 were permitted to compound their offences.

The estimated value of property reported to the police as stolen was £4,445; property to the value of £1,341 was recovered.

The total cost of the force for the year was £38,923, as against £46,273 for 1909.

(D.) PRISONS.

The prisons of the Protectorate are divided into three classes, *i.e.*—

First class prisons.
Second class prisons.
District lock-ups.

There are two first class prisons, one at Nairobi and the other at Mombasa, to which long-sentence prisoners are transferred to serve their time. There they receive instruction in various industries, such as cane work, tin-smithing, basket-making, and other crafts, so that on their release they may have some knowledge of a trade and may be enabled to earn their livelihood in an honest manner. The work thus manufactured is remarkably good, and is productive of a considerable revenue.

There are five second class prisons, situated at Kisumu, Naivasha, Fort Hall, Lamu, and Kismayu. Long-sentence prisoners are not transferred from Kisumu, Lamu, or Kismayu.

The district lock-ups, situated at the different administrative stations, are utilized for the confinement of short-term offenders only, who are employed in bush-clearing, road-making, tree-planting, and generally in keeping the station and its environs in a clean condition.

Hitherto the prisons of the Protectorate have formed part of the Provincial Administration, but the management is now to be taken over by the newly-appointed Prisons Board, which it is expected will be able to inaugurate a more economical and effective organisation.

At many of the stations in out-districts prison farms have been started, cultivated, and tended by the prisoners themselves. The crops put down are for the most part those which when reaped will serve as rations for the prisoners, and thus it is hoped that in course of time many of these lock-ups will become self-supporting, as far as food is concerned.

The conduct of the native warders has been very satisfactory, and complaints are rarely made.

The following table shows the number of admissions during the year, as compared with those of 1909-10:—

	1909-10.	1910-11.
Seyidie	1,445	1,194
Tanaland	226	401
Jubaland	94	69
Ukamba	2,758	4,775
Naivasha	259	575
Kenya	612	491
Nyanza	618	1,194

The increase in the number of prisoners incarcerated in the gaols of Ukamba Province is due to the fact that a number of convicts sentenced to long sentences in other parts of the Protectorate have been transferred to the Nairobi Prison, whence they are employed in the works on the Thika Tramway.

VIII.—PUBLIC HEALTH.

(A.) VITAL STATISTICS.

The state of public health during 1910 has been more satisfactory than that of the previous five years. The numbers treated were slightly less than in 1909. This improvement has depended largely on weather conditions, a third year of scanty rainfall in succession modifying the courses of various diseases.

Table I.—Showing the total number of patients attended to in the Government Hospitals, and deaths for the past three years: —

Year.	Admissions.	Deaths.
1908	90,712	940
1909	90,924	1,094
1910	78,603	1,110

Table II.—Showing quarterly incidence of patients attended to in the Government hospitals, and deaths for the year 1910:—

Quarter.	Admissions.	Deaths.
1st	25,169	241
2nd	23,008	228
3rd	21,124	240
4th	21,411	231

The decrease in cases was most noticeable in the blackwater and malarial admissions; of the latter there were over 1,500 fewer, with 45 per cent. less deaths. The year was fortunate in that there was no particular outbreak of epidemic disease to record. Of the endemic diseases, small-pox and plague showed a considerable subsidence, while there was a continued existence of sleeping sickness, which is restricted to the shores of Lake Nyanza.

Two diseases—tuberculosis and enteric fever—are on the increase and, though the number of recorded cases of the former is very small, there is the evidence of various medical missions, which are in closer contact with the native life of the country than is possible at Government dispensaries, that it is spreading. The bulk of the enteric cases occurred among Europeans and, from the list of localities to which an infection has been attributed, it has a wide range. Before 1906 it was practically unknown. An increase in the number of cases of amoebic dysentery has also to be recorded.

Of other diseases, those affecting the nervous system remained stationary. There was an increased number both of digestive and respiratory illnesses; the latter, however, shewed a largely lowered death-rate compared with the previous year.

A large number of local injuries were treated, with 50 per cent. less deaths. 3,071 surgical operations were performed with nine fatalities—two more than last year out of 1,547 operations.

(B.) Principal Diseases During the Year 1910.

(1) *General Diseases.*—These include diseases of the nervous, respiratory, circulatory, digestive, and urinary systems, the generative organs and locomotory systems, &c., and number 38 per cent. of the total admissions, or 35,742 with 298 deaths. Two hundred and twenty-nine of these deaths were caused by respiratory and digestive ailments. General and local injuries amounted to 19,173 cases with 20 deaths.

(2) *Insect-borne diseases*:—

Disease.	Admissions.	Deaths.
Sleeping Sickness ...	96	22
Plague	8	4
Dengue	1	nil.
Malaria	11,205	50
Blackwater Fever ...	10	5

(3) *Infectious Diseases*:—

Disease.	Admissions.	Deaths.
Small-pox	21	8
Enteric Fever	30	2
Beri-beri	32	1
Tetanus	4	3
Tuberculosis	49	7
Syphilis	1,413	12
Gonorrhoea	978	1
Leprosy	5	nil.

European Officials.—569 cases of illness among European officials came under treatment during the year 1910, of whom 307 were placed off duty. Three deaths took place during the year and two officers were invalided home. In addition, one death occurred on the voyage to Europe. The prevailing diseases among European officials during the year were diseases of the digestive system and malarial fever.

General European Population.—This has been estimated at, approximately, 3,000 souls. During the year 1910 there have been 69 births and 22 deaths.

Of diseases affecting the European community the most prominent were:—

1.	Of the Respiratory System ...	375
2.	Malarial	353
3.	Of local injuries	150
4.	Of Skin Diseases	80
5.	Of Nervous Origin	64
6.	Dysentery	25
7.	Rheumatic Fever	19
8.	Enteric Fever	16
9.	Blackwater Fever	4
10.	Tuberculosis	3

The quarterly incidence of sickness and deaths among the European community (as far as has been recorded) has been:—

Quarter.	Admissions.	Deaths.
1st	489	6
2nd	363	1
3rd	355	5
4th	461	5
Total ...	1,668	17

General Native Population.—The African population of the Protectorate has been estimated at three million souls. No complete information is as yet forthcoming in regard to births or deaths.

(C.) SANITATION.

The sanitary control of the townships and stations of the country is of two classes, viz.:—

1. Those towns which possess an organised Conservancy Department responsible to a committe, *e.g.*, Nairobi and Kisumu, or to a superintendent of conservancy, *e.g.*, Mombasa.

2. Those towns and stations which rely on station hands and prison labour under the direction of the administrative officer in charge.

The Nairobi sanitary staff consists of a medical officer of health, a town clerk, one sanitary inspector and 137 men.

The Kisumu sanitary staff consists of a medical officer of health, a superintendent of conservancy, a sanitary inspector, and 46 men.

The Mombasa sanitary staff consists of a medical officer of health, a superintendent of conservancy, and 153 sub-inspectors and men.

The medical officers of health at both Nairobi and Kisumu have also other duties.

All the railway stations, other than Kisumu and Nairobi, have their own departmental conservancy staffs under the control of the permanent way inspectors.

It is satisfactory to observe that Europeans resident in this country, whether private or official, are becoming increasingly alive to the vast importance of sanitation and hygiene, their interest in these matters being sedulously fostered by the efforts of the local press.

The preventive measures undertaken during the year have been as follows:—

1. *Mombasa.*—(*a.*) The institution of a mosquito brigade under the direction of the medical officer of health. The position of this body will be materially strengthened by the installation of the new water supply.

(*b.*) The continued insistence—chiefly in the official quarters—on the necessity of clean compounds and a judicious thinning of over luxuriant gardens.

(*c.*) The drawing up by a local committee of a scheme for the demarcation of Mombasa Island into areas, for the construction of streets through the native town, and for the projection of new streets in the future.

(*d.*) The continued eradication of bush in the unused portions of the Island.

(*e.*) The examination of possible sources for a new water supply.

2. *Fort Hall.*—(*a.*) The placing of the whole of the Government employees on quinine administered weekly.

(*b.*) The provision of a water condenser.

(*c.*) The improvement of surface drainage.

(*d.*) The extended clearance of bush.

3. *Kisumu.*—(*a.*)The systematic destruction of rats.

(*b.*) The continued eradication of bush.

4. *South Kavirondo.*—The reopening of a voluntary segregation camp for cases of trypanosomiasis.

5. *Nairobi.*—(*a.*) Preliminary arrangements for the provision of a more ample water supply for the township.

(*b.*) The establishment of new dhobis' quarters.

(*c.*) The consideration of by-laws for the control of the milk supply.

(*d.*) The acquirement of land for the purpose of establishing a native location.

(*e.*) The allotment of a sum of money wherewith to procure a disinfector.

6. *Lamu.*—(*a.*) The commencement of an investigation into the extent to which filariasis prevails among the inhabitants of the township.

(*b.*) The inception of a scheme for the establishment of a separate European quarter.

(*c.*) The improvement of the meat and fish market.

7. *In General.*—(*a.*) The consideration of a scheme for the segregation of persons suffering from leprosy.

(*b.*) The consideration of an Ordinance providing for the compulsory vaccination of persons resident in the Protectorate.

With a view to spreading knowledge and increasing interest in the important question of hygiene and sanitation the compilation of material for a small pamphlet entitled "Hints on the Sanitary Care of Out Stations" has been undertaken. The advice contained therein is simple and the means suggested for dealing with everyday sanitary matters are within the reach of the most isolated stations. As the country advances in prosperity and means of communication become more opened up, it is hoped that succeeding editions of this pamphlet will become more elaborate and complete.

(D.) GOVERNMENT INSTITUTIONS.

Hospitals.—In the Government hospitals there were 1,668 admissions of Europeans, 17 of whom died. In the previous year there were 1,495 admissions and 17 deaths. There was a decrease of 43 cases of malaria, 375 cases in all coming under review. There were 25 cases of dysentery, 19 of rheumatic fever, 16 of enteric fever, and 4 of blackwater fever. One death and several admissions were the result of injuries caused by lions.

The number of Asiatics and Africans attended at the above institutions was 89,044. Of this number 18,804 were cases of local injuries, 15,391 diseases of the digestive system, 10,849 cases of malaria, and 10,618 diseases of the respiratory system. These figures do not include the returns of the various Mission hospitals and dispensaries.

Bacteriological Laboratory.—In spite of the removal of all veterinary work, the routine examinations were as many as during the previous year, the number of medical examinations (2,215) being double. Of 1,385 blood examinations 197 showed malarial parasites or pigment. 66 water analyses were made and 28,209 tubes of glycerinated lymph issued. Experiments with lymph dried and sealed *in vacuo* were most successful, such lymph proving resistant to high temperatures in transit.

As in previous years, research work was much hindered by the amount of routine examinations, but experiments in transmitting various trypanosomes with *Glossina fusca* have been continued and work has been carried out with three different animal trypanosomes. A *Sarcosporidium* not visible to the naked eye has been found to be common in cattle. A parasite of leucocyte has been found in the dog. Numbers of smears from game and birds have been examined and, in some, new blood parasites have been discovered.

Pathological Laboratory.—The Pathological Laboratory at Kabete is now in working order. The following diseases are at present under investigation, viz., East Coast fever, rinderpest, anaplasmosis, trypanosomiasis, swine fever, sheep diseases, and horse sickness. Anti-rinderpest serum is being produced on a large scale and vaccines for sheep-pox and contagious pleuro-pneumonia are being made.

Lunatic Asylums.—The Nairobi Lunatic Asylum for males was opened in July, 1910, and up to the end of the year had received 33 insane persons from various parts of the Protectorate, of whom three died. About 50 acres of land are attached to this institution and of these six have been already placed under cultivation. It is hoped before long to increase this amount.

A section of Mombasa Prison still serves as an asylum for female lunatics, three of whom died during the year.

IX.—NATIVE AFFAIRS AND PROVINCIAL ADMINISTRATION.

(A.) Highlands and Nyanza Basin Provinces.

(i.) *Nyanza Province.*

The Nyanza Province consists of the Kisumu, North and South Kavirondo, Nandi, and Lumbwa Districts.

An alteration was made in the boundary between the East Africa and Uganda Protectorates during 1910, and the territory handed over by the latter has been effectively administered. The revised estimate of the native population, including those inhabiting the area taken over from Uganda, is 1,100,000. The total non-native population of the Province is 1,401, including 186 Europeans.

The number of huts assessed came to 268,737.

Revenue.—The following are the amounts of Hut Tax collected during the year:—

	Rs.
Kisumu	238,989
North Kavirondo	264,264
South Kavirondo	222,498
Lumbwa	47,874
Nandi	28,848
Total	802,473

being an increase of Rs. 92,235 on the collections of the previous year.

The revenue of the year has been very satisfactory and has exceeded the estimates. Money is undoubtedly becoming more widely circulated every year, and with it the agricultural and trading energy of the people has increased. The demand for payment of taxes has been invariably met most willingly.

Agricultural.—Agricultural development has made considerable strides during the year, and more substantial results were only prevented by a shortage of rain during the latter end of 1910. The natives in part of the North Kavirondo District have been induced to take up cotton cultivation and have planted out a considerable area during the March rains. Quantities of castor oil seed have also been introduced.

Development on European farmsteads in the highlands of this Province is limited to a small proportion of the holdings. Some of the farms have made distinct progress, but the majority are either not occupied or where occupied the holders have done little in the way of production or stocking up. Rubber and sisal planting is being undertaken on three European plantations in the Kisumu district, and considerable progress is evident.

Rinderpest has been severely active amongst the native cattle in North Kavirondo and in parts of the Kisumu District. Large numbers have succumbed to the disease.

Trade.—The amount of produce railed from the Province during the year amounted to 9,860 tons as against 6,800 for 1909-10, at an estimated value of Rs. 987,623 as against Rs. 712,905. The principal items of increase are sim sim and maize.

The sales of imported goods are becoming very important owing to the increased facilities for trade and the increasing demand.

Townships.—Eight townships and a number of trading centres are in existence; and roads in all directions have been thrown open to the public.

Native Affairs.—Matters of an administrative and political nature are generally satisfactory. The policy of working the native administration through the medium of the various tribal authorities is slowly but surely having a marked effect to the advantage of the people and the country, and must help to increase the people's confidence in the *bona fides* of the Government towards them.

Inter-tribal relations have been satisfactory.

Natives on both sides of the Anglo-German boundary were somewhat troublesome on two occasions, and these matters have occasioned correspondence between the local administration and the German authorities at Shirati, with whom relations are most friendly.

The social condition of the people is distinctly on the upward move. Their economic requirements are increasing, and there is a general tendency to betterment in many of the locations.

Some 125 native courts and councils are established.

Judicial.—The administration of the law by the European Courts has been satisfactory. The populations generally are law-abiding. The total convictions before the European Courts come to 1,455, which works out at a very small percentage. Serious crime is singularly infrequent.

Public Health.—The general health of the Province has been comparatively satisfactory.

Nine cases of bubonic plague occurred; there were eight deaths. Constant sanitary precautions and other measures have been adopted by the medical officer in this connection. The small-pox epidemic of the previous year died away.

Enteric fever broke out on the s.s. "Clement Hill," and four cases were dealt with, two of which died. The medical officer attributes the outbreak to the drinking of water drawn from near the piers.

Sleeping sickness cases would appear to be on the decrease. It is certain that there is no increase of cases, while there is a steady increase of native population in the infected locations. The sleeping sickness camp is continued in South Kavirondo, but with practically no success in so far as the attendance of patients is concerned.

Labour.—Labour is plentiful and cheap in most parts of the Province, and large numbers of Kavirondo are now to be found in various districts of the Protectorate working in gangs on plantations, farms, and roads, whilst most of the fuel-cutting and ballast breaking for the Uganda Railway is performed by them. They are men of fine physique and, speaking generally, are very tractable. Provided their employer treats and feeds them well and looks after their interests, complaints are rarely heard.

(ii.) *Naivasha Province.*

The Naivasha Province is divided into seven districts, viz.:—Naivasha (with sub-district Nakuru), Masai Southern Reserve, Masai Northern Reserve, Ravine, Uasin Gishu, Baringo, and Turkana.

The European population is 969, and the native population approximately 113,000.

Revenue.—The total revenue amounted to Rs. 89,251. The amount of Hut Tax collected was Rs. 50,256 as compared with Rs. 38,567 in 1909-10.

Agriculture.—In the Naivasha District the settlers are chiefly engaged in pastoral farming. Cattle and sheep, especially the latter, are increasing rapidly. A few settlers are engaged in ostrich farming and are doing well. The farmers are continuing to develop and improve their holdings, and in many cases have erected excellent stone bungalows on their farms. The greater part of the land available for settlement has now been given out. All the new farms are allotted on two years' occupation licences, which require certain permanent improvements and 18 months' residence by a European.

The wheat crop at Njoro was a success, and an average of about 20 bushels to the acre was obtained. About 3,000 acres are under wheat. Of the different varieties which were tried, Rietta and Thew proved the best.

Mealies have been the standard crop among the settlers in the Nakuru Sub-district, and in some instances 20 bags to the acre were obtained from crops sown along the Molo River.

The coffee trees in the Solai District are doing well, but this industry is still in its infancy.

Tobacco is grown near Nakuru and is reported to be of good quality.

The Uasin Gishu District is entirely occupied by white settlers. 230 farms have been taken up or applied for. Small areas have been broken up for cultivation, and several stone houses have been erected, but the majority of the farmers seem to be in poor circumstances. The headquarters of the district have been removed from Farm 84 to Farm 64.

Rinderpest broke out at Molo, Njoro, and round Nakuru, but was taken in hand at once and suppressed. An outbreak of sheep-pox occurred at Molo. Foot-rot also is very prevalent in that district. Horse-sickness has caused several deaths in Naivasha District.

Gastro-enteritis and pleuro-pneumonia were very virulent in the Masai Northern Reserve early in the year and accounted for the loss of some 15,000 head of cattle.

There has also been a considerable amount of cattle disease in the Baringo District.

Trade.—Among the Masai trade is confined to exchanging cattle for sheep. 22,738 sheep, 237 hides, and 354 goatskins were exported, and 209 donkeys and 453 head of cattle were imported.

A considerable trade in foodstuffs has been carried on in the market at Rumuruti by natives from the Nyeri District.

In the Ravine District there has been a fairly brisk trade in fox, goat, and sheep hides.

The whole of the Turkana District has been opened to trade. Donkeys are the chief attraction.

Public Health.—The Province, with the exception of the Baringo and Turkana Districts, may be considered healthy, though malaria is prevalent in some parts. In the dry season the whole country is exposed to constant gales, causing dust-storms, which are largely responsible for diseases of the eye and the digestive system.

Native Affairs.—The Kekonyuki clan of the Masai, who occupied part of the Kinangop plateau, were moved to the Masai Southern Reserve during the year under review.

Lenana, paramount chief of the Masai, died of dysentery on March 7th, and his son Segi was selected by the Masai to succeed him. Legalishu of the Northern Reserve and Ngaroya of the Southern Reserve were appointed regents during the minority of Segi.

The circumcision festival was celebrated throughout the district without any disturbance.

In Baringo district outlying sections of the Chebleng have been brought under our influence and are now on friendly terms with the Administration.

Constant raids by the Turkana on the Suk of the Baringo district and the punishment of the Turkana necessitated the

Government's taking steps to administer this district. A post was first established at Kerio, but owing to the unhealthiness of the position and its distance from Turkana proper another site was selected at Ngabotok at the junction of the Turkwell and Kerio Rivers.

Labour.—Relations between employers and native labourers are on the whole good, but the quality of the labour is poor, as the natives refuse to work on farms for more than two or three months at a time.

(iii.) *Kenya Province.*

There are four districts in the Kenya Province—Fort Hall, Nyeri, Embu, and Meru.

The European population is 152, and the native population about 900,000.

Revenue.—The total Hut Tax revenue collected was Rs. 599,662, as compared with Rs. 406,149 in 1909-10. This increase is due to the fact that the tax was collected for the first time this year in Meru District, and also to the introduction of the Poll Tax. A further increase is expected when the latter is more fully organised. The tax was collected in the Kenya Province, as in other parts of the Protectorate, without friction and without any hardship on the native population.

Agriculture.—Some 200,000 acres have been allotted in farms on Western Kenya. Of the larger established farms in Fort Hall District, some 3,500 acres are under cultivation out of a total of about 100,000 acres allotted.

Rose cocos beans, sisal, black wattle, wheat, and maize are the chief crops. Expensive machinery is being erected for the sisal plantations.

In the Nyeri District there are three agricultural farms totalling 1,400 acres, with 43 acres under cultivation. The Italian Mission has 150 acres under wheat, maize, barley, and coffee.

One syndicate has collected Rs. 10,000 worth of rubber in the Kenya Forest.

Native cultivated areas have increased, and this increase is largely due to the systematic taxing of the individual. Issues of good seed to the natives have been made and are appreciated.

Some cases of cattle sickness occurred at Nyeri, but nowhere else in the Province.

Trade.—The bulk of the trade is in the hands of Indians or Swahilis. The chief exports are grain, hides, skins, and beeswax. The trade goods are mainly German and Austrian. A considerable increase of trade is anticipated at Nyeri in the near future.

Applications have been received for two mill sites at Meru. The establishment of the mills will be of great advantage and will cheapen the cost of food for the Northern Frontier District.

The hotel at the Thika is conveniently placed and shows a profit.

Trading sites are being laid out in various parts of the Province with plots for occupation by Europeans and Indians.

Communications.—Mails are more frequent; a tri-weekly service from Nairobi to Fort Hall now exists.

The telegraph from Nairobi to Fort Hall now extends to Nyeri, which is also on the telephone.

Public Health.—Sanitation has improved at all stations, and especially at Fort Hall, where the health of the inhabitants is consequently better. The station covers 1,000 acres, which has to be kept free of tall vegetation. The water supply at all the stations is satisfactory.

At Fort Hall, Europeans can only remain healthy by engaging in constant tours through the district. Nyeri and Meru are healthy; Embu is unhealthy. Amœbic dysentery caused many deaths amongst the natives in the Nyeri and Fort Hall districts in February and March.

Native Affairs.—The native councils or courts are gaining in efficiency, and the chiefs and headmen are, on the whole, satisfactory.

Hut counters have been introduced, and the huts and population are being systematically counted and registered.

Labour.—There are no labour difficulties. Thousands of natives leave the reserves in search of work, but figures cannot be obtained owing to the number of routes in use. The local rate of pay is Rs. 3 to Rs. 4 a month with food.

The Meru are beginning to look for work, but as the language which they speak is almost unknown, they labour under some disadvantage.

(iv.) *Ukamba Province.*

In the Ukamba Province are the Nairobi, Kikuyu, Ulu (Machakos), and Kitui districts. The total population of the Province is 320,000. The population of Nairobi is 16,107, including 968 Europeans and 2,645 Indians.

Revenue.—The revenue derived from native taxation amounted to Rs. 340,628, as compared with Rs. 253,007 in 1909-10. The increase is due to an improved system of census and to the imposition of the Poll Tax.

Agriculture.—Economic products and improved varieties of maize and beans are being introduced amongst native cultivators, and practical demonstration in rotation of crops is being afforded in the Kikuyu District.

Machakos District has potentialities as a wheat growing and fruit farming area, but the ravages of game on the one hand and lack of sufficient knowledge of the subject on the other, have hitherto been a bar to progress.

East Coast fever in the Machakos District was the subject of investigation by the Veterinary Department in 1910, and an outbreak of cattle plague of a mild form swept through the district towards the end of the year.

Trade.—Trade in Nairobi received a considerable impetus during the year, and many firms report an increased turnover. There was quite a boom in land towards the end of 1910.

A second banking business was instituted in Nairobi during the year.

In the Kyambu District trading appears to be on the increase, and in the Ulu and Kitui Districts increases in native trade are observable.

Native Affairs.—The inauguration of a new native policy, by which the tribal authority has been revived and native tribunals resuscitated, has been attended with satisfactory results.

The imposition of Poll Tax has resulted in a considerable increase of revenue, and has caused no friction between the administration and the natives.

A fairly accurate census of the native and alien population of the Province has been achieved.

The failure of the rains in December, 1910, caused a scarcity of native foodstuffs, which did not, however, amount to a famine.

Nairobi Township.—Considerable improvement was effected in the sanitation of the township of Nairobi during the year. Electric lighting was installed in the streets: a steam laundry was inaugurated; and many new and good buildings were erected or commenced. The Indian bazaar is, however, overcrowded and insanitary, and measures to improve this part of the town are receiving serious consideration.

Health.—There was no epidemic disease during the year. One case of smallpox occurred at Kyambu, but prompt measures were taken and there were no further cases.

The total death-rate for Nairobi Township in 1910 was 16·8 per 1,000—practically the same as that for the British Isles in 1909. Pneumonia was the prevailing disease amongst Asiatics and Africans. Tuberculosis appears to be gradually increasing. The European death-rate was 8·3 per 1,000, and the birth-rate 30·3 per 1,000.

Labour.—The supply of labour in the Kikuyu District appears to be steadily increasing. This is perhaps due in part to the imposition of the Poll Tax.

In the other districts the A-Kamba—a naturally indolent tribe—are, as always, unwilling to go outside their reserves for work.

(B.) Coast Provinces.

(i.) *Seyidie Province.*

The Seyidie Province is divided into four districts, viz.: Mombasa with Rabai Sub-District, Malindi with Takaungu Sub-District, Vanga and Taita with Taveta Sub-District.

The principal tribes are the Nyika and the Taita. The Nyika are sub-divided into nine smaller tribes, the most important of whom are the Giriama, Digo, and Duruma. There is also a considerable Mahommedan population of Arabs and Swahilis. The coloured population is approximately 207,000, whilst the white population is 324.

Revenue.—The revenue derived from the collection of Hut and Poll Tax amounted to Rs. 162,904, being an increase of Rs. 22,186 on that of the previous year. This increase is due to a more accurate census, and a more systematic method of collection. The total revenue was Rs. 362,832, as against Rs. 322,796 in 1909-10.

Agriculture.—In the European rubber plantations, the area under cultivation has been considerably increased, and the planters generally seem satisfied with their prospects. Both in the Malindi and Mombasa Districts large numbers of rubber and cocoanut trees have been planted out and considerable areas of ground prepared for cultivation. The native community principally cultivate grain, and the maize crop for the year has been excellent, being almost double the output of 1909-10.

In the Malindi District there has been considerable mortality amongst live stock, which is stated to have been caused by tsetse fly. Live stock are brought from the Rabai Sub-District to Mombasa principally for slaughter purposes. This is now the chief meat supply of Mombasa.

Trade.—Notwithstanding the scarcity of rain on the coast belt, there has been a considerable increase in the quantity of exports. This is very noticeable with regard to rubber, gum-copal, copra, mangrove bark, and grains. The fibre industry made no progress during the year, this being due to the low prices obtained from Sanseviera.

There are Customs stations at Mombasa, Malindi, Vanga, and Taveta.

Native Affairs.—With the increased means of communication between the coast towns, and owing to the local service on the railway, the social condition of the pagan native population is rapidly improving. They are developing an intelligent interest in their surroundings as well as an imitative policy in agriculture, customs, and dress.

In the Seyidie Province, visited as it is by representatives of nearly every tribe and race in the Protectorate, the problem of native affairs is one which must be handled with great care. Large numbers of Kavirondo were recently imported into the Vanga District to be employed in the collection of mangrove bark. An ever-increasing number of Kikuyu and Kamba visit the Province in search of employment, trekking from their districts in gangs numbering from 10 to 100.

The past year has been uneventful, and taking everything into consideration the native population of the Province is most amenable, and gives little cause for anxiety. Every effort is made to impress the Liwalis, Mudirs, and headmen with the responsibilities of their respective positions, and to encourage the natives to appeal to them whenever necessary.

Public Health.—There has been no actual epidemic, but cases of sickness have been frequent, and the general health of Europeans and natives has not been satisfactory. Among the European population, the principal ailments have been malaria and diseases of the digestive organs. The natives suffer chiefly from malaria and dysentery, whilst among the Giriama leprosy is common.

Communications.—The first 10-mile section on the Voi-Taveta road was badly damaged by floods in December, and a 90-foot span bridge over the Voi River was carried away. The damage has since been repaired.

Labour.—Labour is as a rule plentiful. The rate of pay varies from Rs. 12 p.m. for Swahilis to Rs. 8 for Kikuyu, without food.

(ii.) *Tanaland Province.*

The Tanaland Province comprises the districts of Lamu and Tana River, and the Sultanate of Witu. In the Tana River

District a sub-district has been formed, and a temporary station established at Sankuri, about 300 miles up the river. The Korokoro natives in the vicinity of the station are peaceful and law abiding.

The white population of the Province is 37, and the coloured about 40,000. There are also approximately 20,000 Somalis who wander between Tanaland and Jubaland.

Revenue.—The revenue from Hut and Poll Tax collections amounted to Rs. 36,229, as compared with Rs. 41,190 in 1909-10. The decrease is due to the exemption of Arabs and the difficulty of enforcing the Ordinance.

Trade and Agriculture.—Cotton planting has made good progress. The cost of cultivating, planting, and picking an acre of cotton on virgin land is estimated at Rs. 43.50, and on previously cultivated land at Rs. 27.50. The average production is 600 lbs. of seed cotton per acre.

Rubber shows great possibilities. Tapping can be commenced when the trees are 18 months old, and they will from this age yield about 50 lbs. of dry rubber per acre during the ensuring period of six months.

A few plantations of cocoanuts have been laid down. Attempts have been made to eradicate the cocoanut beetle (*Orycetes monoceros*), but so far without success.

Rice is planted by the natives in the Tana Valley, and compares very favourably with that imported from India.

The output of mangrove bark has increased from 2,087 tons in 1909 to 3,300 tons in 1910.

Townships.—The two principal townships in the Province are Lamu and Kipini. The population of the former is about 7,000, and the revenue amounts to Rs. 3,000 per annum.

Communications.—The telegraph line from Witu to Mkonumbi has been removed, and Witu is now connected through Kipini. The line between Lamu and Malindi has been renewed. A road from Lamu to Shella has been begun by reclaiming the sea-shore. The Post Office at Lamu has been moved to larger and more accessible premises.

Public Health.—The health of Europeans in Lamu and Kipini is good. There is a considerable amount of malaria among the planters and missionaries on the Tana River, whilst filariasis is common among the natives.

Native Affairs.—The people on the whole are satisfied and contented. The Native Courts are working well.

Labour.—The majority of the labourers in the cotton and rubber plantations are Kikuyu, who walk 300 to 400 miles to obtain employment. The rate of pay is Rs. 6 to Rs. 12 a month. There is a great difficulty in persuading the local natives to work steadily, as two natives in a canoe can easily earn Rs. 180 per month by stripping mangrove bark. As a rule the health of up-country natives does not suffer at the coast.

(iii.) *Jubaland Province.*

There are two districts in the Jubaland Province, Kismayu and Gosha. In the Kismayu District there is the sub-district of Gobwen, and in the Gosha District the sub-district of Serenli.

The European population, including civil and military officers, is 41; the native population, excluding Somalis, is about 10,000. There are some 40,000 Somalis, many of whom, however, reside for a part of the year in the Tanaland Province.

Townships.—There are two townships, Kismayu and Gobwen; and, considering the sandy nature of the soil, they are clean and well kept. Rain water is stored in tanks, and when these are empty the Juba River is the source of supply.

Revenue.—The collection of Hut Tax amounted to Rs. 18,674; and the total revenue, under general heads of the Estimates, was Rs. 80,807, as compared with Rs. 64,383 in 1909-10.

Agriculture.—Experiments in cotton planting have been started at several places on the Juba River, notably at Alexandra. A few of the European planters are beginning to work the land they have taken up.

Trade.—The "Credit Trade with Natives" Ordinance came into force towards the end of the financial year, and is having a beneficial effect.

The Somalis are great traders. They supply the markets of Mombasa, Zanzibar, and Madagascar with meat, and they travel over the whole Protectorate bartering with the natives.

Communications.—There are no telegraphs in the Province, but the Italian wireless system is utilised for the more advanced stations up the Juba River. New roads are gradually being constructed, and old ones improved. A stone Custom House at Gobwen is in course of erection.

Native Affairs.—The Somali tribes are divided into five principal sections, namely, the Aulihan, Merehan, Herti, Ogaden, and Abdullah. Though by no means peaceably inclined to one another, they all—with the possible exception of the Merehan—willingly acknowledge the advantages which they have reaped from the policy of peaceful penetration instituted by the Government. Trading facilities have been greatly extended and it is hoped shortly to establish new stations, which will still further increase the possibilities of the country. By a just and firm administration, and especially by opening up trading centres, it is expected that in course of time these tribes will become strong and valuable adherents of the Government.

They possess considerable numbers of arms, and they indulge in frequent inter-tribal quarrels, as is only to be expected from people possessing such naturally turbulent characteristics, but in no cases are these conflicts directed against, or caused by, the administration of the Government.

(C.) Northern Frontier District.

In the Northern Frontier District there are at present three stations, Marsabit, Moyale (or Fort Harrington), and Loiyangolani. Marsabit is the original station and was opened at the end of 1909.

The past year has been spent in obtaining a knowledge of the country and tribes, and the stations have been posts of observation only. The tribes are entirely pastoral, and the greater part of the country is so arid and barren that agriculture is practically impossible.

The year has been peaceful with the exception of a few small raids on the Samburu by the Turkana.

Revenue.—A tribute of 334 camels was collected from the Rendile in July, being at the approximate rate of one camel to five huts. The tribute was willingly paid in return for the protection afforded. No tribute has yet been levied on the Samburu or other tribes.

Trade.—There has been a great increase in the number of caravans. Since September, 1910, 800 ponies and mules have left the Abyssinian frontier for Nairobi. A great number of Somalis have been coming into the district from Jubaland for the purpose of trade.

All trade is done through the medium of the dollar and a cloth called the maraduf. Efforts will be made to bring the rupee into circulation.

The Abyssinians are beginning to bring goods for sale and are making enquiries about the road to Nairobi. The Abyssinian authorities are endeavouring to regulate this trade and have stationed a Customs clerk at Jammok.

When the quarantine is ended, it is expected that there will be a fair trade in cattle.

An Indian shop was opened at Marsabit in September, which has been much appreciated.

Communications.—A monthly service has been kept up by the food convoys and has been supplemented by extra mails whenever possible.

(D.) SLAVERY.

During the year under review the working of the abolition of slavery has been performed in a manner satisfactory to all concerned.

Altogether 5,519 claims were dealt with, and the compensation and maintenance paid amounts to nearly £24,000. A decline of 501 cases on the previous year was recorded this year with a corresponding decrease in compensation, which would seem to indicate that the great majority of slaves in the coast belt have already been dealt with.

There are 91 aged and decrepit slaves in receipt of maintenance at the rate of Rs. 3 each per mensem.

The average rate per head paid for slaves in the year under review was £5 11*s.* 3*d.*, as against £6 1*s.* 1*d.* in the previous year.

Of the original grant of £40,000, £28,036 was spent up to March 31st, 1911, and £10,000 estimated for the current financial year, leaving a balance of £1,964 out of which £954 was spent on building a school for Mahommedan children at Mombasa. It is therefore anticipated that a small extra sum will have to be provided to complete the scheme.

It cannot be denied that the Arabs feel most keenly the near approach of the date on which no further application for compensation will be entertained, viz., the 1st day of January, 1912, because they will then be compelled to part with their best slaves whom they have retained to the very last, such as cultivators, sailors, carpenters and masons, domestic servants and female inmates of their harems.

In view of the occupation of Afmadu, Serenli, and Marsabit the advisability of gradually extending the scheme of the abolition of slavery to those districts where slavery still exists is being considered.

X.—EDUCATION AND MISSIONS.

(A.) Education.

Educational facilities have been greatly improved during the last year. The former Railway (subsequently Protectorate) school at Nairobi was transferred to its new buildings in September, 1910, and admission was confined to children of pure European stock. The number of European and Eurasian children is given in last year's report as 72: in May last the number of Europeans only on the school register was 110, with an average attendance of 100. An extra boarding house is being opened in September next for boys over 13 years of age. Six pupils sat for the second-class examination of the College of Preceptors in December last, and all were successful.

The Nairobi school for Eurasian and Indian children has up to now proved a failure. A European headmaster was put in charge in February, but Eurasian parents refuse to send their children to school with Indian children. The Indians have refused to send their children on the ground that their language is not taught. A proposal to use the vernacular as a means of instruction side by side with English for the first two standards, merely as a means of enabling the smaller children to learn and on condition that English is used entirely in the playground and above the second standard in school, is likely to be welcomed by the Indian community, and there is a probability of the registers shortly recording the names of about 100 children.

At Nakuru there is a small day school of eight European children.

A meeting was held on the Uasin Gishu to consider the establishment of a school. Official returns show 236 persons under the age of 20 on the Plateau. The majority of these have had no education.

Continuation classes are about to be started in connection with the Young Men's Christian Association in Nairobi for European youths who have already left school. The Association possesses a very strong staff of instructors, and gives courses of lectures in mathematics, drawing, building construction, book-keeping, shorthand, French, Swahili, and Hindustani.

Grants-in-aid are being given to missions for the promotion of native technical education. Apprentices are properly indentured, and undergo a three years' course, and at the end of each year will be sent to Nairobi to be examined by the Public Works Department. It is proposed to keep a record at the Education Office of all who obtain the final certificates, and to find them employment in Government service. Similarly, records are also being kept of all pupils who leave Government schools, European or otherwise, and of the employment found for them.

The idea of opening a European school in Mombasa is not favoured as the climate is not suitable for European children.

With regard to the Mohammedan school at Mombasa, a beautiful building has been partially completed, and the Arabs are anxious to start as soon as possible. There is, however, great difficulty in finding a suitable headmaster.

A scheme is under consideration for the education of the sons of chiefs and headmen that they may instruct their tribes in improved methods of agriculture, sanitation, &c., and assist the administrative officers in their work.

A Director of Education was appointed during the year.

(B.) Missionary Societies.

The following missionary societies are working in the Protectorate:—

The Africa Inland Mission.
The Church Missionary Society.
The Church of Scotland Mission.
The Evangelical Lutheran Mission of Leipzig.
The Friends Africa Industrial Mission.
The Italian Mission.
The Lumbwa Industrial Mission.
The Mill Hill Mission.
The Mission of the Holy Ghost.
The Seventh Day Adventists Mission.
The Swedish Mission.
The United Methodist Free Church Mission.

The work performed amongst the natives by the various missionary societies is progressing favourably, and their spheres of influence are expanding. At the majority of stations technical education is given, and the work done has been most creditable, notably at the Church of Scotland Mission at Kikuyu, at the Mission of the Holy Ghost at Nairobi, and in the missions of different denominations in Kavirondo. At the Africa Inland Mission at Kijabe there are natives who are capable of managing a sawmill and of cutting timber into shingles.

A great deal has been done in mission dispensaries to alleviate native diseases, and at one or two stations boys have been indentured as medical apprentices.

The relations between the mission societies and the Administration are of the most cordial nature.

XI.—LANDS AND SURVEYS.

(A.) Lands.

The number of land grants made during the year under review is 245, comprising an area of 389,598 acres, compared with 222 grants, totalling an area of 373,570 acres, in the previous year.

Little improvement has to be recorded in reducing the arrears in pending applications, inadequate survey staff being the root cause. In the past year we have suffered under the disabilities of unfilled vacancies in the authorised establishment of surveyors, and through the resignation of three, and the death of one, of these officials. The licensed surveyors have not been of great assistance, as they refuse all offers except the most remunerative class of work in the healthiest districts.

The procedure of allotting land now followed in East Africa is the same as in other colonies, and no land is thrown open to settlement until it has been surveyed ahead. The sub-division of vacant land into farms is at the present time a matter of urgency as there are only 20 farms available for allotment.

The proposed Crown Lands Ordinance, which was introduced in the Legislative Council in 1908, has received much attention during the past year. Pending the enactment of this Ordinance leases have been issued under the following conditions, viz.: applications entertained between 7th May, 1908, and 1st March, 1911, have been granted a 99 years' lease without revision of rents; applications received after 1st March, 1911, have come under the notice of that date, and a 99 years' lease with revision of rent after 33 and 66 years has been issued. Furthermore, in order to discourage the accumulation of land in the hands of individuals, a graduated surtax is to be imposed.

The revenue during the year under review has shown a highly satisfactory increase, the estimates having been exceeded: the rents estimated were £10,467, whilst the rents realised were £14,053. Sales show an increase of £5,421, £989 having been estimated and £6,410 having been realised. The excess is due to the unexpectedly large amounts realised from stand premiums and sales of reverted farms, it being impossible to forecast these with any degree of certainty.

Coast Land Settlement.—There is at the coast a large area of land which is privately owned; but the greater portion of this region is claimed by the Government as Crown or waste lands. It is at present not possible to say to what proportion of these lands the Government may be really entitled. All waste land and land not hitherto cultivated, as well as land which has been cultivated in the past but which has now gone out of cultivation, is claimed by the Government; but until the land which is owned by private persons has been separated from the total the Government is not only unaware of the extent of its own possessions but is precluded from dealing with them.

Putting aside the question of Government ownership, another matter of great importance has been the uncertainty of private title. During the past few years several planters have turned their attention to land at the coast with the object of growing cotton, rubber, coconuts, fibre, &c., and investing therein a large amount of capital, but owing to the insecurity of title offered by native owners and the inability of the Government to lease them the land they require, since there is no certainty as to what is Government and what is private land, they have withdrawn, and the development of the coast has been unduly retarded.

With the object of overcoming these difficulties the Land Titles Ordinance was enacted and applied in the first instance to the Malindi District and later to the Island of Mombasa. A Recorder of Titles was appointed with an office at Mombasa whilst his deputy worked at Malindi.

The total number of applications received for certificates of ownership in the Malindi District amounted to 3,462.

An Arbitration Board consisting of an experienced official and the *Liwalis* (Governors) of the coast towns was formed in March, 1910, and commenced its work in April. The immediate object of the Board was to make a preliminary and exhaustive investigation into all claims to land, with a view to determining the validity of these claims and ultimately to demarcate the boundaries in order to pave the way for the Recorder of Titles. The first claims to be settled were those of the Mazrui, who in days gone by were the most powerful family on the coast and reigned as semi-independent chieftains till 1837, when their power was broken by the Sultan of Zanzibar. They revolted in 1895 against the Imperial British East Africa Company, and many of them left the country and settled in German East Africa. Up to that date they had owned large numbers of slaves and cultivated extensive areas of land with maize, sorghum, or other annual crops. With the loss of their slaves these areas went out of cultivation and reverted to bush. An agreement was come to with the Mazrui according to the terms of which the Government recognise their claim to all their land under cultivation and to a large stretch of bush country, whilst the remainder of the bush land is handed over to the Government.

The total acreage surveyed up to March 31st was approximately 34,000. The total cost of the survey was £1,845, and the expenditure incurred on the coast land settlement was close on £2,000. No revenue accrued under this heading during 1910-11 as no certificates of ownership were issued; but it is estimated that £1,000 will be derived from this source during 1911-12, whilst over 100,000 acres of Crown land will become available for settlement.

As soon as the difficulties mentioned above have been removed, great attraction will be held out to the profitable and secure investment of European capital, and, whilst the native and other owners will benefit by acquiring an indisputable title to their land, Government will be able to utilise its own property to the best advantage and in the interests of the general economic development of the country.

(B.) SURVEYS.

During the year 1910-11 triangulation has been carried out over Laikipia and the neighbourhood, the Uasin Gishu Plateau, and the country south of Mombasa. Six thousand square miles were triangulated as compared with 1,200 square miles last year.

The topography of Lake Hannyngton, Laikipia, Northern Kenya, Nakuru, Nyeri, Naivasha, and Fort Hall sheets has been compiled in the field, a total of 12,250 square miles, as compared with 3,792 square miles last year.

The Cadastral Branch has during the whole year been 25 per cent. short of its authorised establishment. Notwithstanding this 482 cadastral surveys amounting to 484,000 acres have been completed, as compared with 268 surveys amounting to 553,000 acres last year.

From three to four surveyors have been employed on the coast surveys for title-registration. One of these surveyors unfortunately died from fever.

The "arrears" of survey have increased this year as compared with last year from 813,000 to 1,520,000 acres. 700,000 acres of this is due to Uasin Gishu surveys which were not included in last year's arrears.

The expenditure on survey during the past year was £20,700, as compared with £21,800 in 1909-10; the fees, &c., collected amounted to £4,500.

XII.—GAME.

During the past year the number of licences issued has increased considerably, as will be seen by reference to the following comparative table:—

	1909-10.	1910-11.
Sportsman's Licence	117	124
Resident's Licence	140	191
Resident's 14 days' Licence	28	34
Landholder's Licence	83	105
Special Elephant Licence	28	116
Special Giraffe Licence	—	17
Employee's Licence	7	7
Employer's Licence	1	1

The increase of revenue thus accruing is nearly £2,000. The increase in the number of special licences is due to the fact that the new Game Ordinance, which came into force at the end of 1909, did not provide for the inclusion in a Sportsman's Licence of an Elephant or Giraffe Licence, as heretofore.

Game Reserves.—There are two Game Reserves, one of which lies to the south of the Uganda Railway between Tsavo and Nairobi and extends to the Southern Uaso Nyiro and the Anglo-German Boundary; the other includes the country to the north of the Northern Uaso Nyiro.

The stock of game in the Southern Reserve is quite satisfactory, and there has been little or no disease this year. An attempt will be made to acclimatise the wild water melon of the Kalahari Desert (*Cucumis Caffer*) in this area. It is excellent food for game and cattle, and if it grows successfully will do away with much of the trouble experienced in obtaining food and water for Masai cattle and the game during the droughts.

A certain number of dams will also be made in suitable places in the Reserve.

There is a splendid stock of ostriches in the Reserve at present, and if the hyenas, which are very numerous, are killed off with poison, the ostriches will increase rapidly and stock the surrounding country, to the great advantage of ostrich farmers.

A great deal of the Northern Game Reserve is extremely arid waterless country, forming a natural stronghold for species which are adapted to such conditions, but not a sanctuary for a large variety. Elephants are numerous, and so are rhinoceroses, and a number of Greater Kudu are reported.

Principal Game Districts.—The district around Sotik and the Loita Plains is one most frequently visited by shooting parties and one possessing a considerable variety of game. It is still well stocked; but no ranger has ever been available to look after it, and the information received is not always reliable. Wildebeest are breeding well this season on the Loita Plains.

The Rift Valley District, though a settled area, is still holding a wonderful head of game. Eland and Neumann's hartebeest have increased considerably from the time that their protection in this district was made the subject of special legislation. There are more zebra in proportion in the Rift Valley than in any other part of the country.

The Athi Plains District is as a rule only visited by sportsmen for lion hunting. In spite of this, and the fact that the local settlers kill every lion they can, these animals appear to be as numerous as ever, and more troublesome. With the exception of wildebeest and rhinoceros, the usual game of the plains is still abundant in the district.

The district embracing the River Tana and the Northern Uaso Nyiro is another valuable game country, and is being visited far more frequently by sportsmen owing to the greater facilities for transport to Fort Hall. As transport improves this shooting ground will very much increase in value as there is a large variety of game.

The Uasin Gishu Plateau District was formerly much visited as a shooting ground, but the land south of the Nzoia River is now almost entirely taken up by settlers, most of whom are Boers. Some of them are, however, making an attempt to preserve the game on at least part of their land.

North of the Nzoia River there is an extensive and valuable game country which will be in charge of a ranger.

On the whole the prospects of the game are most satisfactory. There has been very much less disease, and the plentiful rains which have fallen early in 1911 will produce an abundance of food and lead to a rapid increase in the stock. Eland and buffalo appear to be increasing in numbers all over the country, and wildebeest are also becoming more numerous. Ostriches have increased very considerably in the southern parts of the Protectorate. The rhinoceros, numbers of which are killed in self-defence, is decreasing fast, as is inevitable with so slow a breeder. With regard to elephants, the herds of cows and young ones appear to be holding their own, but the larger bulls are getting scarce, and those with heavy tusks are now rather difficult to find.

Return of game killed in the Protectorate on all licences during the year:—

Elephant	46
Rhinoceros	227
Hippopotamus	55
Buffalo	141
Eland	84
Zebra (Grevy's)	67
Zebra (Common)	646
Oryx (Callotis)	12
Oryx (Beisa)	236
Water Buck	310
Giraffe	17
Sable Antelope	7
Roan Antelope	29
Greater Kudu	1
Lesser Kudu	49
Topi	159
Coke's Hartebeest	643
Neumann's Hartebeest	24
Jackson's Hartebeest	227
Thomas' Kob	27
Bongo	5
Palla	419
Wildebeest	183
Grant's Gazelle	445
Waller's Gazelle	57
Duiker	108
Dik Dik	162
Oribi	191
Suni	1
Klipspringer	59
Ward's Reedbuck	247
Chamber's Reedbuck	44
Thompson's Gazelle	618
Peter's Gazelle	69
Bushbuck	178
Colobi Monkeys	271
Marabout	124
Egret	13
Steinbuck	5
Paa	2

XIII.—KING'S AFRICAN RIFLES.

Recruits.—137 recruits were enlisted for the 3rd battalion during the year, 62 of whom were Soudanese.

Health.—The health of the troops generally has been good. There has been a distinct improvement in the health of the Zanzibar detachment.

Patrols and Operations.—No military operations were undertaken during the past year. Half a company of the 2nd battalion was employed on patrol duty in the Meru District for two months. One company of the same battalion was employed on cattle quarantine duty at Athi River for one month.

Inspection.—The Inspector-General of the King's African Rifles inspected the Protectorate troops in November and December.

Disbandment.—In March orders were received for the disbandment of the 2nd battalion: this has now been accomplished.

Volunteers.—A new Ordinance for the volunteer reserve came into force on January 1st, the main provisions of which are:—

(*a.*) Members sign on as either "district" or "field service" members, the former undertaking to serve in the district in which their unit is established, and the latter to serve anywhere in the Protectorate when called upon to do so by the Governor.

(*b.*) Volunteers to be classed as "efficients" must pass a musketry test which is the same as that laid down for the Territorial Infantry Force in England.

(*c.*) A yearly capitation grant of one pound is given by the Government for each "efficient" volunteer.

There are at present five units, and other units are in process of formation.

XIV.—PUBLIC WORKS.

The expenditure on public works during the year was £74,668, which was £11,678 less than that of the previous financial year, and was moreover the smallest expenditure since the year 1906-7.

The most important individual work undertaken was the augmentation of the water supply of Nairobi by laying a nine-inch diameter main for a distance of 10·40 miles. Work was still proceeding at the end of the year, the expenditure up to then having been £7,523. The conversion of barracks built originally for the European police to a boarding and day school for boys and girls was another important work, on which £1,009 was spent. The erection of a new jail in Nairobi was continued, at an expenditure of £2,037. Fresh accommodation for the European police necessitated an expenditure of £685. Thirty-seven minor items of work costing, in the aggregate, £1,689 were completed under the vote for Petty Works.

The Department's stock of unallocated stores was reduced during the year by the value of more than £7,500 to the amount of £38,034.

Under the schedule of Recurrent Public Works a sum of £30,727 was spent on the maintenance and repair of existing roads, works, and buildings.

APPENDIX 1.

Comparative statement showing the values of Imports (exclusive of Government goods, specie and bullion, and goods in transit) into the East Africa Protectorate during the years ended 31st March, 1910 and 1911.

Articles.	Year ended 31st March, 1911. Value. £	Year ended 31st March, 1910. Value. £
Agricultural implements	29,265	27,512
Ale and beer	4,146	4,046
Ammunition	6,401	4,708
Apparel (including hats, caps, and haberdashery).	25,065	27,251
Bags and sacks	13,691	6,825
Beads	9,273	4,542
Books, maps, and printed matter	4,324	3,103
Boots and shoes	7,212	5,547
Brass and copperwares	26,303	11,043
Building materials	27,905	16,552
Coal	3,888	85
Cotton goods	261,141	209,734
Cotton yarn	1,125	510
Drugs, medicines, and chemicals	8,127	9,455
Earthen and glasswares	7,493	9,793
Firearms	12,614	9,734
Furniture	4,600	12,386
Grain (including rice, flour, wheat, &c.)	80,654	74,880
Gunpowder	105	—
Iron and steelwares (including cutlery, nails, &c.).	27,943	24,461
Kerosene oil	14,408	13,334
Live stock	15,064	16,278
Machinery and parts of	24,840	20,609
Provisions of all sorts	77,351	63,595
Salt	3,334	1,900
Seeds and plants for cultivation	2,314	3,302
Silk goods	3,351	1,927
Spirits and liqueurs	16,500	18,440
Sugar	33,332	24,723
Surgical instruments	44	11
Tea	7,895	6,072
Tobacco	22,697	21,027
Wines	10,450	6,596
Wood	12,273	6,527
Woollen goods	4,774	4,658
Motor car and launches	4,568	1,519
Ships and lighters	14,337	567
Railway, tramway, and road materials	2,363	—
Hides, skins, ivory, and rubber	4,970	4,900
All other sorts	164,206	97,094
Total Imports	1,000,346	775,246

APPENDIX 2.

Comparative statement showing the values of various articles (including produce from the Uganda Protectorate, German East Africa, Congo Free State, and Italian East Africa) exported from the East Africa Protectorate during the years ended 31st March, 1910 and 1911.

Articles.	Year ended 31st March, 1911. Value. £	Year ended 31st March, 1910. Value. £
Borities (Zanzibar poles)	2,543	4,152
Carbonate of soda	1,016	596
Chillies	20,840	5,931
Coconuts	489	278
Coffee	17,984	9,808
Copra	30,608	16,154
Cotton	218,544	83,500
Cotton seeds	10,752	4,608
Cotton seed oil	1,476	252
Cowrie and other sea shells	1,911	1,411
Fibres	3,751	6,312
Gum copal	1,931	1,286
Ghee	14,101	11,475
Gold	48,384	16,533
Grain—		
Beans	6,992	2,526
Castor oil seeds	193	98
Ground-nuts	32,422	10,801

No. 751.

EAST AFRICA PROTECTORATE.

(For Report for 1910-11, *see* No. 705.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
7th December, 1912.

SIR,

I HAVE the honour to forward herewith the Annual Report on the East Africa Protectorate for the year 1911-12.

I have, &c.,
C. C. BOWRING,
In the absence of the Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(27901—2.) Wt. 29478—571. 1125—90. 2/13. D & S.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

Revenue.

The actual revenue collected during the year 1911-12 amounted to £720,078, which was £108,799 over the estimate and an increase of £119,492 on the revenue for 1910-11.

The following table shows the actual revenue during the last five years with percentage of increase:—

Year.			£	Percentage increase.
1907-08	...	...	474,760	—
1908-09	...	...	485,668	2·3
1909-10	...	...	503,040	3·5
1910-11	...	...	609,586	21·0
1911-12	...	...	729,078	19·6

Every head of revenue, with the exception of Reimbursements by other Governments, realised substantial increases over the amounts estimated.

Custom duties showed an excess of £35,239 over the original estimate. There was a steady expansion of trade in nearly every direction.

Hut and Poll Tax amounted to £146,215, or £20,610 over the estimate, and was £11,769 more than that collected in 1910-11. The extension of the area administered, a more accurate count of huts, and energetic collection of the tax all combined to effect this result.

Post office and telegraph receipts exceeded the estimates by £2,484, due to the general growth of postal business, the extension of postal facilities, and an increase in the number of telephone connections.

The receipts from Government railways amounted to £340,553, or £33,553 more than the original estimate. A general all-round development in passenger and goods traffic was experienced during the year.

From rents of Government property £5,589 over the estimate was received. On new grants rent is paid at the end of the calendar year next following, and a full year's rent on each succeeding 1st of January, while on old grants, where occupation has been given, the back rent is collected on the issue of the deed.

Interest was £3,099 above the estimate. Larger cash balances than were anticipated and £1,765 from the Note Guarantee Fund account for this excess.

Under Miscellaneous Receipts the surplus over the estimate was £2,361; most of this was due to recoveries of instalments for fencing wire issued. The proceeds of sales of confiscated ivory amounted to £1,537.

Land sales realised £4,704 more than the estimate. Good prices ruled generally during the year.

Grant in Aid.

Although in the Estimates for 1911-12 only £115,000 was shown as receipts under the head "Imperial Grant in aid of General Revenue," the actual amount received was £190,000; for during the year £75,000 was granted by the Imperial Treasury as a first instalment towards the purchase of rolling stock in view of the increased traffic expected from the scheme for the development of Lake Magadi.

The following table shows the amounts of the grants in aid received during the last five years: —

	£
1907-08	193,000*
1908-09	138,000
1909-10	133,500
1910-11	130,000
1911-12	190,000†

Expenditure.

The actual expenditure for 1911-12 totalled £772,354 against the original estimate of £762,246. Included, however, in this was a sum of £27,929 on account of special expenditure for Lake Magadi, which was not estimated for. The principal excesses were as follows: —

Port and Marine.—£2,734. This is accounted for by the purchase of a new steam launch, value £2,072, for Mombasa, the provision for which, made in the previous year's Estimates, had not been expended; also by the fact that a mooring lighter, for which £700 had been provided, could not be procured for that sum, and further by the additional expenditure which had to be incurred on the cost of freight from Bombay.

Prisons.—£2,680. This vote had been somewhat severely cut down, and the increase in prison population, the expenses of the reformatory, and the failure of the prison food plantations all contributed to the excess.

Miscellaneous Services.—£1,300. Of this sum £445 was expended on celebrations in connection with the Coronation; £100 more was required for language bonuses; £519 beyond the sum provided was necessary for telegrams, and £245 more than estimated was required for payments in connection with the Tropical African Services Course.

Railway.—£6,227. This was entirely due to increase in traffic, 1,208,367 miles being run instead of 900,000, on which latter basis the original estimate was framed.

No provision was made for special expenditure for the development of Lake Magadi, under which head a sum of £27,929 was required. A special grant of £75,000 was made by the Imperial Treasury, but owing to unforeseen circumstances only the sum mentioned could be utilised.

The expenditure for the last five years is as shown hereunder: —

---

* Includes special grant of £40,000 for abolition of slavery.

† Includes special grant of £75,000 for Lake Magadi.

	£
1907-08	691,677
1908-09	703,103
1909-10	669,405
1910-11	682,041
1911-12	772,354

Financial Position on 31st March, 1912.

	£	£
Assets as on 1st April, 1911		147,010
Expenditure for 1911-12	772,354	
Revenue for 1911-12	729,078	
Excess expenditure over revenue		43,276
Balance excluding grant in aid		103,734
Grant in aid, 1911-12		190,000
Net assets on 31st March, 1912		£293,734

Included, however, in the sum of £293,734 are certain unexpended balances amounting to £74,152 on account of works which could not be completed during 1911-12, and for the expenditure of which sanction will be sought in 1912-13.

(B.) CURRENCY.

The following table shows the expansion of the subsidiary coinage during the year:—

Denomination.	In Circulation.		Increase.
	31st March, 1911.	31st March, 1912.	
	Rs.	Rs.	Rs.
Silver 50 cents.	1,70,703	2,32,631	61,928
Silver 25 "	90,192	1,17,761	27,569
Nickel 10 "	1,48,600	2,20,607	72,007
Nickel 1 "	3,16,952	5,57,112	2,40,160
Nickel ½ "	4,500	4,500	—
Total	7,30,947	11,32,611	4,01,664

The stock of old copper pice and aluminium cents, both of which have been demonetised, though the latter are still being received, decreased during the year by Rs. 12,416 face value, as is shown by the following table:—

Denomination.	Outstanding.		Decrease.
	31st March, 1911.	31st March, 1912.	
	Rs.	Rs.	Rs.
1 pice copper	2,09,082	2,02,588	6,494
1 cent. aluminium	30,734	24,865	5,869
½ " "	2,170	2,117	53
Total	2,41,986	2,29,570	12,416

The total face value of notes in circulation on 31st March, 1912, was Rs. 38,71,995, an increase of Rs. 10,42,995 since the same date in 1911.

(C.) Loan Advances.

On 28th December, 1911, the first advance amounting to £47,000 was made by the Imperial Treasury on account of the loan of £250,000 for the purposes of improved railway communication and harbours in the Protectorate and for the provision of a pipe-borne water supply for Mombasa. An Ordinance, No. 10 of 1912, was passed on 31st May, 1912, charging the principal and interest to the revenue of the Protectorate. The interest is at the rate of 3½ per cent. with a sinking fund of one per cent. The rate of the sinking fund, accumulated at 3½ per cent., will enable the advances to be redeemed in forty-four years.

II.—TRADE AND SHIPPING.

(A.) Trade.

Imports.

The import trade of British East Africa includes merchandise imported from foreign ports by sea and consumed in Uganda. The total value of such imports for the year 1911-12 (inclusive of free goods but exclusive of specie, goods in transit, and Government stores) was £1,330,437, as against £1,000,346 in the preceding year, an appreciable increase of £330,091. Included in the value of imports are £66,382 for railway material imported by the Lake Magadi Company and £16,795 for articles necessary for maintaining cable communication imported by the Eastern Telegraph Company. Excluding these amounts, imports of trade goods amounted to £1,247,260, showing a net increase of £246,914 or 24·6 per cent. over the previous year.

The total import duty received during the year amounted to £122,799, a rise of £26,368 or 27 per cent. over last year. The fact that the value of trade imports increased by 24 per cent. only, whereas the duty increased by 27 per cent., points to the fact that a larger proportion of dutiable goods was imported during the year under review than was the case in the previous year.

The principal articles of import are stated below, together with their values in pounds sterling:—

	£
Cotton goods	394,715
Grain	100,903
Provisions	76,878
Machinery and parts thereof	50,392
Sugar	42,571
Wearing apparel	40,932
Iron and steel wares	40,652
Building materials	39,261
Tobacco	26,517
Agricultural implements	24,416
Spirits and liqueurs	20,406
Brass and copper wares	18,763
Bags and sacks	18,751
Kerosene oil	15,086
Articles necessary for maintaining telegraphic communication	16,795
Railway, tramway, and road materials ...	66,382

The largest item in the list is cotton manufactures, which rose from £261,141 to £394,715, an increase of 51 per cent. in value, while the quantitative expansion was as much as 64 per cent. over that of the previous year. Cotton goods, the principal article of East African trade, represent 31 per cent. of the whole trade imports. The rise in value of £133,574 alone accounts for 54 per cent. of the total increase in value of imports in the year under review, viz., £246,914.

In cotton goods the share of the United Kingdom receded from 24 per cent. to 22·7 per cent., a relative decline but an actual increase of £27,049 over the previous year's figures, which were £62,672. The first place held a year ago has not been maintained, but has been taken by the United States of America. The share of the latter country represents 30 per cent. as against 20 per cent. in the previous year; the advance in value is one of £64,901, *i.e.*, from £53,494 in 1910-11 to £118,395 in 1911-12. Germany has increased her supply from £26,987 to £40,136, and Holland from £53,979 to £68,915. India has lost ground with a percentage of 11·5 as against 18·1 in the preceding year, the decline in value being one from £47,680 to £45,483.

The appended statement shows the comparative values of cotton goods imports during the last nine years and their percentage in relation to the total imports:—

Year.	Value. £	Percentage of total imports.
1903-04	118,539	27
1904-05	145,588	28
1905-06	210,571	31
1906-07	222,278	30
1907-08	197,044	25
1908-09	207,545	26
1909-10	209,734	27
1910-11	261,141	26
1911-12	394,715	31

The foregoing figures are worthy of special note. The trade in cotton goods, which at present holds the premier place in the imports of the Protectorate, is still in its infancy. British East Africa has a population of about three million natives, most of whom, until quite recently, went about unclothed. The majority still adhere to their primæval customs in the matter of clothing, the Kavirondo tribe, numbering over a million, being the most conservative in this respect. The wealth of the native tribes is, however, increasing year by year, and it is only to be expected that enhanced prosperity, coupled with the spread of civilisation, will in a short time engender a desire to adopt a state of life similar to that of other human beings; in fact the Kikuyu have already begun to purchase cotton goods and are becoming alive to the fact that they possess the wherewithal to obtain what they require, whether it be blankets, wraps, or more elaborate clothing. The present trade with the natives in all classes of goods is bound to expand enormously in a few years' time. An immense market is awaiting supplies, which should form no inconsiderable outlet for British industrial enterprise, but it does not at present appear to hold out much inducement to British manufacturers to dispose of their goods in increasing quantities; the trade in cotton goods, both with Great Britain and with India, having relatively declined. The supply of these commodities is now, and appears likely to remain, largely in the hands of foreigners and Asiatics. So far from there being an influx of British firms, the past year has seen the advent of three new foreign houses who have started business in Mombasa, whereas there has been no increase in the number of British commercial concerns. The bulk of the trade with the natives in cotton goods is carried on from Mombasa. Up to the present time Nairobi has not catered for native wants. By Nairobi is meant Nairobi firms having no business houses in Mombasa.

The class of import which comes next in importance is "Grain," valued at £100,903, forming over 7 per cent. of the whole. The trade has expanded during the year under report, the amount in 1910-11 being £80,654 (184,093 cwt.), as compared with £100,903 (210,859 cwt.) in 1911-12, an increase of 14·5 per cent. in quantity and 25 per cent. in value. The prices hardened in Burmah owing to large demands from India and China in consequence of famine.

The next item is "Provisions." Bacon, ham, butter, cheese, condensed milk, preserved meat, tinned provisions, &c., have previously been included under this head, but during the year under review much more comprehensive headings were arranged, and in the trade returns for the year the articles mentioned are shown under separate headings.

The importation of "provisions" amounted to £76,878, and shows a negligible decrease of £473 under the previous year: the decline is not to be attributable to decreased consumption, but is probably due to increasing local production. The United Kingdom continues to supply more than half of these imports.

The imports of sugar advanced from £33,332 (42,289 cwt.) in 1910-11 to £42,571 (50,379 cwt.) in 1911-12, the increase in value of £9,239, or 27 per cent., and in quantity 8,090 cwt., or 19 per cent., being due to progressive increase in internal demand. China and Java claim 45 per cent. of this trade and Austria-Hungary 32 per cent.

The increase in machinery and parts thereof, especially for agricultural and industrial purposes, is remarkable. The value advanced from £24,840 to £50,392, a rise of over 100 per cent. The United Kingdom continues to maintain the leading position, and her share is 75 per cent. of this trade.

The apparent fall of £1,827 in agricultural implements is due to a change in statistical headings rather than to decreased demand, as some of the articles formerly grouped under Agricultural Implements are now included in Agricultural Machinery. Another satisfactory feature of the returns is the increase of £5,068, or 37 per cent. over the previous year, in the importation of bags and sacks for packing produce, an index to the growth of the export trade.

The increase of £1,075 in value of seeds and plants is also satisfactory.

The advance of 7,292 gallons in quantity, and £3,906 in value, of spirits and liqueurs during the year under report is not entirely accounted for by increased consumption but would appear chiefly to be caused by the depletion during the two previous years of the large stocks previously imported in anticipation of a rise in duty. The United Kingdom supplies 72 per cent., France 24 per cent., and the balance comes from other European ports.

Furniture is another item which showed a decrease of £7,786 last year over the preceding year, but has recovered during the year under review and marks an increase to the extent of £3,268. There is also a large and growing trade in locally-manufactured furniture.

In building materials, iron and steel wares, tea, tobacco, timber, silk, and woollen goods there was an appreciable expansion of business. These items also showed increases last year over the previous year.

Wearing apparel, drugs, medicines and chemicals, and earthen and glass wares, which showed decreases during 1910-11, have taken an upward turn during the year under report.

The increases in ale and beer, beads, cotton yarn, kerosene oil, salt, &c., are all due to the growing trade of the country.

The total increase in various articles amounted to £356,229, whereas the aggregate decrease in a few items was £26,138 only, showing a net increase of £330,091, inclusive of goods imported for the Lake Magadi Company and for maintaining telegraphic communication.

The total decrease of £26,138 can be ascribed to fluctuations of trade rather than to a diminishing volume of business.

The principal articles of import trade into the East Africa Protectorate and their values during the last five years are stated below, the increase or decrease in their final values as compared with the first year of the quinquennial period just ended being set against each.

Articles.	Year ended 31st March—					
	1908.	1909.	1910.	1911.	1912.	Increase.

						Decrease
Furniture	16,281	13,240	12,386	4,600	7,868	8,413
Spirits and Liqueurs ...	34,240	38,796	29,083	31,096	33,293	947
						Increase
Total Imports ...	799,717	797,158	775,246	1,000,346	1,330,437	530,720

The most interesting feature of the above list, which shows advances in most cases, is the high percentage of increases in cotton goods.

A portion (11 per cent.) of the total imports declared for home consumption was re-exported to neighbouring countries, mostly overland to German East Africa by the Uganda Railway. The value of these re-exports increased from £70,002 to £135,425 during the year under review, a rise in value of £65,423, or 93 per cent. over the previous year. This is largely due to the passing of the Customs Ordinance, 1910, under which the whole amount of duty is returned on the re-export of goods, less 25 cents (4*d.*) per package to cover the administration expenses, instead of 75 per cent. only as was the practice formerly. For the same reason goods passed through in transit have decreased, the re-export trade being found to be a more convenient one than the transit trade. The German Railway from Dar-es-Salaam to Tabora has not yet had the effect of reducing goods traffic on the Uganda Railway from and to the ports on Lake Victoria Nyanza, except in the matter of rubber from the Congo, which is now being sent down by the German line.

The following comparative statement shows the values of all imports into the East Africa Protectorate during the years ended 31st March, 1908-12:—

—	1907–8.	1908–9.	1909–10.	1910–11.	1911–12.
	£	£	£	£	£
Trade goods	799,717	797,158	775,246	1,000,346	1,330,437
Importation on behalf of East Africa Administration.	89,776	73,377	40,577	41,146	92,776
Importation on behalf of Uganda Administration	12,414	36,874	32,617	17,169	77,128
Importation for the construction and maintenance of the Uganda Railway.	35,473	57,165	32,396	73.692	157,413
Importation of specie, gold and Indian rupees.	224,000	52,420	56,835	209,674	175,859
Importation of goods in transit by sea.	189,647	157,020	228,002	264,498	236,458
Total	1,251,027	1,174,014	1,165,673	1,606,525	2,070,071

Exports.

The total value of exports of British East African produce (exclusive of Uganda, German East Africa, the Congo Free State, the Soudan, and Italian East Africa) for the year ended 31st March, 1912, rose to £333,670, as against £276,480 in the previous year, the advance being one of £57,190, or 20 per cent. The receipts on dutiable exports declined from £12,786 to £11,368 in 1911-12, the decrease being one of £1,418, or 12 per cent. over that of the previous year, due to the falling off in ivory and rubber.

The principal articles of export during 1911-12 are enumerated in the appended list with their values in pounds sterling:—

	£
Grain	108,568
Hides and skins	73,250
Copra	28,055
Rubber	16,498
Ivory	15,649

The bulk of the total exports from British East Africa is still supplied by our neighbours—Uganda, German East Africa, and the Congo Free State contributing £683,228 during the year under report—while the value of domestic exports from British East Africa amounted to £333,670 only.

The noticeable increases over the previous year in the value of principal articles of export are under grain, hides and skins, and living animals.

The largest single item is that of grain, valued at £108,568, which forms no less than 32 per cent. of the total exports of East Africa produce. The remarkable increase in value is one of 90 per cent., and in quantity one of 48 per cent. The principal articles under this head are sim sim and maize. The advance in sim sim is from £23,537 in 1910-11 to £44,999 in 1911-12, an increase of 91 per cent. in value, and from 50,256 cwt. in 1910-11 to 79,147 cwt. in 1911-12, or 57 per cent. in quantity. The chief customer was France, who bought nearly 50 per cent. The price hardened owing to shortage in the world's markets.

The export of maize developed from £21,297 to £43,270 in value, and from 119,972 cwt. to 181,788 cwt. in quantity. The increase in value is one of 100 per cent., and in quantity one of 51 per cent. More than half was consigned to the neighbouring Colony of Italian East Africa, where it forms the staple food of the natives.

Other items under grain exported are millet, ground nuts, pulse, rice, beans, and peas, amounting to £20,299, as against £13,667 in the previous year.

Next in importance is the export of hides and skins, which represents 22 per cent. of the total domestic produce. The output of hides has increased from £62,258 in 1910-11 to £73,250 in 1911-12, showing a rise of £10,992, or 17 per cent. The United Kingdom and France are the principal buyers of hides, while 50 per cent. of the goat skins are consigned to the United States and 27 per cent. to France.

Steps are being taken to induce the natives if possible to improve the present methods of treating and drying hides. There is no reason why, if care is taken, their value should not be greatly enhanced.

The export of live-stock advanced from £5,821 to £12,588 in the last twelve months, a rise of 116 per cent. This abnormal increase was mainly due to the good prices ruling in Zanzibar, to which place shipments of native cattle were made from British East African northern ports.

The export trade in coffee enjoyed another prosperous year. The increase is from £2,995 to £5,765, or 93 per cent. in value, and from 1,220 cwt. to 2,089 cwt., or 71 per cent. in quantity. Under the Diseases of Plants Ordinance coffee beans are not allowed to be imported from foreign countries or from neighbouring territories, except in transit or if previously roasted. The internal demand for indigenous produce has in consequence increased, and this, in its turn, causes contraction in the exportable surplus.

The progressive increases during the past two years in the exports of beeswax, chillies, coconuts, ghee, castor oil seeds, sim sim oil, wattle bark, and wool are indications of expansion of business.

The exports of fibre have increased from £3,727 (6,398 cwt.) to £4,264 (8,117 cwt.) during the last twelve months. The increase in value is one of 15 per cent. and in quantity 27 per cent.

Potatoes, which showed a falling off last year, have advanced to £4,915 during the year under review.

The trade in borities (rafters) has slightly recovered its position from £2,543 in 1910-11 to £2,958 in 1911-12, but is still below the average of past years.

The exports of cotton show a decrease of £1,164, from £7,477 to £6,313, but the quantity has increased from 163,184 lbs. to 166,033 lbs.

The progressive expansion in the exports of rubber which was reported in previous years has received a temporary check, for whereas in 1910-11 the value exported reached the unprecedented total of £31,963, in 1911-12 this figure decreased by 48 per cent, to £16,498, inclusive of £2,686 for plantation rubber. The diminution in quantity is from 1,726 cwt. to 1,207 cwt., or 30 per cent., inclusive of 193 cwt. for plantation rubber. The export of wild rubber is declining, while many of the plantation trees have not yet come into bearing.

The export of ivory from British East Africa is dwindling steadily and has decreased from £21,975 in 1910-11 to £15,649 in 1911-12, or 29 per cent. in value, and from 2,133 cwt. to 1,721 cwt., or 19 per cent. in quantity.

The trade in ivory is at present only 4·7 per cent., whereas a decade ago it formed 33 per cent., of the domestic exports. Elephant hunting in general no longer plays an important part in the lives of the natives, but elephants are still shot by them in some districts and a considerable quantity of ivory is smuggled out of the Protectorate over the frontiers, which it is impossible to guard except at immense expense.

Sixty per cent. of the ivory was sent to Zanzibar for distribution to foreign countries, while the direct shipments to the United Kingdom and the United States of America amounted to £2,413 and £2,730 respectively.

The contraction in the exportable surplus of copra is somewhat unexpected. The value receded from £30,608 in 1910-11 to £28,055 in 1911-12, while the quantity declined from 36,879 cwt. to 31,717 cwt. The decrease in value is one of 9 per cent., and in quantity one of 14 per cent., the difference between the two, viz., 5 per cent., marking the rise in the average price of copra during the year under review. The diminished output may be partly ascribed to the intensification of internal demand, but is chiefly due to a low rainfall, which curtails the full development of coconuts. France continues to be the largest single purchaser of East African copra, taking £24,677, or 88 per cent.

The exports of minor products such as fine wood, gum copal, horns, oil cakes, ostrich feathers, and sea shells, which showed last year comparative increases, have decreased by £2,982. The trade in such articles is insignificant, only amounting to £3,043.

Mangrove bark receded from £6,059 (6,442 tons) to £1,950 (1,995 tons) during the year. Stocks were held owing to low prices prevailing. The market has recovered to a slight extent and shipments have been made but there is still a considerable quantity held here for a rise in price.

Uganda Exports.—During the year under review, produce of Uganda valued at £377,074 was exported through East Africa, showing a trifling increase of £5,561 or 1·5 per cent. over the previous year.

German East Africa Exports.—Produce from the Lake ports of Muanza, Bukoba, and Shirati is brought by the Uganda Railway to Mombasa for exportation to foreign countries. This overland trade amounted to £280,113 during 1911-12, showing a small decrease of £5,425 over the figures reached in 1910-1911.

The following statement shows the comparative values of all exports for the last five years from the East Africa Protectorate including produce from the Uganda Protectorate, German East Africa, the Congo Free State, the Soudan, and Italian East Africa.

Produce of	1907-8.	1908-9.	1909-10.	1910-11.	1911-12.
	£	£	£	£	£
East Africa Protectorate	157,097	140,418	190,668	276,480	333,670
Uganda Protectorate ...	140,277	140,370	211,796	371,513	377,074
German East Africa ...	173,236	102,119	169,241	285,538	280,113
Congo Free State ...	44,442	53,406	18,352	27,349	22,325
Soudan	—	—	—	1,688	3,634
Italian East Africa ...	—	—	—	343	82
Total... ...	515,052	436,313	590,057	962,911	1,016,898

The following statement records the extent of the total volume of imports and exports combined during the last five years:—

	£
1907-08	1,766,079
1908-09	1,610,327
1909-10	1,769,695
1910-11	2,569,436
1911-12	3,086,969

The increase in the whole volume of trade during the quinquennial period is £1,320,890 or 75 per cent.

The figures given in this report demonstrate forcibly the fact that an export trade of some importance, and to a large extent a corresponding import trade, have been quietly and gradually built up by native development, that is to say, by the production by the natives of commodities which find a ready sale in other countries.

Large quantities of machinery and agricultural implements have been imported free of duty, and a considerable amount of capital has been invested, and it is hoped that before long the white settler will become a successful competitor with the native not only as a producer but as an exporter. So far the results of white settlement in connection with the export trade have been disappointing. Wheat, a commodity largely experimented in, does not figure at all in the list of exports, live-stock and carcasses appear to no great extent, while wool, which jumped to £8,219 in 1910-11, shows an increase of only £98 during the year under review.

Coffee and sisal from up-country are now being exported in noteworthy quantities, and wattle bark and potatoes to a smaller extent. In a few years' time considerably larger shipments of coffee, sisal, wattle bark, and possibly rubber may be expected, but the export figures for 1911-12 in respect of up-country produce differ very slightly from those of 1909-10.

The Kavirondo tribe are the principal indirect contributors to the export trade, the Kikuyu taking the second place. The European contributors are nearly all foreigners, the only British (European) exporters of any note being the British East Africa Corporation and the Uganda Company, but their exports consist almost entirely of the produce of Uganda.

Development of the Jubaland and Tanaland Provinces has been commenced by private enterprise and a small amount of cotton from the Tana is now being exported.

The Agricultural Department is obtaining specimens of soil in these districts for report by experts as to their cotton-growing possibilities.

Work has not yet been begun on the deep water pier at Kilindini, it having been deemed necessary to submit the matter for report by the consulting engineers. The present wharf and general facilities for handling cargo, including lighterage accommodation, have proved inadequate, and with the sudden rush of trade great congestion of traffic has resulted. Remedial measures are, however, now being adopted. The port of Kilindini is in the meantime being used to its fullest capacity, especially for export purposes. Its increasing popularity has prevented an absolute block at the port of Mombasa, but there also the congestion is serious. A growing import and export trade through native development is assured, and if in addition a large import and export trade is built up by white settlement, extensive improvements even on a larger scale than is now contemplated would appear to be amply justified at Kilindini.

The steamers of the lines to which reference was made in the last annual report are arriving at and leaving the ports of Kilindini and Mombasa with full cargoes, and until the port of Kilindini is developed to such an extent as to be capable of dealing with the whole import, export, and transit trade of the Protectorate (with the exception of the trade with India and the Persian Gulf, which must be dealt with at the port of Mombasa), the public will be put to much inconvenience.

The Customs Ordinance, 1910, has proved to be a most useful measure. There were, during the year under review, 48 seizures and 46 convictions, in addition to more trivial breaches of the law which were dealt with by the Chief of Customs under powers given to him by Section 39 of the Ordinance. The fines imposed varied from 3,000 rupees to one rupee.

The market of British East Africa suffers from the effects of overtrading and there were many bankruptcies during the year under review. While, however, the general system with Indian traders continues to be one of long credits, a healthier state of things is now in existence, and business is being conducted on somewhat safer lines than heretofore.

In reviewing the trade of the year, the factor which has exercised the widest influence has undoubtedly been the steady growth in the exports, which have brought the return flow of money and have determined the capacity of the country to purchase imports. Signs are not wanting that the next few years will witness a decided development of agricultural industries in the Protectorate.

Improved means of communication, by which districts hitherto practically inaccessible are being opened up, must result in a still further increased volume of exports and imports. The record for the year 1911-12 marks in almost every respect an advance upon former years. Present conditions augur further trade improvements, and the outlook for next year is decidedly full of promise.

(B) SHIPPING.

Of the two chief ports in the Protectorate, Kilindini and Mombasa, the former, lying on the west side of Mombasa Island, is by far the larger, and is in consequence used by all the principal steamers.

Mombasa Harbour is small, with a narrow entrance, and is therefore only available for small steamers and dhows, though it is the more conveniently situated owing to its proximity to the business quarter of the town.

The Protectorate has been served during the whole year by five regular lines of mail steamers, the British India Steam Navigation Line, the Union-Castle Line, the German East Africa Line, the Messageries Maritimes, and the Societa Nazionale di Servizi Marittimi.

The British, French, and Italian Lines have called once a month, and the German Line twice a month.

In addition to the above, the British India Steam Navigation Company's steamers have called once a month with cargo transhipped at Aden.

The Clan, Ellerman and Harrison Line, and the Natal Line have also called once a month.

A branch of the German East Africa Line maintained a regular service twice a month with Bombay with occasional visits to Lamu.

A branch of the British India Steam Navigation Line maintained a regular service once a month with Bombay during the year.

The coast traffic has been carried on by the small steamers belonging to Messrs. Cowasji Dinshaw and Brothers, and Messrs. Esmailji Jivanji and Company, but the service has been very unsatisfactory owing to the irregularity of the steamers' sailings.

The following table shows the gross tonnage of ships, the amount of cargo and the number of passengers landed and shipped by the different steamship lines at Mombasa.

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo.	Passengers.		Cargo.	Passengors.	
				Euro-peans.	Natives.		Euro-peans.	Natives.
			Tons.			Tons.		
British India, Aden ...	26	86,852	2,605	61	652	730	89	762
British India, Europe...	17	47,528	6,483	7	186	3,363	11	129
British India, Bombay	26	87,815	6,072	38	1,388	562	40	833
German Line, Bombay	51	174,613	6,406	103	4,356	779	77	2,067
German Line, Europe	58	351,497	13,938	785	864	13,136	518	596
Messageries, Europe ...	24	93,065	784	211	177	374	173	238
Union-Castle, Europe...	30	180,855	28,231	1,522	388	18,115	914	572
Harrison Line, Europe	23	72,125	5,717	6	38	5,154	5	111
Italian Line, Europe ...	20	44,882	1,039	61	407	2,528	62	439
Total	275	1,139,232	71,275	2,794	8,456	44,741	1,889	5,747

The total steam tonnage entered in the ports of the Protectorate amounts to 1,507,997 tons, represented by 686 steamers, an increase of 75 vessels and 206,247 tons over last year.

The total tonnage of sailing vessels entered in the ports of the Protectorate amounts to 55,662, represented by 3,431 vessels. This is a decrease of 197 vessels and 7,328 tons, as compared with 1910-11.

A new beacon has been erected on Chapel Rock, Lamu Harbour.

The revenue of the Port Office amounted during the year to £2,905.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

The increasing growth of the prosperity of the Protectorate is clearly shown from the satisfactory reports received from the business concerns established in the larger townships and by the number of branch industries which are constantly being opened in the more settled localities. In Nairobi especially, firms which have, until the last few years, accommodated themselves in temporary buildings of wood and corrugated iron, now find themselves in a position to put up substantial buildings of stone. Spacious assembly rooms have been erected, while a theatre and a large hotel are in process of construction. It is particularly satisfactory to note that several firms report a greatly increased demand for agricultural implements.

Nairobi itself is lit by electric light, generated in the works of a private company, and the increasing number of motor cars and motor bicycles has necessitated the opening of two motor garages, both of which have proved successful ventures.

Dairy farms continue to increase, but even so the demand is in excess of the supply.

A large proportion of the wheat grown in the highlands is ground by local mills, but the supply available is not yet sufficiently large to allow a margin for export.

The number of sportsmen visiting the country has decreased, but the firms who make a speciality of catering for shooting expeditions have not been affected thereby, owing to the increase in general business.

The cotton ginnery established at Kisumu by the British East Africa Corporation has had a most successful year. Though it maintains a high standard of efficiency, its capacity for work has been severely taxed owing to the large import of cotton from Uganda. In the latter part of the year nearly 500,000 lbs. of seed cotton were sent from the Sio port alone, of which 260,000 lbs. came from the Nyanza Province and the remainder from Uganda. Electric light has recently been installed to admit of night work.

Both the National Bank of India and the Standard Bank of South Africa report a satisfactory year, and the latter bank has opened a branch at Eldoret, which should prove of great convenience to the settlers on the Uasin Gishu.

(B.) MINES AND MINERALS.

There is practically nothing to report under this heading. Only seven prospecting licences were issued during the year.

Some mica found in Machakos District has been favourably reported on.

The investigations instituted by Government with a view to following up the discovery of coal on the Taru plains unfortunately had a negative result, no trace of a seam of the mineral being discovered.

A new Mining Ordinance was passed through the Legislative Council the conditions of which were more liberal than those in the Ordinance of 1902, and it is believed that this Ordinance will prove a fresh incentive to the prospector. The new Ordinance will be applied when the Rules to make its application effective have been drafted.

Dr. F. Oswald was sent out from the British Museum on a special mission to investigate the tertiary fossiliferous beds near Karungu. His investigations were successful and he obtained remains of a large and varied fauna, and geologically mapped the whole series of deposits. The beds are believed to be of early pleiocene age; his full results will be communicated to the Geological Society in due course.

IV.—AGRICULTURE AND STOCK RAISING.

The hopeful feeling expressed in the reports of last year and those of previous years still continues. A noticeable feature during the year has been the great increase in the number of settlers with large means who are also men of experience in agricultural and pastoral pursuits. It is to men of this class that the Protectorate must look for rapid development and consequent advancement, as, in the case of the man of small means, a considerable time must of necessity elapse before he can expect any appreciable return in the way of exports, although by catering for the local markets and by careful management his land may be self-supporting within a moderately short period.

(A.) CROPS.

In the highlands the year has seen excellent rains during the first season; the second was droughty at the commencement but heavy rain in February brought the yield to normal.

Wheat.—The wheat crop at Njoro, which is the chief wheat-growing district of the Protectorate, was seriously affected by green fly and rust, probably due in a large measure to the continuous growing of wheat on the same lands for successive years. Experiments have been conducted at various centres with a large number of varieties of wheat, some of which have given encouraging results.

Barley.—With this cereal some very encouraging results have been obtained from recent experiments. The loose friable soils of the highlands appear to be more adapted to the raising of barley than wheat, and where the latter crop has often failed owing to the ravages of rust barley has given good returns. Rust is present in a slight degree, but does not appear seriously to affect the crop.

Tobacco.—Experiments in this crop are now being conducted by the Adviser on tobacco who arrived in this Protectorate during the latter part of 1911, and it is hoped that the results attained may warrant the cultivation of this product on a commercial scale.

Linseed.—This product continues to give very encouraging results. A large quantity of the best seed for sowing was imported in April, 1912.

Maize.—This crop has received increasing attention throughout the year and the exports have more than doubled those of 1910-11. The value exported was £43,270 as compared with £21,297, and the quantity 181,788 cwt. as compared with 119,972 cwt. Good seed from the heavy-cropping varieties is now procurable in the Protectorate.

Beans.—The export of this crop has been very similar to that of last year. By some it has been grown in large quantities and has yielded a satisfactory return.

The prices c.i.f. on the Marseilles market in November, 1911, were as follows:—

	£	*s.*	*d.*	
Noyau au Blanc (white haricot) ...	18	10	0	per ton.
French Coco (small ditto)	14	7	6	,, ,,
Brailla Flat white	14	7	6	,, ,,
White Coco	14	7	6	,, ,,
Canadian Wonder	14	10	0	,, ,,
Rose Coco	13	10	0	,, ,,
Chick Peas	9	10	0	,, ,,

The demand for all these varieties is practically unlimited; the prices given may be considered the maximum.

Coffee.—The continued upward tendency of the prices realised for East Africa coffee has led to frequent enquiries for land suitable for growing coffee, and considerable areas are now planted. The export of coffee beans has increased and the prices are satisfactory.

Wattle.—The trees which have been planted during the past few years are doing well, and further considerable areas of land have been planted at Limoru, Njoro, Lumbwa, and Londiani.

The Director of the Imperial Institute reports as follows on bark from Njoro:—

"This bark is of good quality, and would probably be worth about £8 per ton in London under present conditions, where Natal wattle bark is selling at £6 5*s*. to £10 per ton according to quality."

Cotton.—The output of cotton has been slightly less than that of last year. Experiments have been conducted on the Tana and Juba Rivers, the results of which are encouraging. The experiments, however, have been on too limited a scale to justify a definite pronouncement, and further trials will be carried out during the present year. Abassi is the variety which gives the best general results.

Copra.—The export of copra still continues on a large scale, and big areas are being planted out with young palms.

Rubber.—There has been a decrease in the output of rubber owing to the temporary prohibition of cutting the wild vine.

Tapping of Ceara rubber trees has been carried out on several properties; the yield of latex was good and the prepared rubber sold at good prices.

New Ceara plantations are coming into yielding yearly. A further large area has been put under manihot and glaziovii at the Coast and Kibwezi.

Sisal.—Decorticating operations have been conducted on the Punda Milia plantations and consignments of fibre have been placed on the market with the result that the prices realised were the maximum obtaining in the market at the time. The brokers reported very highly on the length, colour, and textile strength of the fibre.

A rapid extension of the already large area under sisal can now be expected.

Sim-sim.—A further increase in the export of this oilseed, almost wholly grown by natives in the Kavirondo District, has taken place. The price at Marseilles ranges from £12 to £16 per ton and, on account of the quick returns and simple cultural requirements, this is now regarded as one of the best of all catch crops.

Fruit.—A noticeable feature of the past year has been the steady increase in the demand for fruit trees of all descriptions. Numerous consignments of citrus and other trees have been imported by settlers with the object of starting what it is hoped will prove a successful branch of farming in the Protectorate.

(B.) LIVE STOCK.

Cattle.—In spite of the fact that during the early part of the year one of the chief stock-producing districts, North Kavirondo, was practically devastated by rinderpest, it is estimated that, although the disease existed also in South Kavirondo and among the cattle of the Masai in Laikipia, there has been an increase in the number of native cattle in the Protectorate.

A considerable number of pure bred cattle, both bulls and heifers, have been imported from the United Kingdom and South Africa. Their destination has been chiefly the Rift Valley and the Uasin Gishu Plateau, in which districts the raising of grade cattle is receiving considerable attention.

The dairying industry is being followed in the Nairobi District, on the Kinangop, in the Rift Valley, and at Molo and Lumbwa, but at present the output of butter and cheese is scarcely enough to supply local consumption.

The high prices recorded for cattle in the previous year still prevail.

Sheep.—The marked development noted last year in this branch of pastoral farming still continues.

The demand among new comers for suitable sheep land has been considerable, and a number of pure bred stock of high quality have been imported.

The up grading of the native sheep with the merino still continues, and there is a marked and rapid improvement in the wool. The export of wool is gradually increasing.

The demand for native ewes is great throughout the sheep breeding districts of the Rift Valley and the Uasin Gishu, and merino and grade rams find a ready market. The mortality among the flocks generally has been very low, and there has been a large increase in the breeding stock of the country.

Horses.—Horse breeding continues to be successful and to attract a considerable amount of attention, and the progeny of the better class stallions imported of late is exceedingly promising.

The importation of horses included a number of South African brood mares, one English thoroughbred, a few Indian country breds, and Arab ponies. More ponies than usual were imported from Abyssinia, but the majority of these were weedy animals.

Mules.—The market has been well supplied with mules from Abyssinia during the past year, and prices were lower than they usually have been.

Pigs.—The raising of bacon pigs has not received the amount of general attention that was expected. The reasons for this are probably—(1) the risk of East African swine fever which is of a peculiarly virulent type: (2) the necessary extra precautions exercised by the Uplands bacon factory in the selection of pigs for bacon.

The demand for pedigree pigs at the Kabete Farm has not been so brisk this year as in the past, but the progeny of the new sows imported from England have all been taken up. This points to a re-awakening interest in the better class of pedigree pig and its influence should very soon be felt. There is always a ready sale for pigs on which proper care in the way of feeding has been bestowed.

Ostriches.—Among the owners of small flocks interest in this branch has subsided somewhat, but some of the larger owners continue to be successful. Some of the better birds give feathers of excellent quality, and consequently return a satisfactory profit per head.

(C.) EXPERIMENTAL FARMS.

Kabete.—This farm has continued experiments with different varieties of maize, beans, wheat, &c., and very valuable data have been collected with regard to the comparative yields of the different varieties of crops. Considerable attention has been given to growing only from the best selected seed. A large part of the work has consisted in providing seeds of all descriptions to settlers.

A flue-barn has been erected for the curing of tobacco.

Pig breeding is also carried on, and recent importations have added considerably to the value of the farm as a centre from which stock pigs can be obtained.

Experiments in the grading up of native cattle and donkeys have been continued.

The elands are doing well and one has given birth to a very fine calf.

The farm has become an important centre for persons who are desirous of settling in the country, and a number of settlers have visited it.

At the end of the year the number of live stock on the farm was 564.

Mazeras.—At this station the experiments in connection with tropical crops suitable for growing on the Coast belt have been continued and much useful knowledge has been obtained.

Kibos.—This station has been utilised chiefly as a centre of instruction for natives. Crops which are considered suitable for the Lake Districts are extensively grown and all available improved seed is issued to the natives through the administrative officials of the Province.

Naivasha.—The Government stock farm at Naivasha continues to produce a large number of pure bred and grade cattle of different breeds which are in great demand. The annual sale in Naivasha was well attended and competition in bidding was keen.

Sheep breeding has received full attention and the prices realised at the sale are sufficient proof of the appreciation by the public of this institution.

The prices were as follows: —

Description.	Average price. Rs.	Highest price. Rs.
Pure bred bulls	700	945
Grade bulls	215	395
Grade cows and heifers ...	305	400
Pure Merino rams	65	140
Grade rams	8	25
Pure Merino ewes	25	34
Pigs: —		
Berkshire sows	21	35
Tamworth sows	32	35
Long black boars	15	20
Berkshire boars	8	16

The total number of animals sold was 993, and the gross proceeds amounted to Rs.34,452, or nearly £2,297.

(D.) DISEASES OF ANIMALS.

East Coast Fever.—Investigations have resulted in the knowledge that East Coast fever, instead of being a newly introduced disease, has existed for many years in several large areas of the Protectorate. A very large percentage of cattle reared in these parts, when exposed to infection, have proved to be immune, that is to say, they have acquired immunity through having passed through an attack of the disease in early life. It is practically impossible to eradicate the disease in all these infected areas, and the policy now advised is that of exposing to infection all calves born in these districts, with, in most cases, subsequent immunity.

Other parts of the Protectorate, such as the Rift Valley, Molo, and the Uasin Gishu, are believed to be free from East Coast fever, and every effort is being made to protect the highly susceptible valuable cattle within these clean areas.

Rinderpest.—Practically the whole of the Nyanza Province is infected. The epidemic mentioned in last year's Annual Report as causing such heavy mortality in North Kavirondo, still continues. An attempt was made to suppress it by protective inoculation with serum, but, owing to the impossibility of checking movement, it was decided to abandon the inoculation within the native reserve. In order to guard against the spread of rinderpest eastwards, all cattle from Nyanza Province are inoculated ten days before leaving.

Individual isolated outbreaks have occurred in various parts of the Protectorate, which have been successfully dealt with by inoculation with anti-rinderpest serum. From none of these centres has the disease spread.

The veterinary laboratory at Kabete has manufactured sufficient serum to supply the needs, not only of this Protectorate, but also of Uganda.

Pleuro-pneumonia.—So far as is known contagious pleuro-pneumonia exists only in Laikipia among a few herds of cattle belonging to the Masai. These herds have been confined to an isolated area and inoculation has been carried out.

Anaplasmosis.—Anaplasmosis is fairly prevalent although no losses on a very large scale have occurred.

Horse Sickness.—Up to the beginning of March no serious outbreak had taken place. During the last two weeks of the financial year several cases have occurred.

Lymphangitis.—Epizootic and ulcerative lymphangitis are largely on the increase, and are likely to cause serious trouble in the future.

Sheep Scab.—This disease is wide spread over the country, and as the number of woolled sheep increases, is likely to become a serious danger. Many farmers have erected dips on their land, and trade sheep are dipped at Nakuru and Rumuruti before entering the settled parts. Other public dips will shortly be erected.

Sheep Pox.—Cases have occurred on some farms in the Rift Valley. The benign form of variola is that generally met with, and the percentage of mortality is low. In Naivasha Province a disease has recently appeared amongst newly born lambs, causing their deaths, in practically every case, within 24 hours of birth. No remedy has yet been discovered, nor, indeed, is the cause of the trouble known, but it is thought that the very exceptional rains experienced in February and March may have affected the grass.

Swine Fever.—In May a serious outbreak occurred on one of the farms at Gilgil, and outbreaks have also occurred on some of the farms near Nairobi. The East African form of swine fever differs from that known in Europe, in that it is particularly virulent, and cases of recovery are exceedingly rare.

Permit System.—The permit system for the movement of stock is adopted everywhere in the settled districts, and between the native reserves, and without doubt has done much to check the spread of disease. The routes by which stock may be moved are shown on the permit.

Experiments.—Research work is being carried on and experiments in connection with East Coast fever, swine fever, trypanosomiasis, and various obscure diseases of sheep are being conducted.

Branding.—The advisability of branding is recognised by most stock farmers, and numerous applications have been received for brands.

Fencing.—Under the provisions of the Diseases of Animals (Fencing) Ordinance, 12 miles 441 yards of four-strand fencing have been erected round infected areas during the year.

The cost of fencing infected areas for the year has been Rs.6,716; this includes the value of the wire, staples, and posts, as well as the cost of erection, and also the upkeep of the existing fences.

During the year all the two and three-strand fences within the Nairobi municipal area were taken down, as they were no longer required.

It has been decided that all fences erected (within the scheduled area) shall be sold to the owners of farms on whose boundaries they had been erected, for the purpose of controlling East Coast fever, with the exception of such as may be required for veterinary purposes.

(E.) INSECT PESTS AND PLANT DISEASES.

The two species of beetle mentioned in the Annual Report for 1910-11 as being highly injurious to young wheat have now been identified, and measures are being taken to prevent their reappearance.

The "wheat aphis" or "wheat green fly" (*Toxoptera graminum*) was responsible for considerable damage to the wheat crop in the neighbourhood of Njoro, and the Government Entomologist was in consequence requested to visit the United States of America, to learn by what means the pest could most effectually be eradicated. An attempt is to be made to introduce the lady-bird beetle and a hymenopteron parasite with a view to this end.

Regulations have been brought into force to deal with coffee bushes infected by disease, and to ensure such cultivation of coffee bushes and the land on which they are grown as will as far as possible eliminate the possibilities of disease. Coffee beans imported in definance of the regulations have either been destroyed or returned to the consignors.

The Mombasa fumigator is now solely used for imports passing through the Mombasa customs; exports are dealt with at Kilindini.

A quarantine siding for maize infected by weevils has been laid alongside the Kilindini fumigator, and has proved of great benefit in handling consignments of maize. 3,986 tons of maize were passed for export, of which 805 tons were fumigated prior to shipment.

Altogether 2,579 consignments of plants and seeds were examined during the year.

V.—FORESTS.

Forest Reserves.—There has been no material alteration in the area of the forest reserves during the year under review.

Reafforesting.—All existing plantations have been maintained; weeding and cleaning has been carried on over 969 acres. 575 acres of new plantations were formed at an average cost of Rs.13.08 per acre.

This very cheap rate of planting was made possible by the help of native cultivators in the forests near Nairobi and at Njoro.

Nurseries.—921,731 young trees were raised during the year; 1,643,349 young trees were planted out, sold, or issued free to Government Departments, and 775,864 were in the nurseries at the close of the year ready for planting out in the coming season.

Timber.—36,362 cubic feet of timber were sold during the year, being an increase of 18,803 cubic feet over that sold in the preceding year.

111,390 cubic feet of timber were issued free to Government Departments and to settlers having no timber on their farms.

Rubber.—2,290 lbs. of landolphia rubber were collected in the Kenya forests.

Railway Fuel.—1,379,648 cubic feet of fuel were cut by the two railway fuel contractors from Government forests during the year.

Forest Protection.—The whole of the forests on the Aberdare Range in the Kenya Province have been cleared of native squatters with much advantage to the forests.

The year under review has been remarkable for the absence of forest fires, owing chiefly to the rainfall being evenly distributed throughout the year.

Nairobi Arboretum.—Good progress has been made with the planting of trees and the laying out of the grounds.

Expenditure.—The total expenditure of the Department amounted to £10,229 4*s*. 11*d*., being £2,043 14*s*. 8*d*. less than in the preceding year.

Revenue.—The total cash revenue amounted to £3,752 18*s*. 5*d*., being a decrease of £604 17*s*. 11*d*. from that of the preceding year. This reduction in the revenue was caused by the falling off in the output of mangrove bark; the amount realised for the royalties on mangrove bark and borities being only £754 16*s*. 3*d*., as compared with £1,407, the amount realised the year before.

The value of the produce issued free was £7,577 1*s*. as compared with £4,232 13*s*. 11*d*. of the preceding year. Included in this amount is the value of the fuel extracted from the forests by the Railway Department and the value of 17,680 tons of fuel issued free to natives in the vicinity of Nairobi.

VI.—COMMUNICATIONS.

(A.) RAILWAY.

(1) *Uganda Railway.*—The capital cost of the system, excluding suspense account, now stands at £5,456,381, and, including cost of steamers on Lake Victoria and works added from funds provided in the annual estimates, amounts to a gross total of £5,753,476. In addition £98,486 was drawn against the completion of the Busoga Railway, which, although open for traffic and showing promise, will not be completed till the rails reach the terminus at Namasagali, the port a few miles lower down the river, and one more suitable for Nile navigation, than Kakindu, the terminus originally proposed.

During the year under review the total revenue earned amounted to £360,224 as against £300,116 in 1910-11, showing an increase of 20 per cent., and the total expenditure to £228,852 as against £201,596, an increase of 13½ per cent. The profit is £131,372 as against £98,519 in the previous year, and the net increase is £32,853, or 33 per cent. This must be considered satisfactory, and shows that the development in traffic is progressive and fully sustained.

The total tonnage hauled rose from 77,478 in the previous year to 115,767 tons in that under review. There was considerable increase in both upwards and downwards traffic, as will be seen from the following figures:—

	Upwards. Tons.	Downwards. Tons.
1910-11	40,771	36,706
1911-12	63,836	51,930

The total goods receipts were £238,935 as against £194,942 in the previous year, an increase of £43,993 or 23 per cent.

The addition in downward traffic was chiefly under cotton, cotton seed, maize, sim-sim, maize flour, and matama.

The export of cotton and cotton seed from Uganda was beyond expectations, and it is predicted that even larger quantities will be exported during 1913-14, if adequate provision is made in the way of roads, piers, and sheds, the demand for which is strongly emphasised.

Coaching receipts increased from £59,191 in 1910-11 to £67,344 in the year under review, an increase of £8,153, or 13·7 per cent.: the improvement was mainly under 1st and 2nd class passengers, for, although 18,342 African labourers took advantage of the concession rate, the fares are still too high to admit of the development of anything like an important traffic.

The total number of passengers carried rose from 403,224 in 1910-11 to 442,479 in 1911-12, an increase of 9·7 per cent.

The tonnage carried by the steamers rose from 33,461 in 1910-11 to 43,858 tons in 1911-12. This advance is mainly due to the general increase of business at northern ports, German ports having fallen off slightly.

The following figures taken from the statistics show the result of the past five years in working both railway and steamers:—

Year.	No. of Passengers.	Tonnage of Goods (exclusive of Railway material and Steamer Service).	Earnings from Coaching Traffic.	Earnings from Goods Traffic.	Earnings from Telegraphs.	Miscellaneous Earnings.	Earnings from Steamer Service.	Total Earnings.	Total Working Expenses.	Earnings per mile of line open (excluding Steamer Service).	Working expenses per mile of line open (excluding Steamer Service).	Train Miles.	Earnings per train mile (excluding Steamer Service).	Working expenses per train mile (excluding Steamer Service).	Percentage of Total Expenses to Receipts (inclg. Steamer Service).	Net Earnings (including Steamer Service).	
	No.	Tons.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Miles.	Rs.	Rs.	°/。	Rs.	£
1907–08	339,933	54,855	804,330	2,211,503	9,735	31,368	424,112	3,481,048	2,510,350	5,234	3,896	705,656	4·33	3·22	72·11	970,698	64,713
1908–09	284,871	57,226	788,215	2,199,106	9,387	31,742	461,463	3,489,914	2,517,338	5,186	3,849	702,856	4·31	3·20	72·13	972,577	64,838
1909–10	293,052	60,213	785,740	2,386,479	9,739	49,452	460,785	3,692,195	2,704,190	5,533	4,115	747,770	4·32	3·21	73·24	988,005	65,867
1910–11	403,224	77,478	887,876	2,924,132	10,726	44,828	634,180	4,501,742	3,023,947	6,611	4,623	967,305	4·00	2·80	67·17	1,477,795	98,519
1911–12	442,479	115,767	1,010,168	3,584,037	14,324	57,875	736,954	5,403,358	3,432,781	7,976	5,223	1,208,065	3·86	2·53	63·53	1,970,577	131,372

The lighter wharfs and new sheds at Kilindini proved useful within limitations, but the accommodation and the facilities for handling merchandise are at present totally inadequate to meet the rapidly increasing traffic of the port. It is expected that with the aid of quick working cranes, electric lights, and additional sidings the facilities will be so far increased as to meet the trade till the larger scheme is matured; while the investigation now being conducted with the view to utilising to the best advantage the grant sanctioned for further extensions is being followed with the keenest interest, and immediately the data necessary have been collected and the design settled, the pier or wharf will be pushed on to completion.

Works in connection with the Voi-Samburu water supply and other schemes bearing on the scarcity of water are in full swing.

No accident resulting in the death or injury of a passenger occurred during the year.

(2) *Thika Tramway.*—The Thika branch, in the hands of the Public Works Department, is making progress; various causes have contributed to retard its completion, which is being eagerly awaited.

(3) *Magadi Railway.*—The Magadi branch, under construction, is still in the hands of the contractors, Messrs. Pauling and Company, and is being pushed on as rapidly as labour difficulties will permit.

The work of realignment and regrading of the main line between mile 60 and Magadi Junction at mile 382, which had to be taken in hand in connection with the promised Magadi soda traffic, has steadily progressed and will be finished in anticipation of the opening of the branch.

During the first nine months of the year no difficulty was experienced in obtaining labour, but, since the commencement of the construction of the Magadi Railway and the increased demand for labour in the Kavirondo District, the supply has fallen off, and at present great difficulty is experienced in keeping up the numbers. Contractors for the cutting of wood fuel are in great straits for men, and it would not be surprising if the railway were ultimately forced into the use of coal with its largely enhanced cost in working.

Speaking generally, the year's progress from a railway point of view has been very considerable, and the preparations made to meet still greater development in the immediate future will largely conduce to the prosperity of the country, to which an efficient railway service is absolutely necessary. The provision of funds lately made under the grant has removed any anxiety, and the future may be contemplated with confidence, as we can now guarantee that all reasonable requirements in the way of rolling stock, locomotives, and steamers will be met, and that proper wharf accommodation, bungalows for the staff and other facilities at the Lake ports will be forthcoming when needed.

(B.) ROADS.

Although the road vote for the year amounted to £8,000, this sum proved insufficient to meet the demands for the new transport routes required for the movement of produce, and an over-expenditure of the vote by the sum of £1,219 occurred. The expenditure on the maintenance of existing roads was £5,789.

The chief item of new work was the commencement of a road from Londiani Station to the Administration headquarters on the Uasin Gishu Plateau at Eldoret. Other urgent demands involved the restriction of work on this road to a total cost of £3,368, and, though portions of it to a total length of twelve miles were completed, it has not yet been possible to open it for traffic.

The other principal items of expenditure were:—

(*a*) The continuation of the Kisumu-Mumias road, along which increasingly heavy traffic appeared as successive lengths were opened. £1,786 were spent on this work.

(*b*) The expenditure of £1,473 on the purchase and transport of material for a suspension bridge of one hundred feet span across the Nzoia River, some forty-six miles north of Kisumu.

(*c*) The construction of a new business street in Nairobi and a road out to the new jail at a cost of £575.

(*d*) The metalling of a portion of the Kyambu road where it passed through forest at a cost of £497.

(*e*) The opening up of a road in the direction of Kaimosi in North Kavirondo at a cost of £259.

(*f*) The improvement of the main road through Lumbwa township at a cost of £253.

Thirteen other main items of expenditure on new roads occurred, but, in spite of severely restricted grants in all cases, many other pressing applications for assistance had to be disregarded. The growth in the volume of traffic on many of the roads was very marked and indicated the approach of a time when a superior type of surface to the prevailing earth or murram for country roads would have to be provided.

(C.) Post and Telegraphs.

The post and telegraph services, which are amalgamated with those of the Uganda Protectorate, include 94 post offices and post office agencies. There are in East Africa 32 money order and 71 telegraph offices, including 43 railway station telegraph offices and 2 telephone offices. The Uganda Protectorate is served by 9 money order and 16 telegraph offices, including 4 telephone offices.

Revenue.—The revenue for the combined Protectorates amounted to £28,535, as compared with £24,329 in 1910-11, an increase of £4,206, or about 17 per cent. The additional revenue collected in East Africa was £3,380, of which £2,925 was postal and £455 telegraph and telephone.

Expenditure.—The total expenditure was £34,730, as compared with £31,876 in 1910-11, an increase of £2,854, or about 9 per cent. An estimated division of expenditure between the Protectorates gives the total for East Africa as £27,637, or an increase of £2,642 on the previous year, of which amount £1,110 was in respect of telegraph and telephone construction and material.

Financial Result.—The deficit on the year's working was £6,195, as compared with £7,547 in 1910-11. It is estimated that free services to the value of £9,587 were performed for other Government departments.

Postal Matter.—The number of postal articles, excluding parcels, dealt with during the year in the combined Protectorates is estimated at 3,464,586, being 12 per cent. over last year's figures. In East Africa the figure has risen from 2,330,455 to 2,682,461, or 15 per cent. The increase is general throughout all classes of correspondence.

Parcel Post.—During the year 47,103 parcels were dealt with. Of this number 28,132 were posted or delivered in East Africa, being an increase of 631 on 1910-11. The value of imported parcels amounted to £37,772, of which amount £24,484 was in respect of parcels forwarded to East Africa.

Registered Letters.—The total number of registered postal packets dealt with in the two Protectorates amounted to 117,479, as compared with 111,233 in 1910-11. Of this total 70,733 were posted in East Africa and 21,576 in Uganda. 25,170 registered articles were received from foreign countries, of which number 21,173 were delivered in East Africa and 3,997 in Uganda.

Returned Letters.—During the year 26,280 postal articles, exclusive of parcels, were dealt with at the Returned Letter Office on account of the combined Protectorates, as compared with 24,569 in 1910-11. The number quoted included 18,899 letters, 691 postcards, and 6,690 newspapers, book packets and circulars. Of the total number of articles dealt with 17,665 were returned to the senders or to the office of origin in the case of letters received from abroad, the remainder being treated as finally undeliverable. The value of cheques, currency notes, coins, &c., found in returned letters amounted to £380.

Money Orders.—Money order business both internal and overseas shows a marked increase on the figures for 1910-11. The number and value of orders issued and paid in the East Africa Protectorate for the two years is as follows:—

—	Issued.		Paid.		Total.	
	No.	Amount.	No.	Amount.	No.	Amount.
		£		£		£
1910-11 ...	19,454	106,846	8,021	55,099	27,475	161,945
1911-12 ...	24,275	128,874	10,706	73,202	34,981	202,076

Postal Orders.—The total number of postal orders issued and paid in the East Africa and Uganda Protectorates during the year was 16,660, and their value £10,176, as compared with 11,669 and £7,104, respectively, in 1910-11, an increase of about 43 per cent. both in number and value. In East Africa 13,051 orders, to the value of £7,825, were dealt with, as against 9,466 orders, to the value of £5,749, in the previous year.

Savings Bank.—The East Africa Protectorate Post Office Savings Bank, established in April, 1910, shows a steady advance. On the 31st of March, 1912, there were 1,420 accounts in operation, with £20,814 standing to the credit of the depositors. Deposits amounting to £21,821 and withdrawals to the sum of £16,936 were made during the year. £459 was credited to the depositors for interest.

Telegraphs.—The increase in telegraphic traffic is not so marked as in 1910-11. During the year under review 161,732 telegrams and cablegrams were dealt with in the combined Protectorates, as compared with 141,282 in the previous year, an increase of rather over 14 per cent. Of the total number 115,781 were dealt with in East Africa, as compared with 98,585 in 1910-11. Arrangements have been made for the transmission of deferred cablegrams at half rates to the United Kingdom and certain countries on the Continent of Europe.

Telephones.—The telephone exchanges at Nairobi, Mombasa, and Kisumu were extended by the addition of 10 official and 24 private subscribers. The total number of calls registered in East Africa Protectorate was 262,218, as compared with 174,075 in 1910-11. Telephone revenue increased from £736 to £772.

Ocean Mail Services.—The mail service to and from Europe still remains unsatisfactory. Although steamers belonging to no less than five lines, viz.: the Union-Castle, British India, Deutsche Ost Afrika Linie, Italian, and Messageries Maritimes, call once and in some cases twice monthly at Kilindini or Mombasa, the sailings are not arranged so as to give a regular service at frequent intervals. It often happens that three vessels will arrive in the course of two days, with a subsequent interval of a fortnight without a mail. This is a source of much inconvenience to the public and in particular to the commercial community.

Inland Mails.—The coastal steamer service is still infrequent and irregular. The regular mail services by runners have been on the whole satisfactory, but considerable difficulty is still encountered in providing for the conveyance of extra and heavy mails from the United Kingdom.

Staff.—The administrative and clerical staff numbered 142 officers, of whom 42 were Europeans and 100 were non-Europeans. In addition to this number there were 8 European storekeepers who acted as post office contractors at out-stations. Increasing difficulty is experienced in recruiting a satisfactory class of Asiatic subordinate, and renewed efforts are being made to train the educated native in postal and telegraph work.

Telegraph and Telephone Construction.—The total length of the telegraph lines amounts to 1,039 miles of pole lines, of which 859 miles are erected on iron poles and 180 on wooden poles.

The mileage of wires amounts to 2,284.

The capital cost of the East Africa telegraphs amounts to £95,857, and that of telephone lines to £3,275.

There are 29 postal telegraph and telephone offices, and 42 railway telegraph offices.

There are 116 telegraph sounders in use and 22 vibrating telephone sounders.

There are 340 telephones in use, of which 183 are in connection with the Nairobi Exchange, and 45 with the Mombasa Exchange, the balance being in connection with the Uganda Railway and private or separate lines. One hundred and fifty-five miles of wire and 40 new subscribers were connected during the year.

Thirty miles of permanent telegraph line were diverted between Mumias and the Sio River in connection with a diversion of 50 miles of line from the area infected by sleeping sickness and depopulated on the Uganda side of the border.

Telegraph communication was extended from Nandi to Eldoret, Uasin Gishu.

Fifty miles of copper wire were erected on the Lamu-Mombasa line, replacing a similar quantity of the old iron wire.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A.) Judicial.

The total number of cases dealt with during the year by the High Court is 1,087, an increase of 122 cases over the year 1910-11. The comparative particulars are as follows:—

	1910-11.	1911-12.
Original civil cases	123	163
Original criminal cases	94	77
Confirmation criminal cases ...	390	487
Revision criminal cases	35	44
Appeals, civil cases	78	65
Appeals, criminal cases	69	62
Probate causes	146	151
Insolvency causes	4	14
Trust causes	26	25

The total liabilities in the insolvency causes were Rs. 86,439.

The total value of the trust estates administered by the court on behalf of minors is Rs. 65,752.

Of the original civil cases 120 were filed at Mombasa, 38 at the District Registry at Nairobi, and five at the District Registry at Kisumu.

The figures show the comparatively large increase of 13 cases filed at Nairobi over those of the preceding year, and it appears probable that the work there will gradually increase in quantity and importance.

Monthly returns from 88 subordinate courts have been received and dealt with during the year.

The percentage of sentences passed by subordinate courts in criminal cases and upheld unaltered by the High Court during the last four years is as follows:—

1908-09.	1909-10.	1910-11.	1911-12.
Per cent. 81	Per cent. 85	Per cent. 88	Per cent. 91

It is satisfactory to note that the increase in the percentage of cases unaltered continues and shows steady improvement in the efficiency of the subordinate courts.

The total number of civil cases tried was 5,122, an increase of 186 over those tried in 1910-11.

The increase in cases under Rs. 100 is 144. Although in every province except in Tanaland and Naivasha the number of such cases tried is less than in 1910-11, the very large increase of 481 in Tanaland and the increase of 62 in Naivasha have provided for the increase in the total of such cases over 1910-11. The return of civil cases from Tanaland include 363 under the Native Hut and Poll Tax Ordinances; 568 of such cases were tried civilly throughout the Protectorate during the year. The decrease in the other provinces is no doubt due to the fact that a large number of civil claims are now dealt with by native tribunals.

The increase in cases over Rs. 100 is spread over all the provinces, except in Jubaland, Kenya, and Nyanza.

The proportionately large increase in cases over Rs. 1,000, *i.e.*, 27, has occurred mainly at Mombasa.

The total number of persons brought before the tribunals of the country on criminal charges was 10,528, which shows a satisfactory decrease of 1,331 on the figures of 1910-11.

The actual number of persons convicted shows a decrease of 60.

Four hundred and twenty-four persons were prosecuted under the Diseases of Animals Ordinance, of whom 364 were convicted, and 646 persons under the Master and Servants Ordinance, of whom 423 were convicted.

5,492 prosecutions, resulting in the conviction of 3,789 persons, were undertaken under revenue, municipal, and other laws relating to the social economy of the Protectorate; a great proportion of these were for offences under Townships Rules and the Hut and Poll Tax Ordinance.

There has been a diminution of serious crime during the year.

The number of persons prosecuted for stock thefts has diminished by 78, or 18 per cent. less than in 1910-11, and the number of persons convicted by 28, or 9 per cent. less. Stock thefts are provocative of more feeling than any other form of crime, and such a comparatively large decrease is a matter for satisfaction.

There has been a large decrease in the number of persons committed for trial for homicide and attempts to commit homicide, *i.e.*, about 40 per cent., and a decrease in the number of convictions. All the persons convicted during the year were natives. The sentence on one Indian convicted in 1910-11 was carried into execution during the year.

Sentence of death was passed on 19 persons during the year, but only in two cases was the sentence carried into execution.

The comparative figures of persons convicted for the last five years are as follows:—

—	1907-8.	1908-9.	1909-10.	1910-11.	1911-12.
Europeans	85	64	76	77	83
Asiatics	510	513	463	328	454
Natives	5,488	5,538	6,839	6,698	6,547

The convictions of Europeans are, as was the case last year, mostly for petty offences tried by magistrates and do not show any great increase in crime when the increase in the white population is taken into consideration.

The number of Asiatics convicted is considerably higher than last year, during which an unusually small number were prosecuted, but is still below the figures for the three years preceding 1910-11. Although administration has been extended in various directions the number of natives convicted is smaller than in 1910-11. This diminution is probably due to the fact that native tribunals, concerning which no returns other than of sentences of imprisonment confirmed by administrative officers are received, now deal with a large number of native offences.

Returns have been received from 12 subordinate courts which have confirmed sentences of imprisonment passed by these tribunals under the native Tribunal Rules, 1911. The number of persons imprisoned was 219.

The Town Magistrates' Courts show an expanding revenue in fees, and the revenue from the High Court fees and fines has increased by Rs. 2,430 over that of 1910-11.

Legal practitioners' fees and legal library fees are Rs. 845 higher than last year, whereas the fees of notaries public have decreased by Rs. 100.

(B.) LEGAL.

The following are the principal Ordinances passed during the year:—

The Forest Ordinance, 1911.
The East Africa Police Ordinance, 1911.
The Mining Ordinance, 1912.

Registration of Documents.—The time has now arrived when the centralization of the Registration of Deeds must be considered, and a new Ordinance is being drafted whereby only two offices will be established in the Protectorate, one at Mombasa and one at Nairobi, in the place of the 29 District Registries which at present exist.

During the past year a total revenue of Rs. 59,164 has been obtained in 3,469 transactions.

In the last few months of the year considerable activity took place in the highlands in respect of coffee, sisal, and wattle, suitable land averaging from £3 to £4 per acre.

Administration of Estates.—During the year 125 new causes have been opened. Of these five are treated as miscellaneous causes in which small estates under the value of Rs. 100 are dealt with; these number 376.

The causes opened are divided as follows:—

European	16
Asiatic	32
Native	76
West African	1

The number of European and Asiatic estates have thus increased as compared with 1910-11, when only 33 were dealt with.

The number of native estates has kept up to the average.

Forty-seven lots of immovable property situate in the Provinces of Nyanza, Naivasha, Ukamba, Seyidie, and Tanaland, respectively, have been sold and the proceeds amounted to Rs. 36,089.50.

Considerable litigation has resulted over immovable property in the Seyidie Province.

The agencies at Nairobi and Kisumu have worked well.

Five minors' causes have been opened, making a total of 13.

Bankruptcy.—The revenue for the year amounts to Rs. 1,021.23, which is Rs. 759.97 in excess of the estimate and shows a considerable increase as compared with the revenue of Rs. 261 collected in 1910-11.

Twelve fresh causes have been opened, the insolvents all being Asiatics.

These causes show total liabilities of Rs. 293,529.79 with assets amounting to approximately Rs. 37,000.

Seventeen causes have been dealt with, and seven finally wound up.

Patents.—Six new inventions were registered during the past year.

The revenue from this source amounts to Rs. 160, being a decrease of Rs. 350 on last year's receipts. The decrease is due to the fact that the fees in respect of the continuance of the exclusive privilege are not payable until the fourth year after registration.

Trade Marks.—Twenty-nine trade marks have been registered during the past year, producing a revenue of Rs. 145.

The fee for recording trade marks is Rs. 5 for each trade mark registered. Under the new Trade Marks Ordinance the fee for registration will be Rs. 23; so that when the Ordinance comes in force the revenue from this source will be considerably augmented.

Bills of Sale.—Sixteen bills of sale have been registered during the year, producing a total revenue of Rs. 156.87.

Joint Stock Companies.—Fifteen new companies have been registered during the past year, bringing the number of companies on the register up to 45. The new companies represent a total capital of Rs. 3,000,000.

The total revenue from the above source amounts to Rs. 3,484.53. Of this sum Rs. 3,204.94 represents fees on the registration of new companies and Rs. 279.59 fees in connection with filing returns, &c., under the Companies Act.

(C.) POLICE.

Two important reforms were introduced during the year: (1) the formation of a central training depôt at Nairobi, and (2) the opening of the finger print bureau for active work.

The authorized establishment of police on the 31st December was 1,575 of all ranks, or an increase of 21 over the figures on the previous year. The actual strength on the 31st December, 1911, was 1,453 of all ranks, of which 1,409 were Asiatics and Africans.

Five hundred and forty-three recruits were enlisted during the year, or 207 more than in 1910, all of whom were passed through a course of training before being posted to units.

On the inauguration of the new central training depôt at Nairobi the recruits then under training were removed from their hitherto congested quarters in the Nairobi district police lines to the new depôt lines and placed under a separate staff of instructors, a reform which it is anticipated will tend to increased efficiency, and the benefits of which will be materially noticed during the following year.

The chief sources of supply of recruits were, as in 1910, Nilotic Kavirondo and Akamba, and it is probable that at no distant date an overwhelming percentage of the force will be drawn from these two tribes. Coast natives are becoming increasingly difficult to obtain for the police force, owing to their dislike to continuous work, disciplinary control, and night duty. Moreover, the difficulty in obtaining recruits is increasing generally, owing to the growing demands for labour and the high prices prevalent.

Discipline during the year under review was well maintained, the number of punishments awarded showing a most appreciable decrease in comparison with previous years. One hundred and one men were dismissed for misconduct, of whom 27 were recruits. The increased number of dismissals in the latter part of the year is accounted for by the abolition of corporal punishment on the publication of the new Police Ordinance in October, 1911, since a number of men who would have received corporal punishment and remained in the force under the old conditions, were sentenced to imprisonment and dismissed under the new regulations.

The total number of cases investigated by the police in those districts from which statistics are available, that is to say, in those districts in which police officers are stationed, was 4,496. 5,288 persons were arrested or summoned, of whom 3,026 were convicted while 78 were permitted to compound their offences. The value of property, as estimated by the owners, reported to the police as stolen was £5,395. Property to the value of £2,543 was recovered.

On the opening of the finger print bureau in May the 1,521 finger impression slips which have accumulated since 1909 were classified and filed, while 1,059 slips were added to the bureau between May and December, 1911, making a total number of 2,580 slips on record on the 31st December, 1911. Five hundred and eighty-four slips were received in the bureau for search prior to trial of the accused, of whom 109 were traced as having previous convictions.

The total cost of the police is estimated to show a reduction of £3,000 on the budget figure of the previous year, which was £38,896, the saving being due to the unfortunate deficiency in the ranks of the Indian and African police, owing to insufficient accommodation for the number of recruits required prior to the opening of the new central training depôt.

(D.) PRISONS.

A total number of 8,284 prisoners was admitted to the various prisons, as compared with 9,223 during the previous year.

Of these 8,284 prisoners, 2,077 were long-term prisoners, 3,390 short-term prisoners, and 2,817 were still awaiting trial; 111 were women and 161 were juveniles.

The average prison population throughout the year was 1,345, as compared with 1,128 in 1910-11. The special feature of the year's admissions was the large increase in the number of long-term prisoners, namely, 2,077, compared with 1,677 in the previous year.

It must not be gathered from these figures that crime is on the increase, but rather that there now exist greater facilities and more perfect means for its detection, while the extension of the finger print method of identification is likely to increase still further the proportion of recidivists from year to year.

The number of boys at the reformatory at the close of the year was 33. The admissions during the year amounted to 16.

The present building is well adapted for the custody and treatment of the inmates, and there is unanimous testimony to the extent and value of the efforts made by the staff to help these lads, the fundamental conditions of the regime being hard work, strict discipline, and order, combined with the healthy and boyish recreations indulged in by their fellow creatures in free life.

The total expenditure of the department during the year, exclusive of buildings, was £13,121, as against £12,170 in 1910-11, the cost per prisoner, on the average population, being £9 15*s*. and £10 15*s*. respectively.

The conduct of the staff has been good, while the prisoners generally have been well behaved.

The industrial section of the 1st class prisons at Mombasa and Nairobi has carried out much good work, and there is reason to believe and hope that the training now practised in these prisons will be instrumental in saving many of the prisoners from further criminal life, for it is designed on lines to help prisoners to acquire a trade that will enable them to earn an honest livelihood on their release.

In the 2nd and 3rd class prisons the prisoners have been employed, as in former years, in bush clearing, road-making, tree planting, the cultivation of prison farms, and generally in keeping the station and its environments in a clean condition.

A gang of 300 long-term prisoners has been employed upon railway earthwork construction in connection with the Thika tramway, and has done much useful work.

VIII.—CLIMATE AND HEALTH.

(A.) VITAL STATISTICS.

The climate of the East Africa Protectorate varies within wide limits—from the extremes of tropical vegetation to the snow line. At the higher altitudes of 4,500 to 9,000 ft. the climate is bracing and healthy. The mean maximum temperature registered at Nairobi (5,450 ft.) for 1911 was 74·5°, and the average monthly rainfall 3·51 inches. At the coast port of Mombasa the mean maximum temperature was 82·3°, and the average monthly rainfall 3·46 inches, whilst the lake port of Kisumu had a mean maximum temperature of 83·5°, and an average monthly rainfall of 3·03 inches.

The census returns for 1911 give the white population of the Protectorate as 3,175 and Asiatics as 11,886. In the absence of a census of the native population it is only possible to make a rough calculation, and this based on hut tax returns and other indications is estimated at three millions.

During the year 92 births were registered amongst the white population, giving a ratio of 28·97 per 1,000. The number of deaths registered was 42, or a ratio of 13·22 per 1,000.

No information regarding births and deaths in the different native tribes is available.

(B.) PUBLIC HEALTH.

The general health of the white population has been good. The total number of Europeans admitted to the Government Hospital at Nairobi and Mombasa during the year was 230, and of this number 14 died.

The principal ailments were:—

Enteric fever	21
Malaria	76
Blackwater fever	4
Nervous diseases	5
Respiratory diseases	10
Digestive diseases	34
Injuries	19

Of the 21 cases of enteric 17 occurred in and about Nairobi, and of the total cases treated three proved fatal. Though it has been found difficult to trace the source of infection, it must be assumed that the majority of patients contracted the disease through drinking water from streams which were known to be polluted. During the year Nairobi suffered its third visitation of plague, the epidemic lasting from May to September. In all there were 39 cases, 22 of whom died. All the cases were confined to Indians and Africans. 6,140 persons were inoculated.

The European death-rate in Nairobi has increased from 8·3 to 21 per 1,000, largely due to excessive infant mortality early in the year, and to deaths in hospital of patients coming from other parts of the country.

At the coast dysentery was somewhat prevalent amongst natives in and about Mombasa. The causes, as far as they can be ascertained, are bad water, food of poor quality, non-hygienic surroundings and conditions, housing, camps, and clothing.

Kisumu experienced its annual recurrence of plague. Altogether a total of 64 cases occurred, with a mortality of 49. The cases were confined to Indians and Africans.

The European population is so scattered throughout the Protectorate that it is difficult to obtain any reliable medical statistics regarding them. It is only for emergencies and urgent cases that the services of Government medical officers are requisitioned. These calls were comparatively few, and it may be said that a fair measure of health was enjoyed during the year.

The following statistics for the European officials show that their general health was good. There is an observed tendency to take more care of their health than formerly, and this greater care has been rewarded by better health and spirits:—

Total number of officials resident ...	470
Average number resident	388
Total number placed on sick list ...	413
Average daily number on sick list ...	9
Average number of days on sick list for each patient	8
Total deaths	3
Percentage of deaths to total residents ...	·64

(C.) SANITATION.

At the coast the most effective measures for the eradication of mosquitoes have been bush clearing and the oiling of pools and marshes. Continuous inspections of the various quarters of the town of Mombasa have been made by the Health Officer, but the machinery to enforce his recommendations being carried out still remains in an unsatisfactory state. No cases of plague or smallpox occurred at Mombasa, although the former occurred at Nairobi, and two ships arrived from Bombay with cases of smallpox on board which were quarantined.

Mombasa still remains dependent on underground rain tanks and polluted wells for its water supply, but the preliminary work of the new pipe water supply from the Shimba Hills has been begun.

In coast towns the drains, where they exist, are usually built of concrete and discharge into the sea. The condition of the undrained areas is far from satisfactory. The introduction of a pipe water supply to Mombasa will render the institution of a definite drainage scheme imperative.

At Nairobi the removal of the Indian Bazaar is earnestly desired by the Government and the public alike, but, pending some solution of the problem which will not unduly burden the finances of the Protectorate, it remains in much the same insanitary state as when reported on five years ago. New drains have been laid down in the town but their full benefit will only be apparent when further progress has been made with the main scheme. Gangs of convicts have been employed in making drains through low-lying, marshy pieces of ground, and in cleaning those which had become overgrown with weeds and vegetation. A leaflet on the prevention of malaria was circulated amongst all householders.

Sewage and scavenging work is performed by the Conservancy Department of the township and collection is effected by hand and ox transport. The water supply of Nairobi still remains of excellent quality, and a larger pipe line from the source to the township was laid down during the year, with the result that, instead of seven gallons per head per day, 30 gallons are now available. It is unfortunate that the Nairobi River, running through the township and known to be infected with typhoid germs, is so convenient of access to a large number of the native inhabitants. This is doubtless the main cause of the periodical outbreaks of enteric which have been experienced.

At Kisumu, during the rainy months of the year, malaria and plague were most prevalent, and owing to their existence much attention was paid to the sanitation of the town. 5,728 persons were inoculated against plague, and 10,435 rats were trapped. Isolation of sick and contacts, evacuation of huts, general disinfection, and safeguards from rat infection were the chief precautions adopted during the outbreak.

The main water supply of Kisumu depends on a pipe installation operated by a pump placed at the dead end of the shallow gulf on which the town is situated. This lake water is grossly contaminated with vegetable matter and the churning up of the mud by the constant succession of arriving and departing steamers, and, as a possible source of typhoid, cannot but be regarded with grave suspicion.

Great attention has been paid to the clearing of the bush which used to surround the township and was the favourite habitat of the *Glossina palpalis*, and the foreshore for some miles on either side of the port is now free from infection.

Malaria exists in townships generally to a greater extent than it should, and is even found in places where it should never have been allowed to get a hold. Amongst the factors which contribute to this result may be mentioned the inefficient system of domestic drainage, houses frequently being unconnected with the roadside channels, and a general difficulty in obtaining money for a financially unremunerative sanitary outlay while funds are being so earnestly demanded for the commercial development of a young and growing country. The attitude of the native towards mosquitoes is, moreover, a great stumbling-block, as he cannot be induced to take them seriously.

(D.) GOVERNMENT INSTITUTIONS.

Hospitals and Dispensaries.—There are two European Government Hospitals in the country, one at Nairobi and the other at Mombasa. The former is a well equipped modern building but the latter is a converted bungalow not wholly suitable as a hospital. Although primarily intended for Government officials these hospitals are more largely used by the general white population. Both of them are under the charge of a medical officer and nursing sisters and have a sufficient menial native staff. During the year 72 officials and 158 non-officials were admitted for treatment.

At each of the headquarters stations of the provinces there is a native civil hospital in the charge of a medical officer. In addition there are some 20 dispensaries, to most of which is attached a small hospital in charge of either an Indian sub-assistant surgeon or a compounder. These dispensaries are periodically visited, inspected, and reported on by the medical officer of the province in which they are situated. Both hospitals and dispensaries are, in nearly every instance, built of corrugated iron and wood, and huts are built of wattle and daub as required to segregate cases of infectious disease.

The following table gives the total numbers of natives treated as indoor and outdoor patients at the various native hospitals and dispensaries during the year:—

Indoor Patients.

Number admitted	5,548
Number died	592

Outdoor Patients.

Total number treated	80,222

Lunatic Asylum.—60 natives were treated in the asylum during the year and eleven deaths occurred. 13 cases recovered and were discharged. About eight acres of land are under cultivation and maize and beans almost sufficient for the requirements of the inmates have been grown. The most turbulent cases have calmed down sufficiently to take part in the cultivation of the soil. The accommodation was taxed to its utmost, and additions had to be made to the buildings. A wing is being added to accommodate the females at present confined in the section of the Mombasa Prison which serves as an asylum.

Bacteriological Laboratory.—The increase in the routine examinations has continued, the number being 3,727 as against 2,205 in 1910. Even deducting the examinations of rats for plague, there remains a considerable increase of general work. Of 1,419 blood examinations 308 showed malarial parasites or pigment. The number of cases in which malarial parasites were found is 276 as against 289 during the whole of the previous 3½ years. The increase is most marked in the case of sub-tertian or tropical malaria, of which there were 238 cases in 1911 as against 205 in the previous 3½ years.

88 water analyses and 16 other chemical analyses were made. A regular series of analyses of the proposed water supply for Mombasa was carried out, and should provide valuable data for the future.

12,497 tubes of glycerinated vaccine were issued, and further successful experiments were made with lymph dried *in vacuo*.

During the outbreak of plague in Nairobi 1,944 rats were examined, 186 being infected.

Plague and analyses caused much interruption, but experiments were continued with *T. gambiense*, efforts being made to convey it with *Gl. brevipalpis* and bed bugs, but without success. Attempts to convey trypanosomes from a horse and mule with *Gl. brevipalpis* also failed.

Cases of *Spirillosis hominis* were found in Nairobi, and search produced *Ornithodoros moubata* in places where they had previously been looked for in vain. Experiments were carried out with strains of *Spirochætes* from Uganda, Kenia Province, and from Nairobi to determine their identity or otherwise. The results were most interesting, but not decisive. Examinations of blood smears from game have been continued, the most interesting result being the finding of trypanosomes in the blood of two elephants shot in the Mumoni district.

IX.—NATIVE AFFAIRS AND PROVINCIAL ADMINISTRATION.

(A.) HIGHLANDS AND NYANZA BASIN PROVINCES.

(i.) *Nyanza Province.*

The Nyanza Province consists of the Kisumu, North and South Kavirondo, Nandi, and Lumbwa Districts.

The revised estimated native population based on the hut counts is 1,105,197. The total non-native population of the Province is 1,674, including 288 Europeans.

The number of huts assessed came to 288,563 as compared with 268,737 for 1910-11.

Revenue.—The total revenue collected during the year amounted to Rs. 978,195 or £65,213, of which the following amounts represent hut tax:—

	1911-12. Rs.	1910-11. Rs.
Kisumu	248,109	238,692
North Kavirondo	305,679	264,264
Nandi	31,482	28,848
Lumbwa	49,788	47,874
South Kavirondo	230,079	222,498
Total	865,137	802,176

The revenue for the year has been in every way satisfactory, and has exceeded the estimates. Money becomes more widely circulated every year, and the earnings of the people are on the increase, due to the increasing agricultural and trading energies of the various populations.

Agricultural.—Agricultural development continues to make important strides, and the year under review has been a good one in this respect.

Cotton cultivation, commenced during the early part of 1911 in North Kavirondo, has resulted in a fairly satisfactory first crop. The results amounted to about 280,000 lbs. seed cotton, and are very promising. Linseed, introduced during the year, has proved eminently successful. It is at present being grown for its seed. The first crop was reaped in January, and the yield is estimated at from 15 to 18 bushels to the acre. The whole of the first crop is being kept for seed to be used this next season. This product should, under favourable conditions, be an important item of trade and export in the near future.

Maize has been an important item of trade during the year. Over 8,000 tons were railed in the twelve months.

Development on European farmsteads in the highlands has shown more progress during the year, and it is expected that a distinct move forward will be evident shortly. The farms are becoming occupied, and the occupiers seem full of confidence as to their prospects. A new area of farms has been opened out on what is known as the Londiani Extension, and occupation of this land is gradually taking place.

The one sisal and the two rubber plantations in the Kisumu district are making considerable progress.

Trade.—Trade in country produce has been very satisfactory during the year, 16,793 tons being railed from the Province as compared with 9,894 tons in 1910-11 and 6,829 tons in 1909-10.

The principal items of increase are maize, sim-sim, ground nuts, and hides.

3,599 head of mixed cattle have been sold during the year by natives to settlers and traders, and about 2,000 head to transport contractors.

The native demand for imported goods is constantly growing, and trade in this connection is very promising, and is becoming very important.

Townships and Trading Centres.—Eight townships and 21 trading centres are in existence. Roads in all directions are available for use by the public.

Native Affairs.—Affairs of an administrative and political nature are satisfactory. The tribal authorities generally are assuming definite responsibility for affairs within their respective divisions, and are working well under the advice of the administrative officials.

The relations between different tribes are good.

The economic requirements of the people and their desire for civilised articles show a tendency to increase. The social condition of the people generally is continually improving.

The native tribunals are proving useful, and are carrying out their work in an increasingly civilised manner.

The movements of natives on both sides of the Anglo-German boundary still occasion correspondence between the respective local representatives. An excellent understanding prevails between the local administration and the German authorities.

Judicial.—The work of the European courts has been satisfactory. 1,308 criminal convictions are recorded as against 1,455 in 1910-11. The natives of the Province are, as a rule, a law-abiding population.

Public Health.—The general health of the Province has, on the whole, been satisfactory.

An epidemic of plague broke out in Kisumu in April, and went on to October, during which time there were 64 cases and 49 deaths. Preventive measures adopted consisted of energetic sanitary precautions and other usual procedure.

Four cases of enteric fever occurred on the lake steamers, one officer dying from this disease.

One officer died of blackwater fever contracted in the North Kavirondo district.

Sleeping sickness cases, although still evident in certain parts of the Province, would appear to be on the decrease. The hut counts in the infected areas give evidence of a steady increase in the native population in such areas.

Labour.—Labour for work inside the Province has been plentiful; all through the year it has been fairly good and cheap. Although more men have left the Province this year than formerly for work down country, there has been an apparent shortage due to the fact that requirements elsewhere have considerably increased. Large numbers of men have been employed on the Magadi Railway, at various contract camps on the Uganda Railway, and on the Mombasa Water Works Scheme. The settlers on the Uasin Gishu and other Europeans have been large employers of Kavirondo labour.

(ii.) *Naivasha Province.*

The Naivasha Province is divided into seven districts, viz.:—

Naivasha (with sub-district Nakuru), Masai Southern Reserve, Masai Northern Reserve, Ravine (with sub-district Maragwet), Uasin Gishu, Baringo, and Turkana.

The European population is 975 and the native population approximately 115,500.

Revenue.—The total revenue amounted to Rs. 117,118. The amount of hut tax collected was Rs. 65,397 as compared with Rs. 54,545 in 1910-11.

Agriculture.—In the Naivasha district pastoral farming is the chief industry, and cattle and sheep appear to thrive exceedingly.

There is at the present time no more land available from Government which can be given out as farms, but a small section of the Kinangop has recently been surveyed and seven dry farms will later be disposed of.

Land round the lake shore is valued by holders at £1 an acre and farms on the Kinangop at about Rs. 10. Few transactions have lately taken place and holders appear well content to live on and develop their farms.

Wheat, during the past year at Njoro, did not do so well as was anticipated, due to the presence of a green fly, which did considerable damage to the young wheat. It appears that the kind known as Rietti has given the best results up to date.

Mealies appear to do well and in the Molo district a large area is being prepared for this crop.

The Uasin Gishu is entirely taken up by white settlers, many of whom have come from South Africa. Progress is being made as regards buildings, and, as a new road is at present under construction from Londiani to the Uasin Gishu, it is hoped that a motor lorry service will later take the place of the ox waggon. This of itself should do much to help the development of the district.

Cattle diseases have not given much anxiety during the past year.

Horse sickness has lately been a disturbing factor and a considerable number of deaths have occurred, not only on the Kinangop, but in and round Naivasha.

Rinderpest has been prevalent amongst the Masai cattle in the Northern Masai Reserve, but close observation and isolation have greatly reduced the mortality, which last year amounted to, roughly, 15,000 head.

Trade.—The trade with the Masai is confined entirely to bartering cattle for sheep. Owing to the partial movement of the Masai from the Northern to the Southern Reserve during the year trade was dislocated, and such complete figures as were given last year are not available.

Large numbers of natives cross the Aberdare mountains from Nyeri carrying foodstuffs (principally maize) for sale, and it is rumoured that a second mill will shortly be erected at Naivasha for crushing mealies into maize flour.

Somalis go into the Suk and Turkana country to trade—mostly cattle for donkeys.

Public Health.—The Province, with the exception of Baringo, Maragwet, and the Turkana country, is healthy, and no serious epidemic has occurred during the year.

Blackwater fever is prevalent at Ngabotok, and three Nandi Askaris died of this disease during the year.

Native Affairs.—The Maragwet Patrol was undertaken in December, 1911, with the object of endeavouring, by peaceful suasion, to compel the Maragwet tribe to surrender two men, suspected of the murder of a Mr. Van Breda. Negotiations failed to achieve the object in view, but after a sojourn of approximately thirty days, during which time desultory fighting occurred on two accasions, the Maragwet surrendered one of the men, while the Elgeyo chief promised that he and his people would be responsible for the capture of the other. The patrol was accordingly withdrawn on the 6th of January, and the second fugitive was eventually captured in a neighbouring district. Both men confessed their guilt before a Magistrate, and were subsequently convicted and hanged.

It is hoped that the Maragwet will now fall into line and become peaceful and friendly allies of the Government. They are not possessed of much wealth, and extensive agriculture is not possible owing to the extremely hilly and wooded nature of the country; they have, however, already cut one or two roads and have expressed a desire to trade.

Raiding by the Turkana on the Suk still continues at intervals, but both tribes are being brought under administrative control, and at Ngabotok, the recently selected site for an administrative station, there are two European officers, viz., one civil, and one military.

Labour.—On the whole, labour is plentiful except possibly in the sub-district of Nakuru where, owing to heavy sentences inflicted on stock thieves, a section of the Wakikuyu show a reluctance to go to work.

New enterprises, such as the Magadi Railway and Mombasa Water Works, divert a very large number of natives who would probably otherwise seek pastoral work.

(iii.) *Kenya Province.*

There are four districts in the Kenya Province—Nyeri, Fort Hall, Embu, and Meru.

The European population is 156, and the native population about 917,000.

Revenue.—The total hut tax revenue collected was Rs. 699,360, an increase of Rs. 85,851 on the revised figures of last year. The tax has been collected in person by administrative officials, who have experienced no opposition, except in the country inhabited by the Suka and lower Mwimbi tribes. It is at present only possible to visit these districts at long intervals owing to their distance from the Government station, but it is hoped shortly to bring them under more effectual administration.

Agriculture.—Crops throughout the Province have been good, and there has been no shortage of food.

The area of land under cultivation in the Meru district is greatly increasing, and it is most satisfactory to note that the young men of the tribe are beginning to work in the fields.

Considerable development is being carried out on the European farms in Western Kenya, and land in this district is eagerly sought after.

The sisal plantations in the Fort Hall district are proving a great success, and the fibre has been excellently reported on by the experts at home.

The rubber industry in the Kenya Forest has been abandoned for the present until the concessionaires can discover a more profitable method of tapping.

There has been no widespread disease among stock during the year.

Trade.—There are four townships in the Province—Nyeri, Fort Hall, Embu, and Meru. There is a European storekeeper at Nyeri, but the bulk of the trade is in the hands of Indians and Swahilis. The wealth of the natives is increasing and there is a considerable demand for trade goods of the cheaper kinds.

Two mills have been established at Meru and are proving of advantage.

Communications.—The post and telegraph service is efficient, but the greatly increased white population of the Western Kenya district and the removal of the headquarters of the Province from Fort Hall to Nyeri will make a more frequent service necessary. There are at present only two mails a week.

It is hoped that it will shortly be found possible to extend the Fort Hall—Nyeri telephone line to Meru viâ Embu. This would greatly facilitate the working of the Province, and would be of advantage to the administrative officers of the Northern Frontier District.

Public Health.—The Province as a whole can hardly be described as healthy, for although Nyeri and Meru stations are well situated, the districts through which officers have to travel are distinctly malarial, especially in the vicinity of the Tana River. Fort Hall is relaxing, and it is a matter of considerable difficulty to supervise efficiently the large area of 1,000 acres which forms the Government Station. The most healthy portion of the Province is the area on Western Kenya, which has been divided up into farms and given over to European occupation.

Native Affairs.—The headquarters of the Province have been moved from Fort Hall to Nyeri. This step was considered necessary owing to the more central position and more healthful reputation of the latter station.

A noteworthy change in the Fort Hall district is the diminution in the number of responsible headmen—60 of the original 112 have been made subordinate to the remaining 52.

Two of the three paramount chiefs, Kibarabara and Kithai, have been deposed, the former for lack of energy and the latter for embezzlement of Government revenue.

Labour.—The natives of Meru show considerable progress. Thousands have been induced to go to Nairobi and Mombasa for work, and excellent roads have been cut through their divisions. Substantial bridges have been thrown across rivers under the supervision of the district officers.

(iv.) *Ukamba Province.*

In the Ukamba Province are the Nairobi, Kikuyu, Ulu (Machakos) and Kitui districts. The total population of the Province is 323,000. The population of Nairobi is 16,107, including 995 Europeans and 3,361 Asiatics.

Revenue.—The revenue derived from native taxation amounts to Rs. 353,717 as compared with Rs. 351,021, the total collected in 1910-11, including arrears, which were very much greater last year than this. The total revenue for 1911-12 was Rs. 479,514, as compared with Rs. 502,900. There was, therefore, a decrease in total revenue of Rs. 23,386, due mainly to the comparatively small number of sportsmen's game licences issued during the year. It is said that the Indian Durbar kept many sportsmen away from the country.

Agriculture.—Greater protection against game and animals, and improvements in method have led to general progress at Machakos, though some crops were damaged by the abnormal rains in February. The June harvest at Kitui was a failure, and a slight outbreak of cattle disease took place. Coffee planting is on the increase in Kyambu district.

Trade.—At Nairobi trade in general has been good, and land has been bought for development rather than for speculation. The prices recently paid show a greatly enhanced demand on all sides. Machakos and Kitui show an increase in both exports and imports; as at Kyambu, this trade is mainly in the hands of Indians.

Native Affairs.—At Machakos an outbreak of hysterical mania on the part of the Akamba was calmed by the despatch of a military patrol. The Nzama (native councils) appear to work well, but tribal discipline is not all that can be desired. The district of Kitui has improved continuously for five years, except perhaps in the region near Mumoni. The Akamba possess considerable pastoral wealth, and sell their young stock freely. A threatened famine early in the year in Kikuyu was met by a relief fund, the amount expended being later on repaid by the natives. Owing to the frequent failures of crops, numbers of natives in Kikuyu are moving to lower lands. Tribal discipline is also lax in Kikuyu, but the councils promise considerable improvement in this respect.

Communications.—The roads in Nairobi township are good, but in the rest of the district unsatisfactory. The main trunk road to Fort Hall is almost impassable after heavy rains, and the native roads are simply unmetalled tracks. The Thika tramway is progressing favourably.

Townships.—In Nairobi township the census shows an increase of 24 per cent. in the European population, a decrease in the number of Asiatics, and an increase in the number of Africans. Great improvements have been made in the water supply by the installation of larger mains. New public latrines have been built, and a disinfecting plant acquired. Business has made most remarkable progress, particularly in connection with land suitable for building. In Machakos another survey has been made and the European plots demarcated, whilst a post office building will be commenced soon. At Kitui the township area is not yet surveyed.

Health.—There was an outbreak of plague in Nairobi, lasting about four months. The source of the outbreak, and the chief difficulty in dealing with it, was the very unsanitary condition of the Indian Bazaar. The total death rate per 1,000 was 18·6, an increase of 2 per 1,000 on that of last year. The European death rate has increased from 8·3 to 21 per 1,000, owing to excessive infant mortality early in the year, and to deaths in hospital of patients coming from other parts of the country. In Machakos, Kyambu, and Kitui the general health has been good.

Labour.—The difficulties in the way of recruiting labour in large quantities appear to be on the increase, and there is a marked tendency for wages to rise.

(B.) COAST PROVINCES.

(i.) *Seyidie Province.*

Seyidie, the southern coast province, is divided into four districts, Mombasa, including the sub-district of Rabai, Malindi with Takaungu sub-district, Vanga, and Teita which includes the sub-district of Taveta.

The population of Seyidie consists of (1) Arabs and the hybrid race which they have formed with Africans, the people of which are known as Swahili or coast people; (2) the Nyika or country people, who are divided into nine sub-tribes, among whom the Giriama, Duruma, and Digo are the principal; (3) the Teita, who inhabit the highlands to the west of the Uganda Railway from mile 100 onwards; and (4) the Taveta, the small colony of natives living to the south-east of Kilimanjaro.

Europeans in Seyidie number 339, Asiatics 6,931, and Africans 195,000.

Revenue.—The revenue derived from the collection of Hut and Poll Tax amounted to Rs. 173,505, being an increase of Rs. 10,601 on that of the previous year. The population of the Nyika tribes is increasing, and the tax is paid yearly by a larger percentage of the people, which, coupled with more systematic methods of collection based on a carefully prepared census, gives higher results year by year. The total revenue was Rs. 322,053, as against Rs. 362,832 in 1910-11.

Agriculture.—The rainfall for the year under review has been below the average, and agriculture has been affected proportionately. Speaking generally, however, the area of rubber plantations has been considerably increased, and from Malindi the export of plantation rubber has increased by 100 per cent. during the last twelve months, the value being Rs. 18,830, as compared with Rs. 9,569 in 1910-11. Rubber, coconut, and sisal are the principal crops grown by Europeans, and under normal conditions of rainfall a good report would have come from coast planters in Seyidie.

Native crops have been less affected by the low rainfall than might have been expected. From Malindi district 4,259 tons of native produce have been exported during the last year, as against 2,941 in 1910-11. In Vanga district considerable quantities of rice and cassava are grown, but the principal products, other than those from Europeans' plantations, are maize, millet, sesamum, beans, coconuts, and tobacco.

The chief cattle market is at Rabai, where natives from Ukambani and the Duruma disposed of large numbers of beeves to the butchers of Mombasa.

Trade.—Trade is progressive in every district of the Province. Figures showing the imports and exports of each district are not kept except in the case of Malindi and Vanga, which have Customs stations. The area under cultivation, however, has increased with the rise in population, the goods receipts of the Uganda Railway at stations within the Province have increased monthly, and the returns from the Malindi and Vanga Customs stations register a steady advance.

Coconuts, copra, fibre (sanseviera), native grain, gum copal, hides, cotton seed, sim-sim, plantation rubber, and rafter poles constitute the chief export trade of Seyidie.

The Kipingoni Rubber Estate have 140,000 rubber trees planted out, of which 80,000 will be tappable next year. These are expected to yield 7,000 lbs. of dry rubber.

The Miritini Rubber Estates, Limited, have about 200,000 rubber trees, all tappable. They have also some 500,000 seedlings in nurseries. They hope to obtain some 2,000 lbs. of dry rubber this year.

The Mbuyuni Estate has 57,000 rubber trees planted out, of which some 20,000 are tappable. Next year's yield is estimated at 8,000 lbs.

The United Methodist Mission Estate have 22,000 rubber trees planted out, of which 20,000 are tappable. They expect to obtain 5,000 lbs. of rubber next year under normal conditions.

The Kusitawi Estate has about 40,000 young coconut trees.

Better prices were obtained for sanseviera fibre at the close of the year, and this industry is looking up.

Native Affairs.—The Arab staff of the Province consists of the Governor or Liwali of Mombasa (Sheikh Salim bin Khalfan, C.M.G.), an Assistant Governor, and Liwalis of Malindi, Takaungu, and Vanga. Mudirs of Arabuko, Mtanganiko, Mtwapa, Roka, Changamwe, Tiwi, and Gazi bear office under Government.

The three districts in which the above are stationed are Malindi, Mombasa, and Vanga.

Cadis or Arab magistrates, administering Mahomedan law only, hold their courts at Mambrui, Malindi, Takaungu, Mombasa, and Wasin, the Sheikh-ul-Islam at Mombasa only.

Presidents of councils, administering the tribal law of the Nyika tribes, are recognised by Government in districts inhabited by the latter. These are invariably headmen of tribal standing recognized by their own people as their representatives.

The record of the past year has been one of steady progress as far as the condition of the native population of Seyidie is concerned.

Easy access to those administering justice, security of life and property, good communications, and the consequent facilities for travelling to and from trade centres are the chief objects of Government in the administration of native affairs.

Among the members of the Nyika tribes the population is rapidly increasing, and the area of cultivated land is consequently greater. The art of medical science, however, is powerless to arrest the increasing infecundity of the Arab and Swahili population.

Public Health.—The general health of the Province has been comparatively satisfactory. Europeans have suffered as usual from malaria and disease of the digestive organs. Mombasa is probably the healthiest town in the Province; there is little to complain of in the situation of the District Commissioner's bungalow at Voi, but Malindi, Takaungu, and Rabai cannot be described as healthy stations. Vanga district, apart from the situation of the headquarters at Shimoni, is apparently the most unhealthy in Seyidie. The officers in charge of Taveta last year have enjoyed good health.

The natives all through the Province suffer chiefly from attacks of malaria, dysentery, and diseases of the respiratory system. Elephantiasis is common at Malindi as well as a few cutaneous diseases of a contagious character. Leprosy exists, but not to a great extent as far as can be ascertained.

Communications.—In Seyidie these will not compare with those in the interior. All are at best footpaths, except the road from Voi to Taveta, which is becoming overgrown owing to the diminution of wheeled traffic from Kilimanjaro consequent upon the railway from Tanga, German East Africa, reaching New Moshi. This road is, however, still available for motor traffic.

Tropical rains cause wash-outs along the coast from Mambrui to Vanga, but repairs by local natives enable communications to be kept open practically all the year round, except in the case of big floods. The following are the distances of the main routes in Seyidie:—

	Miles.
Mombasa to Vanga	51
Mombasa to Takaungu	30
Takaungu to Malindi	40
Mazeras to Rabai	3
Voi to Taveta	68

Labour.—The supply has not equalled the increasing demand. The members of the Nyika tribes cannot be persuaded to work anywhere except on their own shambas, and, consequently, both Government and planters rely almost entirely on Kikuyu labour. Very few natives of Ukamba offer their services on plantations. For heavy work in towns, such as loading and off-loading ships and dhows, and porterage of large packages which cannot be handled by unskilled men, Swahilis, Wanyamwezi, and Shihiri from Southern Arabia are employed; their wages amount to Rs. 1.25 per diem. When employed on odd jobs, such as water carrying, doing piece-work, &c., they can earn double that amount, but such pay is not earned day in and day out.

Up-country natives, who consist chiefly of Kikuyu, Kavirondo, and Teita, earn from Rs. 6 and food per mensem upwards according to their capabilities and length of service.

Both Kavirondo and Kikuyu suffer considerably from malaria and dysentery at certain seasons of the year. They are sensitive to change of diet and water. Both these tribes enjoy a very varied diet at home and generally good running water. A lack of variety in rations or inferior water disables them far more quickly than would be the case with a coast native.

(ii.) *Tanaland Province.*

The Tanaland Province comprises the districts of Lamu and Tana River, and the Sultanate of Witu. In the Tana River district the temporary station established last year at Sankuri did not prove wholly successful owing to its great distance up the river, and the station has accordingly been moved to Bura, a spot eight days below Sankuri. It is hoped that this station will eventually be made permanent.

The population of the Province is approximately 46,000, including 44 Europeans.

Revenue.—The revenue from Hut and Poll Tax collection amounted to Rs. 40,936 as against Rs. 36,229 in 1910-11. The total revenue for the Province was Rs. 192,625, a decrease of some Rs. 3,000 on that of 1910-11. This is mainly owing to a diminution in the export of mangrove bark and a decrease in Court fees.

Agriculture and Trade.—The East Africa Cotton Company have 720 acres already under cotton or ready for planting. They have well over 200,000 rubber trees, besides small areas of maize, fibre, and coconuts and they have constructed on their property 25 miles of roads, 58 miles of drains, besides embankments and irrigation ducts.

This Company have also started the cultivation of kapok, a product largely used for upholstery purposes. It is apparently indigenous in the Witu Sultanate and grows very fast.

The Witu Rubber Estate has about 58,000 tappable trees and about 59,000 less advanced. A considerable amount of machinery has been recently imported.

The export of mangrove bark has decreased, owing to there being less demand in Europe.

There has been considerable mortality among native live stock, especially cattle, through drought.

Townships.—The following townships in the Province have been gazetted:—Lamu, Kipini, Witu, Faza, Siyu, Kiunga, Mkonumbi, and Wange. At present the Township Ordinance is applied to Lamu and Kipini only. All the others are the seats of native officials, Walis, Mudirs, and Cadis.

Public Health.—The general health of the European community has been satisfactory. There have been no epidemic diseases.

The principal diseases are ulcers, neuralgia, and diseases of the digestive organs.

There is a certain amount of leprosy in the Sultanate of Witu, and in Lamu the proportion of inhabitants of weak intellect is high.

Native Affairs.—Tribal government is working well on the Tana River, and there is a growing tendency towards just government on the part of the chiefs and obedience on the part of the tribesmen. The Somalis on the Tana River are quiet and give little trouble.

There is an increasing laxity in many of the inhabitants of Lamu in their observances of the precepts of the Mahomedan religion.

A Town Magistrate was appointed to Lamu during the year. On the coast serious crime is infrequent, but there is a large amount of petty litigation.

Labour.—The majority of the labourers in the cotton and rubber plantations are Kikuyu, but the supply is not enough to meet the demand.

(iii). *Jubaland Province.*

The Jubaland Province comprises:—

(1.) The district of Kismayu, the headquarters of the Province, consisting of the sub-districts of Kismayu and Gobwen. The sub-district of Kismayu consists of the town and harbour, the country occupied by the Herti Somalis, the Bajun Islands, and Port Durnford. The sub-district of Gobwen consists of the township of Gobwen, opposite the township of Giumbo, the headquarters of the local Italian Administration. This sub-district includes the European plantations and the military stations of Gobwen and Yonti. Gobwen is also the base of the river steamer traffic.

(2.) The district of Gosha.

(3.) Further up the Juba River is the civil station of Serenli. This station is an observation post only, with an Assistant District Commissioner in political charge of the tribes in those parts.

Population.—The European population is about 40; the native population in southern Jubaland is about 10,000. The population of northern Jubaland has not yet been estimated.

Townships.—There are two townships, Kismayu and Gobwen, both of which are increasing in size and trade. In Kismayu, especially, many stone houses are being built. Improvements have been made in the roads at both townships.

Revenue.—The total revenue, under general heads of the Estimates, was Rs. 86,562. This shows an increase of Rs. 5,754 over last year. The collection of Hut and commuted Hut Tax was Rs. 21,801, showing an increase of Rs. 3,000 over last year.

Agriculture.—Experiments in cotton planting at Alexandra carried out by the Government have been a success. Mr. Argyropoulo has now 200 acres under cotton. He has also rice, onions, and Indian corn (maize), and with the exception of the rice, which is not yet ready for picking, all of these crops have done well. Pumping machinery has been established with good results, and more is to arrive.

Other planters are apparently marking time, though some work is being done. There are five good houses already built.

Trade.—Trade, in spite of a bad rainfall, is generally increasing, especially the stock trade for the farms on the Uasin Gishu and other parts of the highlands.

Communications.—A Custom House at Gobwen has been built. Roads have been improved and new ones opened. A new pier and Customs House are contemplated at Kismayu. It is possible to communicate with Europe and Mombasa by Italian wireless and cable.

Native Affairs.—The political situation has been generally satisfactory. Our knowledge of routes, the resources of the country, and the temper of the inhabitants, especially in the further parts, has increased considerably. Officers are constantly travelling and living among the tribes, and this policy will no doubt bear very good results among the Somalis, if accompanied by an extension of trading facilities. The tribes are divided into six sections, namely, the Herti, the Mohamed Zubeir, the Aulihan, the Maghabul, the Abdullah, and the Sheigaal. All are Kablalla Somalis. The Marehan are a separate tribe.

Arms continue to be imported, but with no particular hostile design against the Government.

(C.) NORTHERN FRONTIER DISTRICT.

In the Northern Frontier district there are three stations, Marsabit, Moyale, and Kulal (or Loiyangolani).

Considerable progress has been made during the past year in obtaining a knowledge of the country and the tribes. There have been no disturbances to record.

Revenue.—For the first time a tribute was levied on the Samburu, some 89 donkeys, 674 bullocks, and 1,000 sheep and goats being collected. No trouble was experienced in making the collection, and volunteers to assist as herdsmen and runners were easily obtained. The villages are small as compared with those of the Rendile.

A further toll of camels was exacted from the Rendile, but owing to an outbreak of camel sickness the collection had to be suspended.

Trade.—The volume of trade has largely increased, and cattle, ponies, and mules are being sent down to Nairobi from Abyssinia.

It is hoped that an Abyssinian mission, constituted of high officials, will visit Nairobi in the near future for the purpose of discussing the further possibilities of trade, and negotiations are in progress to this end.

Communications.—From Nairobi to Marsabit is a journey of about 21 days, and from Marsabit to the frontier station at Moyale 10 days, during which a supply of water sufficient for four days has to be carried throughout the year, and in the dry weather six days' supply is necessary. From Nairobi to Kulal is about 27 days.

Native Affairs.—After many conferences with the officers possessing the most intimate knowledge of the countries concerned, it has been decided to adopt a more vigorous policy in the administration of the tribes inhabiting the Northern Frontier District and Jubaland. Hitherto the Government stations have been posts of observation only, and the administrative officers have been engaged chiefly in travelling among the tribes with a view to obtaining a deeper insight into their manners and customs, in levying moderate taxation on the more settled districts, and in enforcing, as far as possible, the authority of the Government in cases of raids made on tribes who have placed themselves under our protection. It is now felt, however, that in order to ensure the proper advancement of these scattered tribes the Government must openly assume the administration of their territories. It has therefore been decided to send a military force to patrol the country inhabited by the Marehan, who have for some time past been a considerable source of trouble to their neighbours, but who are now reported to be ready to welcome the advent of the Government. Political officers are to be appointed to the different sections of the tribes, to travel among them, to assist them in their desire to trade, and generally to gain their confidence. A force of armed mounted constabulary will be recruited for preserving peace along the frontier. It is hoped to construct a road from Meru to Marsabit suitable for wheeled transport, which will greatly facilitate communications. It is also proposed to open trade routes between Kismayu, Afmadu, Wajheir, and Moyale; between Moyale, Eil Wak, and Serenli; and possibly between Wajheir and Meru; while the route between Moyale, Marsabit, and Nairobi is already proving of great advantage to Abyssinian traders. The distances existing between these posts render the task of opening up these regions one of great difficulty, but with the improvement of the water supply and the protection of the existing wells, it is hoped that the above projects will be successfully carried out.

(D.) SLAVERY.

During the period under review the work of the department has steadily progressed, and, with the assistance rendered by the administrative officials concerned, has done its work most satisfactorily and reliably.

A few bogus claims have been brought forward by certain fraudulent persons, and in one instance at Malindi the claimant was convicted.

Altogether 6,048 cases have been dealt with, and the total compensation and maintenance paid amounts to £26,953 5*s*. There were 453 cases less than the previous year. 44 infirm and decrepit slaves, for whose support Rs. 3 per mensem is paid, are on the maintenance list. The mortality amongst these slaves is very great. This year the average compensation paid per slave has been £6 10*s*. 2*d*. as against £5 11*s*. 3*d*. paid in the previous year.

From the commencement of the working of this department until the present year the average compensation paid works out at £5 1*s*. 10*d*. per slave.

Of the original grant of £40,000, the sum of £33,696 has been expended. This amount includes £954 utilised for building a school for Mahomedan children in Mombasa.

The total available balance on 31st March, 1912, was £6,304.

The one great question at issue is that of the Mahomedan marriage laws and their authority in regard to female slaves freed under the Ordinance. The Kathis have decided that unless a woman obtains the consent of her master, or former master, she cannot be legally married according to the Sheria. In several instances the masters have demanded, before giving their consent, a certain honorarium which the ex-slaves are financially unable to produce. The legal department desires that a test case be brought before the court, but up to now it has been impossible to induce those concerned to take action.

X.—EDUCATION AND MISSIONS.

(A.) EDUCATION.

1. *European Education.*—The number of European children in the Protectorate continues to increase at a steady rate, not only in Nairobi, but more especially in the Provinces, and it will be necessary to make arrangements to accommodate the increasing numbers.

It is not proposed to carry education in the Provinces at present beyond the fourth standard, but to centralise, as far as possible, in the Nairobi School, where higher efficiency can be attained under a larger and more capable staff.

(a) *Nairobi School.*—The number during the past year has increased by about 30, the registers in May, 1912, showing 137 names on the books, including 47 boarders. A staff of qualified teachers is maintained, and these are assisted from time to time by pupil-teachers. The school has done creditably during the past year in the examinations of the London College of Preceptors. The fourth standard take the junior examination, which may ultimately serve as a leaving certificate for boy clerks; standard V. take the third class; standard VI. second class; standard VII, the first class. Pupil-teachers take these examinations followed by that for the training certificate. The number of successful candidates during the past year is as follows:—

	Presented.	Passed.
December, 1910	6	6
June, 1911	1	1
December, 1911	26	23

The average number of children per qualified teacher is 26.

(b) *Nakuru School.*—This is a small school of 18 children where education is carried only as far as standard IV. The building of wood and iron is unsuitable, and it is proposed to erect a stone building on a Government plot, with opportunities for adding boarding accommodation if required.

(c) *Uasin Gishu Schools.*—The Uasin Gishu presents all the difficulties of rural schools. The distances between farms are considerable, and the roads where they exist are bad. The education of Dutch children will be carried on by a number of local farm schools; the English children will at present be educated at the central school at Eldoret, to which the Dutch children will be drafted after passing standard IV.

2. *Indian Education.*—There are 120 Indian children under instruction at the Nairobi "B" school. The school is managed by a committee of Indian parents under the supervision of the Director of Education. As most of the children are unable at first to speak English, the vernacular is used for the first two standards, after which the syllabus of the European school is adopted. In Mombasa negotiations are in progress with the Buxton High School to carry on Indian education.

3. *Native Education.*—Technical education is carried on by Government, partly by means of capitation grants to missions after an annual examination by the public works, agricultural and other departments, and partly by a system of Government provincial schools. The first school will be erected for the Wakamba this year at Machakos. There will be a separate department for sons of chiefs at Government provincial schools with a view to training them for service under administrative officers.

4. *Miscellaneous.*—In addition to Government schools, there are schools for white children at the Rift Valley Academy, Kijabe, and at St. Joseph's Convent, Nairobi. Eurasians and Goans attend at the French Mission, Nairobi.

(B.) MISSIONARY SOCIETIES.

The missionary societies of East Africa, representing almost every denomination, continue to make useful progress in most parts of the Protectorate. The missions chiefly noticeable for their work are the Church Missionary Society at Maseno, the Church of Scotland Missions at Kikuyu and Tumu-tumu, the Mill-Hill Roman Catholic Missions at Ojola and Kakamega. All are especially active in evangelistic work and have considerable numbers at their services. Their schools also are well attended, the roll averaging about one hundred. In several cases separate village schools have been started. In all the lower classes the instruction is carried on solely through the mother-tongue, Swahili being learnt only in the higher classes. At a few missions English is taught. Translation committees have been formed, and a considerable advance is being made with each language. Many of the missions have started industrial branches and train boys in carpentry, masonry, tailoring, agriculture, &c., receiving assistance from Government in the form of capitation grants of £5 per head, payable after a satisfactory annual examination of the boys by various Government Departments. At the end of the last financial year the Government paid grants to the value of about £600 for the training of artisans and sons of chiefs.

XI.—LANDS AND SURVEYS.

(A.) LANDS.

The number of land grants made during the year under review is 382, comprising 608,752 acres, compared with 245 grants, totalling an area of 389,598 acres, in the previous year.

The number of pending applications at the end of December last being 323 against 387 on the same date of the previous year, it will be seen that under the heads both of enhanced output and reduction of arrears an improvement is recorded, and that the prediction, in last year's report, of the increase in land allotted was justified.

However, it has for some time been realised that the present methods of allotment are not altogether happy; and, as a result, in September, 1911, the discontinuance of all further allotment was ordered pending consideration of the new methods governing the same; and, as the matter is still under consideration, pending cases only are being dealt with.

There is no doubt that a decrease is likely to be recorded in the year following the one under review, though the position will in some degree assist the Survey Department in reducing the large amount of arrears in survey work to be dealt with, and will also assist the Land Department in reducing the number of pending cases.

In the meantime, also, further new areas are being surveyed, so that it is hoped that, when orders for allotment are received, a considerable area will be surveyed and available.

The new Crown Lands Ordinance is still under consideration.

The revenue is both large and satisfactory, totalling £27,060 as compared with £20,463 in the previous year, being an increase of £6,597.

The expenditure stands at £5,684, being an increase of only £238 compared with the previous financial year.

Coast Land Settlement.—The work of the Recorder of Titles has been proceeding slowly, and some 168,000 acres have now been liberated. The total revenue collected was some Rs. 2,500, while some Rs. 6,000 is due on applications upheld. The main reasons for the failure to reach the revenue estimated were the inadequacy of the survey staff, the unavoidable interruptions in the working of the Arbitration Board, and the complications which arose in the Mazrui Settlement.

The total expenditure was nearly Rs. 85,000, being Rs. 10,000 short of the estimate. Rs. 15,000 of the sum expended under survey was debited to the survey vote, so that there is thus a total saving on the votes sanctioned for coast land settlement of Rs. 25,000.

The Coast Land Titles Board was constituted in November, 1910, with the object of discussing important questions arising in connection with the work of coast land settlement. The Board has frequently met during the year, and has been of great assistance to all parties concerned.

In the Land Registration Court 122 cases were dealt with and 104 applications upheld, 18 applications on behalf of the Zanzibar Government having been disallowed. An appeal has been lodged which is pending.

The most important case dealt with was the Mazrui Settlement case, by the judgment in which the Mazrui receive a title of 42,000 acres of land, and some 160,000 acres of land are thrown open for alienation as Crown Lands.

172 certificates of titles were prepared, of which 121 have been issued.

Mombasa Island was declared an area under the Land Titles Ordinance on the 15th May, 1911, and 2,719 applications were registered up to the 31st December, 1911, the end of the prescribed period within which applications had to be made.

The Arbitration Board constituted in March, 1910, continued work in the Takaungu sub-district and completed it about the end of September, proceeding thence, after an interval of six weeks, to the vicinity of Malindi.

A second Arbitration Board was appointed for Mombasa Island on February 15th, 1912, but has not yet begun work.

132 shambas and reserves were surveyed, giving an acreage of 25,874.

(B.) SURVEYS.

During the year triangulation of a high order of accuracy has been carried out over the country between Mombasa and the German boundary, between the Nzoia River and Mount Elgon, and over the Elgeyo and Kamasia country. Only one officer has been available for nine months of the year and some 2,600 square miles were triangulated, compared with about 6,000 last year.

Topography has been completed over some 7,500 square miles as compared with 12,000 last year. The decrease is due to leave of absence among the plane-tablers and to the fact that, to aid rapid settlement, the bulk of the work was mapped on double the usual scale.

In addition to the above some 44,000 square miles have been compiled from various sources—more or less reliable—and sent home for publication.

The Cadastral Branch has, apart from miscellaneous surveys, carried out 870 cadastral surveys, amounting to 580,000 acres, as compared with 482, amounting to 484,000 acres, last year. This satisfactory result is partly due to work having been obtained from a larger number of licensed surveyors.

With an increased staff for coast land settlement considerable progress has been made with that work.

The "arrears" of survey have swelled from 1,520,000 to 1,607,000 acres. The Trans-Nzoia work will soon have to be undertaken when the arrears will reach 2,000,000 acres.

The expenditure has been about £21,000 as compared with £20,700 last year, while the fees, &c., collected reached £5,600, an increase of some £900 on 1910-11.

XII.—GAME.

During the past year the number of sportsman's £50 and resident's £10 game licences issued has decreased, while the actual total of game licences issued has increased, as will be seen from the following comparative table:—

	1910-11.	1911-12.
Sportsman's Licence	124	83
Resident's Licence	191	154
Resident's 14-day Licence ...	34	108
Landholder's Licence	105	155
Employer's Licence	8	18
Special Elephant Licence ...	116	83 (to shoot 100 elephants)
Special Giraffe Licence	17	16
Traveller's Licence	234	356
Total	829	973

This has, of course, produced a corresponding decrease in the annual revenue derived from licences:—

	1910-11. £	1911-12. £
Revenue	10,666	7,941
Expenditure	2,539	2,788

This decrease in revenue is attributed to two causes: (1) The "Coronation Durbar" attracted to India many visitors, some of whom would probably otherwise have come to British East Africa; (2) Visiting sportsmen have only recently realised the great facilities for shooting with less expense which are offered by the £1 traveller's licence, which allows the sportsman to kill any animal allowed under the £50 licence without limit as to numbers, provided the animals are killed on private land with the consent of the owner.

During the past year landholders who own land in good game districts have adopted the custom of leasing the shooting over their farms to visiting sportsmen or have charged a certain sum for a particular animal. In this way a visitor is able to obtain a great deal of shooting and a fair variety of trophies at a very much lower figure than the £50 sportsman's licence. This money goes into the pocket of the landholders instead of into the Government revenue, and as thus a great inducement is held out to landholders to protect the game on their land this custom is to be cordially welcomed as being greatly in the interest of game preservation.

Game Reserves.—The condition and stock of game in the two game reserves is satisfactory. Ostriches have continued to increase considerably in the Southern Reserve, and on one occasion no less than 102 were seen together near the junction of the Magadi Railway. There has been no disease among game reported during the past year. The greater kudu in the Northern Reserve were greatly reduced by rinderpest some years ago, but are steadily increasing again.

In the Northern Reserve and the Northern Provinces generally there are large numbers of rhinoceroses and elephants. Of the latter, bulls with heavy tusks are now scarce, as is only to be expected seeing that ivory hunting has been carried on for so many years, and the herds consist chiefly of cows and calves and young bulls with tusks weighing less than 30 pounds. But there is little doubt that the East Africa and Uganda Protectorates contain a larger stock of elephants than probably any other part of Africa, and the East Africa Protectorate contains more rhinoceroses than any other African territory.

On the whole the prospects of the game in the Protectorate are quite satisfactory. There have been exceptionally heavy rains during the early months of 1912, which, by producing abundant supplies of food, act powerfully as a preventive to disease and are favourable to prolific breeding.

The rhinoceros, although still numerous in some districts, particularly in the north, has undoubtedly decreased considerably of late years in the more accessible parts of the country. On this account the number of rhinoceroses allowed under a game licence has been reduced from two to one during the past year. A reduction in the number of Thomas' Kob allowed under the licence has also been made from four to two, as this beautiful antelope is only found in one district of the East Africa Protectorate and has lately been considerably reduced in numbers. The numbers of elephants in the Protectorate are satisfactory, and now that the system of Government purchase of old ivory has been stopped since 31st March, 1912, the prospects of their preservation are good.

The attempts to acclimatize the wild water melon of the Kalahari Desert (*Cucumis caffer*) in the Southern Game Reserve were inconclusive in 1911. Seeds were planted over a large area, but the rains in October, November, and December were not sufficient on the plains and the seeds, apparently, did not germinate. However, the seeds of this melon are known to have the power of remaining on the ground for several years and afterwards producing a luxuriant crop. Besides this, a large quantity of seeds has again been planted in the Reserve from Athi River Station down to Simba Station. The seeds have been proved to be fertile as they have been grown in the Game Warden's garden in Nairobi, but it was found that insects attacked the young plants with avidity and will probably prove to be the most serious opponents.

The return of the proceeds from the sale of trophies confiscated under the Game Ordinance and afterwards sold by public auction is as follows:—1910-11, Rs. 818.07; 1911-12, Rs. 2,439.03.

This increase of Rs. 1,620.96 during 1911-12 is due to the attack made upon the illicit trade in buffalo hides, and the consequent sale of the hides confiscated.

There has also been a large increase in the amount of ivory confiscated from smugglers and other illegal owners, as may be seen from a comparison of the Customs figures showing the value of confiscated ivory exported during the last two years. The value of confiscated ivory exported in 1910-11 was Rs. 15,461, and in 1911-12 Rs. 36,769. It will be seen from this that the amount has more than doubled this year.

Eighty-one persons were prosecuted under the Game Ordinance, with 67 convictions.

XIII.—KING'S AFRICAN RIFLES.

Recruits.—298 recruits were enlisted for the 3rd battalion during the year. This includes the extra Kavirondo company raised in May, 1911.

Health.—The health of the troops generally has been good, with the exception of a serious outbreak of beri-beri at Serenli. There were 108 cases and 43 deaths, 40 of which were soldiers and 3 women.

Patrols and Operations.—No military operations were undertaken during the past year. Two companies were employed on patrol duty in the Maragwet district. Two companies were employed on patrol duty in the Wakamba district.

Inspection.—The Inspector-General visited the Protectorate in September, 1911, and landed at Kismayu. He was accompanied by Lieutenant-Colonel G. R. Breading, D.S.O., Mr. G. F. Archer, Captain C. N. French, and Captain R. F. Loder Symonds and proceeded *viâ* Serenli, Dolo, Moyali, and Marsabit to Nairobi, inspecting the troops at all stations en route.

Increase.—One extra company was raised for the 3rd battalion in May, 1911, thus raising the strength to seven companies. Two companies of the 1st battalion were attached to the 3rd battalion for service in the Protectorate.

Volunteer Reserve.—The membership of the Reserve on the 31st March, 1912, was 431, as against 265 on the 31st March, 1911, showing an increase of 166.

The musketry test is the same as that laid down for the Territorial Infantry Forces at home, and only 20 men failed to pass.

New units have been formed at Limoru and Uasin Gishu, and ranges constructed at both these stations.

XIV.—PUBLIC WORKS.

Two important works were commenced by the Public Works Department during the year from loan funds.

One was the installation of a water supply for Mombasa Island by gravitation from the Shimba Hills on the mainland. Work was started in the latter half of the year, survey was completed, and construction operations begun. The expenditure was £2,232. It is not anticipated that the water will be available in Mombasa Island before 1914. It will be brought by a main of ten inches in diameter capable of delivering three quarters of a million gallons a day. The distance from the springs in the hills to the service reservoir is 25·9 miles. The estimate of the total cost of the project is £90,000.

The other was the construction of the "Thika Tramway," a branch line of metre gauge railway starting from Nairobi Railway Station and running northward in the direction of the Kenia Province as far as the Chania Bridge Post Office close to the River Thika, a total distance of 31·9 miles. The work is of a heavy description as a succession of nine river valleys, some of them presenting extensive swamps, has to be crossed. Earthwork was well advanced by the end of the year, some of the material was delivered, and plate-laying was commenced. The total expenditure was £41,272. The vote upon which the work is being conducted is £60,000.

Apart from these loan projects, the expenditure on public works during the year was £78,198, an increase of £3,530 on that of the previous year.

The installation of the new nine-inch water main for the supply of Nairobi was completed at an expenditure of £3,061, and water was turned on in August. Funds remaining for the expansion of the distribution system in the town itself were handed over to the manager of the Uganda Railway, under whose supervision such work had previously been carried out. A further sum of £953 was spent on the new gaol at Nairobi. It was then occupied and the old corrugated iron gaol was converted into police lines at a cost of £1,420. The new police depôt in Nairobi was also completed at a further cost of £1,223. Another small portion of the Nairobi drainage system was finished at a cost of £798, and laboratory accommodation for a Government analyst in Nairobi necessitated an expenditure of £909. An addition to the lunatic asylum cost £847.

Concurrently with the prosecution of heavy work on a new main road to serve the Uasin Gishu Plateau, a sum of £1,414 was spent on buildings at the administration station of Eldoret. In the Nyanza Province, further buildings in Kisii Station cost £926. A change in the headquarters of the Kenia Province from Fort Hall to Nyeri necessitated some work in the latter station, and £518 was spent on a house for the Provincial Commissioner, which was not yet completed by the end of the year. A new gaol cost £988. £224 was spent on Gosha Station in Jubaland and £271 on Meru Station in the Kenia Province. New buildings at Voi cost £600.

Other expenditure comprises £530 on three local prisons, £1,004 on four hospitals and dispensaries, £359 on a reformatory, £1,527 on additional buildings at Government Farm, Kabete, £498 on Post Offices, £255 on the purchase of land at Mombasa, and £333 for the acquisition of a piece of property near Lamu. A sum of £1,278 was spent on 23 items of petty works.

An experiment of some promise was made in the training of a number of African youths as handicraftsmen under the supervision of a European instructor. Subsequent to the termination of a three years' apprenticeship, these youths will be at liberty to follow their vocation either within or outside the Government service. The total expenditure under this head was £655.

The Department's stock of unallocated stores was augmented by receipts to the value of £61,214 during the year and diminished by consumption to the value of £67,937, the balance in hand at the end of the year standing at a value of £31,311.

Under the Public Works Recurrent Schedule a total sum of £14,828 was spent on repairs to roads and buildings and on other maintenance services, in addition to a sum of £6,473 spent on the rent of land, offices, and residences required for Government purposes.

APPENDIX 1.

Comparative statement showing values of Imports (exclusive of Government goods, specie and bullion, and goods in transit) into the East Africa Protectorate, during the years ended 31st March, 1911 and 1912.

Articles.	Year ended 31st March, 1912. Value.	Year ended 31st March, 1911. Value.
	£	£
Agricultural implements	27,438	29,265
Ammunition	5,459	6,401
Ale and beer	4,164	4,146
Articles necessary for maintaining telegraphic communication	16,795	—
Apparel (wearing)	40,932	25,065
Bags and sacks	18,759	13,691
Beads	9,910	9,273
Books, maps and printed matter	5,241	4,324
Brass and copperwares	18,763	26,303
Building materials	39,261	27,905
Cotton piece goods	394,715	261,141
Cotton yarn	1,552	1,125
Drugs, medicines and chemicals	14,875	8,127
Coal	3,629	3,888
Earthen and glasswares	13,254	7,493
Firearms	13,692	12,614
Furniture	7,868	4,600
Grain	100,903	80,654
Gunpowder	264	105
Iron and steelwares	40,652	27,943
Kerosene oil	15,086	14,408
Live stock	11,534	15,064
Machinery and parts thereof	50,392	24,840
Salt	3,519	3,334
Provisions	76,878	77,351
Seeds and plants	3,389	2,314

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

No. 791.

EAST AFRICA PROTECTORATE.

(For Report for 1911-12, see No 751.)

THE ACTING GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
13th December, 1913.

SIR,

I HAVE the honour to transmit herewith the Annual Report on the East Africa Protectorate for the year 1912–13.

I have, &c.,
C. C. BOWRING,
Deputy Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(C6.) Wt.36076/850.1.1.14. 1125 & 90. 2/14. B & F. LTD. G.11/2.

ANNUAL REPORT
ON THE
EAST AFRICA PROTECTORATE FOR 1912-13.

I. FINANCIAL.

(A) GENERAL REVENUE AND EXPENDITURE.

Revenue.

The estimate of revenue, £780,684, was actually exceeded by £171,841, and reached the record total of £952,525. This is £223,447 more than the previous year.

The following table shows the actual revenue during the last five years, with percentage of increase:—

Year.	£	Percentage Increase.
1908–09	485,668	2·3
1909–10	503,040	3·5
1910–11	609,586	21·0
1911–12	729,078	19·6
1912–13	952,525	30·6

The revenue of 1912–13 is 89 per cent. more than that of 1909–10.

Every head of revenue (except reimbursements by other Government) shows an increase over the estimate.

Customs receipts from imports and exports, despite an increase of the amount payable to Uganda, from £21,851 to £26,000, showed a total of £146,085, or £50,785 above the original estimate. The expansion in trade continued steadily, as well as a further increase in local exports.

Under Licences, Excise, and Internal Revenue, the total receipts were £199,249, or £26,209 over the estimate. The Hut and Poll Tax revenue amounted to £157,614, as against £146,215 in 1911–12. No original estimate of Non-Native Poll Tax was made, but from the returns rendered previous to the coming into operation of the tax a sum of £9,500 was expected to be realized, and this sum was exceeded by £427.

Fees of Court, Payments for Specific Services, and Reimbursements in aid exceeded the estimate by £5,240. Crane and Pier dues, Warehouse Fees, and Transit Fees exceeded the estimate by £1,045, £636, and £2,002 respectively. This may be attributed to the general increase of trade.

Testing and Dipping Fees brought in £1,467 more than anticipated; large numbers of cattle from Northern Frontier District and Nyanza were inoculated, and also sheep coming from Laikipia and the north were dipped.

Hospital Fees exceeded the amount anticipated by £508, due in some measure to the increase in number of patients, and also to the collection of arrears.

Government Railways receipts brought in £481,081, against £416,800 estimated.

Rents of Government property realized £2,225 more than the estimate.

The item Timber Sales and Royalties from Forest Areas alone exceeded the amount anticipated by £2,598, due in a great measure to the establishment of new saw mills, influx of settlers, and the exploiting of further forest areas. There was a large increase in the sales of seeds and plants.

Whereas the total Forest Revenue in 1911-12 was £3,652, that of the year 1912-13 amounted to £6,681.

The receipts from Rent of Lands other than Forest Areas very closely approximated the estimate, amounting to £16,948, as against £17,330 estimated.

Interest brought in no less than £7,391 more than the estimate. The large cash balances, including an advance against the £375,000 Loan, and the income (£2,873) from investments of Note Guarantee Fund, all helped to swell the excess. The inability of contractors to deliver early in the year was the reason of the Protectorate balances in England remaining high.

Miscellaneous Receipts—always an item difficult to estimate—showed a surplus over the estimate of £5,207. The item Sale of Stores, was considerably swelled by recoveries effected on advances made towards the cost of fencing erected by Government, and also by sales of fencing wire.

Confiscated ivory, an item impossible of correct estimation, alone realized £2,885.

The head Sale of Government property also showed receipts amounting to £229 in excess of anticipation, due wholly to royalties on stone quarrying, necessitated by the expansion of building operations.

Land Sales realized £1,487 more than the estimate, or £4,779, as against £3,292 anticipated. The prices for town plots ruled high, and, as they were sold by auction, an accurate estimate is impossible.

Grant in Aid.

For the first time since the establishment of the Protectorate, no grant in aid of general revenue was received. The sum of £23,500, however, was granted by the Imperial Treasury as part of a second instalment towards the cost of rolling stock, to cope with the increased traffic connected with Lake Magadi.

In the following table are shown the amounts of the general and special Grants-in-Aid made since 1905-06 :—

Year.	General.	Special.	Total.	Remarks.
	£	£	£	
1905-06 ..	214,000	..	214,000	
1906-07 ..	164,000	..	164,000	
1907-08 ..	152,975	40,000	192,975	Abolition of Slavery.
1908-09 ..	138,000	..	138,000	
1909-10 ..	133,500	..	133,500	
1910-11 ..	130,000	..	130,000	
1911-12 ..	115,000	75,000	190,000	Magadi.
1912-13 ..	nil.	23,500	23,500	Magadi.

Expenditure.

The original estimate of expenditure sanctioned for the year was £957,899; but in addition to this a sum of £70,941 was authorized out of surplus balances as expenditure on works uncompleted at end of the previous financial year.

The total authorized expenditure for 1912–13, therefore, was £957,899 plus £70,941, or £1,028,840.

The gross total expenditure came to £961,178 or, in other words, an excess of £3,279 on the original estimate, but £67,662 less than the total of authorized expenditure when that sanctioned out of surplus balances (£70,941) is included.

Of this latter sum, £70,941, sanctioned out of surplus balances for uncompleted services, £57,289 were spent; so that the true expenditure for the actual services of the year was £961,178 less £57,289, or £903,889.

The principal excesses were as follows:—

Provincial Administration, £3,775.—The principal cause of excess on the Provincial Administration Vote was the large amount of continuous travelling necessary in connection with the Masai Move which, however, was practically completed by the end of the financial year. The expenditure incurred by the Magadi Railway Magistrate and Labour Inspection Officer, was not estimated for. In the Northern Frontier District increased administrative activity caused an excess on the estimate.

Provincial Administration Special Expenditure, £1,468.—The expenditure in connection with the Masai Move which could not be properly charged to appropriate and existing subheads was, to the extent of £1,369, responsible for the excess on Provincial Administration Special Expenditure.

Medical Department, £823.—This excess was due to the urgent necessity of special steps being taken with regard to the epidemics of plague and smallpox which broke out during the year.

Military Special Expenditure, £5,946.—The cost of the patrol to the Marehan country, for which £6,200 was approved during the year, is the reason of the excess on Military Special Expenditure.

Railway Special Expenditure.—This vote exceeded the original estimate by £13,328, but in addition to the provision made, a further sum of £12,988 was sanctioned on account of uncompleted works of the previous year. This, and the fact that new stations had to be opened to cope with the increased traffic, which expenditure, however, was met by corresponding savings on the ordinary Maintenance Vote, fully account for the excess.

Agricultural Department.—There was an excess of £2,140 on the Agricultural Department. This was caused by additional expenditure on purchase of live stock for the Naivasha Farm, also by the fact that the stock intended for sale in November had to be kept till later in the year, owing to an outbreak of sheep-pox. There was also unexpected expenditure to be met to deal with coffee leaf disease; the outbreaks of rinderpest necessitated more expenditure on serum production, and the salaries of two additional temporary Veterinary Officers had to be met. More travelling in connection with the outbreaks of disease was also necessary.

Financial position on 31st March, 1913.

		£
Assets as on 1st April, 1912		293,734
Expenditure 1912–13 ..	£961,178	
Revenue 1912–13 ..	952,525	
Excess expenditure over Revenue		8,653
Balance		285,081
Special Grant-in-Aid for Magadi, 1912–13 ..		23,500
Net Assets on 31st March, 1913		308,581

In this amount of £308,581, however, is included, as usual, certain balances on services uncompleted during the last financial year, totalling £82,900, and for the expenditure of which in 1913–14 sanction will be sought.

(B) CURRENCY.

A five cent nickel piece was introduced during the year, with satisfactory results.

The following tables show (*a*) how the subsidiary coinage stood on 31st March, 1913, and (*b*) as compared with the same day in 1912.

(*a*) Particulars of Subsidiary Coinage on 31st March, 1913.

Denomination.		Received from Mint.	In circulation.	On hand.	In transit from Mint.
		Rs.	Rs.	Rs.	Rs.

Totals ..		11,32,611	14,33,912	3,01,301	26	55

Of the total original amount of copper pice, face value Rs.4,10,000, there still remains unaccounted for Rs.2,02,536. They are not now accepted.

The aluminium cents outstanding on 31st March, 1913, amounted to the face value of Rs.26,440; it is highly probable that only an inappreciable amount of these coins will ever be presented, and, although still accepted, the question of discontinuing to do so after a certain date is under consideration; ample time has been given to allow of all being redeemed, as they were demonetized by a Proclamation published in the Gazette of 1st December, 1909, and ceased to be legal tender after 31st May, 1910.

The following tables (*a*) and (*b*) give particulars of the demonetized subsidiary coinage as on March 31st, 1913.

Table (*a*)

Denomination.	Originally coined.	Sent to Crown Agents.	In stock.	Balance.
	Rs.	Rs.	Rs.	Rs.
1 pice copper.. ..	4,10,000	2,07,464	—	2,02,536
1 cent aluminium ..	94,080	69,193	476	24,411
½ ,, ,, ..	4,500	2,383	88	2,029

Table (*b*)

Denomination.	Outstanding.		Decrease.
	31st March, 1912.	31st March, 1913.	
	Rs.	Rs.	Rs.
1 pice copper	2,02,588	2,02,536	52
1 cent aluminium ..	24,865	24,411	454
½ ,, ,, ..	2,117	2,029	88

The total face value of notes in circulation on 31st March, 1913, was Rs.45,65,000, an increase of Rs.6,93,005 since the same date in 1912.

(c) Loan Advances.

On 8th November, 1912, the first advance of £120,000 was made by the Imperial Treasury on account of the loan of £375,000 for the purposes of improvements on the Uganda Railway and the Lake Victoria ports, and additional cargo steamer, and improvements in terminal facilities at Kilindini. A second advance of £255,000 was received on 29th March, 1913, on the same account. The interest is at the rate of 3½ per cent., and sinking fund at 1½ per cent., to commence in 1916.

No further advance other than the £47,000 received on December 28th, 1911, has been received on account of the £250,000 for the purposes of improved railway communication and harbours in the Protectorate and for the provision of a pipe-borne water supply for Mombasa.

II.—TRADE AND SHIPPING.

(a) Trade.

The gross receipts from the import and export duties during the year amounted to £190,813, made up as follows :—

	£
Ad valorem duties on merchandise	154,544
Specific duty on distilled liquors	18,083
Duties on domestic exports	12,808
Duties on account of transit goods	5,378
Total	£190,813

The total refunds during the year amounted to £18,728, apportioned as below :—

	£
(1) Refunds on account of transit goods	4,525
(2) Drawbacks of goods re-exported	13,530
(3) Other refunds	673
Total	£18,728

The net revenue, therefore, from customs duties reached the sum of £172,085, the largest amount from this source yet collected in the history of the Protectorate.

Import duties amounted to £159,277, representing 92 per cent., and export duties £12,808, or 8 per cent. of the net revenue.

The net receipts exceeded the estimates by £50,785, or 42 per cent., and exceeded the net revenue of the previous year by £49,145, or 40 per cent.

Imports.

Appended are the figures of the gross amount of import duty collected in respect of principal articles under the following headings during the last three years :—

	1912–13.	1911–12.	1910–11.
	£	£	£
Cotton goods	52,233	39,472	26,114
Grain	11,386	10,090	7,917
Building Materials ..	12,387	5,224	4,017
Provisions	9,047	7,274	7,430
Sugar	6,008	4,257	3,333
Spirits and Liqueurs ..	18,083	12,315	10,152
Ale, Beer, and Wines ..	2,119	1,288	1,460
Brass and Copper Wares ..	2,640	1,876	2,630
Kerosene oil	1,554	1,509	1,441
Tea	1,584	1,021	789
Tobacco	3,417	2,651	2,270
All other sorts	52,169	35,822	28,878
Total	£172,627	£122,799	£96,431

Cotton goods, it will be seen, easily head the list of dutiable imports from which revenue is derived, and form 30 per cent. of the import duties.

The chief articles of merchandise imported into the East Africa Protectorate during the year under review are given below in order of their importance and values :—

	£
Cotton goods	522,331
Building materials	124,089
Grain	115,437
Provisions	95,600
Machinery and parts thereof	80,506
Sugar	60,376
Vehicles and parts thereof	58,413
Hardware and cutlery	56,191
Spirits, including ale, beer, and wines	51,162
Haberdashery and wearing apparel	36,584
Implements, agricultural	35,419
Tobacco, cigars, and cigarettes	34,182
Iron and steel manufactures	31,352
Arms and ammunition	27,396
Brass and copper wares and manufactures ..	26,404
Cotton manufactures, unenumerated	23,639
Soap	20,944
Beads	17,846
Petroleum oil	16,806
Coal	12,972
The total value of all private imports being	£1,808,343

Amongst the imports of merchandise, the first and largest group, as hitherto, is cotton fabrics, which form about 29 per cent. of the total value of imports. Thus the greater value of the imports is explained by a very large entry of cotton goods, indicating their great importance in the local markets.

The imports are of record dimensions, both in quantity and value, being represented by 34,248,565 yards and £522,331. In considering these figures a note should be made of the high price ruling, which possibly curtailed demand to a certain extent. Textiles contributed no less than £127,616, or 23 per cent. of the total increase of £561,083 in value of trade goods.

The improvement over the previous year amounts to 8,118,484 yards and £127,616, which figures represent advances of 31 per cent. in quantity and value.

There were great expectations of a busy year. Large stocks were obtained to open with, but as the year advanced it was seen that stocks could not keep pace with the growing demand. Orders had, therefore, to be extended, but the high price of raw cotton prevalent for several months and, consequently, higher rates for woven materials kept the markets bare while inuring indentors to abnormal rates.

The aggregate value of the imports of cotton tissues into the East Africa Protectorate during the last ten years, together with their percentage to the total trade imports, has been as follows :—

Year.	Value.	Percentage of total Trade Imports.
	£	
1903-04	118,539	27
1904-05	145,588	28
1905-06	210,571	31
1906-07	222,278	30
1907-08	197,044	25
1908-09	207,545	26
1909-10	209,734	27
1910-11	261,141	26
1911-12	394,715	31
1912-13	522,331	29

The main interest of the above figures lies in the significant fact that after four years of progressive expansion there was the sharpest fall in the textile imports during 1907-08. It was mainly due to the financial crisis in the United States, the source of supply of grey sheeting used by natives, whose purchasing power was at the same time curtailed owing to the decreased demand for hides and skins.

The recovery which continued during the next two years did not make good the loss till 1911, when there was sighted what has proved to be a distinct cycle of upward movement. The textile imports were of record dimensions last year, but the value during the year under review was still greater, beating all previous records, reaching a respectable sum of £522,331, and showing an increase of £127,616, or 29 per cent. It is evident that the cotton trade is steadily conquering new fields, and the growth in the last ten years has been nearly 440 per cent. It is a marked tribute to the vitality of the trade of this Protectorate in this staple article and to its possibilities in the future under favourable conditions.

Haberdashery (£5,801), and wearing apparel (£30,783), both combined, show an increase of £10,233 over the previous year, and the total imports of these two classes from all sources amounted to £36,584, of which £19,404 came from the United Kingdom, £6,645 from India, and £4,409 from Germany.

Cheapness and originality of design attract the natives to the Continental make, but so far there has not been much competition with the United Kingdom.

Cotton manufactures, unenumerated, include cotton plush, cotton ribbons, cotton yarn waste, cotton wadding, counterpanes, curtains, cotton frillings, cotton gauze, cotton gloves, cotton handkerchiefs, hosiery, knitting cotton, lace cotton, mosquito nets, cotton quilts, sailcloth cotton, cotton thread, cotton underclothing, etc., the total of which amounted to £23,639, showing an increase of £9,058 over the previous year. Nearly half of the imports comes from the United Kingdom, and about 25 per cent. from India.

From a period of exceptional sluggishness in 1910, the building trade revived during 1911 and 1912, and reached notable dimensions during the year under review.

The great extension of building operations up country, and especially in and around the town of Nairobi, was a marked feature of the year. and in consequence there was a large trade in all kinds of materials required for the purpose. Both the port, that is, the island of Mombasa. and the city of Nairobi continue their march of progress, many industrial firms having enlarged their works. Numerous houses have been and are being built, and building plots have fetched enormous prices.

Building materials, which form 7 per cent. of the whole imports, show an increase of 137 per cent. over the previous year, the enormous development of the building trade being one of the most salient features of the year.

Shipments of cement were largely in excess of the previous year, nearly thrice as much again, and Belgium entered the field for the first time. In the cement trade prices at home have been raised to 50 per cent. and upwards, far more than the legitimate increase in costs warrants.

An instance of the activity in the building trade is strikingly illustrated by the increase in the importation of galvanized iron sheets and plates, the number of 84,679 cwts., valued at £57,061, being nearly three times as much as in the preceding year.

So far no other country has competed with the United Kingdom in the supply of galvanized iron sheets, which constitute the largest item in the building materials. But it is generally known that Germany is extending her equipment of this branch of manufacture, and it is likely that she may, in the near future, send her products to this market.

The importation of timber increased from 2,933 cwts., valued at £13,342, to 6,786 cwts., valued at £34,264, also due to building operations on extensive scales during the year. The imports would have been larger still had it not been for the utilisation of woods from the local forests. The source of supply of imported timber is Norway and Sweden, with a value of £24,846 for pine and deal, followed by India and Burmah, with a value of £8,105 for teak.

Another group which reached a considerable proportion in value is "Grain," which accounts for more than 6 per cent. of the total imports. The quantity rose from 210,859 cwts. to 211,399 cwts., whereas the value increased from £100,903 to £115,437. The trifling increase of ¼ per cent. in quantity was therefore accompanied by a rise of 14 per cent. in the average value, but the several descriptions were so diverse in value for cwt. and the quantitative relation to each other varied so widely during the two years that the figures of quantity and value tell us little unless the items are analysed as below :—

Imports, showing quantity and value during :—

	1911–12.		1912–13.	
	Cwt.	£	Cwt.	£
Rice	160,216	76,324	131,435	72,857
Flour and wheat meal ..	35,282	18,419	55,907	32,013
Wheat	2,710	1,352	4,719	2,386
Pulse	3,164	1,482	4,742	2,167
Maize and maize meal ..	786	160	1,616	314
Grain, other sorts	8,701	3,166	12,980	5,700
	210,859	£100,903	211,399	£115,437

Rice, as usual, is far the largest figure, and forms 63 per cent. of the trade in grain. Measured by quantity, rice imports declined by 28,781 cwts., or 22 per cent., while the decrease in value was one of £3,467 or 4·7 per cent. Thus the cost of rice imports in 1913 was 16 per cent. greater than in 1912. All rice, with the exception of 9,186 cwts., valued at £4,886, was imported from India and Burmah. The rice trade seems to have passed through anxious times, as the rise in price during the year exceeded all expectations, and touched a level hitherto unknown to the East Africa Protectorate market. Remarkable fluctuations were witnessed during the year, and the price oscillated between Rs.12 to Rs.16 per bag of 165 lbs. This is accounted for by the paucity of crops in the principal rice-producing countries.

The next article in order of volume after rice is flour and wheatmeal. The quantity cleared for home consumption was 55,907 cwts., valued at £32,013.

The quantity has increased by 20,625 cwts., or 58 per cent. over the previous year, while the advance in value has been one of £13,594, or 73 per cent.; the rise in price accounts for the difference of 15.

The increase in quantity is natural in a country which is not able to feed its own growing population.

The importation of foreign flour continuing to advance in spite of the output of locally-grown wheat flour demonstrates the fact that its consumption is extending.

Another item which requires mention is maize, the imports of which amounted to 1,616 cwts., valued at £314.

After grain the next important item is the importation of "provisions," which term as applied to merchandise includes eleven heads, viz.:—Bacon and ham, butter and cheese, condensed milk, drinks (unenumerated) (other than distilled liquors, wines and beer), foodstuffs (unenumerated), fruits (raw), mineral waters, ghee (clarified butter), preserved meat, and canned and bottled provisions.

The value increased from £76,878 to £95,600, showing an advance of 25 per cent. All items of comestibles show increases, except preserved meat and canned and bottled provisions, which receded from £17,585 to £14,592. This may be attributed to trade fluctuations rather than to decreased consumption.

In provisions, the imports from the United Kingdom predominate with a value of £49,937.

The importations of bacon and ham have now to a certain extent been affected by the activity of a local bacon factory.

The fifth group in order of value after "provisions" is "machinery,' of which there are different classes.

The following statement summarises the trade for the past two years:—

	1911–12.	1912–13.
	£	£
Machinery and parts thereof, Agricultural ..	22,291	22,241
Do. do. Industrial	21,065	51,572
Do. do. Other sorts	7,028	6,693
	£50,384	£80,506

The aggregate imports in 1913 amounted to £80,506, and thus easily constituted a record, being £30,122, or 60 per cent., more than in 1912.

Industrial machinery has made good headway, the value of the imports being £30,507, or 145 per cent. in excess of those of the previous year.

The trade in agricultural implements, which had somewhat declined in 1912, has improved considerably during the year. The imports amounted to £35,419, being double those of the preceding year—the bulk of agricultural implements imported are for native use.

Sugar is another item the trade in which is rapidly developing, the imports during the year amounting to 79,464 cwts., valued at £60,376. As compared with the previous year, the increase in quantity is 29,085 cwts., or 57 per cent., while the value shows an increase of £17,805, or 41 per cent.

The trade in bags and sacks for produce enjoyed a most prosperous year. The increase in the export trade has naturally brought with it a relatively large demand for packing materials. The imports amounted to £44,384, showing a rise of £26,425 over the previous year.

The trade in this line has increased from £6,316 in 1909 to £44,384 during the period under report, while the expansion over the preceding year is as much as 148 per cent. India is the largest supplier of bags and sacks, valued at £41,460, followed by the United Kingdom with £1,876, and Germany with £998.

Coal imports rose from 2,194 tons in 1912, valued at £3,629, to 7,805 tons, valued at £12,972, in 1913. This was largely due to importation for the Uganda Railway and the Magadi Concession.

Coal was imported from the South African Union to the value of £9,368 and from the United Kingdom to the value of £3,604.

Liquors are statistically distinguished as ale and beer (malt liquors), brandy, whisky, gin, sweetened liqueurs and wines. The trade in this line has considerably increased during the period under report.

The following statement shows the quantities and values of the different classifications during the past two years :—

	1911–12.		1912–13.	
	Gallons.	£	Gallons.	£
Ale and Beer	28,461	4,164	50,839	7,196
Brandy	6,571	4,281	10,458	6,152
Whisky	27,676	14,017	38,865	20,129
Gin	3,132	1,039	5,403	1,634
Liqueurs and other sorts ..	1,650	1,069	2,783	2,060
Wines	21,181	8,723	34,375	13,991
	88,671	£33,293	142,723	£51,162

The total increase in value during the year shows an expansion of 53 per cent. over the preceding year, but it cannot be said that the general prosperity of the country was reflected in the increased importations of wines and spirits. The cause of the increase is due to the enlarged demands from the growing European population. The specific duty of Rs.5 per gallon on distilled spirits valued at £29,975, yielded a revenue of £18,083, which amounts to 60 per cent. ad valorem duty. There are no local distilleries for any sort of liquor, and therefore the only source of supply is from foreign countries.

As regards individual items, the United Kingdom supplied the East Africa Protectorate with whisky worth £20,045, while exports of brandy from France for this Protectorate amounted to £5,645, whereas in gin the United Kingdom has captured the market with a value of £1,421.

In ale and beer Germany's share amounted to £4,678, while the United Kingdom was second with £2,355. In supply of wines France takes the first place, followed by the United Kingdom.

The imports of tobacco, including cigars and cigarettes, increased from 431,549 lbs., valued at £26,517, to 560,546 lbs., valued at £34,182.

The importation of arms and ammunition amounted to £27,396, showing an increase of £8,245 over the previous year.

The turnover in cutlery and hardware amounted to £5,691 and £21,162 respectively during the period under review, as against £5,223 and £18,816 in the preceding year.

Business in tea is likely to assume larger dimensions in the near future. The consumption among natives of the Protectorate is comparatively little, though this beverage is gaining in popularity together with sugar. The imports amounted to 321,018 lbs. in quantity, valued at £15,842.

The increase over the preceding year is one of 101,553 lbs. in weight with a value of £5,630.

The importation of vehicles and parts thereof took the sixth place in the list of imports, and amounted to £58,413, showing an increase of £30,635 over the previous year.

The imports of goods by parcels posts amounted to £44,040 during the year, and is 33 per cent. above the imports of the last year.

The imports of iron and steel manufactures (£28,100) and wires (£3,252) have nearly doubled in value, and the increase is from £16,613 in 1912 to £31,352 in 1913.

There was an increase of £2,179 in the importation of horses and mules, and £1,103 of live-stock for breeding purposes.

The official year ended on 31st March, 1911, showed an increase of £222,737, or 29 per cent. over the preceding year. Another improvement of £249,277 was recorded in 1912, while the trade imports during the year under review amounted to £1,808,343, showing an increase of £561,083, or 45 per cent. over its immediate predecessor, and an increase in five years of 128 per cent.

Exports.

The value of exports from—

	£
British East Africa amounted to	421,084
Uganda	427,228
German East Africa	331,292
Congo Free State	21,485
The Soudan	1,655
Italian East Africa	457
Making a total of ..	£1,203,201

Export duties are levied on produce as follows :—

Borities (Zanzibar rafters), chillies, hides and skins (other than sportsmen's trophies), rhino horns, hippo teeth (other than sportsmen's trophies), tortoise shell and india rubber (other than plantation rubber)	10% *ad valorem.*
Cowries and other sea shells	5% ,, ,,
Ebony and other fine woods	5% ,, ,,
Gum copal	6% ,, ,,
Ivory	15% ,, ,,
Horses	Rs.21 per head
Camels	Rs.4 ,, ,,
Donkeys	Rs.2 ,, ,,

The total yield of such export duties amounted to £12,808, showing an increase of £1,440, or 13 per cent. over the preceding year.

In the case of other dutiable exports from neighbouring territories, the duty is collected by their respective Administrations.

The relative importance of articles of domestic exports will be seen from the following table :—

	£
Grain and oil seeds	147,250
Hides and skins	87,673
Copra	31,956
Rubber (wild and plantation)	22,541
Potatoes	16,003
Ivory	12,466
Cotton	11,831
Animals (living)	10,300
Fibre	8,150
Ghee	10,638
Wool	7,908
Beeswax	7,588
All other articles	46,780
Total	£421,084

Taking the various products separately as above, the exports of grain and oil seeds continue to take first place, and exports of hides and skins, although still large, have taken a place of minor importance.

The exports of grain not only amounted to £147,250 and reached its highest point, but the proportion to the total export trade has risen from 32 per cent. in 1911-12 to 35 per cent. in the year under eview.

In the exports of grain from the East Africa Protectorate, maize takes the first place as regards quantity, but is second in value. It is the chief food of the native inhabitants.

The crop during the year was abundant, and also of good quality, permitting considerable shipments to be made.

In oleaginous grain the principal item is sesamum (sim-sim), which takes the first place in value with £59,123, and second in quantity with 80,461 cwts. The quantitative expansion of 17 per cent., combined with the increase of 31 per cent. in value, gives an advance of 12 per cent. in specific value.

France, as usual, is the largest purchaser of the East Africa Protectorate sesamum, and took 37 per cent. of the quantity, followed by Italy with 25 per cent., and India with 13 per cent.

The trade in ground nuts is progressing rapidly, the increase in quantity is one of 70 per cent.,while in value it is a case of 82 per cent., meaning that the average price during the year hardened by a little over 70 per cent.

The exports of beans and peas takes the third place in the group of grain, and shows a rise of 67 per cent. in quantity, and about 98 per cent. in value, thus giving an advance of 18 per cent. in the average price.

Thirty-seven per cent. of the quantity was consigned to the South African Union, 21 per cent. to the United Kingdom, and about 20 per cent. to Zanzibar.

Exports of highest value after grain are those of hides and skins, which amounted to £87,673, and represent 21 per cent. of the whole.

The trade in hides and skins show the following variations during the last two years :—

	1911–12.		1912–13.	
	Quantity.	Value.	Quantity.	Value.
	Pieces.	£	Pieces.	£
Hides, ox	17,417	50,872	18,065	58,444
	Cwt.		Cwt.	
Sheep skins	78,325	1,615	119,243	2,783
Goat skins	416,550	18,664	496,742	23,884
Wild animal skins	7,298	2,099	7,284	2,562
		£73,250		£87,673

The increase in value is £14,423 over the previous year.

The third largest item of export is copra, with £31,956, which forms 7 per cent. of the exports. Its value advanced by £3,901 beyond that of the preceding year, but the quantity receded from 31,717 cwts. to 31,283 cwts.

The export of rubber amounted to £22,541 during the year, and shows an improvement of £6,043 over the previous year, but it is still below the exports of 1910–11, when it had reached its high water mark, with 1,726 cwts., valued at £51,963.

Below is the return of rubber exports during the last two years :—

	1911–12.		1912–13.	
	Cwt.	£	Cwt.	£
Rubber, wild	1,018	13,812	1,062	15,252
Rubber, plantation	189	2,686	466	7,289
	1,207	16,498	1,528	22,541

The increase is, therefore, one of 321 cwts., or 26 per cent., in quantity, and £6,043, or 36 per cent., in value. This disparity shows a rise of 8 per cent. in the average price per cwt. ; but if the level of prices during the year under report is compared with that of 1910–11, the year in which rubber prices were booming, the result will be a decrease of 25 per cent. in the average value.

Plantation rubber was wholly consigned to the United Kingdom, while in the case of wild rubber 495 cwts. went to the United Kingdom ; 275 cwts. to Zanzibar, and 292 cwts. to Germany.

Another single item that increased much in value is potatoes, the exports of which amounted to 81,877 cwts., valued at £16,003.

The quantity and value of potatoes exported during the year is more than three times as large as in the previous year, and the increase in this product is principally due to its cultivation by the natives in the Kikuyu district, it being a simple form of cultivation with quick returns.

The exports of ivory, which have been decreasing for the last two years, decreased still further during the period under report.

The value receded from £15,649 to £12,466, while the contraction of quantity was from 297 cwts. to 214 cwts., a decline of 28 per cent. in quantity and 20 per cent. in value, the ostensible rise in specific value being 7 per cent.

The trade in ivory has shown a remarkable change of front in recent years. Up to 1903 it headed the list of exports, then became second, and, gradually sliding down, has dropped to the sixth place in order of value during the year under review.

Cultivation of coffee in this country is entirely due to the enterprise of European settlers. Coffee is largely consumed in this country and the exportable surplus, though not considerable, amounted to £11,071, thus showing an increase of £5,306, or 92 per cent. over the previous year, while the export in 1909 amounted to £236 only.

The exports of fibre amounted to 11,848 cwts., valued at £8,150, during the year, and show an improvement of 3,731 cwts. in quantity and £3,886 in value, mainly due to the produce of the Fort Hall Plantations.

The exports of cotton from the East Africa Protectorate reached its highest figure in 1912–13, viz., 2,636 cwts., valued at £11,831, thus showing a rise of 1,154 cwts. in quantity and £5,518 in value. Its insignificance is perceptible when compared with the Uganda export of 93,158 cwts., valued at £277,497.

The exports of wool receded from 1,761 cwts., valued at £8,219, to 1,689 cwts., valued at £7,908, a decline of 72 cwts. for a value of £311. 1,511 cwts. were consigned to the United Kingdom, and 178 cwts. to India.

Ham and bacon were classified separately in the customs statistics for the first time during the year under review.

The exports amounted to 298 cwts., with a value of £1,426 distributed over the United Kingdom, the South African Union and German East Africa.

Locally cured ham and bacon are finding a ready sale in the Protectorate markets.

Uganda Exports.—The consignments of Uganda exports via Mombasa to foreign ports during the year amounted to £427,228, an increase of £50,154, or 13 per cent., which is even less than the gain made by cotton and its seeds, conjointly amounting to £51,436.

German East Africa Exports.—The total value of exports amounted to £331,292, showing an increase of £51,179 over the previous year.

The bulk of German East Africa exports through the Protectorate consists of hides and skins, which form 43 per cent. of the total, whereas grain represents 26 per cent. of the whole.

The following statement shows the comparative values of all exports for the last five years from the East Africa Protectorate, including produce from the Uganda Protectorate, German East Africa, the Congo Free State, the Soudan, and Italian East Africa :—

Produce of	Year ended 31st March					Increase over the last year
	1909 Value	1910 Value	1911 Value	1912 Value	1913 Value	
	£	£	£	£	£	£
East Africa Protectorate	140,418	190,668	276,480	333,670	421,084	87.414
Uganda Protectorate	140,370	211,796	371,513	377,074	427,228	50.154
German East Africa	102,119	169,241	285,538	280,113	331,292	51.179
Congo Free State ..	53,406	18,352	27,349	22,325	21,485	Decrease 840
The Soudan ..	..	..	1,688	3,334	1,655	1.679
Italian East Africa	..	..	343	82	457	Increase 375
Total ..	436,313	590,057	962,911	1,016,598	1,203,201	

The following figures show the value of the whole volume of inward and outward trade of the East Africa Protectorate during the last five years :—

	£
1908–09	1,610,327
1909–10	1,769,695
1910–11	2,569,436
1911–12	3,086,969
1912–13	4,094,693

The increase in the volume of trade over the preceding year is one of £1,007,724, or 32 per cent., whereas during the last five years the advance has been one of £2,484,366, equivalent to 154 per cent., which is far in excess of anticipations in 1908–09, or even in 1909–10.

Out of a total volume of £4,094,693, the trade passing through Mombasa and Kilindini reached the sum of £3,911,154, while £183,539 only was the value of import and export trade of the coast ports and inland Customs stations of Kisumu and Taveta in the interior.

Thus Mombasa, together with Kilindini, maintains the position as the port through which practically the whole import and export trade passes, leaving less than 5 per cent. for other ports of the Protectorate.

(B) SHIPPING.

Kilindini is the principal port of the Protectorate and is used by all the large steamers.

Four regular lines of direct mail steamers have called during the year, viz., The Union Castle Steamship Company, the German East Africa, the French Messageries Maritimes, and the Italian line.

The British, French, and Italian steamers called once a month and the German steamers twice a month.

In addition to the above lines, the British India Company's steamers from Aden, with transhipment cargo from Europe, have called regularly once a month, and the Clan Ellerman and Harrison also called once a month direct from Europe.

A branch of the British India Company's steamers maintained a regular service once a month with Bombay during the first nine months of the year, and twice a month during the last three months.

A branch of the German East Africa line maintained a regular service twice a month with Bombay during the whole year.

The Coast traffic has been carried out by the small steamers belonging to Messrs. Cowasji, Dinshaw and Brothers, and Messrs. Esmailji, Jivanji and Company.

The following table shows the gross tonnage of ships, the amount of cargo, and the number of passengers landed and shipped by the different steamship lines at Mombasa :—

Lines.	Number.	Gross Tonnage.	Landed.			Shipped.		
			Cargo Tons.	Passengers.		Cargo Tons.	Passengers.	
				European.	Non-European.		European.	Non-European.
B.I. .. .. Aden ..	26	86,404	3,330	79	820	1,246	97	660
B.I. .. .. Europe ..	6	17,149	12,491	..	6	30	2	8
B.I. .. .. Bombay ..	32	108,407	7,993	77	2,234	3,418	59	1,846
D.O.A.L. .. Bombay ..	56	192,365	10,171	120	4,615	3,627	64	2,635
D.O.A.L. .. Europe ..	62	393,175	32,637	1,175	844	11,748	677	481
M.M. .. .. Europe ..	25	97,388	693	138	238	499	182	159
Union Castle Line Europe ..	36	216,422	48,518	1,977	191	28,981	971	220
Harrison Line .. Europe ..	19	60,190	9,586	4	23	10,517	..	25
Italian Line .. Europe ..	13	32,040	1,447	38	159	4,020	29	211
Total	275	1,203,540	126,866	3,608	9,130	64,086	2,081	6,245

The total steam tonnage entered in the ports of the Protectorate amounts to 1,581,176 tons, represented by 701 steamers, an increase of 15 vessels and 73,179 tons compared with last year.

The total tonnage of sailing vessels entered in the ports of the Protectorate amounted to 54,464, represented by 3,086 vessels, a decrease of 345 vessels and 198 tons compared with last year.

The port was visited by 4 British men-of-war.

Three new beacons have been erected at the port of Kismayu, and one at Malindi, for the guidance of mariners entering and leaving these ports, and a mooring buoy has been laid in Mombasa harbour.

III.—INDUSTRIES AND MINES.

(A) Industries.

During the year under review the general prosperity of the Protectorate has reached a very high standard. In fact, from reports received from the principal business firms it may be gathered that trade and business has never been so good, and there is no reason to suppose that this state of affairs should not continue.

It is not only in the business concerns in Nairobi that this progress is marked, but also on the numerous European estates, which are now producing considerable quantities for export and local consumption. The substitution of stone offices and shops in Nairobi in place of the old wood and iron buildings is an outstanding feature in the development of the town. There has been a great demand for plots for business purposes and residential sites, and land generally in the township has fetched record prices. The export trade from Nairobi has been very considerable, and the outlook in this connection is particularly bright. There has been a noticeable increase in the number of business firms, and there is scarcely any branch of trade which is not now accounted for.

The motor industry continues to thrive, and the machinery of the town is for the most part driven by electrical power.

The satisfactory state of trade has brought about a rise in wages, and the cost of living has increased considerably.

At Kisumu the British East Africa Corporation are busy replacing their original ginnery by a complete pneumatic system. The new plant when completed will be capable of turning out 12,000 bales, containing 400 lbs. in each, of ginned cotton a year.

Sugar is being produced from sugar-cane at Kibos. It has a fair local consumption.

15½ tons of sim-sim oil was produced in Kisumu during the year. A good amount of lime is produced at the Homa lime-kilns and is used extensively in local building operations.

The Lumbwa Co-operative Society has completed and opened a building for the better conduct of their butter and cheese business.

Dairies have been established near the more important towns, and there would appear to be a good opening in this line of business, as the demand at present considerably exceeds the supply.

The saw-milling industry is doing well owing to the large demand for wood for building purposes.

(B) MINES AND MINERALS.

A considerable amount of prospecting has been done during the year at Mukaa in Machakos district, where an area of metamorphic rocks containing pegmatite veins which carry mica has been opened up by means of open workings. Several tons of mica of good quality have been extracted, but it is not yet certain that the mineral is plentiful enough to pay for the cost of removing the more bulky constituents of the veins.

Graphite deposits have been discovered at Tulimani Hill, Machakos district, and prospected to some extent; the graphite is intimately mixed with a soft schist rock, and analysis shows that the rock sometimes contains as much as 26 per cent. of graphite. The graphite is, however, of an amorphous character, and it is still uncertain if the character of the rock is such that the mineral can be economically extracted therefrom.

Rules have been published which make the Mining Ordinance of 1912 effective, and the Ordinance will formally be brought into operation on May 1st, 1913.

IV.—AGRICULTURE AND STOCK RAISING.

The feature of the year has been the sub-division and sale of portions of many of the larger estates, thus creating a number of smaller farms.

This was in part due to the fact that such crops as coffee, wattle, sisal, etc., can be grown with profit on much smaller areas than those originally granted.

Land has become greatly enhanced in value, and many settlers, being unable to make full use of all their land, have been tempted to part with portions.

These sales offered opportunities to many new settlers to acquire land, and the agricultural population has been, in consequence, practically doubled during the year under review, and the new capital brought into the country has given great impetus to development.

The returns of the earnings of the Uganda Railway for carriage of agricultural produce and the export reports for the twelve months are conclusive proof that remarkable progress has been made; in fact, it has been a record year from an agricultural point of view.

(A) CROPS.

Coffee.—The very rapid rise in the value of land over a large area of the Highlands is greatly due to the success which has attended coffee culture. In 1909–10 the value of exported coffee amounted to Rs.16,012. In each succeeding year the output has doubled, the value of the exports in 1912–13 being Rs.160,199, and with the large area now coming into bearing, it is expected that the exports of this commodity during the current year will more than double that for 1912–13.

The quality grown is increasing in favour in the European markets, and the prices now obtained place British East Africa coffee among the best produced in any part of the world.

The industry, provided an adequate supply of labour is forthcoming, bids fair to become one of the most important branches of farming in the Protectorate.

The observance of the leaf fungus, *Hemeleia vastatrix* in two plantations last October caused a temporary setback to planting.

Sisal.—It is now estimated that there are some 7,000 acres laid out under the crop, and so satisfactory have been the returns from the plantations now being harvested that a large extension of the industry is likely to ensue; in fact, large areas of virgin land are at present being broken up, and in one instance power machinery is being employed so as to bring a large block under cultivation at an early date.

A number of improvements have recently been effected in decorticating machinery, and it is anticipated that the operations of brushing and drying the fibre will shortly be much simplified, and so allow a large decrease in the number of hands employed, and therefore in the cost of labour.

Wattle.—Some 7,000 to 7,500 acres of land have now been planted out with wattle. The extent of the plantations ready for barking does not exceed 200 to 300 acres, but for the next two years the annual output of bark should amount to about 7,500 tons.

The rates for railage to Mombasa have been reduced considerably, but the sea freights are very heavy.

Tobacco.—The experiments in tobacco culture and curing begun in previous year have been continued.

The seasons in the Highlands have not been propitious, and the quality of the leaf produced was not of a high standard. It is proposed to continue the present experimental work in order to find a suitable tobacco for growth in the Highlands.

A small crop was grown on a plantation in the Midlands, with very favourable results. It seems possible that there is a future for the industry in those parts of the country, as yet undeveloped, along the Uganda Railway from Ulu coastwards to Kibwezi.

Maize.—The export of maize during 1912–13 amounted to 115,000 bags (200 lbs. weight per bag), or double that exported in the previous year. The greater portion of this maize was grown by natives in the Nyanza Province. The quality was not of a high standard, and this was largely due to the prices paid to the natives being usually the same for selected and for mixed grain, and in consequence there was little incentive to grade.

In the Solai and Lower Molo districts, where the soil and climatic conditions are considered exceptionally favourable, large areas are being brought under cultivation by settlers.

Wheat.—Riette is still the main variety of wheat grown in this Protectorate for, though weak in the straw, and only fair as regards its milling qualities, it has proved more resistant to rust than any of the other many varieties introduced. It is hoped, however, as a result of the experiments in the crossing and creation of new varieties that a wheat will be found in which the good qualities of the parent plant are blended.

The demand for flour is at present far in excess of the supply of wheat, and with the rapidly increasing population, both in British East Africa and Uganda, there is large scope for the development of this industry.

Cotton.—Excepting on the banks of the Juba and Tana rivers, where irrigation was available, the cotton crops in the coast belt have again proved disappointing owing to unfavourable climatic conditions, and it it now generally conceded that in this part of the Protectorate the culture of cotton, except on land which can be irrigated, is unprofitable, or in any case less profitable than certain other crops. On the other hand, in the Lake district of the Nyanza Province it has been proved that the soil and climatic conditions are very favourable for the growing of this commodity, and the natives in this part are now, in addition to sim-sim and other food products, taking up cotton growing as an accessory branch, and it is anticipated that during the coming year a substantial quantity will be exported by them.

Fruit.—The heavy yields and favourable reports on citrus fruit exported, especially grape fruit and lemons, have attracted the attention of many settlers to this industry, and large orders have been placed in Australia and South Africa for trees for establishment of orchards. The conditions obtaining in the Protectorate are peculiarly favourable for the development of this industry, and a point of great importance is the fact that the main crop can be harvested and exported to the European markets at a season of the year when there is a shortage from other countries producing and exporting citrus fruits.

Other Crops.—In addition to those referred to above, there are many other crops, such as potatoes, beans, etc., grown and produced with profit in the Protectorate.

A large series of experiments has been conducted with different varieties of these, and interesting results have been obtained.

In the Nyanza Province the principal economic crop is sim-sim, which is doing well. The cultivation of maize, mainly hickory-king variety, has been considerably increased. Matama and wimbi practically form the staple food of the people. These grains are very largely grown and are to some extent sold for export. Linseed produced a satisfactory crop during the year. Coffee has been planted on some European plantations, but rubber of the Ceara variety has for the most part been a failure.

In the Naivasha Province extensive and increasing areas have been brought under cultivation. The most fertile of these are farms in the valley under the Laikipia plateau, north, north-east, and north-west of Nakuru. On the Uasin Gishu plateau agriculturists have met with success in maize and linseed. There are some 3,000 acres under cultivation, which will probably be doubled during the coming year. The total area under cultivation by Europeans in the Province is roughly 10,000 to 12,000 acres.

The greater part of the inhabited portion of the Kenya Province is well-watered and fertile, and all native crops do well. A fairly severe scarcity of food occurred in the southern portion of the Meru District during the few months preceding February, owing to the insufficient rainfall of the earlier part of the year.

In the Kikuyu District of the Ukamba Province great strides have been made in cultivation on European estates, and some 20,000 acres are now planted with coffee. Wattle and sisal are coming to the stage of production. Considerable development has taken place on most of the farms in Machakos District and large areas are in process of preparation for coffee and sisal. Native agriculture continues much the same, and in spite of the distribution of a better grain seed the natives do not show much inclination to improve their crops.

The crops in Kitui District have been excellent owing to an abundance of rain.

In Seyidie Province the past year's rains in Mombasa District have been far from good, and there has been no marked increase in cultivation. Coffee introduced from Arabia may be found here and there on Arab plantations along the coast, and the yield appears to be fair. The cause of the poor yield from the coconut trees is said to be not so much the damage done by the coconut beetles as the fact that the grass is never cleared from the roots.

In the Malindi District there was a widespread failure of native grain crops along the coast and, in consequence, food stuffs were very dear.

The drought in the Takaungu District had the effect of driving natives to collect wild rubber and gum-copal, thus causing the output of these commodities to be largely increased.

In the Teita District, maize, beans, millet, sugar cane, potatoes and bananas are grown by the natives.

The greater and lesser rains were so well distributed over the coast area of the Vanga District that two good crops were harvested.

Native agriculture in the Tanaland Province up till the short rains in December, 1912, was practically at a standstill. Since then excellent crops of grain have been grown.

In the Jubaland Province the rains were not good during the year, but there was no shortage of foodstuffs.

(B) LIVE STOCK.

Cattle.—Notwithstanding the continued presence of rinderpest and east coast fever, it is estimated that cattle have largely increased in numbers during the year. The former disease has run its course through many of the native reserves, and the majority of the cattle in these areas are now immune. In other reserves and on settlers' farms rinderpest is now held in check by the use of serum, which is being turned out in large quantities at the Veterinary Laboratory.

As regards east coast fever, the successful results obtained in Natal and other parts of the Union of South Africa by systematic dipping have caused this disease to be viewed as no serious obstacle to successful stock farming, as was the case a few years back. A number of settlers have already constructed dippers, and it is anticipated that before long the regular and systematic dipping of cattle will become general throughout the Protectorate.

Prices at sales have been more than maintained, and this notwithstanding the fact that some thousands of breeding stock have been brought down from Jubaland and the Boran country. In fact, at no period in the history of the Protectorate have the prospects of the cattle industry been so bright as towards the close of the year under review.

A large number of pure-bred bulls and heifers have been imported not only for grading purposes, but for the establishment of pure-bred herds. On the Government farms are now found fair sized herds of Shorthorns, Herefords, Frieslands, Ayrshires, and Red Polls, and these have done so well that the purchase of some of the best bulls was considered justified. The importations this year included the champion Ayrshire bull of Scotland, the champion Shorthorn bull of the Transvaal, as well as others from noted strains at home.

At the annual sale of surplus stock at Naivasha, the average for pure bred bulls on the farm was £60 odd.

Sheep.—In June last the appearance of an obscure disease among young lambs, causing a heavy mortality, had a discouraging effect on the industry, but the set-back was only a temporary one, for, with a good December lambing, and the absence of the above-mentioned disease, hope revived and a rise in prices followed. At the Government sale, held in January, a record average of Rs.93.20 was obtained for 78 merino rams. Towards the close of the year some very valuable consignments of merinos (apart from purchases by Government) were imported by settlers from the famous Bonooke, Zara, and Mount Crawford studs, and also from noted flocks in South Africa.

One of the most encouraging features of the sheep industry is the high prices obtained for wool. At the London Wool Exchange sale held on the 23rd April last, 11*d.* to 11½*d.* per lb. were obtained for greasy merino wool from the Protectorate, prices which compared very favourably with those realized on the same day for wool from Australia, New Zealand, South Africa, and the River Plate. But the striking feature of the sale, from the Protectorate point of view, was the high prices (8½*d.* to 10½*d.* per lb.) realized for wool from the third cross native merino grade sheep.

Pigs.—This industry has not made much headway, although it is considered that the country is adapted for pig breeding. There is a ready market for pure-bred and high-grade pigs at the Uplands bacon factory, but of late there has been some difficulty in procuring the best quality.

Ostriches.—With one or two exceptions this industry is only pursued by farmers with experience of ostriches in South Africa. The prospects are said to be good, but it will be some time before much profit will be made.

(c) EXPERIMENTAL FARMS.

Kabete.—Two hundred and seventy acres have been planted with crops of all kinds and many interesting and valuable experiments have been undertaken. A linseed-retting tank has been constructed and a barn for air-curing tobacco.

There were three Clydesdale mares on the farm at the beginning of the year, one of which has since died from tick fever.

Pigs have done well, and no deaths from disease have occurred.

The total number of stock despatched from the farm amounted to 246. The stock remaining amounts to 493.

The farm has been well patronized by visitors.

Kibos.—The scheme of planting for the year was more elaborate than before and a larger area was put under cultivation with various crops. Successful experiments were made with cotton, chillies, linseed, maize, and sim-sim. Fruit trees of various descriptions have been planted.

Naivasha.—The majority of grade cattle have done very well during the year, particularly the Ayrshires.

Sheep have thrived, and many interesting experiments in cross-breeding have been carried out.

The annual sale of stock from the farm took place in January, and was very well attended.

The following figures and prices show the result of the sale :—

	£	s.	d.		£	s.	d.
Six pure bred Shorthorn bulls from	57	0	0	to	79	0	0
Friesland bulls	47	0	0	,,	57	0	0
Pure-bred Ayrshire	52	0	0	,,	58	0	0
Grade Shorthorn bulls	18	0	0	,,	35	0	0
Young grade bulls (various) ..	10	0	0	,,	24	0	0
Grade Hereford cows	20	0	0	,,	25	6	8
Grade Shorthorn cows	21	0	0	,,	38	0	0
Grade Guernsey cows	28	6	8	,,	34	6	8
Cape Colony cows	17	0	0	,,	31	13	4
Native donkeys, mares supposed to be in foal to the Catalonian jack	5	13	4	,,	8	0	0
Half-bred very young donkey stallions	4	0	0	,,	4	13	4
Pure-bred Angora rams	16	13	4				
Grade Angora rams	0	8	0	,,	2	16	0
Grade Angora ewe goats	0	13	4	,,	1	8	0
Merino culled ewes	1	2	8	,,	1	4	0
Grade ewes (many with lamb at foot)	1	2	8	,,	1	8	0
Merino rams	4	0	0	,,	10	6	8

Mazeras.—The unfavourable weather interfered to a great extent with new experiments. Much good work, however, was done in the propagation and distribution of plants.

(D) DISEASES OF ANIMALS.

East Coast Fever.—The disease is still very prevalent in the Nairobi, Kyambu Districts, and parts of Machakos and Kitui; an outbreak occurred in the Nandi Reserve, and a few cases have been recorded from Lumbwa, N'joro, Uasin Gishu, Ravine, Sotik, and the Kedong Valley.

In November a death from east coast fever occurred in the township of Nakuru, necessitating the placing of Nakuru in quarantine, which prevented the exhibition of cattle at the annual Agricultural Show held in December. This is the second occasion on which quarantine restrictions have unfortunately interfered with the cattle exhibits.

Rinderpest.—It is difficult indeed to estimate, even approximately, the mortality which has taken place during the past year through the ravages of cattle plague, and there are few districts of the Protectorate which have been totally free from its invasion.

The most serious outbreak has been at Nandi and in the Lumbwa District, and the arrival of infected cattle from Uganda at Kisumu made it necessary to forbid the importation of cattle from Uganda unless actively immunized before their exportation.

In the Rift Valley and on the Uasin Gishu Plateau small outbreaks have occurred among the high-grade stock, but happily the free use of anti-rinderpest serum prevented these outbreaks from causing a heavy mortality or assuming alarming proportions.

123,540 doses of anti-rinderpest serum have been produced during the past twelve months. 79,713 doses have been issued, and 4,978 doses distributed to settlers as reserve in case of a sudden outbreak on their farms or for the inoculation of their transport animals while trekking through infected areas.

39,674 doses have been sent to German East Africa, Uganda, and Nyasaland.

Pleuro-pneumonia.—No fresh outbreaks of this disease have been recorded during the past twelve months.

The previously affected herds of the Masai numbering some 12,000 animals, were strictly quarantined by the Masai themselves in an isolated area of Laikipia.

The cattle were periodically inspected by a Veterinary Assistant and Stock Inspectors, and prior to their removal to the Southern Reserve, all cattle showing symptoms were slaughtered and compensation paid.

Quarter Evil.—Cases of blackquarter occurred among the young stock belonging to the Masai in Laikipia, and odd cases have been recorded from several parts of the Protectorate.

No cases of anthrax have come to notice during the year.

Anaplasmosis.—Gall sickness has been slightly more prevalent than last year. On one farm in the Rift Valley six deaths occurred.

The Uasin Gishu farmers have also sustained loss through its prevalence.

Mange.—Several pure-bred bulls imported by Lord Delamere were found on arrival to be badly affected with sarcoptic mange.

The animals were thoroughly disinfected before being allowed to land, and permission for their removal to Soysambu under provisional quarantine was granted.

Under treatment the animals speedily recovered.

Scour among Calves.—Both black and white scour have been the cause of considerable mortality among calves in the highlands of the Protectorate.

In South Africa it has been found that dipping has suppressed the disease, and it is hoped that the same good results will be recorded here on the adoption of general dipping.

Trypanosomiasis of cattle.—With the exception of a few cattle imported from Uganda for experiment, and found to be infected with trypanosomes on their arrival at the laboratory, no case of this disease has come under notice.

Horses.—Horse-sickness has been very prevalent during the past year in Nairobi, Uasin Gishu and N'joro.

In Nairobi 67 were affected, of which 59 died.

At Spring Valley Farm 35 deaths were recorded among horses and mules.

Seven deaths occurred on the Uasin Gishu, and 6 deaths at Nakuru and N'joro.

Ulcerative Lymphangitis.—The great majority of cases of this variety has been reported from the Uasin Gishu plateau. The disease is considered to be of a very contagious nature.

Sheep Scab.—This disease is very widespread, and while the native hairy sheep harbour the parasite with little inconvenience, the results are disastrous among the wool-bearing flocks.

Strongylosis (wire-worm).—Many farmers have sustained severe loss through the ravages of wire-worm and other allied parasites, and the mortality throughout the Protectorate from this disease totals a large figure.

Variola.—This disease has been present in the Rift Valley, but in all cases the disease has exhibited a benign nature.

Foot Rot.—Contagious form of foot rot is most commonly seen in this country, and it has been prevalent on dry and wet pastures.

Swine Fever.—Three outbreaks of this virulent disease occurred during the year, causing a mortality of 100 per cent.

In the Rift Valley outbreak no less than 234 pigs succumbed within a period of two weeks.

Experiments are now being conducted at the laboratory with the object of ascertaining the susceptibility of the wild pig and wart hog to swine fever, but the history of many outbreaks points to the wild animal being the propagator.

The Permit System.—There is no doubt that the permit system has done much to curtail the spread of disease, and has prevented, in great measure, illicit movement of stock, more especially by natives.

Live Stock Importations.—During the past year there were imported through the ports of Mombasa and Kilindini 122 horses, 112 pure-bred cattle, 443 merino sheep, and 5 pure-bred pigs.

From Borana and the Northern Frontier District 135 ponies and 281 mules were imported, and all were submitted to the mallein test at Rumuruti.

8,990 head of cattle were brought through Rumuruti from Borana, Jubaland, and the Northern Frontier District.

(E) Insect Pests and Plant Diseases.

During the year under review there has been no severe outbreak of any insect pest, although several new ones have been met with, and the old ones have been more or less abundant.

White grubs have been reported to be doing more damage than hitherto, and crops on badly cultivated land were most affected.

The wooll apple aphis has been found in new localities. In spite of the inspection of imported trees it has again been brought into this country. Cutworms in nursery beds and among freshly set out plants have been very destructive. This was especially so in tobacco, where the newly planted crop had to be watched carefully and blanks refilled.

Aphides or plant lice on a variety of crops and garden plants have done damage.

Numerous bugs and borers have been found on the coffee plantations. A careful study of these has been made, as the coffee industry is likely to be one of some magnitude.

1,427 consignments of seeds and plants were passed for entry into the Protectorate.

9,866 tons of maize were passed for export, of which 628 tons were passed through the fumigating chambers.

V.—FORESTS.

On the 12th May, 1912, the general rules under the Forest Ordinance, 1911, were published, which provided for the prohibition of acts in forest areas and Crown lands, the issue of licences, for the removal of major and minor forest produce, the residence within, and cultivation of, certain areas, and the grazing of cattle in forest areas. Rates relating to timber and other forest produce were also defined. On the same date rules were also published relating to special timber licences.

Exploitation—Timber.—229,499 cubic feet of timber were sold, and 112,127 cubic feet issued free to Government Departments and settlers.

The quantity sold during the year was 193,137 cub. ft. in excess of that sold in the previous year, or about six times the quantity of last year. According to the statement of free issues of forest produce, the quantity of timber issued free is only slightly in excess of that issued last year.

The enormous increase in the timber sold this year is due to the greater demand for timber and the erection of more saw mills.

All forests are worked on a basis of improvement fellings on a forty years' rotation.

The saw mills in the country are the British East Africa and Premier saw mills, at Nairobi, Limoru steam saw mills between Limoru and Escarpment, three mills at the Equator saw mills, working private forests ; C. B. Clutterbuck's saw mill near Njoro ; Premier saw mills near Lumbwa and Lingham and Grogan saw mills at Eldolat, near Molo. Concessions have been given for other mills, and the erection of machinery has already been started.

The demand has been greater than the supply, and it is very difficult to get seasoned timber, sawmillers' stocks being sold out as soon as sawn.

Poles and Bamboos.—29,085 poles and bamboos were sold, being an increase of 5,000, and 7,690 were issued free to Government Departments, being an increase of about 6,800. The cutting of poles of valuable species is discouraged as far as possible. During the year a few black wattle and eucalyptus poles were obtained from thinnings of plantations.

Brushwood.—5,453 head loads of brushwood were sold, being an increase of about 1,400, and 4,017 head loads were issued free, an increase of about 2,100.

Rubber.—Royalty was paid on 1,192 lbs. of rubber, a decrease of 1,100 lbs., all the rubber being collected from Landolphia vines in the Kenia forests.

Fuel.—5,276 monthly licences for collecting fuel were sold during the year as also 63,151 cub. ft. of fuel, showing an increase over that of last year of 1,548 and 57,005 cub. ft. respectively.

Five hundred and seventeen head loads and 2,550 cub. ft. of fuel were issued free to Government Departments.

Railway Fuel.—1,383,302 cub. ft. of fuel were cut from Government forests during the year.

Nairobi Arboretum.—Planting has been carried out regularly during the planting seasons, and the trees are growing up well. The trees, being planted in groups and singly, give a very good example of the exotic trees which are suitable to the climatic conditions around Nairobi.

Cultural Operations.—The year under report was a fairly favourable one for planting, although the rains started very much earlier than usual. The plantations were chiefly confined to the railway zone, and areas that had been cut down for fuel were planted up. A certain area was planted in the Karura forest in close proximity to Nairobi, where there is danger of the fuel supply getting short in the near future.

Four hundred and fifty-seven acres were planted during the year, the chief species planted being Eucalyptus, Cypresses, Grevillea Robusta, and Muho (*Markhamia hildebrandtii*).

An attempt has been made on the edge of the Kinabop Plateau to assist the natural regeneration of juniper by clearing round young plants.

Nurseries.—Nurseries were kept up at Karura, Dagoreti, Njoro, Londiani, Nyeri and Mombasa. The two first named supply a large quantity for sale to the public, and also as free issues to other Departments. £307 was the revenue in cash derived by the sale of plants, and the value of the free issue of plants was £137.

Surveys and Demarcation.—The boundaries between the Kinabop farms and forest area were demarcated. Line beacons were put in when through open land and a line cleared when through forest. The boundary of the escarpment forests was slightly altered near the African Inland Mission, thus throwing a little more land into Native Reserve.

Eucalyptus were planted along the boundaries in the Kenia Province. Slight alterations were also made in the boundaries of this Province, throwing more land into native reserve, and also opening out a few farms round about Nyeri.

The demarcation of the Arabuko Sekoki was completed during the year, and all lines were properly cut.

The forests on farms 84 and 87 Uasin Gishu were surveyed and demarcated.

An area of about 100 acres was demarcated near Eldoret for a fuel area to supply the township of Eldoret.

Revenue.—The total revenue received in cash is £6,682 10*s*., being £2,930 in excess of the previous year, and about £2,000 in excess of the estimated revenue.

The chief increase has been in the sale of timber, being about seven times as much as last year; this is accounted for by the greater demand for timber and the opening out of more saw mills, and also because an amount of £766 due from previous year's working was paid during the year.

An all round increase has taken place except in that of rents. This is owing to the fact that the working of mangrove areas has been abandoned. It will be some time before the mangrove areas will recoup from the severe fellings that have taken place in the past.

The sale of plants has further increased this year, but the net profit derived is not large.

The estimated revenue derived from forest produce issued free to settlers and Government Departments is £4,345 9*s.* 9*d.*

£900 worth of timber was issued to settlers on free timber permits.

The value of fuel taken by the Uganda Railway was £2,766, or about £80 in excess of the previous year. All costs of supervision, etc., were borne by the Forest Department, but the Railway contributed a sum of £300 towards the cost of replanting those areas cut over for fuel.

The Department also supplied £422 worth of timber free to the Railway, the felling and hauling being done by the Department.

VI.—COMMUNICATIONS.

(A) RAILWAYS.

(1) *Uganda Railway.*—The account of the Uganda Railway against the Parliamentary Grant now stands at £5,511,018, and the total expenditure under the running capital expenditure is £5,925,909. The expenditure during the year shows a total of £194,194, in addition to which a sum of £21,789 was spent towards the completion of the Busoga Railway.

During the year under review the total revenue earned amounted to £489,231 against £360,224 for 1911-12, an increase of 35¾ per cent.

The total expenditure was £280,185 against £228,852 for 1911-12, an increase of 22 per cent. only.

The net profit for the year was £209,046 against £131,372 in 1911-12, an increase of some £77,674 or 59 per cent., which gives a percentage of profit on the capital cost of 3·52 per cent. against 2·4 last year.

The total tonnage hauled rose from 115,767 tons in the previous year to 172,694 tons in that under review.

The total goods receipts were £339,554 as against £238,935 in the previous year, an increase of £100,619.

There was a remarkable increase in both upwards and downwards traffic, the upwards being 46¼ per cent. and downwards 52¾ per cent. more than last year. In four years the goods traffic has more than trebled itself. Increases were noticeable in practically all commodities.

Coaching receipts increased from £67,344 in 1911-12 to £78,887, an increase of £11,543.

The third class concession for men travelling in batches of ten or over is being more appreciated than formerly, the numbers carried being 36,259 against 19,587 in 1911-12.

The total number of passengers carried rose from 442,479 in 1911-12 to 500,304 in the year under review, an increase of 57,825.

The tonnage carried by the steamers rose from 47,483 in 1911-12 to 56,799 in 1912-13, an increase of 9,316 tons.

The following figures taken from the statistics show the result of the past five years in working both railway and steamers :—

—	No. of Passengers.	Tonnage of Goods (exclusive of Railway material and Steamer Service).	Earnings from Coaching Traffic.	Earnings from Goods Traffic.	Earnings from Telegraphs.	Miscellaneous Earnings.	Earnings from Steamer Service.	Total Earnings.	Total Working Expenses.	Earnings per mile of line open (excluding Steamer Service).	Working Expenses per mile of line open (excluding Steamer Service).	Train Miles.	Earnings per train mile (excluding Steamer Service).	Working Expenses per train mile (excluding Steamer Service).	Percentage of Total Expenses to Receipts (inclg. Steamer Service).	Net Earnings (including Steamer Service).	
	No.	Tons.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Miles.	Rs.	Rs.		Rs.	£
1908-09	284,871	57,226	788,215	2,199,106	9,387	31,742	461,463	3,489,914	2,517,338	5,186	3,849	702,856	4.31	3.20	72·13	972,577	64,838
1909-10	293,052	60,213	785,740	2,386,479	9,739	49,452	460,785	3,692,195	2,704,190	5,533	4,115	747,770	4.32	3.21	73·24	988,005	65,867
1910-11	403,224	77,478	887,876	2,924,132	10,726	44,828	634,180	4,501,742	3,023,947	6,611	4,623	967,305	4.00	2.80	67·17	1,477,795	8,519
1911-12	442,479	115,767	1,010,168	3,584,037	14,324	57,875	736,954	5,403,358	3,432,781	7,976	5,223	1,208,065	3.86	2.53	63·53	1,970,577	131,372
1912-13	500,304	172,694	1,183,305	5,093,320	20,327	72,313	969,200	7,338,465	4,202,781	10,869	6,380	1,491,896	4.27	2.51	57·27	3,135,684	209,046

The outstanding feature of the returns has been the heavy increase in traffic during the second half of the year, which increase is still being maintained.

There was a considerable congestion at Kisumu owing to shortage of rolling stock, and at Kilindini owing to the pressing need for improved means for dealing with the ever-increasing traffic. The present lighter wharf is being taxed to its utmost, and it is hoped that the new straddle steam cranes will shortly arrive and somewhat relieve matters.

A very comprehensive scheme for the construction of a deep sea harbour at Kilindini has been prepared and sent home.

There was one serious accident of a runaway train at Kikuyu Station, which resulted in the death of a European guard and one native.

(2) *Thika Tramway.*—The Thika Tramway under construction by the Public Works Department will shortly be opened to public traffic.

(3) *Magadi Railway.*—The Magadi Railway has now reached Lake Magadi, and will probably be opened in the course of the next year.

It is estimated that a traffic of 80,000 tons will be carried during the first year of working.

(4) *Busoga Railway.*—The Busoga Railway is worked by the Uganda Railway Administration on behalf of the Uganda Protectorate.

The total gross revenue amounted to £8,149, the total expenditure being £6,897. The capital account stands at £144,058.

The line was formally opened on January 1st, 1912, but was considered as being under construction to the 1st April, 1912, and open for public traffic on that date.

Unginned cotton was the main feature of the outward traffic, and building materials, piece goods, and machinery of the inward.

Prospects for the future are good, and a large increase in cotton traffic is expected.

The terminus of the railway is at Namasagali, on Lake Kioga.

The year's progress has been very satisfactory from every point of view. Shortage of rolling stock has been a great handicap, but it is hoped that the indents for new locomotives and rolling stock will shortly be completed.

Every endeavour is being made to handle the traffic in the most expeditious manner, and in order to cope with the large development in the export and import trade extra facilities are needed.

(B) ROADS.

The total allowed for new roads and maintenance during the year was £21,375, but was insufficient to maintain the roads or tracks already open in a satisfactory condition.

During the last twelve months the increase in the amount of traffic has been enormous, and in addition the nature of the traffic has changed from slow-moving vehicles with light loads to heavy vehicles carrying heavy loads.

At the commencement of the year the number of motors in Nairobi was comparatively small, whereas at the end of March the number had increased to approximately 100. The increase in the number of motor bicycles has been phenomenal. This class of fast-moving traffic largely decreases the life of the road surface.

The sum allowed for maintenance, £7,500, was exceeded by £256, and that for new road work, although increased by £2,000 towards the close of the year, was expended to within £130. There would not have been even this balance had it not been for the difficulty of obtaining labour.

The principal items of work were as follows :—

(1) *Uasin Gishu Road.*—Work was continued on this road, an amount of £4,851 being expended during the year.

(2) *Mombasa—Malindi Path.*—The work of cutting and forming this path has been continued. Owing to the loose, sandy nature of the soil it is not expected that the path will be satisfactory until metalled for the greater part of the distance, as every time that the grass and scrub are cleared the surface is destroyed. The grass and scrub in this district is of extraordinarily vigorous growth, and to avoid cutting it down after heavy rains experiments were made with a cheap chemical to kill the growth. Nothing, however, that could be obtained at a reasonable rate had the desired effect. With very strong solutions the growth would fade for a few hours, but would recover again as if no attempt had been made to kill it. Very heavy traffic would be the only thing to keep it down.

(3) *Kisumu—Mumias Road.*—The last portion of the formation of this road, between the Uganda Railway and the foot of the Ogada Escarpment, was completed. This road was badly cut up during the last rains, as it carries the heaviest traffic of any outside Nairobi.

(4) *Muhoroni—Tinderet Road (Londiani Allotment).*—A sum of £1,540 was spent in the commencement of an earth track to give access to the farms to the north-east of Muhoroni Station. The length of track opened at the end of the year was twenty miles, and included five bridges and nineteen culverts. Great difficulty was experienced in obtaining labour for this work, and the work was further hampered by sickness of both foreman and natives, the climate being both cold and damp.

(5) *Road to West Kenia Farms.*—Bridges were erected across the Chania and Amboni Rivers to give a possible means of access to these farms, but funds were not available to do much in the way of improvement to the track between the rivers. A total of £420 was spent on this work.

(6) *Kericho—Sotik Road.*—A sum of £410 was spent in bridging and improving grades. The work was let to contract to the settlers in the district, and was completed at a low cost to the satisfaction of all concerned.

(7) *Nzoia Bridge.*—The steel suspension bridge over this river on the road from Mumias to Uganda was completed in March. The bridge has a main span of 100 feet clear and one approach span of 30 feet. The width of the roadway is 12 feet clear, and the bridge was designed to take a steam roller of 10 tons weight. The total cost was £1,772, including approaches.

(c) POST AND TELEGRAPHS.

The Post and Telegraph Services, which are amalgamated with those of the Uganda Protectorate, include 104 Post Offices and Agencies, of which 42 are also Money Order Offices. There are 97 Telegraph Offices, including those combined with Post Offices and those worked by the Uganda and Busoga Railways.

Revenue.—The total Post and Telegraph revenue of the combined Protectorates amounted to £39,047 17*s.* 7*d.*, as compared with £28,535 11*s.* 11*d.* in 1911–12, an increase of £10,512, or nearly 37 per cent. The division of revenue between the two Protectorates gives the following results :—

(A) *Postal Revenue.*

Year	East Africa	Uganda	Total
1911-12 1912-13	£14,408 21,039	£3,998 4,561	£18,406 25,600
Increase of	£6,631 46 per cent.	£563 14 per cent.	£7,194 39 per cent.

(B) *Telegraph and Telephones.*

Year	East Africa		Uganda		Total
	Telegraphs	Telephones	Telegraphs	Telephones	
1911-12 1912-13	£5,677 8,057	£773 1,487	£1,941 2,262	£181 84	£8,572 11,890
Increase of	£2,380 42 per cent.	£714 92 per cent.	£321 17 per cent.	Dec. £97 Dec. 53 per cent	£3,318 39 per cent.

In addition to the Telegraph revenue for East Africa shown above, an amount of £1,557 6*s.* 8*d.* was received from the Uganda Railway for the maintenance of Railway Telegraph Lines.

Expenditure.—The expenditure, including the cost of telegraph and telephone construction and maintenance in both Protectorates, amounted to £42,540 4*s.* 7½*d.* as compared with £41,550 17*s.* 3*d.* for 1911–12, an increase of £989, or not quite 2½ per cent. The estimated division of expenditure gives the following figures :—

Year.	East Africa.	Uganda.	Total.
1911-12 1912-13	£27,637 29,926	£13,914 12,614	£41,551 42,540
Increase of	£2,289 8 per cent.	Decrease. £1,300 9 per cent. decrease.	£989 2½ per cent.

The amounts given in the case of Uganda include £6,821 and £5,108 for the years 1911–12 and 1912–13 respectively for telegraph and telephone construction and engineering services, the cost of which is borne on the Estimates of that Protectorate.

Financial Result.—The financial results of the year's working were very satisfactory. The revenue from all sources shows an increase over the previous year of nearly 37 per cent., whilst the increase in the total expenditure (including the capital cost of new lines) was rather less than 2½ per cent.

Postal Matter.—The number of letters, postcards, newspapers and book packets dealt with in the combined Protectorates during the year is estimated at 4,449,063, as compared with 3,464,586 in 1911–12, an increase of 28 per cent. In East Africa the figures have increased from 2,682,461 to 3,549,830, and in Uganda from 782,125 to 899,233, representing increases of 32 per cent. and 15 per cent. respectively.

Parcel Post.—During the year under review 59,586 parcels were dealt with in the combined Protectorates, as against 47,579 in the preceding year, an increase of 25 per cent. Of this number 39,655 were posted or delivered in East Africa, and 19,931 in Uganda, representing an increase on last year's figures of 41 per cent. for East Africa and 2½ per cent. for Uganda.

The value of parcels imported from countries abroad amounted to £50,984 as compared with £37,772 in 1911–12, an increase of 35 per cent. Of the incoming parcels, 3,143 were insured and valued at £9,703, whilst the outgoing insured parcels numbered 152, of the declared value of £1,219. The greater part of the increased overseas traffic was in respect of parcels imported from the United Kingdom, the numbers of which advanced by 30 per cent. in the case of East Africa and 8 per cent. for Uganda, whilst the number of locally posted parcels dealt with in East Africa was more than double that for 1911–12.

Registered Letters.—The total number of registered postal packets dealt with in the combined Protectorates during the year amounted to 132,944, as compared with 117,479 in 1911–12, an increase of 13 per cent. Of this number 50,112 were posted in East Africa for delivery in the East Africa and Uganda Protectorates and 29,800 for places abroad. In Uganda 17,211 registered articles were posted for delivery in the two Protectorates, and 6,196 for foreign countries.

The number of articles received by the registered post from places abroad increased by 17 per cent., 29,625 letters, etc., being dealt with as compared with 25,170 in the previous year. Of the foregoing, 24,705 were delivered in the East Africa Protectorate and 4,920 in Uganda.

Undelivered Postal Packets.—The total number of articles dealt with in the Returned Letter Office on account of the combined Protectorates was 34,800, as compared with 26,280 in 1911–12, an increase of 32 per cent., the number given being made up of 23,595 letters, 930 postcards, and 10,275 newspapers, circulars, book packets and samples.

The inland correspondence dealt with, that is to say, the mail matter posted in the East Africa and Uganda Protectorates, addressed to places within the Protectorates, and subsequently forwarded to the Returned Letter Office, numbered 21,344 articles, including 12,590 letters, 242 postcards and 8,512 newspapers, being an increase of 42 per cent. on the previous year. Of these articles 13,100 were returned to the senders, and the balance of 8,244 destroyed as neither deliverable to the addressee nor returnable to the sender.

Of the correspondence posted in the East Africa and Uganda Protectorates for delivery abroad, 5,239 articles were sent back by the countries of destination as undeliverable, and of this number 3,249 were returned to the senders, the remaining 1,990, being non-returnable, were subsequently destroyed. During the year, 8,217 of the letters, etc., received from places abroad for delivery were similarly sent back to the countries of origin for return to the senders.

The parcels dealt with in the Returned Letter Office numbered 154, of which 130 were returned to the senders or, in the case of foreign parcels, returned to the countries of origin, and 24 were treated as abandoned.

Cheques, coin, currency notes, money orders, postal orders, etc., to the value of £142 were found in the correspondence dealt with in the Returned Letter Office.

Money Orders.—In East Africa 27,749 orders, amounting to £162,082, were issued, and 11,512, of the value of £85,324, were paid. Of the issues 2,039 orders, amounting to £9,065, represented remittances to the United Kingdom and places served through the intermediary of the London General Post Office. The transactions with India included 15,951 orders, amounting to £80,273, as compared with 13,385 orders and £60,899 in 1911-12.

British Postal Orders.—The total number of British postal orders issued and paid in the combined Protectorates was 22,345, as compared with 16,660 in 1911-12. The value represented by the orders was £13,460, being an increase of £3,284 on last year. The rate of increase in the orders dealt with was 34 per cent. in number, and about 32 per cent. in the value.

Post Office Savings Bank.—The East Africa Protectorate Savings Bank, which was established in April, 1910, has continued to meet with a satisfactory measure of success. A sum of £32,988 was deposited during the year, and £21,141 withdrawn, representing increases of 51 per cent. and 25 per. cent. respectively over the deposits and withdrawals of the previous year. The number of depositors increased from 1,420 to 2,066, and the total amount standing to their credit from £20,814 to £32,975.

Telegraphs.—During the past financial year 199,900 telegrams and cablegrams were dealt with in the combined Protectorates, as compared with 161,732 in 1911-12, an increase of nearly 24 per cent.

Nearly 5,000 "deferred" cablegrams were dealt with—2,160 inward and 2,827 outward—and it is obvious that the system is becoming very popular and tending, to a certain extent, to displace the use of codes.

The telegraph lines in East Africa now extend to 1,059 miles, of which 877 are on iron poles and 182 on wooden poles. The total length of telegraph wire now amounts to 2,300 miles, the capital cost being approximately £102,400.

Telephones.—The telephone exchanges at Nairobi, Mombasa and Kisumu, in East Africa, were extended by the addition of 46 private and 26 official subscribers. The total number of calls registered in the East Africa Protectorate was 389,867, as compared with 262,218 in 1911–12, whilst the revenue derived from the service has increased from £773 to £1,487.

The East Africa telephone system now extends to 633 miles of wire, with 476 telephones installed. Of the latter, 311 are at Nairobi and 73 at Mombasa. The capital cost of the telephone system is approximately £4,800.

Ocean Mail Services.—The ocean mail services with Europe remained practically unchanged during the year. The mail service with India has been considerably improved by the establishment of regular fortnightly sailings of the British India Steam Navigation Company's steamers, under contract with the Indian Government.

Staff.—The staff, excluding Africans and Asiatic postmen, numbered 184. There were, in addition, 8 European Sub-Postmasters (Storekeepers), 10 African clerks, 13 Asiatic postmen, and about 330 Africans employed as postmen, messengers, linesmen and mail runners, making a total staff of approximately 545.

Of the 71 Europeans 24, or approximately one-third, were members of the female staff of accountants, telegraphists and telephone operators.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A) JUDICIAL.

The total number of cases dealt with during the year by the High Court is 1,012, which is a slight decrease from the previous year.

The comparative particulars are as follows :—

	1910–11	1911–12	1912–13
High Court Original Civil Cases filed Mombasa	91	120	86
High Court Original Civil Cases filed Nairobi	25	38	52
High Court Original Civil Cases filed other District Registries	7	5	10
High Court Original Criminal Cases	94	77	105
Magistrates' Cases sent for confirmation	390	487	454
Magistrates' Cases revised by High Court	35	44	28
Appeals, Criminal	69	62	54
Appeals, Civil	78	65	58
Probate and Administration Causes	146	151	136
*Insolvencies	4	14	7
*Trust Estates administered ..	26	22	25
	965	1,087	1,012

It will be seen that there has been a slight reduction in the original civil work, and also in the appellate and revisional work, both civil and criminal, but a considerable increase in the original criminal work.

---

* The scheduled liabilities in the Insolvencies amounted to Rs.99,075, and the total value of the Trust Estates administered to Rs.63,953.

The better trade conditions prevailing are shown by a considerable reduction in insolvencies, as also in the scheduled liabilities, which for the previous year amounted to nearly five lakhs of rupees.

The progressive decrease in the appellate and revisional work of the Court, both civil and criminal, is no doubt to some extent an indication of increasing efficiency in the work of the subordinate courts.

An outstanding feature of the original civil work of the Court is the marked increase in the number of cases filed at Nairobi. The returns for 1911–12 for the first time showed a development in this direction, which has increased further in the year under review, and as far as can be seen from the current year's work is likely to increase further still.

The Town Magistrate's Court at Nairobi has dealt with a large amount of work during the year, the figures as compared with last year being as follows :—

	Civil.	Criminal.	Insolvency.	Probate & Administration.
1911–12 ..	722	1530	4	17
1912–13 ..	1043	1578	3	12

This increase in the civil work, which has also been of a heavier character, is largely due to the growth of the town, and is reflected in the fees taken, which have jumped from Rs.10,000 to Rs. 20,000.

As is usual in this Court, a large proportion of the criminal work arises from petty breaches of Township Regulations.

The headquarters of the Town Magistrate of Nakuru and Kisumu remain at Nakuru, but he pays regular visits to Kisumu, and also holds Court at Londiani and Muhoroni as occasion arises.

The work of the Court as compared with last year is as follows :—

NAKURU.

	Civil.	Criminal.	Insolvency.	Probate & Administration.
1911–12 ..	181	260	—	2
1912–13 ..	257	292	1	8

KISUMU.

	Civil.	Criminal.	Insolvency.	Probate & Administration.
1911–12 ..	198	210	—	—
1912–13 ..	269	140	1	—

This shows a considerable growth of civil work, particularly at Nakuru, which is becoming a more important centre. And as the number of civil cases tried there in 1910–11 was only 91, it will be seen that the work has nearly trebled in three years.

The total revenue from fees in both Courts for the year is Rs.11,400 as compared with Rs.2,500 for the previous year, but in this is included a considerable sum for probate duty.

The work of the Town Magistrate's Court at Mombasa as compared with last year is as follows :—

	Civil.	Criminal.	Court Fees.
1911–12 ..	823	643	Rs.10,400
1912–13 ..	700	706	8,300

This Court does not deal with insolvencies or probate and administration causes, which are all dealt with by the High Court.

The decrease in the civil work is partly due to the better conditions of trade existing and partly to a diminution in the numerous small land disputes which used to occupy a great portion of the time of the Court.

The establishment of a Town Magistrate's Court at Lamu has, as was anticipated, proved exceedingly useful. The work for the year is as follows:—

Civil.	Criminal.	Insolvencies.	Probate & Administration.
145	228	—	158

the Court fees taken being Rs.6,600. One of the principal functions of this Court is the administration of native estates which, previously, owing to a lack of proper supervision had been the cause of endless trouble.

A Town Magistrate's Court was opened at Eldoret towards the close of the year for the benefit of the increasing white population on the Uasin Gishu plateau, but the Court has been open too short a period for the returns to be of any value.

Out of 637 sentences passed by subordinate courts 85½ per cent. were upheld and unaltered by the High Court, and in 2 per cent. only were acquittals ordered; in the remaining 12½ per cent. sentences were reduced or re-trials ordered.

The total number of civil cases tried, 4,502, shows a reduction of 620 cases over last year. This reduction falls almost entirely under the head of "Cases under Rs.100," and is mostly accounted for by the fact that during the previous year claims for native hut and poll tax were returned as "Civil," whereas under the existing system of collection, entailing punishment for non-payment they are returned under the heading "Criminal."

The civil work otherwise shows little variation from that of the previous year.

The number of persons brought before the magistrates shows a considerable increase over the previous year, being 11,915 as compared with 10,528. This, at first sight, would appear to indicate a considerable increase of crime, but in fact it is not so, the explanation being that a very large number of natives were dealt with for non-payment of hut or poll tax, which, as mentioned above, falls within the criminal returns. To this must be added the large numbers proceeded against under the Master and Servants Ordinance and for petty breaches of Township Regulations, which shows a progressive increase as towns grow and Township Regulations are applied where they had not been applied before.

There has, in fact, been a diminution of serious crime in the country, and that although there is an increasing area brought under administration yearly.

Convictions for stock thefts remain at practically the same figure as last year, and are less than they were two years ago.

Other offences against property are 100 less than last year, and the lowest on record for four years.

Convictions for homicide by the High Court remain about the same as last year.

There were 44 death sentences passed, of which 31 were commuted by the Governor.

Other offences against the person for which magistrates convicted remain at about the average of the last four years.

The convictions for "Other Offences" show the large increase of 2,000, but this does not include any serious crime, and is swollen by the inclusion of proceedings for non-payment of hut and poll tax. Of all the cases brought to trial before magistrates and the High Court there were acquittals or discharges in 2,889 cases, or rather less than 25 per cent.

The comparative figures of persons convicted for the last five years are appended :—

	1908–09.	1909–10.	1910–11.	1911–12.	1912–13.
Europeans ..	64	76	77	83	151
Asiatics ..	513	463	328	454	501
Natives ..	5,538	6,839	6,698	6,547	8,418

This return shows an increase under each heading, particularly under the heading of Europeans, though the great majority of such convictions are for minor offences disposed of by magistrates. The increase of convictions of Asiatics is small.

There have been two special sessions of the Court of Appeal held at Entebbe in addition to the ordinary sessions held at Mombasa.

The total judicial revenue for the year from all sources is Rs.165,402 or an advance of Rs.14,000 over last year.

Legal practitioners' fees amounted to Rs.1,565, there being 27 practising advocates on the roll.

(B) LEGAL.

The following are the principal Ordinances passed during the year :—

The East Africa Police (Amendment) Ordinance, 1912.
The Public Works Loan Ordinance, 1912.
The Customs Tariff Amendment (No. 2) Ordinance, 1912.
The Vaccination Ordinance, 1912.
The Interpretation and General Clauses Ordinance, 1912.
The Wattle Bark Industry Ordinance, 1912.
The King's African Rifles Ordinance, 1912.
The East Africa Weights and Measures Ordinance, 1912.
The Registration of Trade Marks Ordinance, 1912.
The Stage Plays and Cinematograph Exhibitions Ordinance, 1912.
The Non-Native Poll Tax Ordinance, 1912.
The Official Secrets Ordinance, 1912.
The Public Holidays Ordinance, 1912.
The Native Authority Ordinance, 1912.
The Law Officers Ordinance, 1912.
The Sales by Auction Ordinance, 1912.
The Fugitive Criminals Surrender Amendment Ordinance, 1912.
The Quarantine Ordinance, 1912.
The Commissions of Enquiry Ordinance, 1912.
The Wayleaves Ordinance, 1912.

Registration of Documents.—There has been a large increase in the work of this Department during the year, particularly at the Nairobi Registry, owing to the numerous transactions in land.

In the coast area business in land has been comparatively quiet and will continue so until the certificates of title have been finally adjusted.

A new Registration Ordinance is awaiting the introduction of the new Crown Lands Ordinance.

The total revenue from all sources amounted to Rs.87,039, obtained in 3,664 transactions. This is an increase of Rs.27,351 over the previous year.

Administration of Estates.—During the year 116 fresh causes have been opened. Of these four are treated as "Miscellaneous Causes," in which estates not exceeding Rs.100 in value are dealt with. These number 377 as compared with 376 in 1911–12.

The causes opened are divided as follows :—

European	15
Asiatic	20
Cape Boy	1
Native	76

The percentage of native estates dealt with compares favourably with the number in past years. Rs.85,257 have been received and allocated to various estates, and Rs.62,938 have been paid out.

Sixty-four lots of immovable property have been sold, realizing Rs.21,211, and include property situated in the provinces of Seyidie and Nyanza. Considerable litigation has resulted over immovable property in the Seyidie Province, owing to the insecurity of title now existing.

Only one minor's trust cause has been opened.

The revenue collected amounted to Rs.6,335 ; this is a slight decrease on the amount received in 1911–12, and is due to the low values of the estates dealt with.

Bankruptcy.—The revenue for the year amounted to Rs.1,922, as compared with Rs.1,021 in 1911–12.

Six fresh causes were opened, all being Asiatic. The total liabilities in these causes amounted to Rs.84,155, with assets amounting approximately to Rs.5,454.

Seventeen causes were dealt with and eight finally wound up.

Patents.—Eight new inventions were registered during the year.

The total fees amounted to Rs.253.

Trade Marks.—Twelve trade marks were registered under the old system, by which only such trade marks as had been registered in the United Kingdom were recorded, and 12 under the new Trade Marks Ordinance of 1912.

The total fees collected amounted to Rs.149.

Joint Stock Companies.—Twenty-three companies, with a total capital of Rs.7,214,250, i.e. £480,950, were registered during the year. This brings the number of companies on the register up to 66.

The revenue for registration fees amounted to Rs.5,613, and that from filing fees on returns, sale of forms, etc., to Rs.863, making a total of Rs.6,477.

(c) POLICE.

The authorized establishment of Police on the 31st December, 1912, was 1,675 of all ranks. The actual strength was 1,623, of which 1,573 were Asiatics and Africans.

623 recruits were enlisted during the year, as compared with 543 in 1911 and 336 in 1910. 231 were under training on December 31st,

1911; the total number dealt with, therefore, during the year was 854. The majority of recruits were drawn from the Nilotic, Kavirondo, and Akamba tribes.

The training depôt has turned out to be a most useful institution. 504 recruits were passed out as well-trained constables, and a number of non-commissioned officers went through short courses of instruction. Special attention has been paid to the formation of character, and to inculcate habits of cleanliness and smartness. Physical drill has formed a special feature of the training.

Discipline throughout the force was well maintained. The total number of punishments awarded departmentally and judicially, rose from 1,014 in 1911 to 1,072 in 1912; this is a normal fluctuation, owing to the increase in the strength of the force.

The total number of casualities amounted to 415, as against 495 in 1911–12. Of these 10 died, 9 deserted, 53 were pronounced medically unfit, 75 were dismissed, 80 were discharged as unlikely to become efficient, and 186 became time-expired. It is encouraging to note the decrease in the number of men who took their discharge, and also in the number dismissed.

There was a distinct all-round improvement in the health of the Asiatic and African members of the force. The health of the recruits, however, at the depôt was not very good, and bronchitis, ulcers, sores, and dysentery were prevalent at various times.

The total number of cases investigated by the Police was 4,614, as against 4,496 in 1911; of this number 437 occurred in the additional districts from which statistics were available. 6,191 persons were arrested or summoned by the Police, of whom 4,724 were convicted. It is very encouraging to note the decrease in the more serious cases of crime. The most striking decrease was in the number of true cases of house-breaking (234 against 395 in 1911), and there was also an appreciable decrease in both cattle (52 against 87) and ordinary thefts (1,031 against 1,130).

Property to the value of Rs.73,545 was reported to the Police as lost, and Rs.28,100 was recovered.

At the beginning of 1912 there were on record 2580 finger impression slips, and during the year under review 1,587 were added, making a total of 4,167. 677 slips were received for search prior to trial, and of these 118 were traced, the previous convictions being proved.

The estimated cost of the Police advanced from £43,542 in 1911–12 to £47,431 in 1912–13. The increased cost was almost entirely due to the additions to the Asiatic and African establishments.

The actual expenditure was £43,643; the saving of £3,788 resulted mainly from the shortage in the European, Asiatic, and African Police.

(D) PRISONS.

A total number of 7,899 prisoners was admitted to the various prisons, as compared with 8,284 during the previous year.

Of these 7,899 prisoners, 1,886 were long term prisoners, 2,952 short term prisoners, 3,021 were committed for safe custody while awaiting trial, etc., and 40 were debtors.

Included in the total were 108 women and 76 juveniles.

The average prison population throughout the year was 1,508, as compared with 1,345 in 1911–12, but notwithstanding this increase, which can be accounted for by the accumulation of long term convicts, the figures cannot be regarded as other than satisfactory, as the total admissions to prison were nearly 400 less than in the previous year, or, if criminal prisoners only are to be taken into consideration, a decrease of 629 in their number is shown.

Twenty-six boys were received into the Reformatory during the year. 12 were discharged, leaving a population of 47 boys in that institution at the end of the year, the management of which continued satisfactory.

The total expenditure of the Department during the year, exclusive of buildings or medical attendance, was £14,324, as against £13,121 in 1911–12, the cost per prisoner on the average population being £9 10*s*. and £9 15*s*. respectively.

The conduct of the staff has been generally good, and so also has that of the prisoners.

The industrial sections of the first-class prisons at Nairobi and Mombasa continued to do much good work, employment being limited only to what is likely to prove beneficial to the workers in earning an honest livelihood on discharge. Technical instruction is now confined to carpentry, masonry, and tailoring, while the labour of those devoid of the aptitude for higher grade work has been lent to the Public Works Department, Sanitary, Uganda Railway, and other public Departments, thus materially reducing the Protectorate wages bill for unskilled labour.

In Provincial and District Prisons the prisoners have been employed, as in former years, in bush clearing, road making, tree planting, the cultivation of prison farms, and generally in keeping the station and its environments clean.

VIII.—CLIMATE AND HEALTH.

(A) PUBLIC HEALTH.

1. *The Coast Zone.*

General Diseases.—The general effect of this year has been to show an improvement over the conditions of the previous year, in some measure attributable to the partial failure of the heavy rains in the greater portion of the year, followed by a diminution of such diseases as bronchitis, malaria, and diarrhoea. As usual, diseases of the digestive system and local injuries rank high as causes for appearing on the sick list. Eye affections also predominate, more especially in the more sandy and less humid regions of Tanaland and Jubaland. In the town of Lamu an interesting condition of retinitis has been observed, due to the effects of sun glare; shading the eyes for a few days effects a cure.

Communicable Diseases.—The number of cases of malaria treated during the year was less than in 1911, the greater number of the cases being of a mild type. Special mosquito rules under the Township Ordinance were made applicable to Mombasa in July. The greatest prevalence commences just after the onset of the rains, and continues for some time after their cessation. The months chiefly responsible in this respect are November and December, and March to June inclusive. Lamu and Kismayu are the towns with the least incidence of malaria; at the former the anopheles is not very much in evidence, while in the latter its presence has, so far, not yet been recorded. Manifestations of malaria in the latter town are due to exposure on the banks of the Juba.

It is gratifying to record a very great diminution in the number of admissions for dysentery, and that the action towards controlling it has borne fruit.

Only three cases of enteric fever amongst Europeans were reported, all of which proved fatal.

During the year the town of Mombasa was visited by a severe epidemic of small-pox, which came to light in the month of July. The island was declared infected, and the new Compulsory Vaccination Ordinance applied. In all, 295 cases were reported, with 63 deaths. It seems likely that the infection was imported from Arabia.

Helminthic diseases are more common than elsewhere at the coast. Mombasa affords a good opportunity for the study of ankylostomiasis, in spite of the fact that only 11 cases were recorded during the year. Many of the cattle in the Lamu district are infected with tænia, and the parasite is fairly common amongst the natives. Ascarides and Bilharzia are met with from time to time.

Beri-beri.—One case appeared in the prison at Mombasa, but its origin could not be traced.

Early in the month of February a very serious mortality from this cause occurred amongst the Nubian troops stationed at the military outpost at Serenli on the River Juba.

Bilharzia is confined to certain districts on the coast. Dracontiasis is unknown so far.

The general health of the officials at the coast was an improvement on previous years. It is worthy of note that with the prevalence of smallpox and plague during the year no official nor member of his family was attacked by either disease.

General European Population.

Very little accurate information can be given under this head, as (with the exception of those residing in the island of Mombasa) the planters are scattered, and mostly not in touch with any medical practitioner. It may, however, be said that, on the whole, their general health has been good. Malaria, as might be supposed, is accountable for a large amount of sickness. Out of an average of 52 officials resident in Mombasa there were 37 cases of malaria, or 71·15 per cent., and out of an average number of 120 resident of the general population, 106 contracted malaria, or 88·33 per cent.

2.—*The Mountainous Area.*

This comprises the two Provinces of Ukamba and Naivasha, including the Uasin Gishu Plateau, with an altitude varying up to 9,000 feet. The greater part of these areas is generally regarded as being specially adapted for settlement by Europeans. The capital of the Protectorate, Nairobi, and the township of Nakuru are situated in this area.

General Diseases.—Digestive and respiratory troubles, particularly pneumonia, and local injuries were as prominent as in other parts of the

Protectorate. Of minor ailments, influenza at Nakuru, and tonsilitis, generally ascribed to dust infections during the dry seasons of the year, were prevalent, as well as veldt sores and jiggers.

Communicable Diseases—Malaria.—This prevailed to a greater degree than last year throughout the Provinces, Nakuru showing the least incidence, as the anopheles mosquito is rarely found there. The bulk of the cases appeared during the second and third quarters of the year.

Epidemic Diseases—Plague.—After the lapse of a year, plague again made its appearance in the Indian Bazaar, Nairobi, on the 5th of September. There were nine cases in all. In October a fatal case occurred at Kyambu, and seven cases at Machakos, with six deaths. In 1911 there were a total of 39 cases, 22 of which were fatal, giving a death ratio of 56·41 per cent. of cases admitted. In 1912 there was a total of 17 admissions and 11 deaths—a mortality rate of 64·71 per cent. of admissions.

Dysentery accounted for 612 cases coming under treatment as indoor and outdoor patients, and of these 52 died. Fifteen Europeans are included in the total number of cases treated, but no deaths were recorded.

Enteric.—The total number of admissions was 23, with two fatalities, giving a death rate of 8·69 per cent. of admissions.

European Officials.

Malaria, as usual, is responsible for the largest number of admissions, enteric and tonsilitis being fairly frequent. There was an increase in the number of admissions compared with last year.

General European Population.

The general white population suffered equally with the rest of the country in an increased number of cases of malaria, dysentery, typhoid and pneumonia.

The death rate per 1,000 for Nairobi was 15·8, as against 21·0 for the preceding twelve months.

3.—*The Kenia and Nyanza Provinces.*

General Diseases.—On the whole a better standard of health was maintained during the year, and, beyond the usual amount of respiratory and digestive diseases and local injuries, there is no particular incidence of disease to record.

Communicable Diseases.—Malaria.—3,134 cases came under treatment as indoor and outdoor cases. The disease showed a notable increase during the rainy months, though the incidence varied slightly at the different stations: at Kisumu in the first six months; at Mumias in the second and third quarters; on the Nandi Plateau in the third quarter; and at Fort Hall and Meru in the second quarter of the year.

Filariasis and Leprosy.—Both these diseases are recorded as fairly common. Cases of elephantiasis abound more particularly on the Yala River in the northern portion of the Kavirondo Province, affecting a certain section of the Nandi tribe.

Plague.—At Kisumu 79 cases occurred between March and the end of the year, as contrasted with 64 in 1911. The death rate was 89·87 per cent. in 1912 and 76·87 per cent. in 1911.

Tick Fever.—Further cases of illness caused by the *Spirochoeta* *duttoni* were observed in the Fort Hall District, though, so far, none have been recorded amongst the Kavirondo.

European Officials.

On the whole there has been an improvement in the health of the European officials, particularly those resident in out-stations.

4.—*The Desert Zone.*

General Diseases.—Pneumonia is surprisingly common in the hot arid wastes of Jubaland; eye affections and local injuries are not infrequent.

Communicable Diseases.—*Malaria.*—The Gosha District (on the banks of the River Juba) is heavily infected. Observations show that such cases as occur in Kismayu are imported ones.

Smallpox.—This was imported from Mombasa into Jubaland by sea, on three occasions. Only one contact case resulted, though the disease was reported to have also appeared around the Deshek Wama. Two of the four cases were fatal.

Dysentery—like malaria—is prevalent on the banks of the river.

Beri-beri.—Early in the year a disastrous outbreak occurred amongst the troops stationed at the military outpost, Serenli, some 400 miles up the river. Out of a total number of 289 troops, women, and followers, stationed at Serenli, 112 were attacked and 44 died, an admission rate of 38·75 per cent. of strength, and a death rate of 39·28 per cent. of admissions.

European Officials.

General Remarks.—The health of officials in these desert zones was, on the whole, remarkably good.

Comparative table showing the average daily number of officials on the sick list:—

	1911.	1912.
The Coast Zone	1·9	2·09
The Mountainous Area	3·12	5·61
The Nyanza and Kenya Provinces..	2·35	1·60

(B) SANITATION.

Legislation governing all sanitary action in the Protectorate consists of the following:—

(1) "The Infectious Diseases Ordinance of 1903," an Ordinance to prevent the introduction of infectious or epidemic disease.

(2) "Plague and Cholera Ordinance of 1907," governing overseas introduction of these diseases.

(3) Rules to prevent sleeping sickness under the Infectious Diseases Ordinance, etc.

In addition to these there are various Rules published under these Ordinances, and others under the Township Ordinance.

During the year the following were added to the Statute List:—

(4) The Vaccination Ordinance, 1912.

(5) Additional (Mosquito) Rules under the Township and Infectious Diseases Ordinances made applicable to Mombasa as well as Nairobi.

(6) The Quarantine Ordinance, 1912, an Ordinance to prevent the introduction of diseases into the East Africa Protectorate.

1.—*Preventive Measures.*

Malaria.—The collection of bottle refuse, oiling of pools and marshes too large for drainage, and the cutting of channels to remove stagnant water was carried out.

Free distribution of quinine was instituted at Mombasa and, in continuation of last year's system, at Kisumu and Fort Hall.

Trypanosomiasis.—Sleeping sickness is entirely confined to the shores of, and islands in, the Victoria Nyanza, and it is fairly evident that its dangers diminish yearly in importance. Each year shows an increase in the hut-tax returns from the infected districts, thereby indicating that the re-population of the decimated districts is proceeding slowly but surely. With the extinction of the Sleeping Sickness Camp the main control has been the inspection of the labour passing through Kisumu.

Epidemic Diseases.—The Protectorate suffered from two visitations during the year—smallpox and plague. The former occasioned a serious outbreak in Mombasa, two small epidemics in the Fort Hall district, and isolated cases in other parts of the country.

Plague.—The immunity of Mombasa to plague was broken into with the appearance of the pneumonic form in the latter part of the year. Nairobi and Kisumu were also affected.

The preventive measures adopted were: isolation of sick and as many contacts as could be seized; the disinfection of the houses and effects in Kisumu and Mombasa by the closing of the house and the burning of sulphur and spraying of floors and wells with a disinfecting fluid; in Nairobi, by means of a portable Clayton. In addition, at Nairobi, a portion of the goods shed was converted into a disinfecting chamber, and infected grain bags and goods, Claytonized by means of the largest size Clayton, fitted on two trucks. At Kisumu, these goods, and all native passengers' effects, were disinfected by a smaller sized Clayton, fitted on a truck in the railway yard. Passengers leaving Kilindini and Kisumu by the railway or steamers were inspected; at the latter place over 10,000 were so dealt with.

The trapping of rats was persisted in; and the following table records the number of rats caught:—

Mombasa	1,724
Nairobi	870
Kisumu	9,636
	12,230

In Mombasa no infected rats were found, even though it was discovered that there had been a rat mortality in certain quarters. In Nairobi 97 rats showed infection. It is significant that 45 per cent. of the female rats caught in Kisumu were pregnant. Infected rats were found there on 11 occasions.

Haffkine's prophylactic was undoubtedly the most valuable means for preventing plague. The numbers inoculated were:—

Mombasa	89
Nairobi	1,400
Kisumu	6,770

No case of plague occurred in those inoculated with Haffkine's prophylactic.

Small-pox.—This broke out in Mombasa in March. It was not controlled until some 34,000 people had been vaccinated.

The following table shows the number of cases of small-pox for the last three years, and the number of vaccinations performed.

——	1912.	1911.	1910.
Cases of small-pox	323	159	21
Vaccinations	79,252	15,167	14,353

The total quantities of lymph issued during 1912 were sufficient for 140.000 persons.

The lymph used was entirely manufactured at the Bacteriological Laboratory. Where results could be inspected, it is estimated that from 80 per cent. to 90 per cent. were successful.

Cholera.—Though the island of Zanzibar was visited by a severe outbreak of cholera, which commenced in July, it is satisfactory to record that there was no suspicion of a case having reached the mainland or island of Mombasa.

Enteric.—The most important point brought out by the experience of the year's work in typhoid has been to prove—what for long has been surmised—the rôle played by the native as a typhoid "carrier." A leaflet drawing attention to the causes and prevention of typhoid was circulated during the year.

Helminthic Diseases.—Beyond individual efforts in out-patient cases, no general measures were promulgated.

2. *General Measures.*

Sewage Disposal.—The single bucket system is in vogue in the towns of Nairobi, Mombasa, and Kisumu, and is generally used in the European, Goanese, and Asiatic quarters, and in the public latrines. In Mombasa the bucket contents are collected in night soil trollies and are tipped into the sea. In Nairobi they are buried in trenches.

Disposal of Refuse. The scavenging of the streets is performed in a somewhat perfunctory manner. Municipal dustbins are provided free at certain street corners and localities, and are obligatory in compounds. Their contents are removed by carts and burnt in pits set aside for the purpose.

Water Supply.—Mombasa's new water service not yet being within range of completion, the town is still dependent on tanks and polluted wells. The chemical analysis of the Mombasa and the Nairobi pipe supply has been satisfactory throughout the year. There are two mains into Nairobi from the resorvoir at Kikuyu, some sixteen miles away. These deliver, respectively, in the twenty-four hours, 705,000 and 136,000 gallons. The four reception tanks in the township have a total capacity of 62,000 gallons ; the overflow from these at mid-day is calculated at 36,000 gallons.

Drainage.—In Nairobi, lack of proper drains is conspicuous in all new streets where extensive building operations are vigorously proceeding. Such drains as exist are kept indifferently clean by the conservancy gangs. In Nairobi the labour was supplemented by the use of a convict gang. Their operations covered the filling in of 96 borrow pits, 21 excavations, the draining of 60 pools, 6 marshes, the weekly oiling of 50 collections of stagnant water, and the cleaning of 56,000 lineal yards of drains. The railway authorities also did a large amount of useful cleaning in their various quarters.

Bush Clearing.—A sum of £500 was spent by the Railway, and £300 by the Public Works Department during the year.

(c) GOVERNMENT INSTITUTIONS.

Hospitals and Dispensaries.

Table showing admissions, and death rate of patients in the European Hospitals at Nairobi and Mombasa :—

——	1911.	1912.
Total number of admissions	230	276
" " " deaths	14	11
Percentage of deaths to admissions	6·09	3·99
Average number of beds daily occupied ..	8	11·5
Number remaining on 31st December, 1912..	11	14

The principal diseases treated in hospital were :—

Malaria 92 cases, or 33·33 per cent. of admissions, with in only one case a fatal termination. The tertian, sub-tertian and aestivo autumnal varieties of the parasite were the prevalent causal agents of the disease. The main incidence of malaria occurred in the second quarters of the year and in July.

Enteric.—This caused 23 admissions, or 8·33 per cent. of the admissions, with four deaths. The cases varied in severity, from those of a few days' duration which, without the agglutination test, might easily have been overlooked, to cases showing the usual symptoms and complications of a severe infection. The incidence of this disease is fairly evenly distributed throughout the year.

The greatest number of cases come, as might be expected, from Nairobi, with its large European population.

Diseases of Respiratory System.—13 cases, an increase of 3 cases compared with 10 for last year.

Dysentery.—10 cases. In this country this disease invariably depends on the amœba. Treatment by emetine, hypodermically, gave good results, though at the site of the injections considerable redness, irritation and swelling were noticed.

Operations.—6 major and 14 minor operations were performed during the year. The principal operations performed were for liver abscess, peritoneal cyst, hœmorrhoids, separation of gastric adhesions, intestinal obstructions, and appendicitis.

Bacteriological Laboratory.—The Bacteriologist performed 2,287 routine examinations in all. These included :—

Blood	1,505
Widal reaction, negative	152
Widal reaction, positive	32
Plague.	
Human, positive	22
Human, negative	27
Rats, positive	100
Rats, decomposed	103
Rats, negative	771
Urines	116
Cattle	791

The output of glycerinated vaccine lymph for the year was 140,770 doses, and dried vaccine for 400 persons.

The standard of successful results obtained was as high and as satisfactory as in previous years.

Lunatic Asylum.—There was a total of 32 males and 4 females admitted during the year, making, with 36 remaining from last year, a total of 72 under treatment, as compared with 60 for 1911. During the year there was a mortality of 22, giving the very high death rate of 30·55 per cent., as contrasted with 18·33 per cent. for 1911. Fully half of these deaths occurred in the first quarter of the year, and was due to an outbreak of dysentery due to polluted water. Cases are sent in from all over the Protectorate, and are generally of a very violent nature. Patients, when fit, are occupied in the growing of maize and beans for their own food, and in the upkeep of the grounds. During the year a new wing was added to take in the females, and a European Matron appointed. One padded cell is reserved for Europeans, but there are no wards for milder or convalescing cases. The water supply is from rain-water tanks. Proper drainage and electric lighting have yet to be installed.

The Gaols.—The two chief gaols are at Nairobi and Mombasa, with 634 prisoners remaining from the past year, and with 1,700 admitted during 1912; there were in all 2,334 incarcerations. The sickness ratio was 37·79 per cent., and the death rate 1·67 per cent.

Civil (Native) Hospitals.—Mombasa and Kisumu both possess stone buildings of good design and construction. The Civil Hospital at Nairobi has been condemned since 1904, and is most unsuitable. Most of the other stations in the Protectorate are provided with small dispensaries, and usually a six-bedded ward, under the charge of a member of the subordinate medical staff.

IX.—NATIVE ADMINISTRATION.

(A) HIGHLANDS AND NYANZA BASIN PROVINCES.

(i) *Nyanza Province.*

The Nyanza Province consists of the Kisumu, North and South Kavirondo, Nandi, and Lumbwa Districts.

The revised estimated native population based on the count of huts is 1,085,000. The total non-native population of the Province is 2,008, including 350 Europeans.

The number of huts assessed came to 313,761, as compared with 288,563 for 1911–12.

Revenue.—The total revenue collected during the year amounted to Rs.1,081,700, or £72,113, of which the following amounts represent hut tax:—

	1912–13. Rs.	1911–12. Rs.
Kisumu	265,680	248,109
North Kavirondo	355,917	305,679
Nandi	33,501	31,482
Lumbwa	55,953	49,788
South Kavirondo	238,224	230,079
Total	Rs. 949,275	Rs. 865,137

The increase of Rs.84,069 over the amount of hut-tax collected in 1911–12 is very satisfactory.

The sum of Rs.19,690 was collected under the Non-Native Poll Tax Ordinance, which came into force in January, 1913.

Native Affairs.—In the Kavirondo districts the general condition under this head has been satisfactory, and the majority of the native authorities have increased their authority and control.

The natives generally are increasing in prosperity. Their demand for clothing and luxuries is greatly on the increase, and the result has been a very large influx of imported goods. They appreciate the improved means of communication and the increased facilities for trade.

The relations between the local and German authorities continue to be most satisfactory.

Trade.—Trade in the province has been very satisfactory during the year, and the number of imported goods has shown a marked increase. There has been a great demand for clothes and various articles of luxury.

The National Bank of India have completed their bank building at Kisumu during the year.

An hotel is in course of construction.

Seventeen thousand seven hundred and ninty-nine tons of produce were railed from the province, being an increase of 1,000 tons over the previous year.

Labour.—The present supply of labour from the province shows a satisfactory annual rate of increase, but owing to the increased demand for labour within the province during the year the supply for outside purposes has not in all cases been adequate.

(ii.) *Naivasha Province.*

The Naivasha Province is divided into the following districts:—

Naivasha (with sub-district Nakuru).

Masai Reserve, Ravine (with sub-district Maraquet) Uasin Gishu, Baringo and Turkana.

The European population is 1,758, and the native population approximately 114,373.

Revenue.—The total revenue amounted to Rs.155,836. The amount of hut-tax collected was Rs.67,618 as compared with Rs.65,397 in 1911–12.

Trade.—The greater part of the live-stock trade of the province is done by Somalis. Large mobs of cattle have been brought down from Jubaland and Boran and either sold by auction or exchanged with the natives for sheep.

Native Affairs—Masai Reserve.—The chief work of the year has been the movement of sections of the Masai tribe with their stock from Laikipia to the Southern, and now the only, Masai Reserve. The move actually commenced at the beginning of June, 1912, and is practically completed.

The numbers who have crossed over are :—

Persons.—	Warriors	462
	Other Males	1,820
	Women	4,031
	Children	3,759
	Total,	10,072
Stock. —	Cattle	199,264
	Sheep	1,000,000 to 1,500,000
	Donkeys	6,000

Having regard to the difficulties inseparable from the movement of such large bodies of animals and the inevitable occurrence of disease, the move has been accomplished with celerity and efficiency.

At the present time the administration of the Reserve is controlled by an officer-in-charge, who has his headquarters on the Amala River.

A military patrol was sent into the Turkana country to inflict a collective fine on a certain section of the tribe who were responsible for the murder of some Masai and Suk. Recent reports show that the patrol has had an excellent effect.

Reported thefts of stock from settlers in the Nakuru District and the fact that stolen animals were traced into the Kamasia District occasioned the despatch of another military patrol, when a fine under the Collective Punishments Ordinance was exacted.

The sub-district of Maraquet, which came under administrative control early in the year, has progressed satisfactorily.

Labour.—The settlers in the province have experienced some difficulty in obtaining an adequate labour supply.

(iii) *Kenya Province.*

The province comprises four districts, viz. : Nyeri, Fort Hall, Embu and Meru.

The European population is 143, and the native population about 800,000.

Revenue.—The total revenue amounted to Rs.757,440. The amount of hut-tax collected was Rs.733,654 as compared with Rs.699,660 in 1911–12.

Trade.—A large trade in maize has taken place from Nyeri and Fort Hall with Nairobi and Naivasha. Large quantities of tobacco and grain have been taken through Rumuruti to Baringo and sold to the Suk and Turkana in return for sheep, goat skins, and money.

Somali and Swahili traders have been bringing down large flocks of sheep and goats from the Rendile, Turkana, and Samburu, and selling them at Nyeri.

Several trading centres have been opened, and plots have been taken up by Indians and Goanese.

Native Affairs.—Considerable advance has been made in the administration of the tribes in the province. The Igembi tribe, which used to be a menace to the Meru District has now been brought under control.

Some Laikipia Masai raided a section of the Meru and succeeded in making away with stock without being detected.

The Chuka section of the Embu District have improved.

Labour.—A considerable amount of labour has gone out of the province in the course of the year. Large batches have been recruited for work on the Magadi and Thika railways. It is estimated that approximately 80,000 natives left their districts for work during the course of the year.

(iv) *Ukamba Province.*

The Ukamba Province comprises the Nairobi, Kikuyu, Machakos, and Kitui Districts.

The total population of the province is approximately 335,354, which includes 1,819 Europeans. The population of Nairobi is estimated at 19,900, including 1,200 Europeans.

Revenue.—The total revenue collected during the year amounted to Rs.601,866, of which Rs.375,540 represents the hut-tax. This shows a considerable increase over the revenue of 1911–12, viz., Rs.482,248.

Trade.—Trade in Nairobi has been brisk during the year under review, and the increase in land and stock business has been most marked. Land has steadily risen in price, particularly in the township, and there has been a good demand for plots for residential purposes. The export trade from Nairobi has increased very considerably.

Native Affairs.—On the whole the majority of the native councils in the various locations are doing their work satisfactorily, and progress in administration is marked.

The hysterical mania which pervaded the Machakos District in the latter part of 1911 is now non-existent.

Townships.—In Nairobi a Government Commission was appointed to enquire into the general sanitation of the township. A number of important projects, e.g., the Native Location, the Indian Bazaar problem, etc., are held in abeyance until the report of the Sanitary Commission is received.

The laying out of roads in the town is gradually being undertaken, and the new drainage scheme is nearing completion. The activity in building has been fully maintained, and several structures designed on a larger scale than hitherto have been erected.

The whole of Machakos District has been surveyed by officers of the Survey department.

The Native Reserve area in Kitui District has been defined.

Preliminary surveys are being undertaken in the townships of Limoru, Kikuyu, Escarpment, Kijabe, Ruiru, and Thika.

Labour.—Labour has been difficult to obtain in Nairobi, and many projects have been held up for this reason. There is a marked increase in the rate of wages

(B) COAST PROVINCES.

(i) *Seyidie Province.*

The Seyidie Province is divided into the following districts :—

Mombasa (Sub-district: Rabai);
Malindi (Sub-districts: Giriama Reserve and Takaungu);
Teita (Sub-district: Taveta);
Vanga.

The European population of the province is 415, the Asiatic 7,753, and the native approximately 150,000.

Revenue.—The total amount of revenue collected was Rs.332,226, which is an increase of Rs.11,346 over the revenue in 1911–12.

Trade.—Local trade in the Rabai Sub-district is mostly in the hands of Indians, and is on the increase. Swahilis do a good trade in copra, which they dispose of in Mombasa.

In the Vanga District an increasing trade is being carried on by the natives with the interior.

The Meritini Rubber Estates has 1,000 acres under coconuts, and the chief feature of this estate is the substitution of coconuts for rubber as the main product.

In the Malindi District, out of a total acreage of 15,515 acres of European plantations, 4,370 has been planted up with rubber, coconuts, and a certain amount of cotton.

In the Takaungu Sub-district the Powysland Plantation at Kilifi has 1,160 acres under sisal, and the Sokoki Rubber Lands 1,150 acres planted with rubber and coconuts. Both these estates are prospering, but are suffering from a shortage of labour.

In the Teita District the Deutsche Englische Ost Afrika Kompagnie are working sanseviera fibre at Voi, and the Voi Plantations are doing the same at Kidai, their factory being connected to the railway by a mono-rail worked by hand power.

The Voi Fibre Estates are planting sisal, but the plantation is still in its infancy.

A tannery is under construction at Tsavo.

In the Vanga District the East Africa Estates have 850 acres under sisal at Gazi, and 250 acres under coconuts.

The Gazi Rubber and Fibre Estates have 1,005 acres under rubber, and 200 acres ready for planting with coconuts.

Native Affairs.—In the Mombasa District and the Sub-district of Rabai, the various tribes have been peaceful, but the native councils have not done much to assist the local administration.

The Arab staff has co-operated loyally with the Government in administrative matters.

In October, 1912, a Government Station was established amongst the Wa-Giriama tribe, and it is hoped that by closer contact the administration of these people will go ahead.

In the Takaungu Sub-district, the failure of the spring rains brought about considerable distress among the Wa-Nyika, and a consequent exodus to the Malindi and Rabai Districts.

In the Teita, Taveta, and Vanga Districts the work of the administration has been progressing satisfactorily, and the Arab staff and subordinates have rendered good service.

Labour.—Labour in the province has been very scarce, and it is practically all alien, being recruited from the Kikuyu and Kavirondo tribes.

(ii) *Tanaland Province.*

The Tanaland Province consists of the districts of Lamu and Tana River and the Sultanate of Witu.

The total population of the Province is approximately 44,830, including 35 Europeans.

Revenue.—The revenue amounted to Rs.238,521, as against Rs.192,625 collected in 1911–12. The amount of hut-tax collected was Rs.38,532.

Trade.—The East Africa Cotton Company have 10,000 acres on the Tana River. The cultivation of cotton, rubber, fibre, and coconuts is being undertaken. Some of the rubber trees have already been tapped, and the yield of three tons from 100 acres shows a satisfactory beginning. The general progress of the estate is satisfactory, and future prospects good.

On Mr. Watcham's Estate and the Witu Rubber Estate Ceara rubber trees have been planted and are doing fairly well. The drought of the last two years has proved a handicap, and irrigation by gravitation has had to be undertaken.

Messrs. McDonell Brothers and Smith have a timber concession up the river which they have started to cut.

At Shella there is a copra-drying establishment.

Native Affairs.—Owing to the long continued drought, between 800 and 900 of the inhabitants of Lamu District have temporarily migrated to other places on the coast.

The native tribes on the Tana have been happy and contented, and the Somalis have given no trouble.

The Abd Wak, which is one of the tribes on the Upper Tana, had a fight with a party of the Mohamed Zubeir from Jubaland. Desultory fighting occurred from time to time, with no serious results.

The social condition of the people of the larger coast towns has not improved during the year.

Labour.—There has been considerable difficulty in obtaining an adequate labour supply for the European plantations.

(iii) *Jubaland Province.*

The Jubaland Province comprises :—

(1) The District of Kismayu with Sub-district of Gobwen;
(2) The District of Gosha;
(3) The District of Serenli;

Population.—The European population amounts to 49. The Somali population in the interior, away from the townships of Kismayu and Gobwen, cannot be accurately estimated.

Revenue.—The revenue amounted to Rs.111,651, of which Rs.12,635 represents the hut tax. The increase in the total revenue over 1911–12 is Rs.25,089.

Trade.—A considerable amount of machinery has been erected on the European plantations, including a cotton gin and hydraulic press, which are now working.

Grain, hides, ghee, and cattle form the main exports, and cloth, woven locally, has a small sale.

Native Affairs.—With the exception of the Marehan tribe the political situation is satisfactory.

There has been a tendency on the part of the Somalis to move south and west. The bulk of the Abd Wak tribe have moved south to the Tana River, and many Mohamed Zubeir west to Wajheir and the Lorian. An administrative officer made a tour from Kismayu to Wajheir to enquire into various matters connected with the immigration. It would appear that, owing to the drying up of the Deshek Wama, the Somalis were anxious to find fresh grazing grounds for their cattle. Certain localities were very much overcrowded, and the desire to settle at better watering places was mainly the cause of the westward movement.

The unsatisfactory condition of the Marehan tribe called for the despatch of a patrol into their country as they had got completely out of hand and were terrorising the neighbouring friendly tribes. No opposition was met with, and the attitude of the tribe was more friendly than was expected. Troops will have to be retained in the district for some time in order to produce any lasting effect. Serenli is the Government Station in this district, and forms an excellent base.

(c) NORTHERN FRONTIER DISTRICT.

The following stations comprise the Northern Frontier District :—
Marsabit, Kulal, Moyale and Wajheir.

The Administration is getting into closer touch with the tribes, and the attitude of the natives has been, on the whole, friendly.

Revenue.—£112 was collected in hut and poll tax—being the amount of the sale of 64 bullocks and 33 oxen.

Trade.—Trade with the Boran and other tribes near the Abyssinian frontier has been good during the year. The establishment of a cattle trade with Abyssinia has developed in a remarkable manner, and there is every prospect that it will continue to grow.

The routes followed are as follows :—

(1) From Boran, via Marsabit, to the north bank of the Uaso Nyiro, up that river to its junction with the Ngare Ndare, then across to the junction of the Narok and Mubara Rivers, and then up the left bank of the Narok to Rumuruti.

(2) From Jubaland, via Wajheir and the Lorian, and up the Uaso Nyiro by the same route as above to Rumuruti.

Native Affairs.—During the last twelve months the political situation in the Northern Frontier District has greatly changed. When taxation of the boundary tribes was started in 1911, it became necessary to administer and protect those natives who were being taxed. Wajheir was consequently occupied in January, 1912, to prevent the Boran from being driven from wells which originally belonged to them, and the Garre country to the east of Moyale was occupied in July, 1912, because this tribe had always assisted the Government in providing baggage camels.

The Ogaden and Marehan Somalis have ceased to raid the Boran and Garre tribes since the occupation of these territories, and the policy, which has met with fair success, has been to settle disputes on neutral ground. Eventually it is hoped that such a measure of order will be established in these newly occupied areas as will justify the levy of a tax on the inhabitants. The Ogaden chiefs at Wajheir have already expressed themselves willing to pay a similar tax to that which the Boran are now paying. Officers have been constantly travelling about amongst the various tribes with a view to getting into closer touch with them.

The question of a comprehensive scheme for a more efficient transport service has lately been under consideration and it is expected that this will be brought into working order during the the ensuing year.

(D) SLAVERY.

The work in connexion with the abolition of slavery has been conducted smoothly during the year.

719 claims for compensation have been dealt with in the Courts. 77 of these were dismissed and compensation paid in 453 cases, amounting to a total of Rs.30,595.

Rs.3,735 was paid for maintenance to aged and infirm slaves.

The total number of slaves on the roll of maintenance now amounts to 112. The average rate of compensation paid during the year is £4 10*s.* 0*d.* per head.

Since the introduction of the Ordinance in 1907, out of 7,868 cases lodged, 6,767 cases have been dealt with and there is still a balance of 1,101 cases pending settlement.

The total expenditure during the year amounted to £3,375.

Out of the original vote of £40,000 a balance of £2,929 remains unspent. This will be utilised for the remaining claims, after which the office will be closed down.

X.—EDUCATION AND MISSIONS.

(A) EDUCATION.

The past year has seen the completion of educational organization on the Uasin Gishu plateau and the opening of two of the three farm schools recommended, together with the erection of additional school buildings for a central school at Eldoret.

At Machakos preparations have been made for a native industrial school for the Akamba. At Mombasa the Arab school has been opened, and the necessary arrangements made for the establishment of a Government School for Indians.

A change has been made during the year by the substitution of local School Committees for a central Education Board.

European Schools.

(1) *Nairobi Division " A " School.*—The total cost of the upkeep of the Nairobi European Day and Boarding School, including salaries, maintenance, equipment, books and stationery, and incidental expenses, amounts to £2,050. Against this charge revenue has accrued as follows :—

	Rs.	Rs.
Fees of Day Pupils	..	2,800
Fees for Boarders	15,775	
Less cost of Suspense	9,988	5,787
Contributed from Suspense Account	5,787	Rs.8,587
		or £572

(Leaving a net cost to the Protectorate of £1,478).

The average number of boarders lodged at the school during the past year has been 50.

The largest number of pupils enrolled during the year was 157. The average enrolment and attendance is as follows:—

	April 1st, 1912. Average No. on roll.	March 31st, 1913. Average daily attendance.
Boys	85	78
Girls	60	54
Total	145	132

The examination of the year is that held annually by the College of Preceptors. It is found that working for this examination stimulates the pupils, and the examination, therefore, will be continued, but the code will be considerably widened.

The record of passes to date is as follows:—

	Presented.	Passed.
December 1910	6	6
June 1911	1	1
December 1911	26	23

(2) *Nakuru Division "A" School.*—The numbers have risen to 30, as compared with 18 in the last annual report. There are two mistresses in charge. In most subjects the children are making good progress.

The total cost of the school is approximately £230, against which must be set a revenue from school fees of some £40.

(3) *Uasin Gishu.*—The difficulty of the question of a suitable system of education seems for the present to have been satisfactorily settled. The first farm school was opened in November, 1912. The average attendance is 11 boys and 7 girls. The second farmschool opened on the 1st April. The average attendance is about 15 all told. The progress appears to be satisfactory. The third farm school will open shortly.

It is hoped that the central school at Eldoret with boarding accommodation for ten children will be opened at an early date.

Indian Schools.

These schools are satisfactory. The inspection report on the Nairobi School last year showed that good work was being done. The average enrolment for the year is 118·3, the average attendance 95·8.

The number on the roll when the school closed in June was 130. The accommodation was complete, and it was not possible to admit more.

Native Education.

Missionary Education.—Grants are given by the Government at the rate of £5 per head for all apprentices under indenture at Missions who pass the prescribed examinations in industrial work.

The Government Industrial School at Machakos was begun in September, 1912, and the buildings are now completed.

Miscellaneous.

In addition to Government Schools there are schools for white children at the Rift Valley Academy, Kijabe, and St. Joseph's Convent, Nairobi. Eurasians and Goans attend at the French Mission, Nairobi. Literary education is provided for natives at all Missions.

Higher Education.—The Young Men's Christian Association provides evening classes in Swahili, French, book-keeping, drawing, shorthand, and building construction.

(B) MISSIONARY SOCIETIES.

The Missionary Societies are pursuing a steady course of progress. No new societies have been founded during the year.

Certain Missions have increased their sphere of influence, particularly in the Meru and Embu Districts.

The industrial education of natives is being undertaken at a number of the Mission Stations, but little progress can be reported, owing to the disinclination of the native to settle down to any particular work for a specified period.

XI. LANDS AND SURVEYS.

(A) LANDS.

The number of land grants made during the year under review is 337, comprising 338,033 acres, of which 337 grants 104 only represent farms, the balance of 233 representing business and residential plots, as compared with 224 farms and 158 plots, or 382 grants comprising 608,752 acres, the previous year. The falling off in farms is due to the fact that all farm land allotment was closed down, pending the decision on the method of alienation, and the grants registered represent arrears or special applications.

The number of pending applications at the end of December last was 279, as compared with 323 at the same date in 1911. 124 of these have practically reached the final stages of settlement.

The question of the method of alienation of land had been under consideration during the year, and it was eventually decided that the system of auction should be adopted.

The Survey Department had meanwhile been active in making further surveys of large numbers of farms ahead, and the large tract known as the Trans-Nzoia, comprising some million acres, was surveyed up into some 300 farms of about 3,000 acres each, so that when the new method was introduced 400 farms were available for disposal.

The new Crown Lands Ordinance has not yet been introduced.

Revenue.—The total revenue from rents and sales was £21,726, compared with £27,060 for the previous year.

The decrease is accounted for by the fact that, as explained above, all further allotment of farms was held up during the year under review. In 1911 a large non-recurring figure was collected in rents, thus giving a fictitious value compared with 1912.

The expenditure was £6,377, compared with £6,653 estimated.

Coast Land Settlement.—The total work accomplished by the Arbitration Boards at Malindi and Mombasa was as follows:—

	Malindi.	Mombasa
shambas delineated.	303	86

Two hundred and seventy-six shambas and plots were surveyed and demarcated, as against 132 during the same period last year, with an acreage of 12,000, as against 25,874.

The total expenditure incurred was Rs.77,617, as against Rs.40,715 in 1911-12.

The total number of applications dealt with in the Land Registration Courts was 234, as against 122 the previous year. The most important cases dealt with were the Tangana case, in which judgment was delivered in favour of the Crown; the Sheriff case, which is still pending; and the Shimanzi case, in which judgment was delivered in favour of the Crown for a large and valuable area known as Shimanzi, with sea frontage.

At Malindi 120 applications were dealt with, 10 of which remain pending and 110 were upheld.

The Mazrui Land Settlement case has now come to an end, and the area has been dealt with.

One hundred and thirty-four deed plans for attachment to certificates of ownership were received from the Survey Department, leaving 59 outstanding at the end of the financial year.

One hundred and fifty-nine certificates of title have been prepared and 133 issued.

The Coast Land Titles Board and the Arbitration Boards have held regular meetings throughout the year.

The total revenue collected during the year amounts to Rs.12,422, as against Rs.2,425 in 1911-12.

(B) SURVEYS.

A total area of 11,096 square miles was covered by triangulation, of which 1,564 square miles was tertiary work, and a further area of about 650 square miles was covered by intersected points. The officers engaged on triangulation were closely followed by the topographers, and the co-ordinates of points were computed and supplied to planetablers in the field.

The topography of those portions of the country occupied by white settlement is approaching completion, and the mapping of the sheets in which the big native reserves are situated is in hand. The output of topography has been considerable, amounting to over 11,000 square miles.

The Cadastral Branch has, apart from miscellaneous surveys, carried out 976 cadastral surveys, amounting to 1,082,069 acres, as compared with 870, amounting to 580,000 acres, last year.

The "arrears" of survey were 1,790,608 acres at the end of December, 1912.

The most extensive farm surveys during the year were the allotments in the Districts of Trans-Nzoya, Ol Doinyo Sapuk, Kaimosi, Kiu, Nyeri, Elmenteita, Kibos-Muhoroni, coast lands, and the Uasin Gishu final surveys.

A contour survey of a portion of Mombasa Island is being effected. This is required to arrange an efficient drainage scheme for the native town.

The expenditure has been about £29,000, compared with £21,000 last year, while the fees only reached £1,108 owing to the small number of allotments made to the public during the year.

XII. GAME.

During the past year there has been an increase in the number of game licences over the number issued last year, as will be seen from the following comparative table :—

	1910–11	1911–12	1912–13
Sportsman's licence	124	83	96
Resident's licence	191	154	230
Resident's 14 days licence ..	34	108	87
Landholder's licence	113	173	216
Special Elephant licence ..	116	83	85
Special Giraffe licence ..	17	16	26
Traveller's licence	234	356	440
Total ..	829	973	1,180

This has, of course, produced a corresponding increase in the revenue derived from licences.

	1911–12	1912–13
	£	£
Revenue	7,941	9,560
Expenditure	2,788	3,490

This increase in revenue from game licences may be accounted for as follows :—

The revenue for last year, 1911–12, was considerably below what may be taken as its normal figure, namely, a variation round about £10,000.

There has also beeen a general all-round increase in the number of licences issued, which is in sympathy with, and a confirmation of, the general progress and increasing population of the Protectorate. It will be noticed particularly that the full £10 resident's licences have increased in number, while the 14 days' £2 resident's licences have decreased. This is a healthy and welcome sign.

Game Reserves.

Southern Reserve.—The stock of game in the Southern Reserve is quite satisfactory, and no disease among game has been reported during the year. A small herd of elephants spent some months in this reserve in the neighbourhood of the Ol Gerei River and Mount Ol Doinyo Erok on the Anglo-German Border. It has not been necessary to make any expeditions to exterminate lions in the reserve, but they are numerous in several parts of the reserve not far from the railway line.

The Magadi Railway, now almost completed, has had little effect upon the game in the reserve, with the exception of rhinoceros, of which a considerable number have been killed in protection of life and property by the railway construction and pipe line parties. This was, of course, inevitable, owing to the stupidly dangerous nature of the animal, and it must be remembered that besides the number actually known to have been killed, which amounts to eleven since the construction of the line was commenced, there must be a considerable number which have been wounded and died in distant parts of the reserve.

As far as the Southern Reserve is concerned, the most important event during the year has been the formation in German East Africa of a corresponding game reserve adjoining the British one.

Northern Reserve.—As far as is known the stock of game in this reserve is satisfactory. It, of course, never contained such large numbers of variety as the Southern Reserve, but there are undoubtedly far more elephants, rhinoceroses, buffalo, and greater kudu in the Northern than the Southern Reserve, while besides this several species of game animals inhabit the Northern Reserve which are not found in the Southern Reserve.

On the whole, the prospects, condition, and stock of the game in the Protectorate is still very satisfactory. The country has again been fortunate in experiencing an almost universal and generous rainfall at both seasons of the year in which rain may be expected. This is as favourable to the health and breeding of game animals as to cattle, or rather more so.

Only one outbreak of disease among game has been reported during the year. This occurred in the Nairobi District, in the forests between Nairobi and Kiambu. The only animals known to be infected were bushbuck (Tragelaphus) and of these considerable numbers died.

The disease was expected to be rinderpest, but the Veterinary Pathologist made a series of inoculations from infected bushbuck into susceptible animals without obtaining any reaction, and, although no infected bushbuck were obtained while alive, the experiments showed pretty conclusively that the disease was not rinderpest. No domestic animals were known to have become infected. A marked feature of the disease was the appearance of a purulent eruption on the ring of bare skin usually found on the necks of all bushbuck. The disease remains unidentified, and has now apparently disappeared.

Confiscated Trophies.

	1910–11. Rs.	1911–12. Rs.	1912–13. Rs.
Ivory	15,461	36,769	61,836
Other trophies ..	818	2,439	2,583

It will be seen from the above figures that there has been a steady increase in the proceeds from the sale of confiscated trophies, particularly in the case of ivory.

The following comparative table shows the revenue and expenditure of the Game Department for the past nine years:—

Year.	Revenue. £.	Expenditure. £.
1904–05	6,223	115
1905–06	7,013	127
1906–07	7,060	207
1907–08	7,560	1,805
1908–09	6,071	1,459
1909–10	8,869	2,422
1910–11	10,666	2,539
1911–12	7,941	2,788
1912–13	9,560	3,490

XIII.—KING'S AFRICAN RIFLES.

Recruits.—One hundred and sixty-five recruits were enlisted for the 3rd Battalion during the year. Of these the men enlisted from the Sotik country appear to be turning out best.

Health.—The health of the troops generally has been good.

Patrols and Operations.—One and a half companies were employed on patrol duty in the Turkhana country; one company was employed on patrol duty in the Sotik-Masai country and a half company in the Kamasia country. The effect of these patrols has been in each instance satisfactory; two companies of infantry and a half company of the Camel Corps are still employed on patrol duty in the Marehan country.

Volunteer Reserve.—The Volunteer Reserve consists of seven units.

Each efficient volunteer receives a capitation grant of Rs.15 from Government. These grants are at the disposal of the Deputy President of the various units for musketry prizes, markers, and improvement to ranges. During the year the inter-Protectorate shoot for the Manning Cup took place, Uganda Volunteers being first and British East Africa second.

Various other rifle competitions were held during the year, the chief being the Waddell Shield, which is an inter-unit competition. This was won by Nairobi Unit.

An East African Miniature Bisley was held under the auspices of the Volunteers, and though the entries were not as numerous as in former years, the shooting, on the whole, was good.

XIV.—PUBLIC WORKS.

The total expenditure for the year amounted to £121,191, divided as follows:—

	£
Works directly charged to Public Works Schedule	89,105
Works undertaken for other Departments	5,805
Works undertaken from Loan Funds	26,281
	£121,191

This year witnessed an abnormal increase in activity in building operations, with the result that costs increased about 20 per cent., and the amount of skilled labour in the country was totally unequal to the demand. All building contracts let by the Government were seriously delayed and were not completed during the financial year.

Owing to the boom in trade in England the prices of all materials have steadily risen, and are still rising. In many cases the cost of materials in England has increased by 25 per cent. This, together with the increasing rates for labour, both skilled and unskilled, is resulting in increased cost of all classes of work.

The main works completed during the year are as follows :—

(a) *Police Station and Quarters at Mombasa.*—This station, to replace that in Ndia Kuu, which was condemned by the medical authorities, is a great improvement on any in the country in point of accommodation, situation and appearance. The main building includes Entrance Hall, Charge Office, General Office, Office for Superintendent, one association cell, and five solitary confinement cells on the ground floor. On the upper floor are provided quarters for two European Inspectors. In the yard behind the station are cubicled quarters for ten policemen.

(b) *Uasin Gishu Plateau.*—The works undertaken at Eldoret included a Gaol, Dispensary, Schoolmasters' quarters, Rest House (now occupied by Town Magistrate) and Clerks' quarters. Quarters for a European Constable were also erected on Farm No. 3 near the southern limit of the farms.

(c) *Isolation Hospital, Mombasa.*—This building formed the commencement of a Quarantine Station at Kilindini, but was not commenced till late in the year.

The Gaol at Fort Hall was completed at a total cost of £592.

A *post mortem* room and bacteriological laboratory were erected at Kabete.

The following works were still in course of construction on March 31st, 1913 :—

Nairobi Drainage Scheme.
New Offices for Provincial Commissioner, Nairobi.
Bonded Warehouse, Nairobi.
Nairobi Water Supply.
Gaol at Mumias.
Hospital at Nandi.
Mortuary, Mombasa.
Fencing to Civil Hospital, Mombasa, and Public Works Department yard, Nairobi.

Loan Works.

(a) *Thika Tramway.*—On March 31st rail-head was just beyond the Ruiru Bridge (Mile $18\frac{3}{4}$), earthwork was completed to Mile $29\frac{1}{2}$, and the Thika and Ndarugu Bridges were well in hand. The total expenditure to that date was £59,687. This sum includes payment for all permanent way material, and £1,452 for credits, which will be given to the work on completion.

On April 1st, 1912, rail-head was at Mile $6\frac{1}{2}$. The work carried out during the year included bridges over the Nairobi, Kasarini, Lyala, Kamiti, and Ruiru Rivers, and the long banks over the swamps at Lyala and Kamiti. These banks were laid upon a bed of papyrus fascines.

Considerable difficulty was experienced in the erection of the Ruiru Bridge, as at low water there was at one point eight feet of water and twenty-four feet of mud with a large number of tree roots embedded, which made pile driving a difficult matter, and the timber of the length required for piles was unobtainable in one length.

(b) *Mombasa Water Supply.*—The work carried out during the year included the final survey for the pipe line and the clearing of bush, excavation of trench, excavations for head-works and break-pressure tank, and erection of piers and bridges at crossings of gulleys and rivers.

The expenditure on this work up to March 31st was £10,098, to which must be added the order for pipes and specials placed in England, representing a value of £40,000. A large quantity of pipes were on their way from England in March.

Training of Apprentices.

On March 31st the number of boys in the Depôt was 23, all being trained as carpenters. The progress made by the boys generally exceeded expectations; the Wakavirondo showing the greater adaptability.

Some of the apprentices are already turning out work which can be made use of, and in consequence, the Depôt benefits by the credit given for such articles as are taken over.

In March, examinations were held at Nairobi, Mombasa, Kisumu and Nyeri at the request of the Director of Education to enable him to pay capitation grants to Mission apprentices who passed the prescribed tests according to the length of training.

Water Permits.

The number of permits issued during the year was as follows :—

For Irrigation	25
For Power Schemes	13
For Domestic Supply	12

The value of unallocated stores on hand on March 31st, 1913, was £32,094, an increase of £783 on the total for 1911–12.

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

SKETCH MAP OF

EAST AFRICA PROTECTORATE

Scale 54 Miles to One Inch

NOTE.—The boundaries of NAIVASHA and NYANZA Provinces are provisional.

C.O. No.18.

Ordnance Survey, Southampton, 1914.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

ANNUAL.

No.	Colony, &c.	Year.

EAST AFRICA PROTECTORATE.

(For Report for 1912-13 see No. 791.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
19th February, 1915.

SIR,

I HAVE the honour to forward herewith the Annual Report on the East Africa Protectorate for the year 1913–14.

I have, &c.,
C. C. BOWRING,
Governor's Deputy.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

ANNUAL REPORT
ON THE
EAST AFRICA PROTECTORATE FOR 1913-14.

I. FINANCIAL.

(A) GENERAL REVENUE AND EXPENDITURE.

Revenue.

The actual revenue collected during the year amounted to £1,123,798, which is an excess of £151,836 over the estimate and an increase of £171,273 on the revenue of 1912–13, and is the highest figure yet reached.

The progress of the Protectorate is shown by the following statement of the revenue for the last five years :—

Year.	£	Percentage increase.
1909–10	503,040	3·5
1910–11	609,586	21·0
1911–12	729,078	19·6
1912–13	952,525	30·6
1913–14	1,123,798	17·9

Leaving out of account the revenue of Busoga Railway and Uganda Railway Marine (Busoga Section), every head of revenue, with the exception of Sale of Government Property, showed an increase both over the revenue of the previous year and the amount estimated.

Customs Import Duties, of which a share amounting to £37,560 was paid over to Uganda, realised £35,242 above the estimate, whilst Export Duties brought in a surplus of £6,955. Compared with the actual revenue of the previous year Import Duties increased by 13·1 per cent. and Export Duties by 24·5 per cent.

The revenue from Licences, Excise, and Internal Revenue was £26,404 above the estimate.

The increase in land transactions caused a surplus of £5,080 in the receipts from Stamp Duties.

As in previous years, the principal item was Native Hut and Poll Tax, which amounted to £171,770, *i.e.*, a surplus of £11,282 over the estimate and an increase of £14,156 over the receipts of the previous year. This is an increase of 8·9 per cent. over 1912–13, in which year the increase was 7·8 per cent. compared with 1911–12.

Non-native Poll Tax realised £1,731 above the estimate, and £1,304 more than in the previous year, an increase of 13·1 per cent, which may be attributed partly to increased immigration and partly to improvements in the method of collection.

The following tables show the receipts (1) from Native Hut and Poll Tax since the introduction of the Hut Tax in 1901 and of the Poll Tax in 1909–10 ; and (2) from Non-native Poll Tax since its introduction.

(1) *Native Hut and Poll Tax Revenue* 1901-2 *to* 1913-14.

Year.	Seyidie.	Tanaland.	Jubaland.	Ukamba.	Kenya.	Nyanza.	Naivasha.	Northern Frontier District.	Total.
	£	£	£	£	£	£	£	£	£

(2) *Non-Native Poll Tax* (*Ordinance XIX of* 1912).

1912-13 ..	1,721	181	334	4,930	264	1,312	1,181	4	9,927
1913-14 ..	3,115	271	352	3,898	269	1,961	1,354	11	11,231

Fees of Court or Office, Payments for Specific Services, and Reimbursements in Aid realised £5,110 more than estimated. Fees of Court exceeded the estimate by £2,536 due to the increase of legal work in Nairobi.

School Fees realised only £525 against an estimate of £1,122, which was partly due to delay in opening the Central School at Eldoret and the Indian School at Mombasa, but was chiefly caused by the closing of the Nairobi schools for several months as a precautionary measure during an epidemic of cerebro-spinal fever.

Survey Fees revenue showed a decrease of £125.

Reimbursements by other Governments realised the exact sum estimated, £12,225, all the items being fixed contributions.

The great increase of work in the Post and Telegraphs Department is evidenced by an excess of £10,649 over the estimated amount of £31,080. Sale of Stamps exceeded the estimate by £5,659, Money Order Commission by £1,067, Telegraph Revenue, East Africa Section, by £2,506, and Telephone Revenue by £732.

The receipts from Government Railways were £546,174, showing a surplus of £46,174 over the estimate.

The receipts from Busoga Railway and Uganda Railway Marine (Busoga Section) fell short of the amounts estimated by £14,566, which, so far as the East Africa Protectorate was concerned, was counterbalanced by savings to a similar extent.

Rents of Government Property realised £29,144, a surplus of £3,140 over the estimate.

Rent of lands other than forest areas brought in £20,425, which, although £839 short of the estimate, was an increase of £3,477 on the previous year.

The revenue from Interest amounted to £14,854, showing a surplus of £10,029 over the estimate.

Interest on funds invested by the Crown Agents and with the National Bank of India realised £8,331 more than estimated. Investments and bank balances were largely augmented owing to increase of revenue and owing to the receipt in full of the £375,000 loan, the expenditure against which to the end of the year amounted to only £219,032.

The income from the investments of the Note Guarantee Fund was underestimated by £1,678, which is partly counterbalanced by the cost of the new Currency buildings being less than anticipated.

Miscellaneous receipts brought in £11,147, being a surplus of £5,647 over the estimate.

The principal item was the sale proceeds of confiscated ivory, which realised £5,019.

Sale of Government Property realised only £3,181, being a deficit of £1,159 on the estimate and a decrease of £798 on the previous year. The sales of produce and live stock at the Government farms fell short of expectations.

Land Sales realised £26,086, being a surplus of £18,126 over the estimate of £7,960. This was due to the great demand for land, both in townships and in the country, and to the introduction of the auction system.

Financial Position on 31*st March,* 1914.

The net excess of assets over liabilities on 31st March, 1914, was £316,480, excluding the unexpended portions of loans, as will be seen from Appendix II. This figure is arrived at as follows :—

Net assets on 1st April, 1913		£308,581
Revenue 1913–14	£1,123,798	
Expenditure 1913–14.. ..	£1,115,899	
Excess of revenue over expenditure		7,899
Balance		£316,480

Grant-in-Aid.

In last year's Financial Report it was stated that for the first time since the establishment of the Protectorate no grant in aid of general revenue was received, but that the sum of £23,500 was received from the Imperial Treasury as part of a second instalment of a special grant towards the cost of additional rolling stock to cope with the increased traffic connected with Lake Magadi.

It may here be recorded that 1913–14 was the first year in which the Protectorate received no grant-in-aid, either general or special, and it may be of interest to observe that the total of the grants-in-aid received from the Imperial Treasury from the 1st of July, 1895, the date of the establishment of the Protectorate, to the 31st of March, 1913, amounted to £2,843,383.

Expenditure.

	£
The actual expenditure during the year amounted to	1,115,899
Against an original estimate of ..	1,010,637
Showing an apparent excess of ..	105,262

Sanction was obtained to expend £67,662 out of balances for services which were provided for but uncompleted in 1912–13.

Sanction was further obtained to expend sums from surplus balances and increased revenue to the extent of £236,281, but against which the actual expenditure was only £74,158.

(B) CURRENCY.

The total value of notes in circulation on 31st March, 1914, was Rs.43,39,000 as compared with Rs.45,65,000 on 31st March, 1913. This decrease may be regarded as temporary only and may be attributed to the banks finding it necessary to hold large stocks of coin to meet the demands for the payment of labour. It may be stated that after the close of the year 1913–14 the circulation rose to over Rs.46,00,000.

The amount of subsidiary coinage in circulation rose during the year from Rs.14,33,912 to Rs.16,30,737, an increase of 13 per cent.

(C) LOAN ADVANCES.

The Protectorate has been granted two loans by the Imperial Treasury :—

(1) a loan of £250,000 for the purposes of improved railway communication and harbours in the Protectorate, and the provision of a pipe-borne water supply for Mombasa ;

(2) a loan of £375,000 for the purposes of improvements on the Uganda Railway and Lake Victoria ports, an additional cargo steamer and improvements in terminal facilities at Kilindini.

The only advance received on account of the £250,000 loan up to 31st March, 1914, was the instalment of £47,000, on 28th December, 1911, while the expenditure up to the former date amounted to £126,853, so that the amount over-spent in anticipation of further advances (which have since been received) was £79,853.

The whole amount of the £375,000 loan was received during 1912–13. The expenditure up to 31st March, 1914, was £219,032, leaving an unspent balance amounting to £155,968.

II.—TRADE AND SHIPPING.

(A) TRADE.

The gross receipts from the import and export duties during the year amounted to £223,359, made up as follows :—

	£
Ad valorem duties on merchandise	182,829
Specific duty on distilled liquors	20,090
Duties on domestic exports	15,956
Duties on account of transit goods	4,484
Total	£223,359

The total refunds during the year amounted to £27,162, apportioned as below :—

	£
(*a*) Refunds on account of transit goods ..	5,260
(*b*) Drawbacks on goods re-exported ..	20,514
(*c*) Other refunds	1,388
Total	£27,162

Thus the net revenue from Customs duties reached the sum of £196,197, which establishes a record. Import duties amounted to £180,241, representing 92 per cent. of the total collection, whereas export duties brought in only £15,956, or 8 per cent.

The net receipts show an increase of £42,197, or 27 per cent. over the estimate, and exceed the amount of the previous year by £24,112, or 14 per cent. In addition to the import and export duties, the Customs Department collected other charges such as warehouse fees, cranage, transit and re-export fees, which amounted to £9,654.

Imports.

The trade imports during the year under report show an increase of £339,594 and reached a total of £2,147,937. They thus for the first time exceed two millions. The values of imports include insurance, freight and landing charges.

The increase over 1912–13 is one of 19 per cent., as against 45 per cent. in 1912–13 over 1911–12.

The following is a statement showing the principal articles of merchandise imported into East Africa Protectorate during the year ended 31st March, 1914, and the percentage to the whole of manufactures and produce of the United Kingdom :—

Articles.	Total Value.	Value of Imports from the United Kingdom.	Percentage of the United Kingdom's share to the total trade imports.
	£	£	
Cotton piece goods ..	570,598	165,959	29
Building materials ..	134,148	75,986	57
Grain and flour.. ..	130,092	839	–
Provisions	128,307	62,921	49
Machinery	104,708	83,613	80
Vehicles and parts ..	93,268	68,515	73
Sugar	61,806	1,718	3
Spirits, including ale and beer..	57,866	33,737	59
Haberdashery and wearing apparel ..	51,264	29,564	58
Implements, agricultural	47,717	19,442	41
Tobacco, cigars and cigarettes	45,531	17,362	38
Iron and steel manufactures	44,800	23,190	51
Hardware and cutlery .	39,870	16,037	40
Brass and copper wire ..	35,625	17,060	50
Cotton manufactures, unenumerated ..	29,479	17,310	59
Arms and ammunition..	27,253	24,305	89
Kerosene oil	23,312	52	–
Coal	19,521	7,589	39
Beads	15,944	240	1
Soap	14,226	11,690	82

Appended are the figures of the gross amount of import duty collected in respect of the principal articles under the following headings during the last four years :—

	1913–14	1912–13	1911–12	1910–11
	£	£	£	£
Cotton goods	57,060	52,233	39,472	26,114
Grain	12,708	11,386	10,090	7,917
Building materials ..	13,392	12,387	5,224	4,017
Provisions..	11,697	9,047	7,274	7,430
Sugar	6,164	6,008	4,257	3,333
Spirits and liqueurs ..	20,090	18,083	12,315	10,152
Ale, beer, and wines ..	2,478	2,119	1,288	1,460
Brass and copper wire ..	3,562	2,640	1,876	2,630
Kerosene oil	1,782	1,554	1,509	1,441
Tea	1,701	1,584	1,021	789
Tobacco	4,553	3,417	2,651	2,270
All other sorts	67,732	52,169	35,822	28,878
Total ..	£202,919	£172,627	£122,799	£96,431

Cotton goods as usual head the list. They represent 26 per cent. of the total trade imports and their value amounted to £570,598 for a total quantity of 38,114,639 yards. The increase in value and quantity averages 9 per cent. and 11 per cent. respectively, as against 32 per cent. in 1913 over 1912. The increase is comparatively small, but large stocks were held at the beginning of the year and there is no reason to fear any serious check in the steady expansion of trade in these goods.

The imports of other varieties of cotton fabrics, such as bleached, dyed, and printed manufactures, amounted to £218,862, showing an increase of £46,379, or 27 per cent., over the preceding year. The increase of £46,379 in bleached goods as against £9,407 in unbleached goods tends to show that the demand for a superior quality of goods is on the increase.

Imports of the following cotton textiles from different countries are given below :—

Countries.	White (bleached) value.	Printed, value.	Dyed, value.	Total, value.	Percentage of the total.
	£	£	£	£	
United Kingdom ..	71,335	16,140	59,806	147,281	67 %
Holland	7,265	24,494	5,216	36,975	17 %
Germany	1,056	4,917	6,242	12,215	5 %
India	1,800	2,819	7,679	12,298	6 %
All other countries..	2,192	234	7,667	10,093	5 %
Total ..	£83,648	£48,604	£86,610	£218,862	—

It is satisfactory to note that, of the textiles referred to, imports from the United Kingdom represent 67 per cent. of the whole or relatively 11 per cent., or £50,966, more than the previous year, whereas Holland's share fell from 20 per cent. in the preceding year to 17 per cent. during the year under review, and Germany contributed only 5 per cent., as contrasted with 9 per cent. in the past year.

The class next in importance is "Building Materials" which amounted to £134,148, forming 6 per cent. of the trade imports. The advance is one of £10,059.

The building trade continued its activity during the year under review and many new houses are springing up in the capital—Nairobi—and other places.

Galvanised iron sheets were solely imported from the United Kingdom with the exception of 57 cwts., valued at £42, from Germany, and the decrease of £19,429 may be ascribed to the fair amount of stock on hand from the previous year's importation.

Imports of foreign timber for building purposes have increased from 6,786 tons, valued at £34,264, to 11,881 tons for a value of £60,560, that is to say, an increase of 75 per cent. in quantity and 77 per cent. in value. The demand for indigenous timber has been greater than the supply, which amounts to more than 50,000 tons in a year, and there is a scarcity of seasoned timber in the country, saw millers' stock being sold out as soon as sawn.

Grain imports during the year amounted to £130,092, the third largest item in the import trade.

The increase has been well maintained in all items except maize, while the advance in the total quantity of grain is one of 14 per cent. and in value it amounts to 13 per cent.

Rice retains the premier place in the grain group and shows an increase of 9,614 cwts., or 7 per cent., over the preceding year, but the exceptionally high price of 11*s.* 1*d.* referred to in the last year's report has declined to 10*s.* 7*d.* per cwt. in the year under review.

The main source of supply is India and Burmah. Flour and wheat meal are second in importance and show an advance of 33 per cent. in value over the preceding year.

The fourth largest value is represented by imports of provisions, which have increased from £95,600 to £128,307 in 1914, showing an expansion of £32,707, or 34 per cent.

Imports of machinery take the fifth place in order of value and it is gratifying to record a rise of £24,202 over the last year.

During the quinquennial period the imports of machinery of all kinds rose from £18,413 in 1909 to £104,708 in 1914. £83,613 worth of machinery, forming 80 per cent. of the total, was imported from the United Kingdom, while the United States was second, with a value of £11,090.

Imports of vehicles and parts thereof reached a sum of £93,268, as against £58,413 in the last year. The value has increased by £34,855, or 59 per cent.

The United Kingdom takes the first place in the imports of vehicles and parts thereof with a value of £68,515, followed by the United States with £12,415. Imports of Cape wagons from South Africa have advanced from £4,030 to £4,431 in the year under review.

Consignments of sugar have continued to increase from 79,464 cwts. to 90,229 cwts. in 1914, but the low price has neutralised the increase in value, which stands at £61,806 in 1914, as against £60,376 in the preceding year.

Imports during the last two years under the heading of Spirits, Wines, Ale, and Beer may be summarised as follows :—

	1913–14.		1912–13.	
Description.	Quantity. Gal.	Value. £	Quantity Gal.	Value. £
Ale and beer ..	52,015	8,125	50,839	7,196
Brandy	11,442	6,132	10,458	6,152
Whisky	45,698	23 504	38 865	20,129
Gin	4,933	1,437	5,403	1,634
Liqueurs and other sorts	2,608	2,022	2,783	2,060
Wines	35,299	16,646	34,375	13,991
	151,995	£57,866	142,723	£51,162

The increase is one of 9,272 gallons, or 6 per cent., in quantity, and of £6,704, or 13 per cent., in value.

The turnover in wearing apparel has increased from £30,783 to £46,170, or 50 per cent., while haberdashery shows a trifling falling off of £707 as compared with the preceding year.

The imports under the head of Agricultural Implements show a satisfactory progress, having risen from £35,419 to £47,717, or an increase of 35 per cent.

Imports of tobacco, including cigars and cigarettes, show an advance from 560,546 lbs., valued at £34,182, to 719,392 lbs., valued at £45,531. The increase in quantity is one of 28 per cent. and 33 per cent. in value.

The trade in hardware and cutlery amounted to £30,735 and £9,135, respectively, during the year, as against £21,162 and £5,691 in the last year.

Bags and sacks show a decrease of £4,552 as compared with the previous year, but very large stocks were imported during that year. At the same time the exports of indigenous produce during the year under review did not come up to expectations.

India supplied the local market with a value of £38,940 out of the total imports of £39,832.

Imports of beads have receded from £17,846 to £15,944 in value, and from 523,546 lbs. to 518,221 lbs. in quantity during the year under review. Germany supplied the market with £11,792, followed by Italy with £3,391.

The imports under Arms and Ammunition showing a trifling decrease of £143, as compared with £27,396 during the previous year. The United Kingdom retains 89 per cent. of the total imports as before.

Imports of kerosene oil have advanced from 622,001 gallons, valued at £15,199, in 1913, to 811,095, valued at £17,592, during the year under review. The 30 per cent. rise in quantity is accompanied by an advance of 15 per cent. in value.

The decrease in the average price is due to a larger proportion of Sumatra oil imported in bulk.

Imports of soap have receded from 15,324 cwts., valued at £20,944, to 10,054 cwts., valued at £14,226. The falling off in quantity is one of 5,270 cwts., or 34 per cent., and £6,718, or 32 per cent., in value. The decline in quantity is not due to decreased consumption, but to large stocks being carried over from the previous year.

Tea is becoming daily more and more popular with the natives and it would almost seem that it is quickly becoming a necessity and not merely a luxury.

The increase is 31,186 lbs. for a value of £1,171 over the consignments of 321,018 lbs., valued at £15,842, in the preceding year, India and Ceylon being the countries where importations originate.

The following statement compares the values of all imports into the East Africa Protectorate during the quinquennial period ending 31st March, 1914 :—

Value of all Imports into the East Africa Protectorate during the five years ended 31st March, 1914.

	1910.	1911.	1912.	1913.	1914.
	£	£	£	£	£
Trade goods	775,246	997,983	1,247,260	1,805,343	2,147,937
East Africa Government Stores	40,577	41,146	92,776	51,055	100,287
Uganda Government Stores	32,617	17,169	77,128	22,752	29,491
Materials for the extension and maintenance of the Uganda Railway	32,396	73,692	157,413	261,607	431,336
Materials for the construction of Non-State Railway	—	2,363	66,382	153,892	219,246
Importation of gold, specie, and Indian rupees	56,835	209,674	175,859	333,354	256,323
Goods in transit by sea	220,002	264,498	236,458	240,650	202,723
Telegraph materials	—	—	16,795	19,839	10,048
Totals	£1,165,673	£1,606,525	£2,070,071	£2,891,492	£3,397,391

Exports.

The respective returns of the exports during the year ended 31st March, 1914, were as follows:—

Produce of	£
British East Africa	443,624
Uganda	564,244
German East Africa	448,103
Congo Free State	26,127
Soudan	778
Total	£1,482,876

or an increase of £279,675, or 23 per cent., in value over the previous year.

During the year under report the revenue from duties on domestic exports amounted to £15,956, of which hides and skins yielded £13,350, ivory £1,300, and rubber £400. The total shows an improvement of £3,000 over the previous year's collection.

The following are the principal articles in detail of domestic exports with their values in sterling:—

British East Africa.	£
Hides and skins	147,474
Grain	118,430
Copra	35,587
Coffee	18,502
Fibre	16,608
Animals, living	11,421
Rubber, wild and plantation	10,532
Wool	9,718
Ivory	8,764
Potatoes	6,716
All other sorts	59,872
Total	£443,624

showing an increase of £22,540, or 5 per cent. over the previous year.

The trade in hides and skins is one which has held an important place in the East African commerce for the last four years.

The largest purchaser of hides was the United Kingdom, which bought 13,363 cwts., valued at £62,884, while France received 6,360 cwts., at a value of £29,664. Thus the position of the two countries in the preceding year was reversed during the year under review.

The chief purchaser of skins was the United States, which purchased 4,953 cwts. (£17,724) out of a total export of 8,752 cwts. (£28,347), and the second best customer was France, to which country 2,740 cwts. of skins, valued at £8,168, were exported.

The second largest item of export is under the head of Grain and Oil seeds, and a fall has to be recorded, viz., from 383,243 cwts., valued at £147,389, in 1912–13, to 321,781 cwts., valued at £118,430, in 1913–14.

Groundnuts show a slight advance of 2,107 cwts., valued at £1,048, over the last year, making a total of 10,751 cwts. for £7,131. France took 3,822 cwts. and Germany 3,694 cwts.

A new feature during the year was the first shipment of linseed, weighing 407 cwts., and barley, 33 cwts. Samples of linseed grown near Gilgil were reported to be of very good quality and were valued at 70*s*. per quarter for crushing.

The third largest item is the export of copra, representing 31,725 cwts., valued at £35,587. It has failed to reach the high level of quantity of 1910–11, but a substantial rise in the average price has increased the value to figures hitherto not recorded.

Exports of coffee have increased from 2,469 cwts., valued at £7,431, to 5,501 cwts., valued at £18,502, that is to say, an increase of 130 per cent. in quantity and 149 per cent. in value. This is highly satisfactory.

Among the buyers of British East Africa coffee, the United Kingdom retains the first place with 4,190 cwts., followed by Italy with 555 cwts. The quality of coffee grown in British East Africa is increasingly in favour in European markets and the price obtained place locally grown coffee among the best produced in any part of the world.

Exports of fibre have increased from 11,848 cwts., valued at £8,150, to 28,478 cwts., of a value of £16,608, during the year under review.

The fibre industry was entirely initiated by European settlers; preliminary trying difficulties have been most successfully met and it has at last been brought to a stage which leaves no doubt as to its early future prominence in the exports of the Protectorate.

Shipments of rubber amounted to 1,165 cwts., of a value of £10,532. As compared with the previous year the quantity receded from 1,528 cwts. to 1,165 cwts., which includes 687 cwts. of plantation rubber. The net export of wild rubber was therefore 478 cwts. only, the lowest figure on record.

The exports of wool have increased from 1,689 cwts., valued at £7,908, to 2,082 cwts., valued at £9,718.

2,069 cwts. were consigned to the United Kingdom. The prices realised at the London Wool Exchange sale were satisfactory and compare very favourably with those realised for wool from other parts of the world.

Up to the year 1903 ivory was the staple export from the country, but it has now dwindled down very considerably.

Ivory shipments during the year amounted to 132 cwts., valued at £8,764, as compared with 678 cwts., valued at £24,039, a decade ago.

Borities (rafters) have made good headway and reached the unprecedented value of £6,479, showing an increase of £3,020 over the previous year. Two-thirds of the exports originated in the Lamu District and the exports are consigned to the neighbouring territories on the east coast of Africa and to Arabian and Indian ports.

Shipments of mangrove bark amounted to 8,062 tons, as against 6,774 tons in the past year, thus showing an increase of 1,288 tons, or about 19 per cent. The value has risen from £6,433 to £8,062.

Wattle bark exported during the year amounted to 202 tons, valued at £1,917. It is an improvement of 151 tons, valued at £1,408; 121 tons were shipped to Germany and 80 tons to the United Kingdom.

Contrary to expectations cotton exports receded from 2,636 cwts. to 1,204 cwts. during the year under review. The cause was unfavourable climatic conditions.

As usual, the United Kingdom is the largest buyer of British East Africa cotton and received 1,117 cwts.

Noteworthy features amongst new products were the shipments of

14 cwts. of mica, valued at £219;
21 cwts. of raw silk, valued at £60, and
9 gallons of lemon grass oil, valued at £2,

all of which were consigned to the United Kingdom.

For the first time there was an export of tobacco, weighing 9,133 lbs., valued at £154; 3,892 lbs. were shipped to Italian East Africa, 2,330 lbs. to Zanzibar, and a consignment of 2,630 lbs. went to the United Kingdom.

Items of export such as beeswax, carbonate of soda, coconuts, gum copal, horns, ostrich feathers, hippo teeth, wood, &c., amount to £30,045, showing a total increase of £2,938 over the previous year.

Others, such as chillies, ghee, oil cake, cotton seeds, fine wood, cowries and other shells, give a total export of £7,188, as against £14,727 in the previous year.

These increases and decreases are of minor importance and may be attributed to fluctuations in trade.

The following is the comparison of exports originating in different spheres of influence and shipped from the East Africa Protectorate during the last five years (1910 to 1914):—

Produce of	Year ended 31st March, 1914.					Increase over the last year
	1910 Value	1911 Value	1912 Value	1913 Value	1914 Value	
	£	£	£	£	£	
East Africa Protectorate	190,668	276,480	333,670	421,084	443,624	5%
Uganda Protectorate	211,796	371,513	377,074	427,228	564.244	32%
German East Africa	169,241	285,538	280,113	331,292	448,103	35%
Congo Free State ..	18,352	27,349	22,325	21,485	26,127	21%
The Soudan ..	..	1,688	3,334	1,655	778	Decrease 53%
Italian East Africa	..	343	82	457	..	
Total .. £	590,057	962,911	1,016,898	1,203,201	1,482,876	23%

(B) SHIPPING.

Mombasa has been served by four regular lines of direct mail steamers from Europe this year, the Union Castle, German East Africa, Messageries Maritimes, and the Maritima Italiana Societa di Navigazione.

The British, French, and Italian steamers have called regularly once a month, and the German steamers twice a month.

The mail steamers of the British India Company, direct from home, have also called here regularly once a month during nine months of the year.

In addition to the above lines the Clan Ellerman, Harrison, and Hall Line (amalgamated) called once a month direct from Europe with cargo only.

A branch of the British India Company's steamers and the German East Africa line maintained a regular service twice a month with Bombay during the year.

The coast traffic has been carried out by the steamers belonging to Messrs. Cowasji Dinshaw Brothers and Messrs. Esmailji Jiwanji and Company.

The total steam tonnage entered in the ports of the Protectorate amounts to 1,734,564 tons, represented by 793 steamers, an increase of 92 vessels and 153,388 tons compared with last year.

The total tonnage of sailing vessels entered in the ports of the Protectorate amounts to 56,517, represented by 2,821 vessels, a decrease of 265 vessels, but an increase of 2,053 in tonnage. The decrease in the number of dhows was due to the two regular lines of steamers calling from Bombay, and to the restrictions enforced on the shipping owing to the town being infected with plague.

The port was visited by 9 British, 1 F[illegible], and 2 Italian men-of-war.

There have been no casualties on [illegible] coast this year.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

During the year under review the general prosperity of the Protectorate referred to in last year's report has been maintained.

In Nairobi particularly business firms have been able to record a satisfactory year's working. Motor garages have increased in number and appear to be doing a good trade.

A number of new stone offices and shops have been completed and two new hotels—the Stanley and Victoria—are now open to the public.

The following table shows the gross tonnage of ships, the amount of cargo and number of passengers landed and shipped by the different steamship lines at Mombasa.

Lines.		Number.	Gross Tonnage.	Landed.			Shipped.		
				Cargo. Tons.	Passengers.		Cargo. Tons.	Passengers.	
					European.	Non-European.		European.	Non-European.
British India ..	Aden ..	9	30.202	1,818	15	332	3,028	24	200
British India ..	Europe ..	11	54.323	17,834	72	223	4,093	27	62
British India ..	Bombay ..	53	178,240	13,514	111	4,978	1,523	111	3,506
D.O.A. Line ..	Bombay ..	43	170,826	7,837	87	3,943	1,196	55	1,595
D.O.A. Line ..	Europe ..	69	436,437	42,031	1,182	879	28,129	708	475
M. Maritimes ..	Europe ..	26	103,429	238	182	73	566	240	3
Union Castle Line	Europe ..	29	193,208	37,783	2,198	522	8,885	1,144	252
Harrison Line ..	Europe ..	27	88,573	27,386	3	45	18,386	7	26
Italian Line ..	Europe ..	20	56,668	1,992	47	148	1,822	43	103
Total	..	287	1,311,906	150,433	3,897	11,143	67,628	2,359	6,222

Town and farm properties have kept up their high price. The building trade has suffered a check owing to business working on insufficient capital.

At Kisumu the British East Africa Corporation has installed a new ginning plant, which is giving satisfaction. The East Africa Industries, at Maseno, have put up machinery for dealing with sisal and the export of fibre from that estate is expected shortly.

Messrs. Boustead & Clarke, Limited, have completed a steam-power mill for producing meal and flour from local corn in large quantities.

Over 29 tons of coarse sugar, made at Kibos, was placed on rail during the year. The fishing industry has been extremely active during the year.

The Lumbwa creamery is conducting a thriving business with butter and cheese.

The saw-milling industry is doing well at various places owing to the large demand for wood for building purposes.

(B) MINES AND MINERALS.

The Mining Ordinance, 1912, was brought into force on the 1st of May, 1913, the Regulations issued thereunder becoming effective on the same date.

The number of claims pegged out and registered is 17.

The number of mineral leases granted was 3, the area concerned being 1,332 acres.

These mining operations have been confined exclusively to mica. At the present stage of the industry it is impossible to say whether it is likely to be an important one. The results so far obtained have been of varying importance and at least another year's trial is necessary before an authoritative verdict can be pronounced.

IV.—AGRICULTURE AND STOCK RAISING.

The year can be characterised as one of conspicuous development in nearly all branches of farming.

The subdivision and sale of portions of many of the larger estates, referred to in last year's report, has been continued, and much of the land alienated is now proved to be suitable for intensive cultivation.

(A) CROPS.

Coffee.—In March it was estimated that over 5,000 acres were under coffee, while there are large areas of land equally suitable for cultivation of this crop.

The value of the coffee exported during the last seven years is :—

Year.	Rs.	Year.	Rs.
1907–08	4,031	1911–12	85,571
1908–09	3,539	1912–13	160,199
1909–10	16,012	1913–14	275,585
1910–11	44,728	—	—

The appearance of the rust fungus *Hemeleia vastatrix*, in October, 1912, on two plantations created a temporary check to development, but the results of close inspection of these and other plantations which subsequently became infected indicate that the disease is unlikely to have the same deleterious effect as has been experienced in other countries where the humidity is much greater and the soil not so rich.

A coffee-plant inspector was appointed from Jamaica in January and the appointment has proved very popular among the settlers.

Sisal.—The total output in the Protectorate is about 50 tons of fibre per week, which is realising from £28 to £30 per ton in the London market. It is estimated that some 7,500 acres are planted with this crop, while further large areas are now being prepared.

There are five decorticators in constant use, while others are being erected.

Cotton.—In the Nyanza Province the area under cultivation is rapidly increasing. In 1910–11 barely two tons of seed cotton were exported from the Province, while in 1911–12 and 1912–13 the harvest yielded 125 and 166 tons respectively ; and this year it is expected that the amount will be double that of last year.

Arrangements have been made with the Department of Agriculture, Kampala for supplies of seed from the seed selection farms.

Experiments are being carried out with Caravonica cotton, and the results so far are satisfactory.

Wattle.—Some 10,500 acres are under cultivation. The question of extracting the tannin locally for export has lately been receiving consideration and a scheme is on foot to erect a factory at Naivasha capable of dealing with 7,000 to 10,000 tons of bark annually.

Maize.—The following figures show the value in rupees of maize exported during the last four years :—

1910–11	1911–12	1912–13	1913–14
Rs.	Rs.	Rs.	Rs.
106,742	332,541	677,608	458,678

Large quantities of seed of different varieties have been imported from America and South Africa and a steady improvement has taken place in the standard of the crops now grown both by settlers and natives. Reports on samples sent home indicate that maize can be raised in the Protectorate equal in quality to that grown in any other countries.

Flax.—The experiments which have taken place during the last few years have had satisfactory results and practical interest in this crop is now being displayed by a number of settlers. Some of the samples sent home were valued as high as £55 per ton and the yield also compares favourably with that in other countries.

Wheat.—The majority of varieties tried have proved susceptible to rust fungus, but some very satisfactory results have been obtained from hybrids produced by artificial hybridization.

Rubber.—At the present time the price of rubber is insufficient to allow of any margin for profit over the cost of production, and in view of the large and increasing output of Para rubber from other countries, the prospects of Ceara rubber in the Protectorate are not considered bright.

Fruit.—The data now available as regards citrus culture go to show that in many districts the conditions are extremely favourable for the development of this industry.

Other Crops.—More attention is being directed to the growing of varieties of beans suitable for export and large quantities of Canadian Wonder and Rose Coco are now being raised by the natives.

Peas have been found to be a profitable crop for export to London.

Arrowroot has been imported and grown at Mazeras, Kabete, and in the Fort Hall District, and the results are very promising.

The cultivation of sim-sim is extending in the Nyanza Province and large quantities of the seed are being exported.

(B) Live Stock.

Cattle.—The original or native cattle in the Protectorate belong to the Zebu or Indian race of bovine species. In 1909 it was estimated that there were 750,000 head of cattle in the administered area, while the present number is thought to be between 780,000 and 1,000,000. The small increase is due to a heavy mortality during the last three years in the native reserves from East Coast fever and rinderpest.

The native cattle have been found to be very susceptible to improvement; the first, second, and third crosses are far in excess of expectations and, while there has been no sign of loss in constitutional vigour, the gain in early maturity and in the quality of the milk is very material.

A number of pure-bred animals have been in the past imported by the Government and some of the settlers are now doing likewise. It has been proved that by systematic dipping the risk from red-water and East Coast fever is practically nil, and now that rinderpest is under control it is anticipated that importations of pure-bred stock for grading purposes and for the establishment of further pure-bred herds, will largely increase.

Dairying has not as yet shown any marked development, the reason being that native cattle are not good milkers, and that the number of grade cattle is still small. However, the conditions obtaining in the Protectorate are very favourable, and it is expected that this industry will show marked progress in the near future.

Sheep.—It has been proved that under proper management this industry may be considered a sound and profitable one, *e.g.*, on the Government Farm, Naivasha, on April 1st, 1907, the total number of sheep, including lambs and wethers, comprised 1,910 head. The purchases up to March 31st, 1914, were 221, and the sales 6,193. On March 31st, 1914 the sheep in hand numbered 2,225, or 315 more than on April 1st, 1907. The total increase for the seven years was therefore 6,287.

Generally speaking, the robust woolled sheep (of the Wangella type) have proved the most satisfactory.

The native boys make excellent shearers. A gang of 10 can shear 500 sheep in a day at a total cost of Rs.15/-.

Pigs.—It is hoped that the bacon industry will develop in the near future, as there are a number of farmers in the Protectorate who started with good foundation stock and can to-day show herds equal in quality to those at home. Maize, barley, potatoes, rape, lucerne, etc., for fattening can be grown here at a low cost compared with other pig-raising countries.

Horses.—Though horse-breeding may be said to be fairly established, it is unlikely that horse-ranching will be pursued in any part of the Protectorate until a remedy for horse-sickness is discovered. There are a number of thorough-bred horses in the Protectorate and their progeny do well. There will always be a good market for the thick-set pony of 14·2 hands or just under, with dense bone, good constitution, and endurance.

Ostriches.—This branch of farming has not developed during the past year owing to the "slump" in the prices of feathers, and the importations of large consignments of inferior feathers from South Africa for sale in the Kavirondo markets.

(c) EXPERIMENTAL FARMS.

Kabete.—The area under cultivation is 270 acres. The total number of stock at the end of the year was 476. The total number despatched from the farm was 128.

Pigs have again done well and no deaths from disease have occurred.

Seven Ayrshire heifers were imported early in the year and are doing well.

Kibos.—The area devoted to nurseries was further extended to meet requirements for seedlings of coffee, timber, fruits, etc. Successful experiments have been made with cotton, chillies, linseed, maize, and sim-sim.

Naivasha.—The pure-bred Shorthorns have done well and the calves and the Lincoln Red Shorthorns all promise to be good. The pure-bred Frieslands and Ayrshires have done exceedingly well.

Grade cattle have done well generally.

Sheep have thriven, and the wool clip was good and clean.

The crossing of native donkey mares with the Catalonian jackass is proving successful, the progeny being superior to their dams in size and bone.

The annual sale took place in March and was well attended. The following figures and prices show the result of the sale :—

	£	s.	d.		£	s.	d.
4 Shorthorn bulls ..	38	0	0	to	62	0	0
1 Friesland yearling bull	66	0	0				
11 young Ayrshire bulls	44	0	0	to	92	0	0
Grade Friesland bull ..	45	0	0				
¾-bred Hereford bull ..	10	0	0				
¼-bred Ayrshire young bulls	13	0	0	to	21	6	8
½-bred Hereford cows with calves at foot.. ..	17	0	0	to	19	6	8
½-bred Catalonian jackasses	5	0	0	to	7	0	0
Pure Merino rams ..	2	0	0	to	6	6	8
Grade rams	0	12	0	to	1	12	0
Pure Angora rams ..	0	7	4	to	0	14	8
Grade Angora ewes ..	0	8	0	to	0	8	8

Mazeras.—The experiments conducted during the period under review consisted of such crops as rice, beans, maize, and sim-sim, but the weather conditions were very unfavourable.

Applications for plants, both economic and ornamental, are on the increase.

(D) DISEASES OF ANIMALS.

East Coast Fever.—This disease has been most prevalent during the last twelve months in the Nairobi District, Kamasia Reserve and the Kedong Valley. No further outbreaks have occurred on the Uasin Gishu Plateau and the quarantine imposed on the infected farms there has now been removed.

A solitary case, fortunately within a fenced paddock, occurred at the Naivasha Government Farm. Infection in this case was probably traceable to the experimental paddock erected last year in which East Coast fever experiments were carried out. All cattle on the farm were submitted to dipping and no further cases have occurred.

One case occurred on the Laikipia Plateau at Rumuruti, in a bullock illegally brought from the Meru District. The area over which the animal had grazed was destocked and carefully guarded, and the contacts placed under observation. No more cases have been recorded.

With the West Kenya District coming under colonization a number of outbreaks of East Coast fever have been recorded. The farmers of this district have been quick to appreciate the value of dipping and have placed the disease under control by this measure.

Out of a mob of 500 cattle obtained as a fine from the Kamasia tribe, 153 head succumbed to East Coast fever. The survivors were submitted to dipping for six weeks on the confines of the Reserve, were then removed to Nakuru, where they have been regularly dipped every three days for the past three months, with the satisfactory result that no further case of the disease has taken place.

546 head of settlers' cattle were admitted to the Kamiti testing area during the year. Thirty have died and 516 have been branded and released as immune animals.

The small death rate is due to the fact that nearly all the animals exposed on the area were drawn from districts known to be enzootic to East Coast fever.

Dipping every three days in an arsenical bath of standard strength having proved a satisfactory and easy method of preventing East Coast fever, the inoculation for this disease, as suggested by Theiler, has not been proceeded with.

Numerous meetings have been held throughout the Protectorate to discuss a general dipping scheme for the country. The outlines of the measure have now been adopted practically unanimously by the various farmers' associations and at the present time between 50 and 60 tanks are in working order or in course of erection—a pleasing number for the short period of twelve months since inception of dipping operations.

The main point aimed at is the compulsory dipping of travelling stock, whereby permits may be granted for the movement of all animals regularly dipped. By the application of this rule the farmer will be enabled to run his transport or move his cattle without endangering them or the stock of his neighbours, while the farmer who does not cleanse his cattle will automatically place his farm in quarantine.

Considerable evidence has already been collected as to the efficacy of dipping for the prevention and eradication of East Coast fever and the farmers who are systematically dipping their cattle are well pleased with the results obtained.

Difficulty has been experienced in keeping many of the baths up to the standard strength, owing to the oxidization of the principal ingredient of all cattle-dipping fluids, *i.e.*, arsenite of soda. This compound does not remain stable, but is oxidised, and becomes converted into arsenate of soda through the agency of bacterial growth in the dipping tank.

The arsenate of soda does not possess the power of the arsenite to destroy ticks, consequently constant supervision has been necessary to keep the bath up to proper strength. For the year ending March 31st, 1914, the Government Analyst has analysed 120 samples of dipping fluids.

There can be no doubt that in a country so infested with ticks every stock owner should either possess a tank or be given facilities to dip his farm animals, for dipping is the only known practical method of dealing with tick-borne diseases.

The native population are evincing considerable interest in the dipping of stock and the Masai asked for a dipping tank to be erected at Ngong. This tank is now under construction.

The Government has erected a model dipping plant at Nakuru and dipping demonstrations for the information of settlers have been carried out there and at Mr. Watson's farm, near Nairobi.

For the information of the settler and official communities a pamphlet containing rules to be observed in the dipping of every class of stock is now in course of preparation.

Rinderpest.—Outbreaks of rinderpest have occurred at Ngong, Lower Molo, Escarpment, Nandi Reserve, Masai Reserve, Uasin Gishu Plateau, Suk, Turkana, and in the districts of Ravine and Baringo.

The severest outbreak was that which implicated the Nandi Reserve, where the mortality was extremely heavy. It has been estimated that the Nandi have lost between 30,000 and 35,000 cattle from rinderpest within the last two years.

The disease was rife practically over the whole of the Uasin Gishu Plateau, but with the free use of serum the number of deaths did not amount to 5 per cent.

The Elgeyo also suffered severe loss.

In Masailand this disease has also been prevalent and reports have been received that large numbers of buffalo have succumbed to the disease.

During the year 201,148 doses of anti-rinderpest serum have been issued from the laboratory.

In January the cattle in the Lumbwa District were subjected to a double inoculation. The experiment proved very successful and the mortality from all causes amounted to 0·6 per cent.

At a Veterinary Congress held at Bulawayo to discuss the question of rinderpest and the danger of its spread to the British Central and South African Colonies, an offer was made by the British East Africa Government to supply anti-rinderpest serum up to an amount of 250,000 doses.

The various colonies concerned decided to obtain a reserve supply of 180,500 doses of serum from our laboratory and of this amount 85,517 doses have already been despatched.

The serum manufactured at the laboratory has not only been tested for use in British East Africa, but its potency upon other than East African cattle has been proved by submitting it to severe tests on cattle drawn from South Africa and England.

Pleuro-Pneumonia.—No outbreaks of pleuro-pneumonia have been recorded during the last twelve months.

This disease was at one time prevalent in several mobs of Masai cattle.

On their removal from Laikipia a specially selected area was set aside for their reception in the Southern Masai Reserve and a Stock Inspector, whose sole duty was to supervise the animals and keep them in strict quarantine, was placed in charge of the area.

Quarter Evil.—The disease occasionally occurs in most districts of the Protectorate and a protective vaccine is now manufactured at the laboratory for issue to settlers.

Anthrax.—There have been three outbreaks of anthrax (involving ten oxen, one mule, and four pigs) recorded during the year under review.

Anaplasmosis.—Among imported animals heavy losses have been sustained through this disease. Every endeavour is being made at the laboratory to obtain pure strains of blood for artificial immunization.

Dipping is an effective preventive of this disease.

Contagious Abortion.—The occurrence of the disease within the Protectorate has been demonstrated during the year. Efforts are being made to ascertain its distribution and when satisfactory data on this point have been obtained measures for its suppression can be undertaken.

Scour in Calves.—While this disease may be of a sporadic nature and may yield to medicinal treatment, the very large majority of cases are due to infection by a specific organism, the *Bacillus coli.*

Endeavours are being made at the laboratory to produce a serum which, it is hoped, will have the effect of supporting the young animal over the period at which it is most liable to infection, *i.e.*, from birth to about three months old.

Trypanosomiasis.—Several suspected cases in cattle brought through the Northern Frontier District have been submitted to microscopic examination, but, so far, no trypanosomes have been demonstrated.

Three Days Sickness, Ephemeral Fever.—Several cases of this disease have occurred during the past year in various parts of the Protectorate, more particularly in the Rift Valley and Kinangop Plateau.

Tuberculosis.—One case of tuberculosis occurred in East Africa during the past year, in an imported English animal. This animal had been carefully tested in England and certified free from tuberculosis. Shortly after its arrival the animal exhibited peculiar brain symptoms and died after several months' illness ; post-mortem examination revealed a tubercular lesion in the brain substance.

This is the only case of tuberculosis which has been reported in bovines in East Africa.

Horse Sickness.—No severe outbreak has been recorded during the past year.

Ulcerative and Epizootic Lymphangitis.—These diseases have been very prevalent during the past year, and heavy losses have been suffered by the farmers on the Uasin Gishu Plateau from the ulcerative form.

A vaccine has been prepared at the laboratory and its use has given very hopeful indications.

General.—Several cases of trypanosomiasis mange and biliary fever have been recorded during the year. No case of glanders has occurred, and all imported animals have either been accompanied by satisfactory mallein test certificates or have been subjected to the test at our quarantine stations.

Horse breeding is now occupying the attention of a number of our farmers, and good sires and dams have been imported during the year. There is every reason to be satisfied with the foals bred in the country and there can be no doubt that there is a great future for horse breeding in East Africa.

Scabies.—Scabies is widespread among the indigenous sheep. It is hoped, however, with the adoption of a general dipping scheme, that we will be able to exercise more control over it and prevent its spread among the woolled flocks.

Strongylosis.—The mortality from this disease throughout the Protectorate is very heavy.

One ounce doses of a 5 per cent. solution of lysol have been proved to be of considerable value in the treatment of this disease and their administration is attended with less risk than blue stone solutions.

Variola.—No severe outbreaks have been reported during the year.

East African Swine Fever.—There have been no outbreaks of this disease during the past year. The disease is distinct from the swine fever of Europe and America.

In August and September last year a very heavy mortality was noted among warthogs on the Uasin Gishu Plateau. Carcases and skeletons in large numbers were to be seen scattered over the plains and in the vicinity of pig holes. The mortality occurred when a severe epizootic of rinderpest was prevalent among the cattle on the plateau which involved also numbers of eland and giraffe.

In Uganda and Ceylon during outbreaks of rinderpest it has also been noted that large numbers of wild pigs died and, in both instances, the veterinary authorities were convinced that rinderpest was the cause of death.

Dog Diseases.—The most prevalent diseases of the dog have been mange, piroplasmosis, and distemper. One outbreak of rabies came under notice in the Nairobi District. Rabies in this country does not appear to be transmissible to man for, of the number of natives bitten by rabid jackals or dogs and kept under medical supervision over considerable periods, not one has developed the disease.

Permit System.—The following permits have been issued from the Permit Office during the year :—

Immune cattle	735	permits.
Non-immune cattle	1,320	,,
Sheep and goats	1,788	,,
Pigs	11	,,

Live-stock Importations.—The following animals were imported through the ports of Mombasa and Kilindini during the past twelve months :—

Horses	150
Mules	24
Donkeys	207
Cattle	634
Camels	23
Sheep	5
Goats	22
Pigs	9
Poultry	540
Dogs	161

Of these, nine horses were imported from England, fifty-nine from South Africa, one from Australia, and twelve from India.

Seventy-five pure-bred cattle were imported.

We must anticipate larger importations of pure-bred stock in the near future for, with the adoption of a dipping scheme, confidence will be restored and an enormous impetus to the stock industry of this country is likely to take place.

Trading.—Sale yards have been established by the Municipality in Nairobi and by Messrs. Newland, Tarlton and Company at Naivasha, Nakuru, and Londiani.

The largest sales have been conducted at Naivasha, where approximately 8,500 head of cattle passed through the yards. Ninety per cent. of these came from Borana and Jubaland. In addition to public sales some 5,500 head of this class of stock changed hands privately.

Through the veterinary station situated at Rumuruti and Laikipia the following stock was inspected, inoculated or dipped, and passed :—

Cattle from Jubaland and Borana	14,203
Sheep and goats from Baringo, Suk, Turkana	44,850
Horses and mules from Borana	333

No fewer than 82,105 sheep and goats passed down the Rift Valley from the native reserves of Suk, Turkana, Kamasia and the Uasin Gishu Masai. Large numbers of sheep and goats are now required at the various centres for butchering purposes and Masai ewes are in great demand by the sheep breeder.

(E) INSECT PESTS AND PLANT DISEASES.

Consignments to the number of 1,240, valued at Rs.65,224, were passed for entry.

Thirteen consignments, valued at Rs.800, were confiscated.

192 packages, valued at Rs.9,342, were passed in transit for Uganda, the Belgian Congo, and German East Africa.

7,050 tons of maize were passed for export ; 70 tons were fumigated and 40 tons condemned.

Experiments were tried to control and destroy the coconut beetle by artificial breeding places or "traps."

288 traps have been constructed in the Changamwe, Rabai, and Freretown Districts. Each trap costs approximately Rs.1·98.

In 186 traps 1,998 beetles were found, with 433 pupæ, 9,210 larvæ and 905 eggs.

The citrus moth causes considerable damage to oranges. Cutworms have caused great trouble, especially to coffee, maize, tobacco, potatoes, and peas.

The coffee bug, *Antestia variegata*, appears to be on the increase and has been recorded from several new localities.

The woolly aphis is found in the Ulu, Kyambu, Kabete, and Nairobi Districts.

The wattle bug and hopper has caused considerable damage in certain localities.

V.—FORESTS.

A Rule under the Forests Ordinance, 1911, was published on the 14th of January, 1914, allowing for the reduction of 25 per cent. in the royalty payable in respect of timber sold by stack measurement. A revised scale of royalties payable for forest produce from mangrove swamps was published on the 26th idem.

Administration.

The Coast division, formerly in charge of a Forester, was placed under the control of an Assistant Conservator in October, 1913. The result has been highly satisfactory. A forest station has been established at Kakumega.

Exploitation.

Timber.—195,224 cubic feet of timber were sold, and 54,488 cubic feet issued free to Government Departments and settlers. The actual quantity cut and sold during the year 1912–13 was 130,460 cubic feet, the increase for the present year being thus 64,764.

The Lingham and Grogan Forest was being worked throughout the year. The quantity of timber marked and felled was 23,463 cubic feet.

The demand for local timber exceeded the supply throughout the year. The price of sawn timber in Nairobi varied from Rs.17 to Rs.20 per 100 super. feet, irrespective of species.

6,596 cubic feet of logs were supplied to the Uganda Railway. With the object of testing the effect of soaking prior to seasoning, twelve logs were placed in the Athi River and left there for five months. The result was most satisfactory as far as cedar was concerned, but the period of immersion was not long enough to penetrate hard woods.

Poles and Bamboos.—52,317 poles and bamboos were sold, being an increase of 23,232 over that of the previous year. 45,553 were issued free, or more than five times the quantity issued in 1912–13.

Mangrove Bark.—7,388 tons of mangrove bark were exported and royalty was paid on 24,000 korja (score) of logs, etc., cut in the creeks the subject of concessions.

Brushwood.—2,656 head loads of brushwood and withies were sold, being a decrease of 2,797, and 1,707 were issued free to Government Departments, a decrease of 2,310. The decrease is accounted for by the sale and free issues of thinnings from plantations instead of allowing young saplings of indigenous trees to be cut in the forests.

Rubber.—Royalty was paid on 335 lbs. of rubber collected under licence in the Kenya Forest, a decrease of 857 lbs. During the year 10,549 lbs. of wild rubber were exported.

Fuel.—5,872 monthly licences to cut fuel and 78,141 cubic feet of fuel were sold. In 1912–13 5,276 licences and 63,151 cubic feet of fuel were sold. 4,274 cubic feet were issued free to Government Departments.

Railway Fuel.—3,435,372 cubic feet of fuel were cut in the Forest Reserves for the Uganda Railway, an increase of 2,052,070 cubic feet. The Railway Administration have subscribed £500 towards the cost of reafforestation.

Cultural Operations.

The rains in April and May were good, but the latter rains were disappointing. 476 acres were planted during the year, 337 of which were for the use of the Uganda Railway. The measures taken to encourage the natural regeneration of cedar (*Juniperus procera*) at the Kinangop Forest Station have been entirely successful.

Nurseries.

Nurseries were maintained at Mwachi (Mombasa), Karura, Dagoreti, Lari, Njoro, Londiani, Nyeri, and West Kenya. New nurseries were established at Kapsaret (Uasin Gishu) and Kakumega. 222,518 young trees and 340 lbs. of seeds were sold to the public, and 55,078 trees and 215 lbs. of seeds were issued free.

Surveys and Demarcation.

Plans of the Arabuko Sokoke Forest were prepared. The Dagoreti Forest area of 6,539 acres was demarcated and surveyed.

In December the demarcation of the Tiriki, Kakumega, and Kabras Forests was commenced and a beginning was also made in the demarcation of the Kenya Forests in the Meru District.

In connection with the Laikipia survey the boundaries of the forests on the Sattima Range and north and north-west of Kenya have been aligned in conjunction with the Forest Department.

Nairobi Arboretum.

Many of the trees, shrubs and hedges have now attained a sufficient age to indicate their value for planting, and are most useful to settlers and others as a guide.

Revenue.

The total cash revenue for the year is £8,718 16s. 0d., showing an increase of £2,036 6s. 0d. over 1912–13.

The chief increases are : sale of timber, £776 ; fuel, £108 ; plants and seeds, £246 ; mangrove bark, etc., £807.

The total estimated value of forest products issued free to Government Departments, natives, and settlers during the year is £3,628, or £717 less than in 1912–13.

The fuel taken by the Uganda Railway is valued at £2,290.

VI.—COMMUNICATIONS.

(A) RAILWAYS.

(1) *Uganda Railway.*—The account of the Uganda Railway against the Parliamentary Grant now stands at £5,525,552, and the total expenditure under the running capital expenditure is £6,289,917.

The expenditure during the year shows a total of £318,817, which includes a sum of £15,977 spent towards the completion of the Busoga Railway.

The total revenue for the year amounted to £546,345, showing an increase of 12 per cent. over that of 1912–13.

The total expenditure was £332,861, showing an increase of 18 per cent. over last year.

The net profit for the year amounted to £213,484, or an increase of 2·08 per cent. on last year's return, giving a percentage on capital cost of 3·39 per cent. as against 3·52 per cent. in 1912–13.

The total tonnage handled was 189,556, compared with 172,693 last year.

The total goods receipts were Rs.5,618,491, as against Rs.5,093,320 in 1912–13.

Coaching receipts increased from Rs.1,183,305 to Rs.1,411,073.

The tonnage carried by the Lake Steamers was 60,382, an increase of 3,583.

The following figures show the result of the last six years working on the railway and steamers :—

—	No. of Passengers.	Tonnage of Goods (exclusive of Railway material and Steamer Service).	Earnings from Coaching Traffic.	Earnings from Goods Traffic.	Earnings from Telegraphs.	Miscellaneous Earnings.	Earnings from Steamer Service.	Total Earnings.	Total Working Expenses.	Earnings per mile of line open (excluding Steamer Service).	Working Expenses per mile of line open (excluding Steamer Service).	Train Miles.	Earnings per train mile (excluding Steamer Service).	Working Expenses per train mile (excluding Steamer Service).	Percentage of Total Expenses to Receipts (inclg. Steamer Service).
	No.	Tons.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Miles.	Rs.	Rs.	
1908-09	284,871	57,226	788,215	2,199,106	9,387	31,742	461,463	2,517,338	3,489,914	5,186	3,849	702,856	4·31	3·20	72·13
1909-10	293,052	60,213	785,740	2,386,479	9,739	49,452	460,785	2,704,190	3,692,195	5,533	4,115	747,770	4·32	3·21	73·24
1910-11	403,224	77,478	887,876	2,924,132	10,726	44,828	634,180	3,023,947	4,501,742	6,611	4,623	967,305	4·00	2·80	67·17
1911-12	442,479	115,767	1,010,168	3,584,037	14,324	57,875	736,954	3,432,781	5,403,358	7,976	5,223	1,208,065	3·86	2·53	63·53
1912-13	500,304	172,694	1,183,305	5,093,320	20,327	72,313	969,200	4,202,781	7,338,465	10,869	6,380	1,491,896	4·27	2·51	57·27
1913-14	616,197	189,556	1,411,073	5,618,491	18,664	85,910	1,061,044	4,992,923	8,195,182	11,851	7,226	1,631,685	4·37	2·67	60·93

The development of the country continues to increase rapidly, but the trade in British East Africa and Uganda has not shown such a large increase as was anticipated. Shortage in rainfall with some failure in the seeds and cotton crops have brought about this result.

The daily passenger service between Mombasa and Nairobi, inaugurated in October, has proved a great success, and it is hoped to start shortly a daily service between Mombasa and the Lake.

A through daily goods train service has been arranged with much advantage to deliveries of upward traffic from the coast to Nairobi.

Third class traffic steadily increases.

Six new stations are now open or ready for opening. In order to provide for the satisfactory working of the anticipated increased traffic a further 20 crossing stations are necessary.

The new lake steamer, " Usoga," was launched on September 20th and the second steamer is in course of construction. The new tug, " Kavirondo," is now in commission. All these three vessels consume oil fuel.

The bi-weekly steamer service on the Lake has proved a success.

(2) *Thika Railway.*—This branch was opened on October 1st. A daily service has been run from the start, and the line is paying its running expenses.

(3) *Magadi Railway.*—The line is not yet fully completed, but is doing useful work in taking down machinery and materials for the Soda Company. In a few months the company should have completed their plant and commenced export.

(4) *Kampala—Port Bell Railway.*—This line is not yet open to passenger traffic, but is doing good work in the carriage of goods traffic.

Busoga Railway.—The total revenue amounts to £11,752 and the expenditure to £8,082. The capital account stands at £156,072.

The total revenue of Lake Kioga Marine amounts to £10,055 and the total expenditure to £9,864.

The traffic has increased principally in cotton and cotton seed, new ginneries having been erected around Lake Kioga. Increases are also manifest in the shipments of simsim, ground nuts, hides, and chillies.

The total tonnage is more than 42 per cent. greater than last year.

The coaching traffic has increased by over 50 per cent., both as regards receipts and the number of passengers.

With favourable climatic conditions and an improvement in the water ways of Lake Kioga, the railway should prove an important financial asset to the Administration.

(B) ROADS.

The expenditure on road work amounted to £24,184, made up as follows:—

Maintenance and repairs..	£10,572
New roads and bridges	9,861
Work from funds accruing from premia on the sale of lands	2,158
Work from funds accruing from fines on the Sotik, Purko, and Loita Masai ..	1,593

In Nairobi several new roads were constructed, while some of those already existing were metalled.

Outside Nairobi a bridge of four spans of 30 feet each, on masonry piers and abutments, was built across the Stony Athi, about three miles from Athi River station.

The Fort Hall road as far as the Thika River and the Kyambu road were maintained as effectively as the limited grants available permitted. In the second half of the year a gang of some 300 convicts was steadily employed on the former road, near the Ndarugu River.

In the Naivasha Province the principal item was the Londiani—Eldoret road. For more than half the year a contractor was employed on the first six miles out of Londiani. Elsewhere work through heavy forest was prosecuted at mile 31. A bridge of four spans, two of 20 feet and two of 24 feet, consisting of steel joists on timber trestles resting on concrete foundations in the stream, was constructed over the Nzoia River beyond Eldoret.

Bridges were erected over the Guaso Narok and Guaso Nyiro Rivers in the Southern Masai Reserve.

In the Nyanza Province the Kisumu—Mumias road was resurfaced throughout the greater part of its length of 49 miles.

The Londiani allotment road from Muhoroni was extended. Three bridges were built, each consisting of a centre span of 20 feet, with end spans of 10 feet.

A cart road was opened between Sotik Post and the Mara River.

Considerable reconstruction work was done on roads in the Lumbwa Reserve with funds obtained from the Sotik fine. A feature of the year's work in this district was the improved supply of Lumbwa labour. For some months gangs of about 1,000 men were employed, and all the bridges on the Sotik road were built with local labour.

In Seyidie Province much repair work was done in the town of Mombasa, but the heavy traffic in the narrow streets and the destructive effect of storm water combined to effect rapid deterioration. Motor traffic increased considerably.

The road to Malindi was repaired and drained.

No new road work was done in Jubaland or Tanaland.

In the Kenya Province the West Kenya (Nyeri-Meru) road was the most important piece of new work done during the year. The length completed was 6½ miles.

The volume of traffic along the Fort Hall road has now reached a point where the retention of an earth surface ceases to be an economical procedure.

(C) POSTS AND TELEGRAPHS.

The Post and Telegraph Services, which are amalgamated with those of the Uganda Protectorate, include 118 Post Offices and Agencies, of which 41 are also Money Order Offices. There are 102 Telegraph Offices, including those combined with Post Offices and those worked by the Uganda and Busoga Railways.

Revenue.

The total Post and Telegraph revenue of the combined Protectorates amounted to £44,428 13s. 10d., as compared with £39,047 17s. 7d. in 1912–13, an increase of £5,381, or nearly 14 per cent. The division of revenue between the two Protectorates gives the following results :—

(A) *Postal Revenue.*

Year	East Africa	Uganda	Total
1912-13	£21,039	£4,561	£25,600
1913-14	22,442	5,409	27,851
Increase of	£1,403 7 per cent.	£848 19 per cent.	£2,251 9 per cent.

(B) *Telegraph and Telephones.*

Year	East Africa		Uganda		Total
	Telegraphs	Telephones	Telegraphs	Telephones	
1912-13	£8,057	£1,487	£2,262	£84	£11,890
1913-14	10,006	2,232	2,726	57	15,021
Increase of	£1,949 24 per cent.	£745 50 per cent.	£464 21 per cent.	Dec. £27 Dec. 32 per cent	£3,131 26 per cent.

In addition to the Telegraph revenue for East Africa, shown above, an amount of £1,557 6s. 8d. was received from the Uganda Railway for the maintenance of Railway Telegraph Lines.

Expenditure.

The expenditure, including the cost of telegraph and telephone onstruction and maintenance in both Protectorates, amounted to 51,286 18s. 5½d., as compared with £42,540 4s. 7½d. for 1912–13, an ncrease of £8,747, or 21 per cent. The estimated division of expenditure gives the following figures :—

Year.	East Africa.	Uganda.	Total.
1912-13 1913-14	£29,926 35,928	£12,614 15,359	£42,540 51,287
Increase of	£6,002	£2,745	£8,747
	20 per cent.	22 per cent.	21 per cent.

The amounts given in the case of Uganda include £5,108 and £6,364 for the years 1912–13 and 1913–14 respectively for telegraph and telephone construction and engineering services, the cost of which is borne on the Estimates of the Protectorate.

Postal Matter.

The number of letters, postcards, newspapers and book packets dealt with in the combined Protectorates during the year is estimated at 5,280,743, as compared with 4,449,063 in 1912–13, an increase of 18 per cent. In East Africa the figures have increased from 3,549,830 to 4,233,511, and in Uganda from 899,233 to 1,047,232, representing increases of 19 per cent. and 16 per cent. respectively.

Parcel Post.

During the year under review 76,406 parcels were dealt with in the combined Protectorates, as against 59,586 in the preceding year, an increase of 28 per cent. Of this number 52,257 were posted or delivered in East Africa, and 24,149 in Uganda, representing an increase on last year's figures of 32 per cent. for East Africa and 21 per cent. for Uganda.

The value of parcels imported from countries abroad amounted to £64,202, as compared with £50,984 in 1912–13, an increase of 26-per cent. Of the incoming parcels, 4,319 were insured and valued at £14,490, whilst the outgoing insured parcels numbered 205, of the declared value of £1,836.

The greater part of the increased overseas traffic was in respect of parcels imported from the United Kingdom, the numbers of which advanced by 30 per cent. in the case of East Africa and 35 per cent. for Uganda.

Registered Letters.

The total number of registered postal packets dealt with in the combined Protectorates during the year amounted to 156,893, as compared with 132,944 in 1912–13, an increase of 18 per cent. Of this number 62,286 were posted in East Africa for delivery in the East Africa and Uganda Protectorates, and 34,589 for places abroad. In Uganda 19,044 registered articles were posted for delivery in the two Protectorates, and 7,084 for foreign countries.

The number of articles received by the registered post from places abroad increased by 15 per cent., 33,890 letters, etc., being dealt with, as compared with 29,625 in the previous year. Of the foregoing 27,861 were delivered in the East African Protectorate, and 6,029 in Uganda.

Undelivered Postal Packets.

The total number of articles dealt with in the Returned Letter Office on account of the combined Protectorates was 50,335, as compared with 34,800 in 1912–13, an increase of 45 per cent., the number given being made up of 35,939 letters, 1,273 postcards, and 13,123 newspapers, circulars, book packets, and samples.

The inland correspondence dealt with, that is to say, the mail matter posted in the East Africa and Uganda Protectorates addressed to places within the Protectorates, and subsequently forwarded to the Returned Letter Office, numbered 30,823 articles, including 21,898 letters, 480 postcards, and 8,445 newspapers, book packets, etc., being an increase of 44 per cent. on the previous year. Of these articles 21,668 were returned to the senders, and the balance, 9,155, destroyed as neither deliverable to the addressee nor returnable to the sender.

Money Orders.

In East Africa 31,866 orders, amounting to £201,275, were issued and 12,779, of the value of £111,017, were paid. Of the issues, 2,403 orders, amounting to £10,174, represented remittances to the United Kingdom and places served through the intermediary of the London General Post Office. The transactions with India included 18,776 orders, amounting to £103,032, as compared with 15,951 orders and £80,273 in 1912–13.

British Postal Orders.

The total number of British postal orders issued and paid in the combined Protectorates during the year 1913–14 was 27,644, as compared with 22,345 in 1912–13. The value represented by the orders was £16,542, being an increase of £3,082 on last year. The increase in the number of orders dealt with was 24 per cent. and value 23 per cent.

Post Office Savings Bank.

The East Africa Protectorate Savings Bank, which has now been established for four years, meets with continued success.

The deposits during the year amounted to £46,595, as compared with £32,988 for 1912–13. The withdrawals totalled £32,143, as against £21,141 for the previous year. The net increase of deposits for the year was thus £14,452.

On the 31st of March, 1914, there were 2,926 active accounts, representing an increase of 42 per cent. during the year. The total amount standing to the credit of depositors on the 31st of March, 1914, was £48,319, as compared with £32;975 on the 31st of March, 1913, an increase of 47 per cent.

Telegraphs.

During the past financial year 239,454 telegrams and cablegrams were dealt with in the combined Protectorates, as compared with 199,900 in 1912–13, an increase of nearly 20 per cent.

The telegraph traffic to and from countries overseas amounted to 44,401 messages in the case of East Africa, and 3,515 for and from Uganda, or 47,916 in all. Of this number 12,077 were sent at "deferred" rates.

Telephones.

The development of the telephone system is shown by the following table :—

Year.	Exchange Connection(including extensions).	
	Official.	Private.
1911–12	152	93
1912–13	178	139
1913–14	188	243

During the past year the number of private connections to the Nairobi Telephone Exchange has more than doubled, and the increase would have been greater but for delays in the delivery of new material.

There are now telephone exchanges at Nairobi, Mombasa, and Kisumu, in East Africa, and at Entebbe, Kampala, and Jinja, in Uganda. The total number of exchange calls registered in East Africa was 555,921, as against 389,867 for 1912–13. In Uganda the calls registered for 1913–14 numbered 139,628, as against 116,081 for the previous year.

The East Africa telephone system now extends to 757 miles of wire, with 524 telephones installed. Of the latter 398 are at Nairobi and 77 at Mombasa. The capital cost of the telephone system is approximately £5,596.

Staff.

The staff, excluding Africans and Asiatic postmen, numbered 201. There were, in addition, 10 European sub-postmasters (storekeepers), 23 African clerks, 10 Asiatic postmen, and about 433 Africans employed as postmen, messengers, linesmen, and mail runners, making a total staff of approximately 677.

Of a total of 81 European officers 31 were members of the female staff of accountants, telegraphists, and telephone operators.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A) JUDICIAL.

The total number of cases dealt with during the year by the High Court shows a considerable increase over last year.

The particulars of the cases as compared with the three previous years are as follows:—

	1910–11	1911–12	1912–13	1913–14
Original civil cases filed Mombasa	91	120	86	174
Original civil cases filed Nairobi	25	38	52	95
Original civil cases filed other District Registries	7	5	10	35
Original criminal cases	94	77	105	103
Magistrates' cases sent for confirmation ..	390	487	454	469
Magistrates' cases revised by High Court ..	35	44	28	40
Appeals, criminal ..	69	62	54	38
Appeals, civil ..	78	65	58	47
Probate and Administration causes	146	151	138	208
Insolvencies	4	14	7	9
Trust causes administered..	26	22	25	22
Totals ..	965	1,085	1,017	1,240

The scheduled liabilities of the insolvencies amounted to Rs.259,579, and the total value of the trust estates administered to Rs.64,850.

It will be seen that during the year the original work has practically doubled and the list included cases of considerable importance, more particularly the Masai, the Jibana, and the Memon cases, of which the last is now under appeal to the Privy Council.

The progressive decrease in appeals, both civil and criminal, to the High Court from subordinate courts is very noticeable and is an indication of the satisfactory manner in which cases have been dealt with in the subordinate courts. The civil appeals in fact represent only 65 per cent. of the total cases filed, and of those appeals 50 per cent. were dismissed. Of the criminal appeals over 63 per cent. were dismissed.

In last year's report there was occasion to note the increase in the volume of the civil work of the High Court up country, and more particularly at Nairobi, and the figures for the present year show that that increase is continuing in a marked degree; and whereas in former years a few days on circuit have sufficed to dispose of all the civil work at Nairobi, it now takes several months.

The work of the Town Magistrate's Court at Nairobi was very heavy during the year as is shown by the number of cases dealt with, both civil and criminal, as compared with previous years.

The civil list, however, includes cases for the recovery of non-native poll tax, which accounts for a portion of the increase in this court as in other Town Magistrates' Courts.

The following is a comparative table showing the work of the Court for the last three years:—

	Civil.	Criminal.	Insolvency.	Probate and Administration.
1913–14 ..	1,788	1,921	5	23
1912–13 ..	1,043	1,578	3	12
1911–12 ..	722	1,530	4	17

The total number of cases dealt with thus shows an increase of over 64 per cent. in the last two years.

The civil fees alone taken by the Town Magistrate amount to Rs.29,550, as compared with Rs.20,000 last year.

The work of the Town Magistrate's Court at Nakuru and Kisumu shows that there has been a slight decrease at the former place and a very considerable increase at the latter, due, no doubt, to the growing trade and size of Kisumu.

Mombasa.

There has been a considerable increase in the work done in the past year in the Town Magistrate's Court, Mombasa, both civil and criminal; the figures are as follows:—

	Civil.	Criminal.
1913–14	1,478	960
1912–13	700	706
1911–12	823	643

This court does not deal with insolvencies or probate and administration causes, which are all dealt with by the High Court.

Lamu.

The principal work of the court of the Town Magistrate, Lamu, continues to be the administration of native estates.

The other work of the court is small in volume, the figures being :—

		Civil.	Criminal.	Probate and Administration.
1913–14	..	188	98	113
1912–13	..	145	228	158

Eldoret.

This is the first year of the existence of this court and the cases dealt with are few in number ; they are as follows :—

		Civil.	Criminal.	Probate and Administration.
1913–14	..	73	191	—

General Civil Work.

An analysis of the general civil work of all the courts in the Protectorate shows an increase in every class of case dealt with, the total number of cases dealt with during the year being 7,207, as against 4,502 in the previous year, an increase of 2,705 or 60 per cent. Of this increase 1,952 is under the heading of cases under Rs.100, which includes all proceedings for the recovery of non-native poll tax, which accounts for a material portion of the increase.

On the other hand there has also been an increase of 60 per cent. in the cases between Rs.100 and Rs.1,000, and of 100 per cent. in the cases over Rs.1,000.

The number of persons brought before the magistrates during the year amounted to 13,100, or 1,185 more than in the previous year. This increase is considerable and is due to a variety of causes, viz., the extension of the administration of the country, the increase of native labour working for hire, the collection of native hut and poll tax, the growth of the principal townships and the consequent multiplication of municipal regulations. The increased number of convictions before the magistrates, viz., 1,163, is almost entirely accounted for under the heads of failure to pay native hut and poll tax, breaches of Township Regulations, breaches of Pass Regulations, and offences under the Masters and Servants Ordinance.

As regards more serious crime, there has been a gratifying decrease, Convictions by magistrates for offences against property are 1,193, or 15 per cent. less than last year and far the lowest record for the last five years.

Offences against the person show an increase of over 12 per cent., while stock theft shows the smallest number of convictions recorded, viz., 267, or a decrease of 3 per cent. over the previous year. The number of persons brought before the magistrates on this charge also shows a diminution of 12.

Convictions for homicide in the High Court are 102, as against 42 in the previous year; this apparently large increase is accounted for by the fact that over 50 persons were tried at one time in the Kiambu Native Tribunal case for being concerned in the burning of certain persons suspected of being witch doctors. Eliminating this case the figures otherwise show but a slight increase.

Thirty-three sentences of death were passed, of which 12 were commuted by the Governor.

The comparative figures of convictions for the last five years are appended:—

	1913–14	1912–13	1911–12	1910–11	1909–10
Europeans ..	260	151	83	77	76
Asiatics ..	709	501	454	328	463
Natives ..	9,113	8,418	6,547	6,698	6,839

This return shows material increases in each class, the most important being that of convictions of Europeans, which have increased by 73 per cent. The total is made up as follows:—

Offences against the person	22
Offences against property	7
Other offences..	231

During the year one special sessions of the Court of Appeal for Eastern Africa was held in addition to the two ordinary sessions.

As might be expected, having regard to the increased work done, the total Judicial revenue shows a very large increase over last year, the previous highest recorded. The respective figures for 1912–13 and for 1913–14 are Rs. 165,403 and Rs. 329,486.

This large increase is in the main due to increased fines and forfeitures, which amount to Rs.206,383, as against Rs.75,843 for the previous year. Heavy fines during the year have been imposed under the Stock and Produce Theft Ordinance, and for breaches of the Game and Diseases of Animals Ordinances.

(B) LEGAL.

The following are the principal Ordinances passed during the year:—

The Prevention of Cruelty to Animals Ordinance 1913 (*No.* 3 *of* 1913).—An Ordinance to make further and better provision for the prevention of cruelty to animals.

The Immigration Restriction Amendment Ordinance 1913 (*No.* 4 *of* 1913).—An Ordinance to amend the Immigration Restriction Ordinance 1906.

The Stock and Produce Theft Ordinance 1912 (*No.* 8 *of* 1913).—An Ordinance to make further and better provision for the prevention of the theft of stock and produce.

Public Health Ordinance 1913 (*No.* 10 *of* 1913).

The Wireless Telegraphy Ordinance 1913 (*No.* 12 *of* 1913).—An Ordinance to make further and better provision for the regulation of wireless telegraphy.

The Abuse of Opiates Prevention Ordinance 1913 (*No.* 14 *of* 1913).—An Ordinance to make provision for the suppression of the abuse of opium and certain other opiates.

The Patents and Designs Ordinance 1913 (*No.* 1 *of* 1914).—An Ordinance to make provision for the protection of inventions and designs.

Registration of Documents.

The past year has been one of great activity in the real estate market and the revenue of the Department has consequently increased very considerably. In the coast area many titles in which uncertainty hitherto existed have been cleared and clean certificates registered in the names of successful applicants.

The number of transactions dealt with during the year amounted to 4,822, as against 3,664 last year.

The centralization of all registration work in the Highlands is about to take place in Nairobi.

The total revenue derived from all sources amounted to Rs.122,582, as against Rs.87,089 for the previous year.

Administration of Estates.

During the year 160 fresh causes have been opened, showing an increase of 44 over the previous year. Of these 7 are treated as miscellaneous causes in which estates not exceeding Rs. 100 in value are dealt with without application being made to the court for an order to administer.

The causes opened are divided up as follows:—

European	21
Asiatic	34
Native	98

The percentage of native estates dealt with has compared favourably with the number dealt with in past years and shows a slight increase.

Rs.154,307 have been received and allocated to various estates and Rs.154,350 paid out.

During the year 217 causes have been dealt with and 147 finally disposed of.

Fifty-three lots of immovable property have been dealt with, realising Rs.55,000, and include property situated in the Provinces of Seyidie, Ukamba, Naivasha, and Nyanza.

Three minors' trust causes have been opened and at the present time 15 causes remain open.

The revenue collected during the year amounted to Rs.9,686, as against Rs.6,335 in 1912–13.

Trade Marks.

169 trade marks were registered during the year, as against 24 in 1913.

Inventions.

Fifteen inventions have been registered and a revenue of Rs.4,293 obtained.

Joint Stock Companies.

Twenty-nine new companies have been registered, an increase of six over the previous year. The total nominal capital of these amounted to £436,500.

There are now 96 companies on the register.

The total revenue from registration fees, stamp duty, and filing fees amounted to Rs.8,134.

(c) POLICE.

The total number of Asiatic and African recruits enlisted during the year was 486, as compared with 623 in 1912. 263 recruits were under training on the 1st January, 1913, the total number dealt with, therefore, during the year was 749.

The majority of recruits were drawn from the Kavirondo (Jaluo), Akamba, and Nandi tribes.

The training depôt has continued to serve a useful purpose. No less than 700 recruits were on the books of the depôt during the year and 347 were passed out to the various units for duty as trained constables.

A gymnasium was erected and the course of gymnastics through which every recruit was put did much to improve their physique.

The total number of punishments awarded departmentally and judicially decreased from 1,072 in 1912 to 978 in 1913.

The number of casualties was 340, as against 41[illegible] in 1912. Of these 17 died, 5 deserted, 37 were pronounced medically unfit, 50 were dismissed, 64 were discharged as unlikely to become efficient, and 163 became time-expired.

The decrease in the percentage of dismissals to strength, viz., 2·88 in 1913, as against 4·74 in 1912, was one of the most satisfactory features of the year.

The improvement in the health of the Asiatic and African police reported in last year's report was maintained. The decrease in the number of cases of venereal disease was specially marked. The health of European officers, non-commissioned officers, and constables was also good and very few cases of sickness were reported.

The total number of true cases reported during the year was 4,572, as against 4,614 in 1912. 5,667 persons were arrested or summoned and 5,528 brought before the courts for trial. Of these 4,252 were convicted. The total number of true cases of cognizable crime under the Indian Penal Code dealt with was 2,107, against 2,213 in 1912, a decrease of 106.

Property to the value of Rs.95,344 was reported to the police as lost and Rs.28,428 was recovered.

The total of 4,159 finger permit slips filed in the Bureau at the end of 1912 was increased by 1,231 during the year, of which number 1,050 were slips of criminals and 181 of discharged police.

The number of references to the Finger Permit Bureau for the antecedents of suspected persons was 1,110 and the number of identifications 174. Of the 1,110 slips sent for search, 586 were eventually convicted of offences.

The estimated cost of the Department for the year was £49,264, as against £47,431 for the previous year. The actual expenditure was £47,292 in 1913–14, whilst that for the year 1912–13 was £42,471. The difference between the estimated and actual expenditure was due mainly to the delay in recruiting the European police up to establishment and a shortage in the Asiatic and African ranks during the early months of the financial year.

(D) PRISONS.

A total number of 9,293 prisoners was admitted to the various prisons, as compared with 7,899 during the previous year.

Of these 9,293 prisoners 1,687 were long term convicts, 4,205 short term convicts, 3,351 were committed for safe custody while awaiting trial, etc., and 50 were debtors. Included in the total were 97 women and 94 juveniles.

The average prison population throughout the year was 1,639·87 as compared with 1,508 in 1912–13 and 1,345 in 1911–12. There is an increase of 1,054 in the number of convicted prisoners over last year, but this increase can scarcely be regarded as more than normal and is due both to the accumulation of long term convicts, the increased extent of territory brought under administration, and the better enforcement of the law.

Thirty-two boys were received into the Reformatory during the year. Nine were discharged, 3 escaped, and one died, leaving a population of 66 boys in that institution at the end of the year ; the management of which continues to be satisfactory.

The total expenditure of the Department during the year, exclusive of buildings, their maintenance and repair, or of medical attendance, amounted to £15,929 10s. 8d., as against £14,324 in 1912–13 and £13,121 in 1911–12, the cost per prisoner on the average population being £9 14s. 0d. as against £9 10s. 0d. in 1912–13 and £9 15s. 0d. in 1911–12.

Ninety-four prisoners died and 39 escaped during the year under review, as compared with 71 deaths and 58 escapes in 1912–13, and 103 deaths and 48 escapes in 1911–12.

The conduct of the staff has been good and so also has that of the prisoners.

The industrial sections of the prisons at Nairobi and Mombasa continue to do good work, but to a somewhat lesser extent than formerly, as manufactures are now strictly confined to the requirements of public departments and private orders are not accepted. Unskilled labour, as formerly, has been given free to other departments, such as the Uganda Railway, Board of Health, Public Works Department, thus materially reducing their expenditure.

In provincial and district prisons the prisoners have been employed, as in former years, in bush clearing, road making, tree planting, the cultivation of prison farms, and generally in keeping the station and its environments clean.

VIII.—CLIMATE AND HEALTH.

(A) PUBLIC HEALTH.

If it were not for the disastrous effects of the epidemic diseases which so seriously affected the Protectorate during the year, it could be said that a better standard of health was maintained than has yet been recorded. The grand total of those who presented themselves for treatment was 108,520, as against 93,408 in 1912.

The predominating diseases, affecting all zones in almost equal proportions, were diseases of the digestive, respiratory and locomotory organs, and affections of the skin. Of the more preventable diseases malaria easily comes first, very few parts of the country escaping this infection. Dysentery also is generally prevalent. Anti-typhoid inoculation has been inaugurated.

1. *The Coast Zone.*

Communicable Diseases.—The number of cases of malaria treated was less than in 1912, the decrease being to a great extent due to the spread of knowledge and an extended use of quinine. There were 11 cases of blackwater fever, and one case of trypanosomiasis, the subject being a derelict native brought in by the police of whom no history could be obtained.

There is a large field for research in the study of elephantiasis, as cases are common, though rarely presenting themselves for treatment.

Infectious or Epidemic Diseases.—The 27 cases of plague, with a mortality of 59·25 per cent., recorded last year increased to 208, with a death-rate of 88·46 per cent., the vast majority of cases occurring in Mombasa. Largely owing to the vigorous measures instituted by Professor Simpson, there have been no reported cases since December 7th. The cooler months of the year produced the greatest incidence. The type was largely bubonic, with a serious proportion of pneumonic cases.

Smallpox occurred at infrequent intervals.

The number of cases of dysentery increased considerably, the chief sufferers being imported labourers from Kikiyu and Kavirondo.

There were 28 cases of beri-beri, the patients being all from up country.

There were four cases of enteric, all Europeans, none of which proved fatal.

There were sporadic cases of cerebro-spinal meningitis.

General European Population.—The improvement in general conditions of health was satisfactorily maintained. Malaria was the principal cause of sickness.

2. *The Mountainous Area.*

The general tenor of reports from various districts was that the health of Europeans and natives was more satisfactory than last year.

Communicable Diseases.—There was an appreciable decrease in the number of cases of malaria. The type was largely sub-tertian.

There were three cases of blackwater fever, one of which proved fatal.

Infectious or Epidemic Diseases.—There were 25 cases of plague at Nairobi, with 19 deaths, and 31 cases at Kisumu, with a mortality of 87 per cent.

Sixty-three cases of smallpox were recorded, of which 12 were fatal.

A severe outbreak of dysentery occurred in January amongst the labourers employed on the construction of the Eldoret–Londiani road. The total number of cases throughout the zone was 777, as against 612 in 1912.

There were 21 cases of enteric, one of which proved fatal.

Cerebro-Spinal Meningitis.—The number of cases reported was 288, with 152 deaths. The rains were early and prolonged, and it was during these cooler months that the epidemic was more apparent. Of the total admissions 9 were Europeans, with 2 deaths.

General European Population.—The most noticeable feature during the year was the large number of children's diseases, chiefly cases of intestinal trouble. The estimated population was 4,596, the number of births being 84 and deaths 46, the ratio being 18·3 and 10·0 per 1,000 respectively.

3. *The Kenya and Nyanza Provinces.*

During the wetter and colder months rheumatic affections prevailed very largely in the neighbourhood of Mount Kenya.

Communicable Diseases.—3,627 cases of malaria were recorded, as against 3,134 in 1912. Some of the native chiefs in the Kenya Province have taken to sleeping under mosquito nets.

One case of blackwater fever was reported.

One imported case of sleeping sickness was discovered at Kisii, 30 or 40 miles from the Lake shore, but notifications of the occurrence of this disease are yearly getting rarer.

Infectious or Epidemic Diseases.—The epidemic of cerebro-spinal meningitis which broke out in May was the most disastrous experienced in the Kenya Province since the advent of European occupation. So severe was it that at one time it threatened to paralyze the interior economy of the province. It is quite impossible to estimate the number of cases, but it is probable that the normal sick-rate among the native population was more than doubled. The death-rate is estimated at from 3 to 10 per cent. above the normal. The infection did not reach the Nyanza Province till the latter part of the year.

Thirty-one cases of plague occurred at Kisumu, with a mortality of 87 per cent.

For the first time on record no cases of smallpox were reported in the Nyanza Province. Desultory cases were met with in the Kenya Province.

The incidence of dysentery was normal.

There were 15 cases of enteric, with 3 deaths.

General European Population.—The general standard of health has been good. No deaths were recorded. It is estimated that the population is 568.

4. *The Desert Zone.*

There were several cases of conjunctivitis and corneal ulcers, probably due to glare, sand, and flies.

Communicable Diseases.—The predominating cause of sickness was malaria, 445 cases being notified in Kismayu alone.

Dysentery was common in Jubaland, owing to the dependence of the population on the muddy waters of the Juba River and polluted wells.

Infectious or Epidemic Diseases.—No cases of smallpox or enteric were recorded.

There were two cases of beri-beri at Yonte and cerebro-spinal meningitis appeared in two instances.

General European Population.—The general standard of health of Europeans in these regions has always been good, and this year was no exception; only one case of malaria was recorded.

Comparative table showing the average daily number of officials on the sick list :—

	1912.	1913.
The Coast Zone	2·09	2·18
The Mountainous Area	5·61	7·04
The Nyanza and Kenya Provinces	1·60	1·68

(B) SANITATION.

The Sanitation Division was created on the 1st of April, 1913, under a Chief Sanitation Officer.

In June Professor W. J. Simpson, C.M.G., Professor of Hygiene at King's College, London, arrived to enquire into the sanitary conditions of the Protectorate. His report was not received during the year under review.

The following legislation dealing with medical matters was passed during the year :—

" The Leprosy Ordinance 1913," making provision for the isolation and detention of persons affected with leprosy.

" The Public Health Ordinance 1913," giving powers to the Sanitary Board to regulate the division, etc., of any lands for building purposes outside a township within five miles radius.

" The Immigration Restriction Amendment Ordinance 1913."

" The Vaccination Amendment (No. 2) Ordinance 1913."

Rules under " The Infectious Diseases Ordinance 1903," conferring powers to enter, search, disinfect, etc., etc.

The Building Rules, Nairobi, 1913.

A General Public Health Act is in course of preparation.

1. *Preventive Measures.*

Malaria.—Energetic measures are being carried out against mosquitos by gangs maintained at Mombasa, Nairobi, and Kisumu, and there is a distinct decrease in the number of cases in districts where a general knowledge of the causes of this disease is being acquired. All medical stations have been circularized and their attention invited to the necessity for still further operations.

Trypanosomiasis.—Six cases were treated during the year, of whom three died. No special measures are employed to limit or control the disease in Kavirondo, and it is gradually disappearing.

Epidemic Diseases.—The Protectorate suffered from serious epidemics of cerebro-spinal meningitis and plague. It is quite impossible to estimate the number of cases of the former disease, but the outbreak was the most serious that has ever occurred in the Protectorate. Its greatest ravages were experienced among the Kikuyu tribes, whence later it spread to the Kavirondo districts. The actual number of cases recorded was 1,128, but this figure in no way represents the actual mortality.

The total number of cases of plague reported during the year was 272, of whom 236 died. 208 cases occurred at Mombasa, 25 at Nairobi and 31 at Kisumu. The types observed were : bubonic, 154 ; septicæmic, 9 ; pneumonic, 45.

The number of rats caught in these three townships was : Mombasa, 1,656 ; Nairobi, 2,882 ; Kisumu, 10,183.

The measures adopted to suppress the outbreak at Mombasa were house to house visitation, fumigation, segregation, inspection of travellers, and inoculation with Haffkine's prophylactic in 48,478 instances. Similar steps were taken in other parts of the Protectorate.

Smallpox.—The number of cases reported was 166, of which 30 proved fatal.

The following table shows the number of cases for the last three years, and the number of vaccinations performed :—

	1913.	1912.	1911.
Cases of smallpox ..	166	323	159
Vaccinations	131,757	79,252	15,167

The lymph used was prepared at the Government laboratory and the quantity issued was 376,202 doses.

Dysentery.—The number of cases was considerable and the disease appears throughout the Protectorate. It appears that the bacillary type is accountable for the majority of cases.

Enteric.—Eight cases were reported in Mombasa, 15 in Nairobi, and 10 in other localities. Arrangements for preventive inoculation are being made.

2. *General Measures.*

Sewage Disposal.—No water-borne sewage scheme has yet been installed, but in a few isolated cases septic tanks have been added to residences. The single bucket system is in vogue generally. The contents of the buckets are thrown into the sea at Mombasa, and buried in trenches at Nairobi, Kisumu, and other towns.

Disposal of Refuse.—The removal of house refuse and general scavenging is undertaken in Nairobi by the Municipal Committee, and in Mombasa, Nakuru, Kisumu, and some of the smaller townships by the Administration. Effective legislation is, however, needed in order that the authorities may be enabled to carry out their duties in a satisfactory manner and the Public Health Act, which it is hoped to enact in a short time, will be of great assistance.

Water Supply.—It must now be accepted that all African rivers are more or less polluted, and general filtration, etc., is most necessary before water can be considered fit to drink. The Mombasa service will not be completed for some time. Similar services are being taken in hand for Nakuru and Kisumu.

Drainage.—Except in Nairobi, where the Bransby-Williams scheme is now well in hand, no township possesses a drainage scheme of a kind that can be regarded as satisfactory. At Mombasa and in the scattered residential districts the need is not acute, owing to the absorbent nature of the soil, but in the more densely populated areas the question is of great importance. A large amount of the work performed by the anti-mosquito gangs is caused by the absence of adequate provision for the removal of waste water.

Bush Clearing.—Considerable work has been done during the year, not only in bush cutting, but also in digging out roots. The alterations in the general appearance of certain areas in Mombasa, Nairobi, and Kisumu are very much for the better. The southern part of Mombasa is now clear of bush. The acreage cleared at Nairobi is 1,229 acres, the work being done by a gang of between 20 and 40 convicts.

At Kisumu an area of nearly 4 square miles has been cleared and stumped.

(c) GOVERNMENT INSTITUTIONS.

(1) *European Hospitals.*

Table showing admissions and death-rate of patients in the European hospitals at Nairobi and Mombasa :—

	1911.	1912.	1913.
Total number of admissions ..	230	276	347
Total number of deaths ..	14	11	14
Percentage of deaths to admissions	6·09	3·99	4·03
Average number of beds daily occupied	8	11·05	16

Of the admissions 194 were officials and 153 non-officials, giving a percentage of 56 for the former and 44 for the latter.

The principal diseases treated were :—

Malaria.—101 cases, 39 of which were officials, the admission rate being 40·52 per cent., as against 33·33 per cent. last year. There were three deaths. The bulk of the cases came from Mombasa, the type being mostly sub-tertian.

Blackwater Fever.—Four cases were admitted, two being fatal.

Enteric.—Eighteen cases were treated during the year, as against 23 in 1912–13. One case proved fatal. The character of the disease was much the same as previously recorded. The bulk of the cases came from Nairobi.

Dysentery.—Seven cases only were admitted, as against 13 in 1912 and 10 in 1911. Two cases were amœbic, one was bacillary in origin, and the rest undetermined.

Cerebro-Spinal Meningitis.—During the epidemic seven cases were admitted to Nairobi Hospital. There was one death.

Operations.—Thirty-two major operations were performed, all, with the exception of two, at Nairobi. These included operations for appendicitis, resection of rib for empyæma, abscesses of neck, knee, and liver, perforation of typhoid ulcer, drainage of gall-bladder, hæmorrhoids, ovariotomy, polypus recti, etc., etc. All, except one, were successful and the patients discharged cured.

(2) *Civil Hospitals and Dispensaries.*

There are 41 native hospitals and dispensaries in the Protectorate.

The following summary shows the cases treated :—

	1911.		1912.		1913.	
	In.	Out.	In.	Out.	In.	Out.
Admissions ..	5,548	80,262	15,233	77,837	11,012	95,778
Deaths ..	592		522		764	
Death-rate per 1,000 ..	106·70		34·26		69·37	

Lunatic Asylum.—Sixty-eight cases were under treatment during the year, as compared with 72 in 1912–13. Five cases were Europeans. The number of deaths was 16.

As far as can be ascertained, the main causes of admission were due to syphilis, congenital or acquired, and alcoholism. In one instance the insanity was caused by malarial infection, which rapidly yielded to appropriate treatment. The mortality rate, though less than last year, is still very high. The majority of patients are in advanced stage on arrival and are prone to succumb very easily.

Gaols.—The two main convict establishments are at Mombasa and Nairobi, attached to the latter being a field prison boma at Ndarugu, on the Fort Hall Road. The daily average lock-up was: Nairobi, 447; Ndarugu, 300; Mombasa, 245. The general health of the prisoners was on the whole good.

Bacteriological Laboratory.—5,581 examinations were performed, including:—

Blood	1,420
Malaria	191
Cerebro-spinal meningitis,	
positive	147
negative	62
Plague,	
Human, positive	29
Human, negative	25
Rats, positive	34
Rats, negative	3,084
Rats, decomposed	16
Urines	163
Veterinary	64

The output of glycerinated vaccine lymph was 370,802 doses.

IX.—NATIVE ADMINISTRATION.

(A) HIGHLANDS AND NYANZA BASIN PROVINCES.

(1) *Nyanza Province.*

The Nyanza Province consists of the Kisumu, North and South Kavirondo, Nandi, and Lumbwa Districts.

The revised estimated native population based on the count of huts is 1,100,000. The total non-native population of the province is 2,527, including 378 Europeans.

The number of huts assessed came to 328,636, as compared with 313,761 in 1912–13.

Revenue.—The total revenue collected during the year amounted to Rs.1,162,637, or £77,509, of which the following amounts represent hut tax :—

	1913–14.	1912–13.
Kisumu	270,939	265,680
North Kavirondo	383,565	355,917
Nandi	36,054	33,501
Lumbwa	58,578	55,953
South Kavirondo	250,965	238,224
	Rs.1,000,101	Rs.949,275

The increase in hut tax was most satisfactory ; non-native poll tax realized Rs.29,433, as against Rs.19,690 for the previous year.

Native Affairs.—The native authorities generally in the Kavirondo districts have performed their duties efficiently. In the Lumbwa District it was necessary to remove the Lumbwa Laibon, as his conduct had been very unsatisfactory. It is hoped that this action will have a very beneficial effect upon the district.

There has been a certain amount of the customary migratory movement both ways over the Anglo-German boundary. The relations with the Imperial German officials continued to be most satisfactory during the year.

Trade.—Trade in imported goods has been exceedingly good throughout the year and there is every evidence that the future prospects are very promising.

The natives in all the Kavirondo districts are becoming large consumers of various kinds of imported goods.

The native produce trade is growing gradually in importance.

18,023 tons of produce were railed from the Province during the year, being an increase of 224 tons over last year.

Large areas of coffee have been planted by European settlers. A flax industry has been promoted in Lumbwa District. The Lumbwa creamery is conducting a thriving business with butter and cheese.

Labour.—28,496 labourers were registered for work in and out of the province during the year. This shows a very satisfactory increase of nearly 57 per cent. over the figures of last year.

(2) *Naivasha Province.*

The Naivasha Province is divided into the following districts :—

Naivasha (with sub-district, Nakuru) ;
Ravine (with sub-district, Maraquet) ;
Baringo, Turkana and Uasin Gishu (with sub-district, Elgeyo).

The European population is 1,521 and the native population approximately 132,129.

Revenue.—The total revenue collected amounted to Rs.190,634, which was an increase of Rs.62,365 over last year. The amount of hut tax collected was Rs.84,573, as compared with Rs.48,044 in 1912–13.

Trade.—In Nakuru District some 7,000 acres of crops of various kinds were planted, including maize, wheat, oats, barley, peas, potatoes, linseed and flax. Considerable areas of coffee have been planted and done well.

Great improvements in the grading of stock have been noticeable during the year.

Sheep have not done quite so well as cattle.

Natives have suffered largely from cattle diseases, both rinderpest and East Coast fever.

Native Affairs.—Owing to the frequency of stock thefts it was considered advisable to send a patrol of King's African Rifles to administer a fine under the Collective Punishments Ordinance. This was carried out without difficulty.

In Maraquet Sub-district the attitude of certain sections of the tribe rendered it necessary to patrol the district and this was accomplished without difficulty.

The headquarters of the Turkana District were removed from Ngabotok to Maerich and the present site is much more suitable from an administrative point of view.

Considerable progress has been made during the year on the Uasin Gishu plateau.

The Elgeyo tribe was attached for purposes of administration to the Uasin Gishu District and a census taken showed a population of between 16,000 and 17,000 persons. The Elgeyo country has been opened to trade, which consists generally in goats, sheep, and skins.

Labour.—Labour has been fairly plentiful during the year.

(3) *Masai Reserve.*

The Reserve has been divided into two districts, having headquarters respectively at Ngong and Narok River, the latter station being the headquarters of the Reserve. Engirende (Mara River) has been made a sub-station.

It is estimated that there are between 30,000 and 34,000 Masai in the reserve.

Revenue.—The total revenue amounted to Rs.37,647, of which Rs.21,525 was collected as hut and poll tax.

Trade.—Cattle, sheep, and skins are the only articles which the Masai have to offer for sale.

There has been a very brisk trade in sheep during the year, mostly with the Kikuyu.

Trade with the Masai is carried on almost entirely by barter. Native flour, tobacco, sugar, honey, swords, cooking pots, knives, axes, blankets, cloth, and umbrellas are the principal articles dealt in.

Native Affairs.—The removal of the Masai from Laikipia was completed towards the end of April, 1913. The move resulted in the transference of some 7,000 Masai with about 200,000 head of cattle and 600,000 sheep to the new Reserve. Although somewhat strange to their new surroundings at first, the Masai now have begun to settle down contentedly. The administration of the Reserve is being actively undertaken, but progress must necessarily be slow for some time.

Labour.—There are a fair number of young men and boys employed by European farmers as herdsmen and they are able to obtain good wages for this class of work.

(4) *Kenya Province.*

The province comprises four districts, viz., Nyeri, Fort Hall, Embu, and Meru.

The European population is 178 and the native population about 840,500.

Revenue.—The total revenue amounted to Rs.836,268, as against Rs.757,440 for the previous year.

The amount of hut tax collected was Rs.786,729, as compared with Rs.733,654 in 1912–13.

Trade.—A number of trade centres have been opened in the province and are doing well, particularly the one at Meru.

There appears to be a growing demand among the natives for blankets, cotton goods, and agricultural implements.

Nyeri is the chief centre for trade in live stock, more especially sheep and goats. There is a large trade in grain, fowls, and eggs, principally from Fort Hall District.

Native Affairs.—During the year the divisions of Chuka and Mwimbe in the Embu District were formed into a sub-district known as Chuka.

The natives throughout the province have been peaceful and a marked advance in their social condition has been noticeable. There has been a large increase in the money wealth of the native community, earned partly by manual labour and partly by selling produce.

Labour.—Over 25,000 natives went out to work on their own initiative and about 72,000 were recruited for work inside and outside the province.

(5) *Ukamba Province.*

The Ukamba Province comprises the Nairobi, Kikuyu, Machakos, and Kitui Districts.

The total white population of the province is estimated at 2,712 and the native population at approximately 350,000.

Revenue.—The total revenue collected during the year amounted to Rs.621,919, as against Rs.601,945 in 1912–13.

Rs.391,362 was collected in hut tax.

Trade.—Business generally in Nairobi has been satisfactory during the year. Motor garages have increased in number and appear to be thriving. A number of good stone buildings have been erected and others are in course of construction. The rise in the wages of domestic servants and labourers has been very noticeable and living expenses have increased.

Trade in the Indian bazaar has shown a steady increase over last year, especially due to more money being spent by natives. Reports from the districts in the province show that trade generally has been satisfactory.

Native Affairs.—There is very little to report under this head and the administration of the various districts has been progressing without any untoward event. The Native Councils have worked satisfactorily.

Townships.

Nairobi.—The report of the Sanitary Commission was completed on December 30th and their recommendations are under consideration.

The most important work of the year has been the construction of stockyards, which were very much needed.

In March it was necessary to close the Jeevanjee Market owing to the discovery of plague-infected rats in the building.

New roads have been laid out in the township and work has progressed in connection with the new drainage scheme.

Labour.—The supply of casual labour in the Kikuyu districts of the province has decreased somewhat during the year, but as a general rule farmers have been able to get as much labour as they require.

(B) COAST PROVINCES.

(1) *Seyidie Province.*

The Seyidie Province is divided into the following districts :—

Mombasa (sub-district, Rabai).
Malindi (sub-districts, Giriama Reserve and Takaungu).
Teita (sub-district, Taveta).
Vanga.

The European population of the Province is 446 and the native population approximately 189,930.

Revenue.—The total amount of revenue collected in 1913–14 was Rs.337,563 as against Rs.279,660 in 1912–13.

Trade.—Unusually good rains fell during the early part of the year and the grain, bean, and fruit crops were exceptionally good.

In the Rabai Sub-district the sale of coconuts has increased. Experiments in the growing of tobacco have been made with good results. Rubber has not done well and a number of estates have closed down.

A commission was appointed at the beginning of the year to draw up a scheme for regulating and protecting the copra industry.

Cultivation of cotton in the Malindi District is gaining ground with the Swahilis and 30 tons were exported during the year.

On the Powysland plantation, in the Takaungu Sub-district, the output of decorticated sisal has risen very considerably.

Harvests have been satisfactory in the Teita District. The staple crop is maize, but large quantities of beans, bananas, sugar-cane, millet, and sweet potatoes are grown.

There has been a decrease in the output of mangrove bark from the Vanga District. Native crops were good and rice did exceptionally well.

The Gazi Rubber and Fibre Estates have abandoned their rubber plantations for the time being and are planting coconuts.

Vanilla is being planted at Diani, on the River Mwamchema.

Native Affairs.—Native Councils in the Mombasa District have worked well. The boundary of the Wadigo Reserve has been defined and accepted by the tribe. Numerous sales of waste land claimed by Government and tribal lands have taken place during the year.

There has been a great decrease in the native liquor traffic owing to the heavy reduction in liquor licences.

In Rabai Sub-district a form of local government through the Assembly of Elders has been established, thereby materially assisting the work of administration.

The Wa Giriama have caused some trouble, but efforts are being made to effect their closer administration.

The Arabs of the Malindi District are in poor circumstances, owing mainly to the abolition of slavery, but partly to their own apathy.

The principal feature of the year in the Teita District has been the development of the native tribunals, which promises to make the administration of the district more effective.

The process of the tructreconsion of the Native Councils in the Vanga District has been slow, as the population is so scattered.

The Wadigo locations have been coalesced into three main groups, but the original distributions of the branches of the tribe have been followed as far as possible.

(2) *Tanaland Province.*

The Tanaland Province consists of the districts of Lamu, Tana River, and the Sultanate of Witu.

The total population of the province is approximately 44,576 and includes 30 Europeans.

Revenue.—The revenue amounted to Rs.289,736, as against Rs.238,521 collected in 1912–13. The amount of hut tax collected was Rs.46,626.

Trade.—The East Africa Cotton Company suffered seriously from floods and many rubber trees were destroyed. The company is now planting up a large area with coconuts and sisal.

Messrs. MacDonell's timber concession on the Tana River is being worked and several hundred logs have been floated down.

The Witu Rubber Estates continue to plant Ceara and coconuts. The yield of rubber is good. The native crops of rice, maize, and millet have been good.

Native Affairs.—The Somalis on the Tana River have given a good deal of trouble and the Wapokomo have suffered at their hands. Intertribal fighting has taken place between the Mohamed Zubeir and the Abd Wak at intervals during the year.

The Pokomo and Wa-Galla tribes have given no trouble and their taxes have been collected without difficulty.

(3) *Jubaland Province.*

The Jubaland Province comprises :—

(1) The district of Kismayu with sub-district of Gobwen.
(2) The district of Gosha.
(3) The district of Serenli.

The European population amounts to 69.

Revenue.—The revenue amounted to Rs.101,179, as against Rs.98,849 for 1912-13. Rs.13,386 was collected in hut tax.

Native Affairs.—Active operations were instituted against the Merehan tribe in December, 1913, and at the close of the year hostilities were still proceeding. It is hoped that when these have been concluded it will be possible to effect a much closer administration of the tribe.

Intertribal warfare between the Abd Wak and the Mohamed Zubeir has taken place at intervals during the year.

Measures are contemplated for the more efficient control of the nomadic Somali tribes who inhabit and roam over considerable areas in Jubaland. The question also of the considerable immigration of Somalis that is taking place from the north is also engaging attention.

Trade.—Grain, hides, ghee, and cattle form the main exports. The cattle trade was somewhat hindered owing to the Merehan operations.

(c) NORTHERN FRONTIER DISTRICT.

The following stations comprise the Northern Frontier District :—
Moyale, Wajheir, Garre, and Samburu.

In the Samburu District there is a military outpost at Kulal.

The Government station at Marsabit has now been moved to Archer's Post, on the Uaso Nyiro River.

There is no station in the Garre District—a touring officer has carried on the work there.

Revenue.—The total amount of revenue collected during the year 1913-14 amounted to Rs.14,495, of which Rs.10,596 was received as hut and poll tax.

Trade.—Trade with the Boran and Somalis has been good. The Abyssinian cattle trade was interfered with by outbreaks of disease. The trade route via the Uaso Nyiro to Lorian and thence to Wajheir was used to an increasing extent during the year. The main route from Moyale is now via Wajheir instead of via Marsabit.

Native Affairs.—Native affairs have been on the whole satisfactory, but Captain Aylmer, the touring officer in the Garre country, was attacked by a party of Abyssinian raiders and killed. This unfortunate incident has retarded the administration of the Garre country.

The Turkana raided the Samburu in December, 1913, and inflicted heavy casualties.

Transport.—Special attention has been paid to the provision of suitable transport in the Northern Frontier District as the efficiency of the administration largely depends on this. Animal transport is very uncertain and a trial has been made with mechanical traction, which it is hoped will prove a success.

(D) SLAVERY.

Seventy claims for compensation were investigated during the year, as against 719 in the previous year. This enormous decrease can be attributed to the fact that, although some 1,000 cases are still on paper pending settlement, comparatively few of them are genuine claims.

The amount of compensation paid during the year amounts to Rs.10,697 and maintenance to decrepit and aged slaves to Rs.4,890. The average rate per head paid in compensation was £6 9s. 8d.

X.—EDUCATION AND MISSIONS.

(A) EDUCATION.

For various causes the development of education during the past year has been small. These causes include the closing of schools through illness, resignation of teachers, and unavoidable delays in the completion of buildings.

European Schools.

(1) *Nairobi Division "A" School.*—Owing to the epidemic of cerebro-spinal meningitis it was considered advisable to close the school in May. Day scholars returned in August, but the boarding house was not reopened till January. The annual examination by the College of Preceptors, London, was cancelled in consequence.

The average enrolment was,	boys, 90 ;	girls, 60.
The average attendance was,	boys, 85 ;	girls, 55.
The number of boarders was,	boys, 28 ;	girls, 22.

The net cost of upkeep was £2,040.

A revised syllabus of work was published in October, based on the results of the head-master's tour of the principal schools under the Boards of Education in England and Switzerland, and certain schools in France and Germany. It has been drawn up to meet the requirements of children who are likely to make the Protectorate their permanent home, and particular stress is laid upon such subjects as elementary science, geography, and hygiene. Provision has also been made for instruction in handicrafts, such as woodwork for boys and cooking, laundry work, nursing, and house management for girls.

(2) *Nakuru Division "A" School.*—The present attendance is 25, or 5 less than last year. The inspection held in December showed that satisfactory work is being done.

The cost of upkeep is about £260, against which must be set a revenue of about £50.

(3) *Uasin Gishu.*—The three farm schools established last year were inspected in November and found to be generally satisfactory.

The completion of the central school at Eldoret has been delayed.

Indian Schools.

The school at Nairobi contains some 150 Indian children. The curriculum is being remodelled on lines similar to those of Indian Government Departments. The teaching is on the whole satisfactory. The school was closed for a short period owing to the outbreak of cerebro-spinal meningitis.

At Mombasa a school was opened in August and the numbers of children immediately admitted exceeded both the accommodation and the capabilities of the staff. The progress made is gradually improving.

Native Education.

It is hoped that the Arab school at Mombasa will eventually prove a success. Its progress must, owing to the inherent indolence of the Arab, necessarily be slow, but the Assistant Liwali of Mombasa is giving his support, and an attempt is on foot to make the school the centre of education for all Arab communities along the coast.

The training of industrial apprentices by the Missionary Societies is proving a success. A similar experiment has been undertaken by the Public Works Department with very good results.

(B) MISSIONARY SOCIETIES.

The Missionary Societies continue to progress steadily. The number of natives who are able to read and write is increasing considerably.

No new societies have been founded during the year.

Industrial education is being persevered with.

XI.—LANDS AND SURVEYS.

(A) LANDS.

The number of land grants made during the year is 447, comprising 572,159 acres. Of these grants 199 represents farms, the balance of 248 representing business and residential plots with a total area of 297 acres only. These figures show a large increase over those of last year, *i.e.*, 104 farms and 233 plots, but it must be remembered that in 1912–13 no auctions were held, pending a decision as to the future method of alienation.

On December 31st, 1913, the number of pending applications was 206, compared with 279 at the same date in 1912. Of these, 94 cases had practically reached the final stages.

Two sales of farms were held and the prices realized were high. It has now been decided that payments may be spread over nine years in ten equal instalments, and this system, while greatly assisting the purchaser, will no doubt largely increase the prices fetched. A large number of business and residential plots in Nairobi and other parts of the country were sold at high prices.

A noticeable feature has been the great increase in private sales and sub-divisions, both of farms and urban properties. As, except in the case of freehold properties, such plans have to be checked and passed by the Survey Department, this unexpected increase in work has had the effect of again increasing arrears.

Revenue.—The total revenue from rents was £20,487 and for land sales £26,086, as compared with £16,947 for rents and £4,779 for sales in 1912–13.

Expenditure.—The expenditure was £7,354.

Coast Land Settlement.—The total revenue amounts to Rs.11,474 as compared with Rs.12,422 in 1912–13. The decrease is due to the delay experienced in issuing deed plans.

The total expenditure was Rs.132,186 as compared with Rs.103,090 in 1912–13.

The total number of estates dealt with by the Arbitration Board at Malindi was 228, aggregating over 12,000 acres.

The Msabaha block of the Mazrui Reserve was also defined.

The work south of the Sabaki River has been completed.

At Mombasa 263 properties were dealt with by the Board.

At Kipini over 700 applications were received and 112 dealt with between November and the end of the year.

324 " shambas " were surveyed, aggregating 28,700 acres.

The total number of applications dealt with by the Land Registration Court was 762, as against 234 in 1912–13.

This satisfactory increase is accounted for by the quick preparation of rough sketch plans under the revised scheme of demarcation.

At Mombasa 314 applications were dealt with, and at Malindi 383. 143 certificates of title were issued during the year. 128 deed plans for attachment to certificates of title were received from the Survey Department. There are now 539 deed plans due on judgments passed in the Land Registration Court.

There now remain 1,905 applications undealt with on Mombasa Island, 576 of which are for certificates of interest or mortgage.

The Coast Land Titles Board and the Arbitration Boards have held regular meetings throughout the year.

The Land Titles Ordinance 1908 and its amending Ordinances were applied to part of the Tana River District on the 15th of May, 1913, and to the remaining part of the district lying within the ten-mile zone on November 15th, 1913.

The demarcation of the Digo Reserve, south of Mombasa, has been taken in hand preparatory to applying the Ordinance south of Mombasa.

(B) SURVEYS.

The total area covered by major triangulation during the year amounted to 7,823 square miles. The western half of the North Kavirondo District was completed, while other work was done in the North Kenya District. A reconnaissance and beaconing of the coast work from Malindi to the Tana River was carried out, and a base measured on the Tana River. This base (10,353 feet) was measured along a flat, straight road in the East Africa Syndicate plantation Three measurements were made and gave a probable error of $\frac{1}{108,000}$. The base extensions were good, and triangulation was carried over the adjacent country and connected to the main trigonometrical control north of Malindi.

A reconnaissance, beaconing, and observing of the triangulation from Kisumu to the Rift Valley was carried out and the work connected to the Anglo-German boundary triangulation at six points.

The average triangular error for major work this year is 2·16 seconds, a distinct improvement on last year.

A considerable amount of topographical work has been performed and the results are most satisfactory.

The maps are good and reliable and a rapid rate of progress has been maintained. The average rate of work on scale 1–125,000 has been 6·6 square miles per day.

The output of cadastral surveys has exceeded that of any previous year. Licensed surveyors have been largely employed on the survey of large blocks of land for alienation. The cost per acre is 6·06 pence, compared with 4·51 pence last year. The increase is accounted for by the fact that a more extensive and rigorous field check is being insisted on.

The "arrears" of survey on April 1st, 1913, were 1,790,608 acres. These arrears were reduced by October to 982,610. In November instructions were issued for the survey of farms on Laikipia and North Kenya, and the arrears thus increased to 2,550,448 acres. At the close of the year they stood at 2,456,475 acres.

The development of the country has increased the demand for township and sub-divisional surveys.

The actual number of surveyed farms which have not yet been taken up is 555.

Coast lands surveys are making steady progress. On Mombasa Island all the "shambas" have been demarcated and are being finally surveyed.

The Malindi surveys have continued without interruption. The survey of the Mazrui Reserves has been completed.

The expenditure has been about £33,000, compared with £29,000 last year. The revenue is approximately £5,000.

XII.—GAME.

During the past year there has been a decrease in the number of game licences issued last year, as will be seen from the following comparative table:—

	1911–12.	1912–13.	1913–14.
Sportsman's Licence ..	83	96	74
Resident's Licence ..	154	230	189
Resident's 14 Days ..	108	87	190
Landholder's Licence ..	173	216	215
Special Elephant Licence	83	85	55
Special Giraffe Licence ..	16	26	28
Traveller's Licence ..	356	440	423
Totals ..	973	1,180	1,174

This has, of course, produced a corresponding decrease in the revenue derived from licences.

Revenue and Expenditure.

	1912–13.	1913–14.
Revenue	£9,560	£8,529
Expenditure	£3,490	£3,683

Though the actual number of licences taken out shows only a decrease of 6, there is a decrease of 22 in the sportsman's licences.

There is an increase in the number of 14 day resident's licences, and corresponding decrease in the number of full £10 licences.

There is only a small decrease in travellers' licences.

Special elephant licences have decreased by 30. This may probably be attributed to two causes—to fewer visiting sportsmen and to the fact that the local elephant hunter is beginning to find out that at the present day the sport is not a commercial proposition. This decrease is to be welcomed at present.

Game Reserves.

Northern Reserve.—The stock of game appears to be quite satisfactory, and undoubtedly keeps up the supply in the Northern Guaso Nyiro District, which is perhaps one of the most heavily shot over in the country. This statement particularly applies to rhinoceros and Grevy's zebra.

Owing to the large numbers of Samburu who were permitted in the early part of 1914 to cross the Guaso Nyiro near Archer's Post, it has been possible to get into touch with a number of their Dorobo, and to explain to them the attitude of the Government towards game. These people stated that they were now in most cases in possession of cattle and sheep and professed themselves as quite willing to observe the Game Regulations.

Southern Reserve.—The state of the game in this reserve is very satisfactory. Rinderpest was reported to be prevalent near Lake Natron, but a careful examination of the buffalo, wildbeest, and eland herds produced no confirmation of this rumour.

The increase of buffalo is very marked, and the same remark applies to giraffe, eland, wildbeest, and ostriches.

Two expeditions to kill lions were necessary. On the first, three were killed and one very badly wounded lioness was lost.

On the second occasion two were killed.

The reserve, with the exception of the boundary from the Ngong Hill to the Guaso Nyiro (west side), has been beaconed with cairns and iron standards.

The southern boundary has been mapped. The rock-strewn, grassy plain of the Southern Reserve between Kapiti Station, the Magadi Pipe Line, and the Athi River is apparently one of the last places where rhinoceros can be seen walking about and sleeping in absolutely open country. Nine were seen in two days by one of the Assistant Game Wardens and thirteen were seen in one day near Ulu.

It was necessary during the year to pursue and capture a band of Wakamba poachers in the Reserve, and this will probably act as a strong deterrent in future.

General Outlook.

The condition and stock of game in the Protectorate can still be considered as satisfactory.

There have been no authenticated outbreaks of disease during the past year.

Confiscated Trophies.

	1911–12.	1912–13.	1913–14.
Ivory	Rs. 36,769	61,836	75,282
Other trophies ..	Rs. 2,439	2,583	4,575

There has been in increase in the proceeds from the sale of confiscated trophies, but it must be remembered that the price of ivory has been much higher during the past year than for some time past, and other trophies, such as skins, heads, ostrich feathers, etc., have realised enhanced prices.

Return of Prosecutions Under the Game Ordinance in 1913–14.

Number Accused.	Convictions.	Discharged.
93	86	7

XIII.—PUBLIC WORKS.

The total expenditure for the year was £188,877. Of this sum loan expenditure amounted to £50,789, comprising £47,204 on the Mombasa water supply and £3,585 on the Thika Railway.

The principal item among new works was a more extensive instalment of the Nairobi drainage system than had been executed in any previous year. A sum of £12,900 was spent on this work.

Work on public buildings in Nairobi included the completion of a new office for the Provincial Commissioner, Ukamba, at a cost of £4,064, an additional accommodation cell with concrete roof at the Nairobi gaol at a cost of £969, quarters for two gaolers £600, installation of machinery and electrical plant at the veterinary laboratory, Kabete, and a large addition, with engine room, to the original building, £4,390, the completion of the bonded warehouse, Nairobi, £653, additions to the European school, £455, additions to the reformatory, Kabete, £352, and the erection of a ward for the treatment of cerebro-spinal cases, with quarters for an Assistant Surgeon, £734.

At Mombasa the new Post Office was commenced and £844 was spent in the erection of a small European hospital at the medical quarantine station at Kipevu. Three adjacent bungalows of a small two-roomed type were converted into one large block at a cost of £1,595. Other works were: an addition to the Treasury offices, £727, the erection of a mortuary, £209, and of a new go-down for petrol at Kilindini, £200.

In Jubaland a new Customs House and quarters for the Superintendent of Customs were built at a cost of £692, and a new dispensary provided, £392.

In the Naivasha Province work was started on the Nakuru water supply and a sum of £3,977 was spent. The project involves the supply of 65,000 gallons of water per diem by a main 8·8 miles long.

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

SKETCH MAP OF
EAST AFRICA PROTECTORATE

Scale 54 Miles to One Inch

NOTE.—The boundaries of NAIVASHA and NYANZA Provinces are provisional.

C.O. No.18.

Ordnance Survey, Southampton, 1914.

The main is to deliver water into a service reservoir of 88,000 gallons capacity on the outskirts of Nakuru. Other works were a day-school at Nakuru, £696, and temporary buildings at Maraquet, £300.

£4,453 was spent on works in the Southern Masai Reserve, including £1,167 on buildings, and £3,286 on the improvement of water facilities for the Masai and their stock. Operations on this latter project consisted of the construction of dams, the cleaning out of springs, and the digging of catch-water drains to lead storm waters into the basins. In this way, water storage was effected at three sites in the Lemek Valley, and at one near Bardamat, on the edge of the Loita Plains. The largest dam at Lemek is 178 feet long at the top and 42 feet high in the highest part. The Bardamat dam is 600 feet long and 17 feet high at the highest part.

In the Nyanza Province new quarters were provided for the Customs clerks at Kisumu, £249, quarters for the Conservancy staff at Kisumu, £200, new store at Kericho, £162, temporary buildings for a new station in Kitosh, £144, and other minor works.

Loan Works.

(*a*) The Thika Railway was opened for traffic on October 1st, 1913. The total expenditure was £61,796 as compared with the £62,770 available.

(*b*) Work on the Mombasa water supply made considerable progress in spite of the difficulties of obtaining an adequate supply of labour. In September plague broke out, which constituted a further serious handicap. Pipe-laying began in February.

Training of Apprentices.

The number of apprentices in the depôt on March 31st was 33, all of whom are formally indentured under the Master and Servants Ordinance for a term of three years. The progress made is good. The depôt is becoming increasingly popular, and a much larger number of boys could be indentured if accommodation were available.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

No. 881.

EAST AFRICA PROTECTORATE.

(For Report for 1913-14 see No. 840.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
3rd February, 1916.

SIR,

I HAVE the honour to forward herewith the Annual Report on the East Africa Protectorate for the year 1914–15.

I have, &c.,
C. C. BOWRING,
Governor's Deputy.

The Right Honourable
A. Bonar Law, M.P.,
Secretary of State for the Colonies.

7.5.H. 3/21/18 S.L.

(C251) Wt. 45316/1003. 1000 & 90. 4.16. B.&F.Ltd. Gp. 11/2.

ANNUAL REPORT
ON THE
EAST AFRICA PROTECTORATE FOR 1914-15.

I. FINANCIAL.

(A) General Revenue and Expenditure.

Had it not been for the war there was every reason to believe that the revenue for 1914-15 would have approximated closely to the estimate. This remark holds good also in regard to expenditure as a whole, with the exception of military expenditure, on which an excess was unavoidable on account of the Marehan operations in Jubaland.

The final results were a deficit of £387,695 on revenue and a saving of £233,221 on expenditure, while the surplus balance on 31st March, 1915 amounted to £149,507.

Revenue.

The total revenue for the year amounted to £984,756, showing a deficit of £387,695 on the estimate and a decrease of £139,042 compared with 1913-14. It was, however, £32,231 in excess of the revenue for 1912-13.

The following table shows the revenue for the last five years:—

Year.	£	Percentage Increase.	Percentage Decrease.
1910–11	609,586	21·0	
1911–12	729,078	19·6	
1912–13	952,525	30·6	
1913–14	1,123,798	17·9	
1914–15	984,756	—	12·3

The gross revenue from Customs import duties was £134,263, of which £60,000 was transferred to the Uganda Protectorate, leaving £74,263, or a deficit of £60,737 on the estimate.

Expenditure.

	£
The original estimate of expenditure sanctioned for the year was ..	1,384,951
And the actual expenditure was ..	1,151,730
Showing an apparent saving of ..	233,221

The savings on the estimated expenditure of the year were however considerably greater, for in addition the following items were authorised :—

	£	£
(1) Unexpended balances on uncompleted works from 1913-14 ..	21,992	
(2) Public Works Extraordinary—New Roads and Bridges, (Special) ..	10,357	
(3) Public Works Extraordinary—Acquisition of land, Mombasa ..	3,664	36,013
Showing a saving of		269,234
From which must be deducted the savings on the Busoga Railway, which belongs to the Uganda Protectorate		20,609
Showing a net saving on the authorised expenditure of		£248,625

Financial Position on 31*st March*, 1915.

The net excess of Assets over Liabilities on 31st March 1915 was £149,507.

This figure is arrived at as follows :—

Net assets as on 1st April, 1914		£316,481
Expenditure 1914–15	£1,151,730	
Revenue 1914–15	984,756	
Excess expenditure over revenue		166,974
Balance		£149,507

(B) CURRENCY.

The total value of Currency Notes in circulation on 31st March, 1915, was Rs.68,66,000, as compared with Rs.43,39,000 on 31st March, 1914. This large increase was chiefly caused by the requirements of the military, the Indian Expeditionary Force having imported large quantities of silver which was paid to the Currency Board in exchange for notes.

II.—TRADE AND SHIPPING.

(A) TRADE.

The Customs receipts during the financial year amounted to £160,640, and the total refunds to £13,287.

The net revenue originally estimated at £205,000, therefore amounted to £147,353 showing a decrease of £48,844 or 25 per cent. as compared with the previous year.

Imports.

The total value of commercial imports receded from £2,147,937 to £1,469,210 during the year under report thus showing a decrease of £678,727 or 31 per cent. as compared with 1913–14 and £339,133, or 19 per cent. below the imports in 1912–13.

Cotton textiles continue to constitute the most important and largest class of imports. They were valued at £269,244 with a yardage of 17,479,985 and represent 19 per cent. of the total merchandise. The decrease in value as compared with the previous year is one of £301,354 or 53 per cent., whereas the fall in quantity is 54 per cent.

Since the outbreak of war the interior of German East Africa has been closed to trade with British East Africa and hence the supplies that used to be re-exported by the Uganda Railway and Lake steamers remained in this country. During 1913–14 re-exports of cotton goods to German East Africa and other places were valued at £135.727, whereas during the year under review they amounted to £64,966 only. The reason for the fall in imports of cotton goods may be found in the fact that the local markets were well supplied before the outbreak of war, the demand during the first four months of the year being, as usual, not as heavy as during the last months of the year.

The imports of other varieties of cotton goods such as bleached, dyed, and printed manufactures amounted to £107,259, a decrease of £111,603, or 51 per cent. Of these imports, English manufactures represent two thirds of the supply in the market, whereas Holland, the next on the list, secured only 14 per cent.

The class next in importance is grain, which forms 11 per cent. of the total trade imports. The quantity advanced from 241,485 cwts. valued at £130,092 to 260,248 cwts. valued at £147,452.

Rice takes the first place in quantity as well as in value and represents 63 per cent. of the total quantity and 58 per cent. of the total value of grain. The increase in quantity is one of 16 per cent., and in value 14 per cent.

The second place is occupied by the imports of flour and wheatmeal, which show a trifling decrease of 253c wts. in quantity accompanied by a rise of 17 per cent. in value. In the other varieties of grain there is not much fluctuation.

About 96 per cent. of the total grain is imported from India.

The third largest item in the list of imports is that of provisions, which show an increase of £12,123, or 9 per cent. over the previous year.

Cement to the extent of 93,093 cwts., with a value of £16,112, was imported during the year. a decrease of 523 cwts. in quantity combined with an increase of £395 in value. Over 80 per cent. of the cement was of British origin.

In alcoholic liquors there is an increase of 26,656 gallons, or 17 per cent. in quantity and £7,122, or 12 per cent. in value. There are no local distilleries and the supply is therefore limited to importations.

Imports of ale and beer rose from 52,015 gallons, value £8,125, to 82,808 gallons, value £13,568,

German beer, which ceased to be exported on the outbreak of war, amounted to 34.166 gallons, as compared with 35,683 gallons during the year ended 31st March, 1914, while South African beer, which was a negligible quantity in the previous years, has assumed the second place in order of value during the year.

The increase in the quantity of soap is 6,370 cwts., or 63 per cent., and £8,797, or 62 per cent. in value.

Of the total, 14,482 cwts., valued at £20,676, was received from the United Kingdom.

In this line of business British manufacturers are to the fore and their goods are replacing German manufactures. Much credit for this change is due to the energy and enterprise of British firms who have for some time been opening up local establishments.

Imports of coal amounted to 10,200 tons, of a value of £21,450, showing a decrease of 2,379 tons, or 19 per cent. in quantity, but an increase of £1,929, or 10 per cent. in value, as compared with the previous year. This means a rise of 36 per cent. in specific value.

With the exception of 12 tons from the United Kingdom, the whole quantity came from South Africa, and the average price worked out at 42*s*., as against 28*s*. 4*d*. during the previous year.

Government coal is not included in the foregoing figures.

The United Kingdom was again the principal supplier of trade goods to the East Africa Protectorate, and it is gratifying to see the combined increase from the United Kingdom, British Colonies, and India from 62·5 per cent. to 69·7 per cent., and the consequent fall in foreign trade from 37·5 per cent. to 30·3 per cent.

Imports of Government stores, railway and telegraph materials, are not included in the above percentage, which is confined to trade importations, but they form a considerable part of the total imports.

The following figures show the share of the United Kingdom in the total import trade, including Government stores, railway and telegraph materials :—

Year ended 31*st March*.

1911. Per cent.	1912. Per cent.	1913. Per cent.	1914. Per cent.	1915. Per cent.
43·4	55·1	53·1	57·7	57·3

The decrease of £678,727, or 31 per cent., in the imports of trade merchandise, is almost entirely due to the war, which has dislocated trade and industry in this country.

Transit Goods.

Imports from foreign ports intended for consumption in the hinterlands of German East Africa and the Congo pass through Kilindini, which is linked up with these two countries by railway and steamers on Lake Victoria Nyanza.

Import duty is not leviable on goods in transit, in accordance with the terms of the Brussels Act, 1889-90, but to cover administration expenses a fee of 4d. per package is charged. The revenue from Transit Fees during the year was £1,100.

The value of transit trade declined from £202,723 to £92,044, showing a decrease of 55 per cent. This was mainly brought about by the stoppage of trade between German ports on Lake Victoria Nyanza and Kilindini immediately war broke out. The trade during the first four months of the year amounted to £74,028, and the balance of £18,016 represents trade with the Congo alone during the last eight months.

Exports.

The comparative values for the past two years are as follows:—

Produce of	1914–15.	1913–14.	+ Increase. — Decrease.
	£	£	Per cent.
British East Africa	314,804	443,624	— 29
Uganda	506,878	564,244	— 10
German East Africa	150,941	448,103	— 66
Congo Free State	31,986	26,127	+ 22
Soudan	187	778	— 76
	1,004,796	1,482,876	——

The decrease in the total value as compared with the previous year is one of £478,080, or 32 per cent., due to passing events rather than to any inherent weakness in the progress of the countries.

As compared with the previous year, domestic exports show a decrease of £128,820, or 29 per cent.

The most considerable decreases are those of £79,858 under grain and oil seeds and £41,082 under hides and skins. The two items amount to £120,940, and form 94 per cent. of the total decrease.

Hides and skins continue to take the first place in the list of exports.

The figures for the year are £106,392, being £41,082, or 28 per cent., less than last year, but £18,719 more than in 1912–13.

The closing of enemy markets had the effect of diverting hides and skins to other markets, and thus, in spite of large demands for leather by the Allies, there was an abundance of hides which would have in the ordinary course gone to what are now enemy ports. Prices dropped accordingly, but a change rapidly came and hides have recently been freely purchased and are now being shipped principally to Italy.

Hides to the value of £52,536 were shipped to the United Kingdom, £15,487 went to Italy, and £13,772 to France.

Of skins, 81 per cent. went to the United States.

The second largest item of export is represented by fibre, valued at £40,077, which forms 12 per cent. of the domestic exports. In 1913–14 the export was valued at £16,608.

The exports of fibres are classified under two heads of "Sisal" and "Other sorts," representing 33,032 cwts. (£35,537) and 7,058 (£4,540), respectively.

The fibre industry was initiated by European settlers, who have most successfully met preliminary difficulties, and it has at last been brought to a stage which leaves no doubt as to its future prominence in our exports.

The quantity shipped to the United Kingdom was 36,275 cwts., valued at £36,535.

Of the two varieties sisal formed the bulk of the exports, representing 33,032 cwts., valued at £35,537, and showing an advance of 11,565 cwts. for a value of £23,012. Sisal fibre is a hard cordage fibre, and consignments from the Protectorate placed on the market realised maximum prices, the length, colour, and strength of the fibre being well reported on.

The class next in importance after "fibre" is the group of grain and oil seeds, exports of which amounted to 104,133 cwts., valued at £38,572, as compared with 321,781 cwts., valued at £118,430 in 1913–14.

Shipments of copra declined from 31,725 cwts., valued at £35,587, to 27,722 cwts., valued at £24,371.

The decrease in the exportable surplus of copra may be attributed to the fact that certain parts of the country were the subject of military operations, thus preventing movements of natives with their produce.

Coffee planting is one of British East Africa's most promising industries, and if an adequate supply of labour is forthcoming it is likely to take a prominent place in our exports in future.

The rate of progress since 1909–10 can be seen from the following figures:—

Year ended 31st March.	Quantity. Cwts.	Value. £
1910	630	1,068
1911	1,220	2,995
1912	2,089	5,765
1913	3,032	11,071
1914	5,501	18,502
1915	7,784	21,738

Ninety-five per cent. of the exports during the year were consigned to the United Kingdom. The coffee produced in British East Africa is excellent and commands a very high price.

Trade in ivory has decreased to £1,887, as against £8,764 in the previous year, and is dying out slowly.

The steady fall since 1910 has been brought about by the stringent enforcement of the Game Regulations. Ivory obtained in contravention of these regulations is confiscated and sold by public auction periodically, the ivory then being exported.

Of the total output last year £675 was consigned to the United States, £619 to the United Kingdom, and £255 to Zanzibar.

The decrease of 32 per cent. in the total exports as compared with the previous year is due more to the war than to any other cause. Uganda exports head the list and form 50 per cent. of the total, while East Africa represents 31 per cent. and the Congo exports contributed 3 per cent.

(B) SHIPPING.

Mombasa has been served by four lines of direct mail steamers from Europe this year—the Union Castle, British India, Messageries Maritimes, and the Maritima Italiana.

The above steamers have called on the average about once a month and have carried cargo and passengers, but owing to the war the services were irregular.

In addition to the above lines the Clan, Ellerman, Harrison, and Hall Lines joint service steamers have also called here once a month direct from Europe with cargo only.

A branch of the British India Company's steamers maintained a service twice a month with Bombay.

The coast traffic has been carried out by the steamers belonging to Messrs. Cowasji Dinshaw & Brothers. The total steam tonnage entered in the ports of the Protectorate amounts to 1,119,972 tons, represented by 432 steamers, a decrease of 361 vessels and 614,592 tons compared with last year. This is due to the war.

The total tonnage of sailing vessels entering the ports of the Protectorate amounts to 51,730 tons, represented by 2,923 vessels, a decrease 4,787 tons, but an increase of 102 vessels compared with last year. This shows that few seagoing vessels have called owing to the war.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

Until the outbreak of hostilities the general prosperity of the Protectorate was well maintained. For some few months afterwards there was a very natural set-back, but conditions are gradually improving and no anxiety is felt as to the future as soon as normal conditions are restored.

At the beginning of the year the firms of architects were very busy and numerous substantial buildings had been commenced.

There are several dairy farms near Nairobi and in the Naivasha and Lumbwa districts, but the supply is barely equal to the demand.

There is an increasing demand for native timber, and the saw-milling firms should have a prosperous future before them.

Town and farm properties have not decreased in value.

Sisal has given most encouraging results, and promises to take a high place in the list of exports in future years.

The area under coffee has increased considerably and excellent prices are obtained in the home markets.

There are many large plantations of wattle, but up to the present the results have been somewhat disappointing.

The bacon industry has developed, and, as pigs can be reared at very little expense, those farmers who started with good foundation stock can show excellent herds.

(B) MINES AND MINERALS.

Up to the outbreak of war considerable activity in mica was exhibited in Mweru and Machakos districts. When war commenced these undertakings, however, closed down, and suspension of work certificates have been granted by the Mines Office, as a number of the European employers were on active service.

The number of claims pegged out in 1914–15 was nine. Area 362 acres.

One sole prospecting licence was granted over 5 square miles.

All the above are in the Ukamba and Kenya Provinces.

No mineral leases were granted.

IV.—AGRICULTURE AND STOCK RAISING.

(A) CROPS.

Coffee.—This remains the principal economic crop of the highlands of British East Africa, and the area under cultivation has probably been doubled during the past season.

The berry produced is of exceptional quality, and the coffee readily commands high prices on the London market.

The leaf disease, *Hemeleia vastatrix*, has not proved the serious matter at one time feared, the experience of the last year showing that, if proper means of control are used, the pest can be kept within moderate bounds.

A coffee curing factory has been erected in the neighbourhood of Nairobi and should prove a boon to planters.

Fibres.—The cultivation of sisal and flax has increased very largely during the year. The former is now a "proved" industry, while the latter is rapidly becoming so. Recent reports from the home brokers and flax experts declare the flax sent from this country to be of excellent quality.

In the Lumbwa, Londiani, Nakuru, and Uasin Gishu districts flax growing is likely to become an important branch of farming.

A factory for handling the fibre has been built at Lumbwa, and others would have been erected had not the present disturbed state of affairs occurred.

Maize, Beans, Potatoes, and Sim Sim.—The successful cultivation of these crops continues throughout the farming areas of the Protectorate. There is a sound local market for all these products and in normal times the export value warrants the cultivation of large areas.

Cotton.—The drop in the price has seriously affected cotton planting by natives in the Nyanza Province where the industry promised so well. It is greatly to be hoped that future prices will induce a revival of the industry.

Wattle.—During the past year arrangements were made by the wattle growers of the highlands to form a syndicate to erect a factory for the extraction of tannin from the bark, but owing to the war no further progress has been made in the matter.

Coconuts.—Coconut planting in the coast belt is progressing. Every effort is being made to encourage the natives to improve their methods of cultivation, and to impress on them the necessity of destroying the beetle *Oryctes monoceros,* which does so much damage to the trees.

The native practice of tapping the trees for "tembo" is strongly discouraged.

Legislation for the protection of the industry has been framed as a result of the report of the Coconut Commission, 1914.

Rubber.—The rubber industry may be said to be dormant. This unsatisfactory state of affairs may be directly attributed to the low price offered for Ceara rubber and indirectly to the brighter prospects in the coast districts of such crops as sisal and coconuts.

Tobacco.—This crop is still in the experimental stage, but there are indications that in certain districts it will be a success.

Fruit Culture.—Many planters are turning their attention to the cultivation of citrus trees. Limes and lemons are the trees chiefly planted with the subsequent object of the local manufacture of the concentrated juice and citrate of lime for export.

The demand for budded or grafted stock has been so great that the nursery at Kabete Experimental Farm was unable to cope with it. Steps have, however, now been taken to increase the supply of these stocks in the near future.

This is one of the most promising industries that has been started in the Protectorate.

(B) LIVE STOCK.

Stock breeding and the grading up of native cattle and sheep have been pursued with continued success in the recognised stock districts of the Protectorate.

The policy of importing Government stock of good quality and disposing of the progeny by auction sale to local breeders who would otherwise experience considerable difficulty in obtaining high class animals has again been greatly appreciated, as is shown by the continued support given by local stock breeders to the annual Government sale at Naivasha. This sale was held in March, 1915, a large number of those interested attended, bidding was brisk, and good prices were realised.

Cattle.—The department has recently imported from South Africa 20 Friesland heifers, 8 Friesland bulls, and 14 head of shorthorns. The introduction of fresh blood of these two breeds, which have been proved admirably suited to local conditions at Naivasha, should have most satisfactory results.

The ravages of east coast fever among the stock of the country have not been so great as in former years. The systematic dipping now practised on many farms accounts for the improvement.

During the year there were 12 outbreaks of rinderpest on European farms. However, a large head of stock has been doubly inoculated and great hopes are entertained that the disease will be held in check in the future.

Pigs.—Swine husbandry has received marked attention during the period under review. The demand on the Kabete Experimental Farm for young stock for breeeding purposes has been unprecedentedly large and greatly exceeded the possible supply.

Swine fever from all reports has not caused so much havoc as in previous seasons. Careful fencing has probably caused this decrease

(C) EXPERIMENTAL FARMS.

Kabete.—The following stock were despatched from the farm during the year:—

24 Grade Cattle,
64 Cows,
22 Oxen,
4 Mules,
70 Pigs,

or a total of 184.

The stock on hand at the end of the year included 305 cattle, 82 sheep, and 100 pigs.

From some plots planted with arrowroot in May, 1913, a very fine sample was obtained, being at the rate of 450 lbs. per acre.

The crops in general suffered from the drought, the rainfall being almost 20 inches below the average of the two previous years.

Kibos.—The area occupied by experimental crops showed a slight increase over that of previous years.

The local conditions have proved suitable to chillies, and the cultivation of this product is becoming popular among the natives.

The establishment of a tropical fruit orchard progressed. The trees include bananas, coconuts, guavas, mangoes, oranges, papaws, pineapples, sugar-apples, mulberry, and fig.

There has been a marked increase in the number of applications for, and inquiries about, economic and ornamental plants and seeds.

Naivasha.—Cattle did exceedingly well; out of 290 head of pure and graded stock only three died.

The pure-bred shorthorns have done well, as have the Friesland cattle. The increase in Ayrshires has been large.

Grade cattle have done well generally.

Sheep have thriven, and the weight of fleece per animal is about the same as last year, and the grade is reported to be good. The price obtained was 10½*d.* per lb. for the whole of the Merino fleece wool, and 10*d.* for the whole of the fleece clip of grade Merino and Lincoln grade Merino.

The Angora and grade Angora goats have done well, and the improvement in the native goat by crossing with the pure Angora is excellent.

The crossing of the native donkey with the imported Catalonian jackass has been a success, and the higher crosses of this breed are showing much promise.

Mazeras.—The rainfall has been poor, and crops have suffered in consequence.

Forty-five acres were under cultivation, and during the year another seven acres were added for coconut and banana plantations.

The experiments conducted consisted of such crops as cotton, arrowroot, citrus, jute, maize, and simsim.

(D) DISEASES OF ANIMALS.

East Coast Fever.—Outbreaks occurred in the Nakuru and Uasin Gishu areas during the year.

There are now close on 70 dipping tanks in working order throughout the country, and the good results obtained have generally established the efficacy of regular dipping at three day intervals as a preventive against east coast fever.

Notwithstanding the present military crisis, several more dipping tanks are being constructed by settlers. Owing to the war and the consequent cutting down of expenditure, the general dipping scheme for the Protectorate has not been proceeded with to any extent, as funds were not available for the erection of district and stock route tanks.

Until these tanks have been erected it is impossible to establish universal dipping, and it is only by universal dipping that the suppression of east coast fever can be looked for.

Rinderpest.—Twelve outbreaks of this disease occurred during the year on European-owned farms. This disease is enzootic throughout most of the native reserves, and, owing to illicit movements of cattle from these reserves, many outbreaks have occurred in the settled districts in the neighbourhood of these areas. Under present conditions it has only been found possible to deal with outbreaks affecting European-owned cattle, and double inoculation has been carried out on an extensive scale in several districts with most satisfactory results.

230,384 doses of serum were sent out by the Kabete Laboratory during the year as follows :—

East Africa	99,664
Northern Rhodesia	30,240
Bechuanaland	10,080
Southern Rhodesia	35,280
Mozambique	15,040
Union of South Africa	40,080

Anthrax.—During the period under review anthrax assumed the form of an epizootic in the Nairobi and Thika districts. Two outbreaks occurred on the Uasin Gishu plateau.

A vaccine against anthrax was produced at the Veterinary Laboratory, and upwards of 23,000 doses were used with most beneficial results.

Pleuro-Pneumonia.—Notwithstanding the exercise of the greatest care, a recrudescence of this disease occurred in the Masai Reserve in April of last year.

Five villages were found infected, and altogether 4,774 cattle were placed in quarantine. The mortality in these herds has, fortunately, not been a large one.

Quarter Evil.—Three outbreaks of quarter evil occurred during the year, and this disease appears to be on the increase, particularly in the Lumbwa district.

Epizootic and Ulcerative Lymphangitis.—Dipping has been proved to be an efficient preventive against this disease, and in its treatment extremely good results have been obtained with a vaccine prepared by the laboratory.

Treatment of epizootic lymphangitis with potassium iodide is under trial at the Veterinary Laboratory, and the results so far have been extremely hopeful.

Horse Sickness.—Fifty-six cases were reported during the year, and most of these occurred in Nairobi. The mortality from this disease has not been a large one.

Scabies.—This disease is ubiquitous, and, while the hairy native sheep suffers little, the causal parasite has disastrous effects on the wooled animal.

Swine Fever.—It is probable that this highly contagious disease is not carried by air or through the medium of external parasites such as fleas or lice, but it has been proved capable of transmission by the ingestion of infected fæcal matter or urine-soiled foodstuffs.

Advantage has been taken of this fact by several farmers, who have fenced in their pig runs with wire netting, thus eliminating the danger of infection from wild porcines.

There is no country in the world where pigs can be reared so cheaply, and pig breeding is rapidly becoming one of the most lucrative industries of the Protectorate.

V.—FORESTS.

Exploitation.

On account of the set-back to the timber trade of the country consequent upon the War, there was a decreased output of timber and mangrove bark from the forests.

During the year 171,576 cubic feet of timber were cut and sold, as compared with 195,224 cubic feet in the previous year. The quantity of timber issued free to Government departments, natives and settlers, amounted to 54,071 cubic feet, as compared with 54,488 cubic feet in the previous year.

No figures are available to show the quantity of timber exploited from the Grogan forests during the year under report, but for the calendar year ending the 31st December, 1914, 142,007 cubic feet of milled timber were turned out of the Maji Mazuri mill and 1,160 cubic feet of unmilled logs were removed from the forests; 186·94 acres were "clear felled" near the above mill during the same period.

The Eldalat mill remained closed throughout the year.

The demand for seasoned local timber still remains in excess of the supply, the stocks of seasoned local timber being very restricted.

The selling prices for sawn local timber in Nairobi at the end of the year were :—

Cedar ..	Rs.120 to Rs.132	per ton of 50 cubic feet.
Podocarpus ..	.. Rs.102	,, ,, ,, ,,
Muzaiti ..	.. Rs.216	,, ,, ,, ,,
Other woods,	Rs.100 to Rs.120	,, ,, ,, ,,

The average selling prices for sawn imported timber in Nairobi at the end of the year were :—

Deals ..	Rs.138 to Rs.150	per ton of 50 cubic feet.
Pitch pine	Rs.200 to Rs.270	,, ,, ,, ,,
Teak ..	.. .. Rs.300	,, ,, ,, ,,

During the year 4,373 tons of timber were imported into the country valued at £21,237 16s., as compared with 10,516 tons, valued at £53,323, in the previous year. The value of timber exported was £84, as compared with £811 in the preceding year.

Railway Fuel.—2,955,423 cubic feet of firewood were cut in the Government forests, as compared with 3,435,372 cubic feet in the preceding year. The actual quantity taken over by the railway from the contractors over the whole length of the line was 7,155,938 cubic feet, as compared with 7,331,210 cubic feet in the previous year.

Cultural Operations.

A total area of 558·67 acres was planted, as compared with 476·08 acres in the previous year; in the forests adjoining the railway 474·28 acres were planted, as compared with 337·5 acres in the previous year.

Revenue.

The total cash revenue for the year was £7,064 1*s.* 9*d.*, being £1,654 16*s.* 6*d.* less than in the preceding year, and £1,705 18*s.* 1*d.* less than the total estimated revenue for the year under report.

There is a satisfactory increase in the revenue derived from the sales of firewood and young trees, the increases being £270 18*s.* 1*d.* and £94 17*s.* 10*d.* respectively.

Expenditure.

The total net expenditure for the year was £11,105 19*s.* 2*d.*, being an increase of £1,062 6*s.* over the expenditure for the year 1913–14.

Included in the above total is £500 contributed by the Uganda Railway Administration for the formation and maintenance of the fuel plantations; so that the actual expenditure debited to the department was £10,605 19*s.* 2*d.*

VI.—COMMUNICATIONS.

(A) RAILWAYS.

Uganda Railway.—The estimates for the year's working provided for an expenditure of £468,036, and anticipated gross earnings of £800,000. These figures are 48 per cent. and 57½ per cent., respectively, over the estimates for the previous year, and from the steady and regular increase in the past ten years, we should have worked very nearly to them.

Up to the time war was declared the traffic for the year was fully up to expectations.

The total revenue for the year was actually £515,925 or only 5¼ per cent. less than the revenue for the previous year. Of this £129,376 was on account of military operations in the defence of the country, leaving £386,549 representing the normal traffic. Recognising the fact that ordinary traffic was greatly interfered with and in some cases practically stopped for such times as were necessary to carry out the transportation of troops, supplies, and munitions, and also that for two-thirds of the year there was no trade with German East Africa, from which we derived about 20 per cent. of our gross revenue, the amount actually received cannot be considered as other than satisfactory, and the original estimate of £300,000 would undoubtedly have been very nearly, if not altogether, an accomplished fact but for the causes already mentioned.

The estimated expenditure was £468,036, against which the actual expenditure for the year was £335,325.

The net earnings for the year were £180,600, a decrease of £32,884 on the previous year's working, and of £151,364 upon the estimated nett earnings. This gives a percentage of 2·81 per cent. profit upon the capital outlay of the railway against 3·39 per cent. in 1913–14, and 3·52 per cent. in 1912–13.

The total tonnage handled was 184,505 as against 189,556 last year.

The total goods receipts were Rs.4,605,250 compared with Rs.5,618,491 last year.

For the first four months these receipts showed an increase of over Rs.230,000.

Coaching receipts increased from Rs.1,411,073 to Rs.2,191,978.

The tonnage carried by the Lake steamers was 42,664.

The Lake flotilla has been increased by the addition of one steamship, the "Rusinga," which was launched in September, 1914, and commissioned in March last.

Two 50-ton and four 100-ton lighters have also been built, or were nearly ready for launching, at the end of the financial year.

Arrangements have been completed for the past three years for all the steamers to be fitted with oil fuel-burning installations, but pressure of work in the first instance and afterwards the War, have rendered it impossible for the necessary works and alterations to be carried out.

The line generally has been kept in a good and efficient state of maintenance. At the commencement of the year there were 53 stations open to traffic and three new stations under construction. During the year one station was completed and 14 additional new stations will be put in hand when opportunities arise.

Thika Railway.—The Thika Railway, 32 miles in length, which was opened for traffic in October, 1913, has so far proved itself essentially a passenger line, fully three-quarters of its revenue being derived from coaching traffic. The line during the past year has almost balanced receipts and expenditure, the nett effect being a slight loss. This should disappear in the very near future, when the large areas under fibre and coffee commence to repay the years of preparation and waiting.

Busoga Railway.—The total revenue was Rs.135,347 and the expenditure Rs.172,937. The deficiency may be attributed to the War, and to the lateness of the cotton crop.

The total revenue of the Busoga Railway Marine was Rs. 165,547 and the expenditure Rs. 137,006.

(B) ROADS.

In the Township and District of Nairobi over 22,000 running feet of fully metalled road were either constructed or completely reconstructed, while over 9,000 feet of murrum-surfaced road with stone foundation, and 67,000 feet of murrum road were constructed. In addition, nearly 12,000 feet of road were resurfaced with murrum and 41,000 feet of road repaired.

In the Naivasha Division work on the Uasin Gishu Road continued up to November, operations being chiefly confined to metalling from Londiani outwards. Other work included repairs to the Nakuru-Solai road, a deviation of 20 miles on the Nakuru-Baringo road, and repairs to the Londiani-Ravine road.

In the Kisumu District, the Kisumu-Mumias road was kept in fair condition and it is hoped that funds may soon be forthcoming to enable it to be metalled, as it carries more wheeled traffic than all the other roads in the Protectorate.

Repairs were undertaken on the Lumbwa-Kericho road, and considerable improvements were effected to the Kendu-Kisii road.

In the Nyeri Division the Nyeri-Meru road was continued.

In Jubaland an improved alignment for the Kismayu-Gobwen road was set out, and construction was commenced by the Administrative officers.

The total expenditure on new roads and bridges amounted to £14,315, of which £3,958 were derived from the vote under P.W.E. and £10,357 from premia on the sale of land during 1913-14.

(C) POST AND TELEGRAPHS.

The Post and Telegraph services, which are amalgamated with those of the Uganda Protectorate, include 127 post offices and agencies, of which 40 are also money order offices. There are 111 telegraph offices, including those combined with post offices and those worked by the Uganda and Busoga Railways.

Revenue.

The total Post and Telegraph revenue of the combined Protectorates amounted to £41,848 12*s*. 1*d*. as compared with £44,428 13*s*. 10*d*. in 1913–14, a decrease of 5·8 per cent.

Expenditure.

The total expenditure, including the cost of telegraph and telephone construction and maintenance in both Protectorates amounted to £64,492 8*s*. 9*d*., as compared with £51,286 18*s*. 5½*d*., an increase of £13,205 10*s*. 3½*d*., or 26 per cent.

Telegraphs.

In July the inland telegraph rates were reduced from one rupee for 10 words to 75 cents. for a plain language telegram of 12 words. In spite of the reduction and in spite of the war an increase of 5 per cent. is shown for East Africa, which indicates that but for the war a substantial increase would have been recorded.

Uganda, however, shows a decrease in telegraph revenue although a greater number of telegrams was handled, shewing that the reduction in rates was not compensated by a sufficient increase in the number of telegrams.

Telegrams.

The number of telegrams dealt with shews an increase for East Africa of 40½ per cent. and for Uganda of 33 per cent.

Postal Matter.

The number of letters, postcards, newspapers, and book-packets dealt with in the combined Protectorates during the year is estimated at 5,458,860, as compared with 5,280,743 in 1913–14, an increase of 3·4 per cent.

Parcel Post.

During the year under review 68,981 parcels were dealt with in the combined Protectorates, as compared with 76,406 in the preceeding year, a decrease of 10 per cent.

Registered Letters.

The total number of registered packets dealt with in the combined Protectorates during the year amounted to 147,712, as compared with 156,893 last year, a decrease of 6 per cent.

Money Orders.

In the two Protectorates 34,216 orders, amounting to £283,613, were issued and 17,392 of the value of £178,638 were paid.

Post Office Savings Bank.

At the end of the financial year the accounts for 1913–14 and 1914–15 stood as follows:—

Deposits.

	£
1913–14	46,595
1914–15	50,509
	£3,914

Increase, 8 per cent.

Withdrawals.

	£
1913–14	32,143
1914–15	46,803
	£14,660

Increase, 46 per cent. (due to very heavy withdrawals at the outbreak of war).

On the 31st March, 1915, there were 3,254 active accounts, representing an increase of 11 per cent. during the year. The total amount standing to the credit of depositors was £53,068, as compared with £48,319 on the 31st of March, 1914, an increase of 10 per cent. The total amount invested in first class securities on the 31st of March, 1915, was £50,000.

VII.—JUDICIAL, LEGAL, POLICE, AND PRISONS.

(A) JUDICIAL.

The total number of cases dealt with during the year by the High Court is practically the same as in the previous year, though the year under review includes eight months of the War.

The number of original criminal cases remains at about the same figure, but there is a gratifying decrease in the criminal appellate work, which has dropped steadily to half of what it was in 1910–11, an indication of a high level of efficiency among the magistrates.

The native subordinate courts, presided over by Liwalis, Mudirs, and Kathis, in the coast belt, have given general satisfaction, as is evidenced by the small number of appeals entered or applications for revision made.

Native Tribunals.—These tribunals are most active in those provinces which contain populous native reserves within which their jurisdiction is exercised.

Since the introduction of the Native Authority Ordinance their powers have necessarily been widened to enable them to assist the Government by enforcing orders for the better administration of native reserves.

They are directly supervised by the District and Assistant District Commissioners.

During the year the Court of Appeal for Eastern Africa held two ordinary sessions and one special session, and dealt with 35 appeals, of which 30 were from the High Court of East Africa. Seventeen of the appeals were on the civil and 18 on the criminal side.

(B) Legal.

The following are the principal Ordinances passed during the year:—

The Criminal Procedure Ordinance, 1913 (*No.* 6 *of* 1914).—An Ordinance to make provision for procedure in criminal courts.

The Pawnbrokers Amendment Ordinance, 1914 (*No.* 10 *of* 1914).—An Ordinance to amend the law relating to the business of pawnbroking.

The Lunacy Amendment Ordinance, 1914 (*No.* 11 *of* 1914).—An Ordinance to amend the law relating to lunacy.

The British and Colonial Probates Ordinance, 1914 (*No.* 15 *of* 1914).—An Ordinance to provide for the recognition in the Protectorate of probate and letters of administration granted in the United Kingdom or in a British Possession or Protectorate or in a British Court in a foreign country.

The Wild Birds Protection Amendment Ordinance, 1914 (*No.* 17 *of* 1914).—An Ordinance to make provision for the protection of wild birds' eggs.

The Land Titles Registration Amendment Ordinance, 1914 (*No.* 23 *of* 1914).—An Ordinance to amend the law concerning land titles in so far as it relates to the registration of documents.

The Death Duties (*Killed in War*) *Ordinance*, 1915 (*No.* 8 *of* 1915).—An Ordinance to provide relief from fees payable on the estates of persons dying from wounds inflicted, accident occurring, or disease contracted on active service against an enemy.

Registration of Documents.

During the period under review the Principal Registry was transferred from Mombasa to Nairobi and the Mombasa office placed under the control of a Registrar of Documents.

Very important changes took place in procedure. By the Registration of Documents Amendment Ordinance, 1914, all instruments presented for registration must be accompanied by duplicates. These duplicates, after being compared with the originals, are filed in the records of the Registration Office and the originals are ready to be handed back to the presenters after an interval of a day or two instead of after several months under the old system, which involved the copying of all documents in manuscript into the registration books.

A new scale of fees has been introduced in consequence of this alteration in procedure.

The registration of all deeds referring to properties which have been the subject of investigation by the Recorder of Titles and for which certificates of ownership have been granted now takes place in Mombasa. This is the first step towards centralization of registration of transactions in immovable property in the coast area.

(c) Police.

The total number of recruits enlisted during the year was 467, as compared with 486 in 1913, and of that number 4 only were Asiatics, who are becoming increasingly difficult to obtain.

272 recruits were under training at the depot on the 1st January 1914, and the total number dealt with, therefore, during the year was 739.

A total of 320 recruits were passed out of the depot during the year and posted to districts as trained constables.

The health of all ranks, whether European, Asiatic, or African must be classed as very good, though at times the number of recruits on the sick list was somewhat heavy, due principally to change in diet and mode of life.

(d) Prisons.

A total number of 10,317 prisoners were admitted to the various prisons, as compared with 9,293 during the previous year.

Of these, 1,448 were long term prisoners, 3,945 short term prisoners, 4,878 were committed for safe custody while awaiting trial, etc., and 46 were debtors.

Included in the total were 112 women and 55 juveniles.

The average prison population throughout the year was 1702·4 as compared with 1639·87 in 1913–14. This slight increase is accounted for by the large number of persons committed for safe custody by the military authorities prior to the formation of military prison camps; it is satisfactory to note that there has been a decrease of 499 in the number of persons committed for the purpose of imprisonment.

The industrial sections of the first class prisons at Mombasa and Nairobi continue to do much good work; technical training is confined to carpentry, masonry and tailoring, while the labour of those devoid of aptitude for higher grade work has, as formerly, been lent to the Public Works Department, Medical Officer of Health, Uganda Railway, and other public departments thus materially reducing their expenditure.

In the provincial and district prisons the prisoners have been employed, as in former years, in bush clearing, road making, tree planting, the cultivation of prison farms, and generally in keeping the stations and their environments clean.

VIII.—CLIMATE AND HEALTH.

(a)—Public Health.

1. *The Coast Zone.*

Communicable Diseases.—It is satisfactory to record that there was a notable decrease in the number of out-patients treated in Mombasa for malaria, in fact the total number of in and out patients is actually less than the out-patients return alone for 1913. The total of 5,489 cases with 17 deaths is the lowest for the last three years in the Coast Zone being 696 cases fewer than in 1913 ; the deaths being 17 as compared with 22 in 1913.

Seven cases of blackwater fever occurred in the Mombasa and Kilindini district with 3 deaths. Of these 4 were Europeans of whom 2 died.

Infectious or Epidemic Diseases.—There were 33 new cases of cerebro-spinal meningitis in Mombasa with 15 deaths, being an increase on the previous year when 13 cases and 10 deaths were recorded.

Dysentery is still prevalent at Mombasa amongst the Kikuyu labourers.

Eight cases of enteric were admitted, with two deaths.

As against the 27 admissions for plague recorded in 1912 and the epidemic of last year of 208, it is very satisfactory to state that only two cases, both fatal, came to the notice of the Medical Officers in Mombasa.

No better tribute could be paid to the soundness of the anti-plague campaign inaugurated by Professor Simpson during the previous year.

2. *The Mountainous Zone.*

Communicable Diseases.—Compared with previous years a larger number came for treatment for malaria than usual. The total admissions were 3,851.

In Nairobi the infection appears to be widespread amongst natives as post mortem examination reveals a large percentage with enlarged spleen.

Naivasha town and Kiambu are apparently quite free from malaria.

Eight cases of blackwater fever were reported, 5 being European and 3 native ; one European died.

Infectious or Epidemic Diseases.—136 cases of cerebro-spinal meningitis are recorded, with 51 deaths. Of this number 106 cases and 47 deaths occured at Nairobi. In 1913 there were 288 cases with 152 deaths.

Dysentery is common, but it is not so often fatal as at the coast, only 49 deaths being notified.

Both types, bacillary and amœbic, were present.

The returns for enteric show an increase on the previous three years, with a more severe death roll :—

	Admissions.	Deaths.
1914	46	10
1913	21	1
1912	23	2

No cases came under observation of patients who had been previously inoculated.

Nine cases of plague occured in Nairobi, six of which were fatal.

3.—*The Kenya and Nyanza Provinces.*

Communicable Diseases.—Over 4,000 cases of malaria were treated —2,300 in the Nyanza and 1,900 in the Kenya Province.

Infectious or Epidemic Diseases.—Forty five cases of cerebro spinal meningitis were reported during the year, a very decided improvement over 1914. There were 28 deaths. The epidemic would have appeared to have almost completely died out in Kenya Province.

There was a slight increase in cases of dysentery this year, the number being 492 as against 428.

Nine cases of enteric were recorded with one death. Three of the cases occured amongst Europeans, none of which proved fatal.

Forty one cases of plague amongst natives, 38 of which proved fatal, were admitted in Kisumu and one case of a European lady who recovered.

4.—*The Desert Zone.*

Communicable Diseases.—There was an appreciable decrease in the number of cases recorded this year, *i.e.*, 1,547 cases as against 2,125 in 1913 in Jubaland.

Two cases of blackwater were reported at Serenli, the first that have been brought to notice since 1902. One was a Somali and one Nandi.

Infectious or Epidemic Diseases.—Beri-beri is still liable to be a source of anxiety in the upper reaches of the Juba. The type, however, appears to be milder, 70 cases being treated as out-patients and 2 as in-patients, with no deaths.

(B) SANITATION.

1.—*Preventive Measures.*

Malaria.—Anti malarial measures are being actively prosecuted in Mombasa, Nairobi, and Kisumu, the presence of Sanitary Inspectors exercising a beneficial influence.

Quinine prophylaxis has been adopted in various localities with some amount of success.

Millions fish have been imported from Zanzibar and have been established in tanks at Mombasa.

Trypanosomiasis.—The actual number of cases treated during the year was 4, with 1 death.

Plague.—Plague has appeared sporadically in Mombasa, Nairobi, Kisumu, Machakos, Makindu, and Maragoli.

In addition to the above an outbreak of plague was reported at Maragoli in June and July and some 20 deaths were certified. Fortunately the measures adopted were successful, and the disease has not spread.

Dysentery.—The presence of amœbic dysentery has been surprisingly small, and the good results following the exhibition of emetine have been maintained.

Enteric Fever.—The number of reported cases was 61, with 14 deaths.

2.—*General Measures.*

Sewage Disposal.—No sewage works have been installed in any township in the country; night soil is disposed of by dumping into the sea, trenching, reception into cess pools, or distribution on the ground.

The duplicate bucket system is not used.

The Water Supply.—The outbreak of hostilities, and consequent financial disturbance has resulted in the much-needed water schemes for Kisumu and Nakuru being either held in abeyance or materially curtailed; the new water supply for Mombasa has not as yet reached that town; and the protective works at Nairobi intake have not been commenced.

Drainage.—Some advance has been made in the main drainage scheme for Nairobi.

Much excellent work has been done in Mombasa by the Health Office Staff in draining the low lying areas in Miembeni, where various road drains have been constructed.

Bush Clearing.—Considerable work has been done in the principal towns, while in many outstations similar work has been performed with most excellent results, but it has necessarily been curtailed by the limitation of funds.

IX.—NATIVE ADMINISTRATION.

(A) Highlands and Nyanza Basin Provinces.

(1) *Nyanza Province.*

The Nyanza Province consists of the Kisumu, North and South Kavirondo, Nandi, and Lumbwa Districts.

The population of the province is estimated at 1,110,500, comprising 1,108,400 natives, 396 Europeans, 1,683 Asiatics, and 19 Anglo-Indians.

The chiefs and elders of the Kisumu and North Kavirondo districts made spontaneous gifts of live-stock as meat for the troops, and assisted very materially in sending out their young men to join the Carrier Corps. The approximate value of the gifts presented was Rs.27,000.

Trade.—Trade in imported goods was very good indeed until August. Subsequently a satisfactory revival was noted towards the end of the year.

The native produce trade has seriously decreased but will improve with the return of normal conditions.

(2) *Naivasha Province.*

The European population is about 1,600 and the native population approximately 133,000.

Trade.—The Nakuru District possesses the most extensively cultivated areas in the province. Early in the year several properties changed hands and there is a tendency to split up the larger areas, thereby extending the cultivation. Prices asked for land range from £1 to £5 per acre according to the locality.

There are several large fuel-cutting camps in the Nakuru District, employing upwards of 2,000 natives. The crops in this district have done well.

(3) *Masai Reserve.*

The Reserve is divided into two districts, with headquarters at Ngong and Narok River. Engirende (Mara River) has been made a sub-station.

The population is about 32,000.

Trade.—By an agreement with the Masai, trade centres were established at 24 places within the reserve. This immediately attracted a large number of Europeans, Asiatics, and natives desirous of opening stores, and over 70 plots had been applied for by the end of the year.

Trade generally has shown considerable expansion.

Of cattle, 3,629 head were removed from the reserve as compared with 833 in 1913–14, while of sheep and goats the numbers were 101,844 as compared with 62,492. In addition, 2,624 bullocks and 40,646 sheep have been bought for the use of the troops.

Manufactured articles are sold to the Masai on an increasing scale but the quantity is still very small.

Native Affairs.—The administration has proceeded almost normally in spite of the disturbing influences of the War.

The natives have increased their wealth and are contented and happy.

Relations with the Government are excellent, and serious crime has been almost non-existent.

(4) *Kenya Province.*

The European population is estimated at 243 and the native population at approximately 871,000.

Trade.—There are 16 trade centres in the province, the chief articles in demand being blankets, cloth, beads, salt, wire, and ghee. Agricultural implements are also more in demand.

In the Thika district there were at the end of the year 5,000 acres under sisal, 2,000 acres under coffee, and 300 acres under catch crops. Increasing quantities of sisal are being exported.

The native councils are working satisfactorily and fortnightly meetings are held in the Government stations.

The improvement in the social condition of the people is slowly increasing.

Means of communication in the reserve have been much improved. All the chief trading centres are connected by roads made and kept up by the natives themselves.

(5) *Ukamba Province.*

The total white population of the Province is estimated at 2,804 and the native population at approximately 371,000.

Trade.—Trade has suffered severely as a result of the War, and also from the severe drought which prevailed during a large portion of the year. The spending capacity of the native has been considerably curtailed, but there is every hope that a return to normal conditions will speedily effect improvement.

The trade in imported goods required by natives is only yet in its infancy. The chief articles in demand are blankets, beads, brass and copper wire, hoes, sugar, salt, flour, and rice. It is expected that with better communications there will be a brisk demand for tools, axes, iron ware, tobacco, shirts, and knickers.

Prior to the outbreak of war trade in Nairobi was steady, but subsequently imports were very materially reduced. Money has not been scarce and there have been no insolvencies of note. Town property maintains its price but is not inflated.

The business of land agents, architects, and contractors has suffered considerably, while orders from the military authorities have greatly assisted firms of timber merchants, engineers, clothiers, etc.

(B) COAST PROVINCES.

(1) *Seyidie Province.*

The European population is 361 and the native population approximately 196,000. There are 8,381 Asiatics.

Trade.—Trade flourished until the outbreak of war, when there was a serious set-back for four months. In the latter part of the year, however, conditions improved very materially.

It is hoped to encourage the manufacture of copra in the Rabai sub-district; this district is responsible for a brisk trade in cattle, goats, chickens, and eggs.

Sim-sim is grown in the Takaungu district.

An official of the Agricultural Department has travelled extensively throughout the province with a view to the improvement of the coconut industry.

The chief products are coconuts, maize, millet, gum copal, wood of all kinds, sim-sim oil, and wild rubber.

(2) *Tanaland Province.*

The European population is 33 and the native population approximately 39,000.

Trade.—The cocoa-nut crop in Lamu district was good, 482 tons of copra being exported.

Large quantities of maize are exported by the Wapokomo.

The War has had no effect on the Mohammedan population and whatever spirit of opposition to the Government may have existed in past years has now quite disappeared.

The same satisfactory conditions prevail amongst the riverside population of the Tana.

(3) *Jubaland Province.*

The European population is 31 and the native population approximately 14,000. The Somali population in the interior is annually increasing and cannot be accurately estimated.

During the year unprecedented floods were experienced in the Gosha and Kismayu districts. Most of the European plantations had to be abandoned and all standing crops in Gosha were destroyed. The Government station at Alexandra only escaped by the constant erection and repairing of dams day and night.

Native crops generally are expected to be very good as the result of the recent floods.

Grain, hides, ghee, and cattle form the main exports.

(c) NORTHERN FRONTIER DISTRICT.

Trade.—Large numbers of cattle have been imported from Abyssinia and Jubaland and taken to Wajheir and other Somali centres.

There is a considerable trade in "bun" (coffee-berries) and the importation of coffee for Somali consumption has much increased.

Trade with Jubaland progresses satisfactorily.

A waggon road 100 miles in length has been cut from the Uaso Nyiro Post to Merti and is regularly used for the transport of supplies for Wajheir and Garreh districts.

X.—EDUCATION.

On the whole there has been a great improvement in the development of education during the year under review.

European Schools.

(1) *Nairobi Division "A" School.*—By the increase of two teachers the work in the school has been better organised. The half yearly examination showed that excellent work had been done throughout

the school. There were forty-five prospective candidates for the College of Preceptors' examination who would undoubtedly have done very creditably, as their final test showed, but, unfortunately, owing to the delay in the steamer service on account of the war, the examination papers arrived some weeks after the dates of the examinations.

(2) *Nakuru Division " A " School.*—This school is doing very useful work and the teachers have worked hard to make the school a success.

(3) *Uasin Gishu Central School.*—Owing to the increase of children on the plateau, now numbering over 300, the Central School at Eldoret was opened in February as a day school to meet the needs for the education of those children living in Eldoret. It is hoped to open the building as a boarding school at an early date.

(4) *Dutch Schools, Uasin Gishu.*—A great deal of difficulty is experienced in procuring suitable teachers for these schools, as the teachers are required to have a working knowledge of Dutch. The school at Wheeler's Farm is doing excellent work, but the number of pupils has to be limited on account of want of accommodation. Besides the three farm schools supported by Government there are several schools conducted by the Dutch Reform Church.

Indian Schools.

The number of pupils at Nairobi has increased to 150 and no more can be admitted owing to limited accommodation.

At Mombasa progress is being made, but the present building is somewhat unsatisfactory.

Native Education.

Ukamba Industrial School, Machakos.—The school will open on April 1st, and already over 70 applications have been received from Wakamba chiefs to have their children admitted as boarders. The school can only accommodate 39 at present, but later on when funds are available, it is intended to admit about 30 pupils every year so that these pupils will be in successive stages, and there should be a constant supply of trained boys fit to join the railway, Public Works Departments, and settlers requiring the services of trained artisans.

At Mombasa Arab School a great improvement has taken place in the numbers of pupils attending and in the general tone of the school.

Technical Education.

The remarks made by the conducting officers appointed to examine the candidates in carpentry, stone work, medical work, agriculture and printing, show that a higher standard has been reached.

XI.—LAND AND SURVEYS.

(A) LANDS.

Revenue.—The revenue for the financial year amounted to £19,381, rents accounting for £18,516, and sales for £865. The amount estimated for rents was £24,400, although after the outbreak of war, when it was decided that no further auctions of land should take place, a revised estimate was submitted in November of £22,400. The War has made the collection of rents exceedingly difficult, and to this cause mainly must be attributed the large deficit in the amount collected compared with the amount estimated.

In a number of cases lessees serving with the forces have been granted an extension of time for payment of rent.

Alienation of Land.—The total number of land grants made during the calendar year 1914 was 312, amounting to 639,640 acres, compared with 447 grants the previous year, amounting to 572,159 acres. Of the figure 312, however, 192 represent grants held under licence or old leases for which new titles were issued in 1914, so that the actual number of new grants was only 120. Of these 120, the area of which was 97,174 acres, 45 grants were farms, and 75 were business, residential, mission, and church plots.

Land Available for Allotment.—Last year there were 495 farms surveyed and ready for allotment. To-day there are some 880 farms surveyed and available for sale, but this number is likely to be reduced by about 40, inasmuch as a certain number will be retained by the Government as townships and other reserves, and a further number will be applied in satisfaction of certain outstanding claims.

The New Crown Lands Ordinance.—It is hoped that this important measure, which has for so long been under consideration will shortly become law. Two very important measures have recently been incorporated in the Bill. The first point is the substitution of a lease for a licence in the first instance, which, being practically freely transferable, gives the lessee a negotiable security on which he can raise money. The second point is the term of the lease, which has been increased from 99 to 999 years.

The most important provisions of the Bill, which have been framed with a view of assuring development and prosperity, are the portions providing for the maintenance of development on farms, and the provisions whereby the rental is reassessed at fixed intervals, thus assuring to the State a share in the increased prosperity.

Coast Land Settlement.—The total revenue actually collected during the year amounts to Rs.21,779 as against rupees 11,474. The revenue due to the Government but outstanding on certificates endorsed amounts to Rs.8,695.

Expenditure.—The total expenditure was Rs.126,179.

(B) SURVEYS.

On the outbreak of war, the Trigonometrical and Topographical Branch was the only body of Royal Engineers in the Protectorate and was immediately employed on military duty and has continued to be so employed.

The programme of work of the field season was the completion of the topography over sheets S.A.36/F, S.A.36/K, and S.A.37/G, the running of lines of precise levels along the Juba River from Kismayu to a point about 30 miles up stream, the remeasurement of the Italian base in Italian Somaliland, and the extension of the Italian triangulation carried out in 1912 to the right bank of the Juba River, with the idea of eventually extending triangulation up stream towards Serenli and Lugh.

The topography of sheet S.A.36/F was well in hand and the sheet half completed when war broke out. All field parties were recalled to headquarters and the work of the branch stopped.

As regards cadastral surveys, several members of the staff volunteered for service locally and others joined the forces while on leave in England. The staff has consequently been reduced and the output of work seriously retarded. However, the output of surveyed farms is larger than that of any previous year, and the cost of work per acre compares very favourably with that of the past.

The demands made by the military authorities on the drawing office were very exacting, and the number of plans actually prepared and issued exceeds all previous records by over 1,100.

The revenue was £1,145 and the expenditure £5,207.

XII.—GAME.

During the year there has been naturally a considerable decrease in the number of game licences issued of all kinds, more particularly in sportsmen's and travellers' licences.

Game Reserves.

Northern Reserve.—Information regarding this reserve has been difficult to obtain during the last eight months. Game is, however, reported to be plentiful, including elephant, rhinoceros, and buffalo, and it appears from reports from the district officers in the Northern Frontier District, that rhinoceros are so numerous as to constitute a nuisance.

Southern Reserve.—This reserve has unfortunately been the theatre of military operations, and since the beginning of the War numbers of troops have been stationed in it.

A certain amount of game has necessarily been shot for food, but it is not considered that the amount of game that has been or is likely to be killed, will make any difference in future years.

The most noteworthy point in regard to this reserve is the number of elephants that have been seen in the Matapato country and within a comparatively short distance of Kiu. This might perhaps be due to their having been disturbed in the Tsavo district, but from native reports it appears that they have been coming there in increasing numbers during the last few years.

Principal Game Districts.—These have practically been free from shooting parties for the last eight months and the rest will no doubt be beneficial.

On the Loita plains and Southern Guaso Nyiro district a certain amount of game has doubtless been killed for food by intelligence posts on the border.

Laikipia and the Northern country have had a complete rest, as also has the Tana River.

In the Voi district there has been probably rather more shooting than usual, but little has been done on the Seringeti plains except possibly by Germans.

The value of ivory confiscated, though unsold, shows a decrease.

The stock and condition of the game in the Protectorate can, as in the last annual report, be considered as quite satisfactory. A slight outbreak of rinderpest occurred in the Matapato district of the Southern Game Reserve in March and about a dozen eland and oryx were reported as having been found dead, but it was nothing serious and most of the game, even the most susceptible species, appear to have a considerable immunity from this disease.

XIII.—PUBLIC WORKS.

The total expenditure for the year amounted to £182,430, as compared with £188,877 in 1913–14. The outbreak of hostilities necessitated retrenchment to the extent of £66,015. Loan expenditure amounted to £22,205.

During the year some 32,000 feet of concrete drains, opened and covered, and of various sections, were completed with regard to the Nairobi Drainage Scheme. In addition, over 19,000 lineal feet of earth drains were constructed. Work on public buildings in Nairobi included the laying of the foundation and plinth for the new police station, additions to the prison, the completion of five bungalows, additions to the survey office, additions to the Principal Medical Officer's office, reconstruction of certain quarters of the subordinate staff, addition to the General Post Office.

In the Masai Reserve, four dams were constructed, two at Ngori-Gori, one on the Weikei River, and one on the Penyin. The two former, on the edge of the Loita Plains, were respectively 325 feet long by 9 feet high in the centre, and 400 feet long by 20 feet high. The Weikei River dam is 308 feet long and 30 feet high in the centre. It is stone pitched on both slopes, and the water impounded is 1,220,000 cubic feet. The cost of this latter work was £830. The Penyin River dam is 462 feet long, 16 feet high in the deepest part and is pitched on both slopes. The water impounded is 660,000 cubic feet. The cost up to March 31st was £860. These works will greatly improve the water supply in the Reserve.

Loan Works.—The close of the year saw the main pipe line from the headworks to Changamwe completed. The total expenditure on this project up to date is £79,507.

Training of Apprentices.—Eight boys have now completed the course provided. In most cases these boys have elected to work as carpenters in the shops of the department. The general progress has been satisfactory.

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

ANNUAL.

No.	Colony, &c.	Year.
847	St. Helena	1914
848	Fiji	„
849	Bahamas	1914–1915
850	Gibraltar	1914
851	Sierra Leone	„
852	Grenada	1914–1915
853	Bermuda	1914
854	Malta	1914–1915

EAST AFRICA PROTECTORATE.

(For Report for 1914-15 see No. 881.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Government House,
Nairobi,
British East Africa,
30th March, 1917

SIR,

I have the honour to transmit herewith the Annual Report on the East Africa Protectorate for the financial year 1915–1916.

I have the honour to be,
Sir,
Your humble, obedient Servant,
H. CONWAY BELFIELD,
Governor.

The Right Honourable
Walter Long, P.C., M.P.,
Secretary of State for the Colonies,
Downing Street,
London, S.W.

(C369) Wt. 47019/1099. 1,000 & 90. 6.17. B.&F.Ltd. Gp. 11/2.

ANNUAL REPORT
ON THE
EAST AFRICA PROTECTORATE FOR 1915-16.

I.—FINANCIAL.

(A) GENERAL REVENUE AND EXPENDITURE.

The final results were a deficit of £20,086 on the Revenue Estimate and a saving of £112,730 on the expenditure.

The surplus balance on 31st March, 1916, amounted to £242,151.

Revenue.

The total revenue for the year amounted to £1,165,561, showing a deficit of £20,086 on the estimate and an increase of £180,805 compared with 1914–15.

The Customs Revenue amounted to £145,397, exceeding the estimate by £54,022 and the Revenue of the previous year by £59,853. £39,851, being 25 per cent. of the Import Duty collected at Mombasa, was paid to the Uganda Protectorate.

The Revenue from Native Hut and Poll Tax amounted to £182,699, an increase of £6,706 over the amount collected in 1914–1915.

The Revenue from Non-Native Poll Tax was £11,215.

Expenditure.

The original estimate of expenditure sanctioned for the year was £1,185,647, which was only arrived at by postponing many services on which the progress of the Protectorate largely depended. A further sum of £35,145 was sanctioned to be spent out of balances on special services and works authorised but not completed during the previous year.

The total authorised expenditure amounted, therefore, to £1,220,792. The net expenditure was £1,072,916, or £147,876 less.

In order to arrive at the actual savings it is necessary to deduct from this difference the unexpended balances of certain votes not completed during the year and revoted to 1916–17. The total net savings amounted to £112,730, of which £71,923 were effected on working expenses of the railway departments.

Financial position on 31st *March,* 1916.

The net excess of Assets over Liabilities on 31st March 1916 was £242,151.

This figure is arrived at as follows :—

Excess of assets on 1st April, 1915		£149,507
Total revenue 1915–1916 ..	£1,165,561	
Total expenditure 1915–1916 ..	1,072,917	
Excess of revenue over expenditure ..		92,644
		£242,151

(B) CURRENCY.

The total value of Currency Notes in circulation on 31st March, 1916 was Rs.79,87,500 as compared with Rs.68,66,000 on 31st March, 1915. The large increase was chiefly caused by the requirements of the military, the Indian Expeditionary Force having, in the early part of the year, imported large quantities of silver which were paid to the Currency Board in exchange for notes.

II.—TRADE.

The Customs receipts during the financial year amounted to £191,241, and the total refunds to £5,992.

The net revenue therefore amounted to £185,249, showing an increase of 26 per cent. as compared with the previous year, but a decrease of 6 per cent. as compared with the receipts of 1913–1914, when the highest figures as yet recorded, £196,197, were registered.

Imports.

The total value of trade imports during the year under report increased from £1,469,210 to £1,708,333, thus showing an advance of £239,123 or 16 per cent.; but if compared with the pre-war record year 1913–1914 it shows a decrease of £439,604 or 20 per cent.

Cotton textiles continue to constitute the most important and largest class of imports. They were valued at £451,022, with a yardage of 27,691,829, and represent 26 per cent. of the total trade imports. As compared with the previous year the increase in value is £181,778 or 67 per cent., and in quantity 10,211,844 yards or 58 per cent., thus giving an average rise in price to the extent of 6 per cent. The imports of other varieties of cotton goods such as bleached, dyed, and printed manufactures amounted to £172,841, an increase of £65,582 or 61 per cent. Of these imports English manufacturers represent three fourths of the supply in the market, whereas the share of Holland, given at 14 per cent., is more apparent than real, because the scarves used by native women are originally made in Manchester and thence shipped to Holland for printing by means of wooden rollers and hand blocks; when imported into the East Africa Protectorate they are shown as coming from Holland, where they were finished.

The second largest item in the list of imports is that of provisions, which represent 9 per cent. of the total trade merchandise. The increase as compared with the previous year is £19,418 or 14 per cent. The importation from the United Kingdom continues to predominate, with a value of £71,044 or 45 per cent. The presence of the troops has undoubtedly helped to swell our imports of foodstuffs.

The third class in order of value is grain, which forms 7 per cent. of the total trade imports. The quantity decreased by 70,587 cwt. or 27 per cent. and the value by £34,250 or 23 per cent. Rice, as usual, takes the first place in quantity as well as in value, and represents 56 per cent. of the total quantity and 52 per cent. of the total value of grain. The decrease is one of 35 per cent. in quantity and 32 per cent. in value as compared with the past year. The second place is occupied by the imports of flour and wheat meal, which show a decrease of 12 per cent. in quantity and 8 per cent. in value. In other varieties of grain there is a decrease of 5,609 cwt. for a value of £3,262. Over 95 per cent. of the total grain was imported from India and Burmah. The importations of grain for the troops are not included in the foregoing figures.

In alcoholic liquors there is an increase of 109,427 gallons or 61 per cent. in quantity, and £32,352 or 50 per cent. in value, as compared with the imports of the previous year. There are no local distilleries and the supply therefore depends upon foreign imports. The large increase in the imports of spirits may partly be attributed to the action of importers anxious to forestall any increase of duty, to the presence of large numbers of European troops, and to accumulation of stocks in anticipation of trade with the occupied territory of German East Africa. Ale and beer constitute the first class in volume, and form 50 per cent. of the quantity and 27 per cent. of the value. The expansion in quantity is 73,980 gallons or 90 per cent., and in value £12,784 or 94 per cent., as compared with the previous year. South African beer, which was a negligible quantity in 1913–14, assumed the second place in order of value last year, and during the year under report it has taken the first place amongst beers. Whisky occupies the first place in value and is second in quantity. It shows an increase of 19,008 gallons, or 41 per cent., in quantity and £10,037, or 39 per cent., in value as compared with the preceding year.

Of other imports tobacco, &c., show an expansion of 464,882 lbs., or 73 per cent., in quantity and £44,007, or 94 per cent., in value; and coal shows a decrease of 3,231 tons, or 32 per cent., in quantity and £6,107, or 29 per cent., in value. Of 6,969 tons of coal imported, all but 20 tons came from the Union of South Africa. The average declared value was 44*s.* per ton as against 42*s.* in the previous year. Coal imported for the Admiralty and the Government of the East Africa Protectorate is not included in the foregoing figures.

The United Kingdom was again the principal supplier of trade goods to the East Africa Protectorate, but its share declined from 43·4 to 40·6 per cent. Both Holland and the United States have increased their trade with the local market.

Exports.

Mombasa and Kilindini, two ports within a couple of miles of each other, form the coast termini of the Uganda Railway, and the gateways through which pass imports and exports of the East Africa and Uganda Protectorates, a portion of the Congo Free State, the Soudan, and German East Africa.

The comparative values for the past three years are as follows:—

Exports of produce from	1915–16.	1914–15.	1913–14.
	£	£	£
East Africa Protectorate ..	329,519	314,804	443,624
Uganda Protectorate ..	356,642	506,878	564,244
German East Africa ..	872	150,941	448,103
Congo Free State	424,209	31,986	26,127
Soudan	182	187	778
Total ..	1,111,424	1,004,796	1,482,876

Domestic exports thus show an increase of £14,715 or 5 per cent. as compared with the previous year.

Hides and skins represent 32 per cent. of the total, with an export of £104,764, being slightly less than in 1914–15. The price of hides and skins has shown a tendency to rise since 1912, and after the outbreak of war prices rose rapidly. The rise was checked in August, 1915, when the completion of local military contracts and the action taken by the Home Government to control values brought the leather market to a more reasonable level. Italy took 60 per cent. in weight of the total of hides, with a value of £55,751, the United Kingdom was second with 6,8[illegible]3 cwt. valued at £29,864, while France bought 986 cwt. for £4,623.

68,746 pieces of sheep skins were consigned to the United Kingdom, 30,244 to India, and 7,788 to Italy. Of goat skins, 270,209 pieces went to the United Kingdom, 4,010 to Egypt, 2,782 to India, 2,293 to Zanzibar, and 130 to France.

The second largest item of export is fibre, valued at £77,050 and representing 23 per cent. of the domestic exports. The shipments of fibre are classified under the two headings of " Sisal " and " Other sorts " representing 46,407 cwt. (£74,669) and 3,338 cwt. (£2,381) respectively. As compared with the previous year the quantitative increase is one of 9,655 cwt. or 24 per cent., and the advance in value is £36,973 or 92 per cent. 97½ per cent. of the sisal fibre exported was consigned to the United Kingdom, while the whole of the " other sorts " exported was shipped to the United Kingdom. There can be no doubt now of the success of this industry, which promises soon to head the list of exports.

Grain and oil seeds have fallen off very considerably during the last three years. The exports during 1915–16 amounted to 76,883 cwt. valued at £37,076, as compared with 104,133 cwt., valued at £38,572 in 1914–15, and 383,243 cwt., valued at £147,389, in 1912–13, when the grain and oil seed export reached its maximum. The decrease in shipments may be attributed to prohibition of exports since the war began, and to the huge demands for local grain for His Majesty's forces in the Protectorate. High freights and want of railway facilities have also contributed to the decrease of exports.

Copra declined from 27,722 cwt., valued at £24,371, to 9,774 cwt., valued at £8,433. This is the lowest figure registered since 1906.

The rapid growth of the coffee-planting industry in the East Africa Protectorate was referred to in the Report for 1914–15. In the year under review the export fell from 7,784 cwt. (£21,738) to 6,028 cwt. (£17,297). This was due to heavy ocean freights by steamers, which have increased from 50 shillings in the pre-war period to 200 shillings a ton during the year, want of railway facilities, and the absence of estate owners at the front. The export to the United Kingdom was 88 per cent. of the total.

The export of wool is gradually increasing. 2,869 cwt., valued at £10,061, were exported during the year, as compared with 2,241 cwt., valued at £8,261, in 1914–1915. Wool is solely exported to the United Kingdom.

The exportable surplus of mangrove poles (known locally as *borities*) during the year increased from 324,195 to 495,363 in number, whereas the value increased from £4,537 to £8,264. About 80 per cent. of the total went to Arabia and the balance to Zanzibar, India, &c.

The export of mangrove bark from the Tanaland concession during the year amounted to 3,012 tons, valued at £4,621, thus showing a decrease of 37 tons with an increase of £1,623 in value. 1,600 tons of mangrove bark were consigned to the United States and 1,400 tons to the United Kingdom.

Carbonate of soda may well be one of the principal items of export from the East Africa Protectorate in future, but the war has seriously hampered the operations of the Magadi Soda Company on Lake Magadi. The company shipped 256 tons of raw soda in 1914–15, but only 77 tons as a sample consignment during the year under report.

The export of rubber declined from 1,279 cwt. to 500 cwt. and the value from £10,183 to £4,081; 83 per cent. of the quantity was consigned to the United Kingdom, and the balance of 17 per cent. to Zanzibar for re-shipment.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

The general prosperity of the Protectorate has been well maintained in the exceptional circumstances caused by the war. After the cessation of hostilities there should be no difficulty in restoring normal conditions, and a period of increasing progress may be expected.

There is no doubt that a large number of buildings would have been constructed had it not been for the excessive cost of material, particularly cement and corrugated iron.

The dairy farms near Nairobi, and in the Naivasha and Lumbwa districts are returning a handsome profit.

There was no increase in the selling price of local timber during the year. The demand was restricted.

Town and farm properties have not decreased in value.

The soda industry at Lake Magadi promises to be the largest industry in the Protectorate.

The area under coffee has increased considerably and excellent prices have been obtained in the home markets.

Good progress has been made in sisal. A flax factory has been opened at Lumbwa. This product promises very well and its cultivation is being largely extended.

The large plantations of wattle have given disappointing results. Suitable machinery has not yet been provided for the treatment of the bark.

The bacon industry has developed considerably. Pigs can be reared at small expense and have a ready sale.

(B) MINES AND MINERALS.

The continuation of the War and the consequent shortage of skilled European supervision has prevented the holders of the various mica concessions from recommencing operations. This is unfortunate, as the price of mica in the home market would probably enable the holders to recoup themselves for their initial expenses.

For the same reason practically no prospecting has been carried on during the year in question.

No mineral leases have been granted during the year.

IV. AGRICULTURAL AND STOCK RAISING.

(A) CROPS.

The principal crops of the country, generally speaking, did well.

Coffee.—The area under coffee has increased considerably, the present acreage approximating 16,000 acres. The leaf disease *Hemeleia vastatrix* has done only a moderate amount of damage; the trees, if properly treated in time, recover rapidly.

A new pest called "thrips" has, however, appeared and seriously injured the trees of certain planters, especially in the Kyambu district.

Fibres.—The interests in sisal and flax have grown considerably greater during the year. A number of extra machinery plants have been erected and a large number are on order from home.

Coconuts.—Owing to war conditions it was not considered advisable to put into force the legislation framed on the report of the Coconut Commission, but the trap system for the collection and destruction of the rhino beetle has been continued and extended with very satisfactory results.

Abnormal rains in the Lamu District caused serious damage in some of the coconut plantations.

Tobacco.—Owing to the unsettled state of the country, only a limited number of tobacco trials were undertaken.

Fruit Culture.—A large number of settlers continue planting citrus orchards, especially limes and lemons, with the object of subsequent export of lime juice and citrate of lime, and factories for this purpose will shortly be built. The supply of budded stocks from the Government Farm, Kabete, does not meet the demand, while imported trees are somewhat expensive and a good opportunity, therefore, appears to offer for the establishment of nurseries.

Sugar.—Trials with sugar canes imported from various sugar-producing countries have been most successful, and it seems almost certain that this will become a flourishing and profitable industry in the near future.

(B) STOCK.

The necessary supplies for the large numbers of His Majesty's troops present in the Protectorate have caused a heavy demand on the resources of stock owners, both native and European, which has been met in an admirable manner. 35,434 cattle, 128,123 sheep and 16,327 goats were consumed by the military from the commencement of the war to March 31st, 1916. These figures do not include civil consumption, nor the numerous deaths occasioned by movement under abnormal conditions; and an additional 20,000 cattle have been used up for transport purposes. This extraordinary consumption has naturally resulted in a certain shortage of beef and mutton animals available at the present time, and a consequent rise in retail prices.

The desire for pure bred and high grade stock was shown at the annual Government sale at Naivasha. Owing to the supply not being equal to the demand, keen bidding resulted and record prices were obtained.

The health of stock during the year has, on the whole, been good. A notable exception has been the large number of cases of trypanosomiasis in the Thika District.

(c) EXPERIMENTAL FARMS.

KIBOS.—Both as regards quantity and distribution the rainfall during the year was a distinct improvement on the previous four or five years.

A further slight addition was made to the nursery.

Trials with beans have given better results than on any previous occasion.

Owing to a failure to obtain good seed in time for planting in season, cotton was one of the few crops which yielded no results.

Experiments with maize were conducted along lines similar to those of the previous year and included the same varieties. The experiments demonstrated that the wider distances were more suitable for the Hogan variety, whilst the closer distances were more suited to the Hickory King variety. Issues of good Hickory King seeds were made to the surrounding districts.

Upland Rice was planted at the beginning of the rains in March and gave very good results.

Tobacco.—Of the 21 varieties of tobacco with which experiments were started some years ago all but three have been deleted from the experiments. Although no attempt has been made to turn out high grade leaves, experiments have shown that a type of tobacco suiting the tastes of medium to strong smokers can easily be produced under the existing conditions on the Farm.

Coffee.—Owing to the appearance of coffee leaf disease on the old plants the experiment in coffee has received a somewhat severe set back.

Cocoa.—Repeated trials have been made with cocoa but so far none of these have produced satisfactory results.

A scheme for the agricultural training of a limited number of native youths on the farm has been introduced. 22 boys, mostly sons of Chiefs and Headmen, have already been admitted.

NAIVASHA.—The rainfall suited all stock on the farm, and in consequence they were in good condition throughout the year.

During the year the cattle did well and the increase was good. The pure bred shorthorns had an excellent season, the Lincoln red shorthorn giving a larger return of calves than the beef breed. The Friesland cattle continue to be a success and are good breeders. The pure bred Hereford cattle have as usual not come up to anticipation and the increase is very low. The Ayrshire cattle have fulfilled expectations, the increase being splendid. The Guernsey cattle have thriven and the Guernsey shorthorn cows also. Grade cattle have done well generally.

Sheep have thriven; the weight of fleece per animal is about the same as in previous years. The report on the clip was very satisfactory

The price obtained was 11*d.* per lb. for pure merino ewe fleeces, and 10*d.* and 10½*d.* per lb. for grade merino fleeces. The sheep on the farm are certainly an eminently paying proposition, taking into account the wool increase and sales of sheep.

The Angora and the grade Angora goats have been healthy and the increase is good. The price obtained in London for the mixed mohair was one shilling per lb. The improvement in the native goat when crossed by the pure Angora is very marked; in each successive cross this is clearly to be seen.

The crossing of the native donkey with the imported Catalonian Jack is a success. The progeny are nice large animals and are in great demand.

Ostriches continue to thrive, but, owing to the slump in feathers, the return is not great.

Some 180 acres of land on the Naivasha Lake frontage have been brought under cultivation.

KABETE.—Good crops were obtained during the first season, owing to the very favourable rains in April, March, and June. The second season's crops were very disappointing, owing to great shortage of rain in December and January.

An area of 6¼ acres was sown in linseed in April, with seed twice grown on the farm. This crop gave an excellent stand of linseed. Samples sent to England for examination were favourably reported on.

Since October, 1915, the farm has become a milk supply depôt for the military hospitals, and for this purpose a large number of additional cows were received from the military. The supply of milk now reaches about 100 gallons per day.

Livestock.—With the exception of casualties due to east coast fever, the health of the stock has been good. Sheep have not done well. Thirty cattle and 82 pigs were dispatched from the farm during the year. The stock on hand at the end of the year included 566 cattle, 54 sheep, and 107 pigs.

(D) DISEASES OF ANIMALS.

East Coast Fever.—Fresh outbreaks of east coast fever have occurred on several farms on the Uasin Gishu Plateau. More dipping tanks are being built and it is hoped that it will soon be possible for all animals on the Plateau to be regularly dipped. During the year, Government dipping tanks have been completed at Nairobi and at Rumuruti, and a tank has been erected by the military authorities at Fort Ternan. Several private dipping tanks have also been erected and some 80 are now in use in the Protectorate. The number of cattle belonging to settlers admitted to the east coast fever testing area at Kamiti during the year, was 587. The number of deaths was 24.

Rinderpest.—Outbreaks of this disease occurred in eleven settled areas, all in the Highlands. Double inoculation was used in suppressing these outbreaks in four of the areas. The other outbreaks were dealt with by the inoculation of serum only. A fresh outbreak of rinderpest occurred amongst the cattle of the Samburu tribe, Northern Frontier District. A temporary quarantine station was formed at Archer's Post and all trade cattle passing through were injected with serum. 125,854 doses of serum were sent out by the Kabete Laboratory during the year.

Anthrax.—Several cases of this disease occurred at Fort Ternan quarantine station amongst cattle undergoing quarantine after double inoculation. Cases also occurred on the Kisumu-Mumias Road and in the Nairobi and Kyambu Districts.

Pleuro-Pneumonia.—A few cases of pleuro-pneumonia came under notice among the stock confiscated from the Turkana. Every possible precaution is being taken to prevent the spread of this disease from the Masai Reserve quarantine area.

Trypanosomiasis.—An outbreak of trypanosomiasis occurred in June 1915, amongst settlers' cattle in the Thika District. The area implicated was placed in quarantine in September, and a Veterinary Officer has, since then, been permanently retained in the district carrying out periodic examinations of all cattle. There is reason to believe that the disease will be eradicated along the transport routes in the near future.

Foot and Mouth Disease.—An outbreak of this disease occurred at the laboratory among cattle imported from Uganda. Prompt action was taken to segregate the affected herd and the disease did not spread.

Quarter Evil.—Outbreaks of quarter evil occurred in Nyeri, Lumbwa, Nakuru, and Kisumu Districts. A vaccine produced at the Laboratory has been used and has given good results.

Epizootic and Ulcerative Lymphangitis.—Very few cases of epizootic lymphangitis were noted during the year; and there has been a great diminution in the number of cases of ulcerative lymphangitis also.

Horse Sickness.—This disease was the cause of considerable mortality among military remounts in the Nairobi, Mbagathi, and Bissel Camps.

V.—FORESTS.

The total area of proclaimed forests is now 1378·55 sq. miles. The estimated total area of demarcated and partially demarcated forests not gazetted is 1,866 sq. miles. These figures do not include the forests on Mount Elgon nor those in the Nandi District, the area of which is estimated to be between 150 and 200 sq. miles.

Up to the end of 1915 the local timber trade was very slack and very little timber was sold; during the first three months of 1916 there was a recovery, the demand for timber was brisk, largely as a result of orders given by military departments and the railway, and the various saw mills in touch with the railway line were kept busy. During the year, 146,564 cubic feet of timber were sold as compared with 171,576 cubic feet in the preceding year.

The quantity of timber issued free to Government departments, settlers, and natives, amounted to 43,211 cubic feet as compared with 54,071 cubic feet in the previous year.

The Timber Market.—There was no increase in the selling price of local timber during the year as compared with the previous year; the demand was restricted; seasoned timber however was in strong demand.

The retail prices for sawn local timber in Nairobi at the end of the year were, per ton of 50 cubic feet: Cedar, Rs.120; Podo, Rs.102; Musharagi, Rs.120; Mueri, Rs.108-120; Muzaiti, Rs.216; other woods, Rs.100-120. The average retail prices for sawn imported woods in Nairobi at the end of the year were, per ton of 50 cubic feet: Deals, Rs.240; Teak, Rs.528. There were no stocks of pitch pine. The stocks of imported timbers were low; during the year under report, 1,429 tons, valued at £10,570, were imported, as compared with 4,373 tons, valued at £21,237, in the preceding year, and 10,516 tons, valued at £53,323, in the year 1913–14.

During the year timber to the value of £711 was exported as compared with £84 in the previous year. Nearly the whole of the timber exported was mangrove poles.

Railway Fuel.—A scheme has been sanctioned for the gradual substitution of a Forest Department fuel supply for the system of supply by contractors. Camps were opened at Molo in April, at Escarpment in August, and at Elburgon in February; fuel for the railway pumping station at mile 11/6 was also supplied from the Mwachi Forest. At the above camps the quantity of green fuel cut during the year was 584,385 cubic feet; of this amount 271,445 cubic feet was taken over by the railway. 3,531,076 cubic feet of wood fuel were supplied to the railway by fuel contractors cutting in Government forests, as compared with 2,955,423 cubic feet during the preceding year. The actual quantity of wood fuel taken over by the railway over the whole length of the line was 9,248,567 cubic feet as compared with 7,155,938 cubic feet in the preceding year.

Cultural Operations.—A total area of 561·93 acres was planted, as compared with 553·67 acres in the previous year; in the forests adjoining the railway 442·21 acres were planted, as compared with 474·28 acres in the previous year.

VI.—COMMUNICATIONS.

(A) RAILWAYS.

Uganda Railway.—The estimates for the year's working were based on the assumption that normal conditions would have prevailed in the country throughout the financial year, and provided for an expenditure of £381,949 and a revenue of £662,000.

The total revenue for the year actually amounted to £629,994, a decrease on the estimate of 5 per cent.; the actual expenditure was £342,694, a decrease of 10·28 per cent. on the estimate.

Five ships of the lake flotilla were in the service of the military throughout the year, leaving three for the use of the railway.

During the whole year the conditions of traffic have been abnormal. The railway was taken over by the military authorities in November, 1915.

Owing to the continued attempts of the Germans to wreck the railway and rolling stock, traffic suffered many inconveniences and delays. In all, fifty-five attempts were made during the year.

Thika Railway.—The Thika Railway offers many possibilities of favourable working in the future and at present is more than paying working expenses. The ordinary main line rates are now in force. During the year, 73,592 passengers were carried, 8,935 tons of goods, and 529 head of livestock. The principal traffic was in coffee and fibre.

Magadi Railway.—The Magadi Railway, 91 miles in length, was built by the Magadi Soda Company for the purpose of exploiting the soda that is found at Lake Magadi. The Uganda Railway took over the whole line finally on August 1st, 1915, and carried out the maintenance of the line on behalf of the contractors throughout the whole year. The railway has been of advantage in dealing with military traffic to Kajiado (Mile 26). Approximately 60,000 passengers were carried. Of the 12,937 tons of traffic received on the line, 93 per cent. was for military purposes.

Busoga Railway and Marine and the Port Bell-Kampala Railway.—The total revenue was £25,097 and the expenditure £23,024. The disappointing result of the year's working can be attributed entirely to the War. The urgency of the military situation in East Africa and the demands made upon the Uganda Railway for the use of its rolling stock resulted in the trade of Uganda having to suffer. The War has also affected the import traffic.

(B) ROADS.

Road development has failed to keep pace with the increasing traffic development. In the Naivasha Province roads have been repaired and work on the Londiani-Uasin Gishu road has been carried on. In the Nyanza Province necessary repairs to roads and bridges have been carried out with the limited funds allowed. Native tracks have been maintained and considerable additions have been made during the year. In the Kenya Province traffic has greatly increased on the Thika-Fort Hall Road. Repairs and reconstruction have been carried out on the main routes. The Fort Hall-Embu Road has been constructed by the Administration and native-made roads have been well maintained. In the Masai Reserve a new road has been constructed from near Kijabe to the Mara Station, a distance of 100 miles. The road is practicable for motor vehicles. In the Northern Frontier District the road from Archer's Post to Arodima was completed and was entirely serviceable as far as Bulesa. The road from Archer's Post to Merrille was repaired..

VII.—CLIMATE AND HEALTH.

(A) PUBLIC HEALTH.

1.—*The Coast Zone.*

The average health remained good throughout the year.

Communicable Diseases.—There were 7,112 cases of malaria treated. This number shews an increase over previous years, but only 14 deaths occurred, as compared with 17 in 1914 and 22 in 1913.

There were six cases of blackwater fever, and one patient, a European, died.

Infectious or Epidemic Diseases.—There were 27 cases of cerebrospinal meningitis, with 12 deaths, being a slight decrease on 1914, when 33 cases, with 12 deaths, occurred.

There were 317 admissions for dysentery, with 39 deaths, as compared with 621 admissions and 75 deaths in 1914. Twenty-six Europeans were treated for the disease, of whom one died.

Twelve cases of enteric were treated, of whom nine were Europeans. There were five deaths, four being Europeans.

Plague was not reported at the Coast during the year, and no infected rats were found.

436 cases of leprosy were reported from settlements at Mombasa, Malindi and Lamu.

Six cases of small-pox were discovered, of whom two died.

Forty-one cases of beri-beri, with one death, were noted at Mombasa Native Civil Hospital.

2.—*The Mountainous Zone.*

Communicable Diseases.—The number of admissions for malaria was 5,352, a large increase over the number admitted in 1914, viz., 3,851. Of 520 Europeans admitted, two died. Nairobi was responsible for the largest number of cases, but every township appeared in the list.

Nine cases of blackwater were treated, two being European. One death occurred in a native case.

Infectious or Epidemic Diseases.—The virulence of cerebro-spinal meningitis appears to be dying down. During 1915, there were three cases among Europeans and 78 were noted among natives, with three deaths. In 1914 there were 136 cases, with 51 deaths, and in 1913, 288 cases, with 152 deaths. The death rate has thus steadily decreased.

An increase is noted in cases of dysentery, 1,647 cases being admitted of whom 89 died; 105 of the cases admitted were Europeans, all of whom recovered.

In 1914, there were 1,471 admissions, with 49 deaths. The increase is attributed to the changed conditions produced by the war.

The admissions for enteric rose from 46 (10 deaths) in 1914 to 182 (19 deaths) in 1915; 35 cases occurred amongst Europeans, of whom three died.

347 cases of pneumonia were recorded, with 62 deaths; 13 cases, with two deaths, were Europeans.

3.—*The Kenya and Nyanza Provinces.*

Communicable Diseases.—4,687 cases of malaria were treated, showing a continued increase in the number of patients submitting to treatment.

There were three European cases of blackwater fever, with one death.

Only one case of trypanosomiasis came to light in Nyanza Province Four cases and one death occurred in 1914.

Infectious or Epidemic Diseases.—Cerebro-spinal meningitis is fairly prevalent throughout the Nyanza Province; 27 cases were treated. There were 23 deaths.

Dysentery showed a notable increase and totalled, including two Europeans, 651 admissions, of whom 39 died. In 1914, there were 492 cases recorded, with 18 deaths. Only two cases of enteric were recorded.

Cases of plague have been numerous in Nyanza Province, but figures showing the number of cases in the native Reserves are unobtainable. Thirty-three Native cases were admitted to Kisumu Hospital; 29 died.

There were 24 admissions of small-pox during 1915, of whom two died. An outbreak occurred in October, 1915, in Nyanza Province, near the Uganda border, and spread to Kisumu. 514 cases were treated in the North Kavirondo District as out-patients up to March 31st, 1916, and 148 deaths were recorded.

4.—*The Desert Zone.*

Communicable Diseases.—1,666 cases of malaria were admitted to treatment. There was one European case of blackwater fever.

Infectious or Epidemic Diseases.—There were nine cases of beri-beri, none of which were fatal.

There were 107 admissions for dysentery, as compared with 373 in 1914.

(B) SANITATION.

1.—*Preventive Measures.*

Malaria.—Reports are unanimous in stating that malaria is on the increase. This year every medical station in the country has been reported to be infected with malaria. As far as possible, owing to the continuance of hostilities, attention has been directed to anti-malarial measures in the principal townships. Quinine prophylaxis has produced gratifying results in some instances, but very little opportunity for its prosecution has been offered.

Nearly all the millions fish imported from Zanzibar died in Mombasa.

Trypanosomiasis.—Four cases in all came under observation. No deaths were recorded.

Plague.—Observed cases of plague have occurred in Nairobi, Kisumu, and North Kavirondo towards the Uganda border. Towards the end of the year, plague appeared in various parts of Kisumu District north of Kisumu, but no supervision could be exercised, owing to shortage of staff.

Small-pox.—Towards the end of 1915, small-pox became prevalent in Nyanza Province near the Uganda border. Vaccination has been carried out throughout the Protectorate. 162,184 vaccinations were performed during 1915.

Enteric Fever.—The number of reported cases was 216, with 33 deaths as compared with 61 cases and 14 deaths in 1914. 1,021 inoculations were performed during 1915 in Nairobi Jail, and 1,320 persons were inoculated in various parts of the Protectorate. The vaccine used was prepared in the Government Laboratory, Nairobi.

Dysentery.—This disease has increased to a large extent in all parts of the Protectorate, the type generally observed being bacillary. The case incidence among porters enrolled for military service has been large. The total number of cases recorded in civil hospitals and dispensaries during 1915 was 2,722, with 168 deaths, of which 134 cases, with one death, were Europeans.

In addition to these the Health Officer at Mombasa reports 350 deaths, at Nairobi 89 deaths, and at Kisumu 420 cases, with 31 deaths.

2.—*General Measures.*

Sewage Disposal.—Works for the treatment of sewage have not been constructed in any part of the Protectorate; the disposal of night-soil has continued by dumping into the sea, trenching, by means of cesspools, or distribution on the ground.

Water Supply.—At Mombasa the new water supply from the Shimba Hills was available at the Kilindini end of the island in March, 1915, but its distribution was restricted to that area. In the same month the new water supply at Nakuru was laid on the existing mains in the township, but in an untreated state. The permanent water supply to Kisumu has not as yet been initiated.

Drainage.—In Nairobi some advance has been made in the drainage scheme, over 1,100 yards of new masonry drains being constructed. The work in Nairobi, Kisumu and Mombasa has been well organised and sustained.

Bush Clearing.—Considerable work has been done in the principal townships and in the majority of out-stations, with excellent results.

VIII.—NATIVE ADMINISTRATION.

The period under report has been one of considerable activity in Native Reserves in connection with military requirements. Large demands have been made for porters for the Carrier Corps, for transport oxen, and for meat supplies for the troops. The natives have responded remarkably well to the demands made of them, and, despite the shortage in the Administrative staff, the administration has in general continued on practically normal lines and steady progress has been made.

(A) HIGHLANDS AND NYANZA BASIN PROVINCES.

(1) *Nyanza Province.*

The Nyanza Province is divided into five administrative districts and is peopled by five main tribes—the Nilotic Kavirondo, Bantu Kavirondo, Kisii, Lumbwa, and Nandi. The population of the Province is estimated at 1,116,655, comprising 1,114,272 natives, 431 Europeans, 1,896 Asiatics, and 56 Anglo-Indians. The area of the Province is 10,254 square miles, of which 8,724 square miles are Native Reserve areas. The average density of the native population is therefore approximately five acres per head.

Great progress is being made among the Kavirondo tribes, who are rapidly becoming keen agriculturists and traders, and are eagerly seeking education. The spread of village schools, where a primitive form of reading and writing is taught, is considerably on the increase.

The Kavirondo are showing an increasing inclination to spend money on imported goods. Better domestic conditions are being adopted by many of the natives. The demand for clothing by both men and women is increasing. A greater tendency is shown to valuing articles in cash, rather than, as heretofore, in cattle.

The Nandi and Lumbwa are mainly a pastoral people and are more conservative than the Kavirondo. They have, however, responded well to calls for recruits for the King's African Rifles and Police.

Trade.—The trade in native produce, although severely handicapped by the absence of railway facilities caused by the military situation and by difficulties connected with sea freights, has shewn a decided tendency to improve. The main exports are sim-sim, maize, and mtama. The production of cotton was not undertaken in 1915–1916 owing to low prices obtained for the 1914–1915 crop. Efforts are being made to reinstate its cultivation.

The trade in imported goods has been hampered by the difficulty in obtaining supplies.

There are forty trade centres in the province, the trade being mainly in the hands of Indians. Allowing for the existing conditions in the country, the general state of trade is satisfactory. Markets are being opened by natives in several parts of the Reserves.

(2) *Naivasha Province.*

The Naivasha Province is divided into eight administered districts, and, apart from the European area, is peopled by a number of tribes, mainly pastoral, the largest of which are the Turkana, Suk, Elgeyo and Marakwet.

The European population of the Province is 1,541, the Asiatic 498, and the Native 156,734.

During the early part of the year a punitive expedition was sent against the Turkana tribe. The closer administration of this tribe has been undertaken as a consequence and three new stations have been opened in their country. Good progress has been made and the natives are settling down peaceably.

Satisfactory progress has been made among the other tribes of the Province.

Trade.—The principal trade has been in stock brought by Somalis from the North. An extensive trade in skins has taken place in Ravine District.

(3) *Masai Reserve.*

The Reserve has been divided into three districts with headquarters at Ngong, Narok River, and Engirende (Mara River) respectively. The population of the Reserve is estimated at 36,000, and the area at 14,600 sq. miles. The area is not excessive, as the Masai own nearly 700,000 head of stock and more than 2,000,000 sheep.

The Reserve being contiguous with the German border, the effects of the war have been very noticeable. Nevertheless, the administration has proceeded almost normally and substantial progress has been made. Since the commencement of the war, the Masai people have spontaneously contributed bullocks and sheep as meat for the troops to the value of about Rs.23,000. In addition, notwithstanding the dislike of the Masai to part with their stock, large supplies of livestock have been readily forthcoming at moderate prices. On two occasions the enemy have invaded the Reserve, but without disturbing the loyalty of the natives. Relations with the Government have been excellent throughout. Serious crime has been rare.

Trade.—Of the twenty four trade centres in the Reserve, twelve were closed to Indians and Somalis, on account of the war. Trade has, nevertheless, expanded in a marked degree and has been in a most prosperous state.

(4) *Kenya Province.*

Kenya Province is divided into four administrative districts with stations at Nyeri, Fort Hall, Embu and Meru, and a sub-station has been established at Chuka.

The population is estimated at 867,779, consisting of 361 Europeans, 266 Asiatics, and 867,152 natives.

Relations between the natives and Europeans have been excellent throughout, and satisfactory progress has been maintained.

Trade.—An increase of trade is recorded in 1915–1916. Consignments of sisal, beans, maize and hides from Thika Station have greatly increased. The trade in livestock has been large.

(5) *Ukamba Province.*

Ukamba Province, in which Nairobi is situated, is divided into four administrative districts, in three of which Native Reserves are situated.

The population of the Province is estimated at 381,502, of which 372,948 are African, 2,875 Europeans, and 5,679 Asiatics. The area of the Province is 24,250 sq. miles; the total area of the native Reserves is 7,620 sq. miles, giving the average density of the native population as 13 acres per head.

The native tribes have, without exception, proved loyal to the administration. Some progress is being made in social advancement. The Kikuyu are seeking for education in largely increasing numbers, the growth of this desire being largely due to excellent missionary work among them.

There appears to be a lamentable increase of drunkenness among the natives of the Province, which is, in parts, not confined only to the old men. Steps are being taken to deal with the evil.

The fear of witchcraft is still a factor that has to be reckoned with.

The natives have willingly assisted in providing necessaries for the war, and have spontaneously made valuable gifts to relief funds and to provide meat for the troops.

Trade.—There are twenty-two trade centres in the Province and five townships. In the Kitui and Ulu districts, Indian traders are being confined to trade centres and forbidden to trade in isolated stores.

Trade in general has been hampered by the difficulty of obtaining ocean-borne supplies and by the limited quantity of rolling stock, due to military requirements, on the Uganda Railway.

An increase of trade was noticeable in the Ulu District, the main articles in demand being blankets, beads, wire, wheat and maize flour, sugar and tea. The important exports are hides and ghee.

Kitui district shews an increase in imports but a decrease in exports.

(B) COAST PROVINCES.

(1) *Seyidie Province.*

Seyidie Province is divided into five districts. The European population is 366, and the native population approximately 195,000. There are 7,677 Asiatics.

Certain adjustments have been found necessary in the Teita district on account of the military situation, and the inhabitants of two locations were temporarily removed from the sphere of military operations.

The Vanga district suffered from enemy occupation at the beginning of the year, and the majority of the inhabitants took refuge further from the German border. They did not return to their country during the course of the year. In spite of these trying conditions the natives generally remained perfectly loyal.

The reorganisation of the Giriama in the Nyika Reserve, after the rising of 1914–1915, proceeded slowly owing, to the conservatism of the natives. There is no longer any active hostility. Passive resistance to Government demands has been noticeable, but satisfactory progress has been made and taxes were paid willingly.

Trade.—The sisal industry has made considerable progress.

In the Teita and Vanga districts trade has been almost non-existent, owing to the military situation.

In the Nyika Reserve and Malindi district trade has been severely handicapped by the failure of the harvests. Export trade has been practically non-existent and money has been scarce.

(2) *Tanaland Province.*

The European population is 19, and the native population approximately 40,000. There are 699 Asiatics. There have been no signs of unrest among the Mohammedan population. The Arab staff has given loyal support.

Trade.—The export in copra was small. An exceptionally heavy rainfall caused serious damage to the coconut plantations. A considerable trade in foodstuffs is carried on by the Somalis with the Wapokomo.

(3) *Jubaland Province.*

The European population is 39, the Asiatic 367, and the native approximately 17,000.

During the early part of 1916, the Lorian Aulihan Somalis were troublesome. Some of their sections looted the Samburru of stock, the greater part of which has since been returned. A fine imposed has been paid in full.

Several public wells have been constructed in Kismayu.

Trade.—The native maize crop was excellent, but the price obtainable was very low.

(C) NORTHERN FRONTIER DISTRICT.

Affairs on the Frontier have been less satisfactory than in the last two previous years.

Trade.—There has been a growing trade from the Boran and Somalis on the Lorian to Meru and Nyeri with goats and skins. Trade with the Samburru and Rendili has been closed for the most part. A steady business was done in the Moyale market on a fairly large scale in coffee berry.

IX.—EDUCATION.

(A) GOVERNMENT SCHOOLS.

European Schools.

(1) *Nairobi Division "A" School.*—The provision of education in this school is now limited to children between eight and fourteen years of age. Though the impossibility of obtaining new assistant masters in England has handicapped the work of the school, examination results have been very satisfactory. Forty candidates entered for the College of Preceptors examination, of whom thirty-nine passed, eleven with honours in various subjects.

(2) *Nakuru Division "A" School.*—The attendance at this school has fallen off somewhat; in other respects the general results are satisfactory.

(3) *Central School, Eldoret.*—This school was opened as a boarding school on June 14th 1915, nineteen pupils being admitted. The number of attendants had risen to forty-four by March 1916. The popularity of the school is a good sign that the work of the school staff is appreciated.

Indian Schools.

The Nairobi school has suffered constant changes in the teaching staff, but the work done was very satisfactory. The average number of children during the year was 146. The infant standard had to be closed owing to insufficient accommodation. At the Mombasa school there are 120 pupils.

Native Schools.

Ukamba Industrial School, Machakos.—This school opened in April, 1915, with twenty-six pupils. At the end of March, 1916, thirty-eight pupils attended. Accommodation for large numbers of pupils is not available at present but it is hoped that extensions will be made when funds are available. The progress of the pupils has been good, and a large number of natives are waiting for the time when further accommodation can be provided.

Considerable improvement in the attendance and general work has been made in the Arab school, Mombasa.

Technical Education.

The training in Mission Industrial Schools has resulted in several natives passing examinations as carpenters, masons, and bricklayers.

(B) MISSIONS.

Seyidie.—The Church Missionary Society have done good work in Mombasa, Rabai, the Nyika Reserve, and Mbale in the Voi District. There are three Church Missionary Society Mission Schools in Mombasa under direct European control, and one in charge of a native teacher. The total number of attendants is 230 boys and 15 girls. In some of the schools fees are charged.

The Roman Catholic Mission have three schools at Mombasa, one of which is under European management. Natives are taught free.

Ukamba.—In Nairobi, the Church Missionary Society have opened a boys' school, a night school, and a women's school, the average daily attendance being 120, 200, and 60 respectively. All schools are conducted under European supervision.

There are about 450 converts at the Roman Catholic Mission, Simonisdale. The greater number are Akikuyu. Technical and secular education is provided. The Nairobi Native Roman Catholic School has an attendance of about 157, of whom the majority are Kavirondo.

In the Kiambu District there are stations of the Church Missionary Society, French Roman Catholic Mission, Church of Scotland, Africa Inland Mission, Gospel Mission Society, and the Italian Roman Catholic Mission.

Kenya Province.—The principal missions are the Italian Roman Catholic Mission and the Church Missionary Society, who have opened sixteen and eight stations respectively. There are also branches of the Church of Scotland Mission, the United Free Church Mission and the Africa Inland Mission.

Naivasha Province.—Missionary effort in this Province is mainly confined to holding church services in the European areas. There are two mission stations occupied by members of the American Inland Mission, one in Elgeyo, and one in Kabarnet.

Masai Reserve.—An experimental school has been opened by the Scotch Mission at Ngong for educational purposes.

Nyanza Province.—The various Mission Societies in the Province maintain schools in their stations and also a number of out-schools in the district. The Church Missionary Society has three stations in the Province; the Roman Catholic Mission (Mill Hill), seven; the Friends' Africa Industrial Mission, four; the Africa Inland Mission, two; the Nilotic Independent Mission, one; the South Africa Compounds Mission, two; the Lumbwa Industrial Mission, one. The Seventh Day Adventists have six stations in South Kavirondo District, all of which have been unoccupied throughout the year.

X.—LANDS AND SURVEYS.

(A) LANDS.

Alienation of Land.—The total number of land grants made during the calendar year 1915 was 100, comprising an area of 246,679 acres, compared with 312 grants the previous year, totalling 639,640 acres. Of the 100 grants, 74 represent grants under licences or old licences for which new titles were issued in 1915; the actual number of new grants was, therefore, only 26, representing 36,519 acres, as compared with 120 new grants, representing 97,174 acres, in 1914. Of these 26, 12 grants were farms, while 14 were business, residential, or mission plots.

Land Available for Allotment.—Last year there were 880 farms surveyed and available for sale, some 40 of which, however, were to be retained by the Government to meet unsettled claims and as township and other reserves. To-day there are about 900, but, allowing for the retention of some 50 for Government reserves and unsettled claims, the number available becomes 850.

The new Crown Lands Ordinance came into operation on 1st June, 1915.

(B) SURVEYS.

All officers in the trigonometrical and topographical branch have been engaged on military work throughout the year. Much of the work in the cadastral branch has been curtailed owing to the military situation demanding the services of many members of the staff. Some 400,000 acres were surveyed by this branch; the cost of survey per acre shows a considerable increase over previous years. The demands made by the military authorities on the drawing office were relaxed on the arrival of a Royal Engineer lithographic section from India. Heavy arrears in deed plans have, in consequence, been cleared off

XI.—PUBLIC WORKS.

The total expenditure for the year amounted to £120,828, as compared with £182,430 in 1914–1915 and £188,877 in 1913–1914. Loan expenditure amounted to £16,578.

Work connected with the Nairobi Drainage Scheme was continued. No vote was forthcoming for the construction of roads and bridges, while the work of the upkeep of roads in Nairobi was considerably increased by the destruction caused by heavy military motor lorries. Work on public buildings in Nairobi included the completion of eight new bungalows, the removal of the medical Quarantine Station to a new site, the reconstruction of certain quarters for the female postal staff, additions to the Survey Office, to the Office of the Commissioner of Police, and to the European School, and the improvement of the General Post Office.

The Post Office at Mombasa was completed at a total cost of £5,131 and handed over to the postal authorities on 12th March, 1916. Other work in Mombasa included the completion of residential quarters and the partial erection of a receiving room at the wireless station, and the completion of two concrete bungalows.

The service reservoir for the Nakuru Water Supply was completed. The distribution system in Nakuru was left in charge of the Uganda Railway authorities.

Two small concrete dams were built on Mt. Suswa, to impound water. Additional work on the improvement of water facilities in the Southern Masai Reserve was done, at an expenditure of £2,374.

Loan Works.—The work of continuation of the Mombasa Water Supply was severely handicapped by various causes connected with the war, by the difficulty of obtaining requisite materials from England, and by floods. Nevertheless, the headworks at Mreri and the first service reservoir at Changamwe were finished, while the carriage of the main across the Makupa Bridge on to Mombasa Island was practically completed. The distribution system on Mombasa Island was carried to an advanced stage. Throughout the year, a supply of water for the military at Kilindini was maintained by means of a four-inch pipe. The total expenditure on this project up to the end of March, 1916 was £96,006.

Training of African Apprentices.—Work has continued on normal lines. The classes contained 37 boys during the year, 16 of whom completed the course provided.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:

ANNUAL.

No.	Colony, &c.	Year.

No. 988.

EAST AFRICA PROTECTORATE.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1916-17.*

I.—FINANCIAL.

(A) GENERAL REVENUE AND EXPENDITURE.

The final results were an excess of £241,005 over the Revenue Estimate, and a saving of £230,031 on the Revised Estimate of Expenditure.

The surplus balance on 31st March 1917 amounted to £578,538.

Revenue.

The total revenue for the year amounted to £1,533,783, which exceeded the revenue of the previous year by £368,222, or 31·59 per cent. This increase is chiefly attributable to a rise in the receipts from Import Duties, Railway Earnings, and Native Hut and Poll Tax. Customs revenue amounted to £243,770, or £132,020 over the estimate, and £98,373 more than the previous year's figure. As in former years 25 per cent. of the Import Duty collected at Mombasa was paid to the Uganda Protectorate. The net Railway revenue was £340,768, being £40,265 in excess of the estimate, and £46,786 higher than the net revenue of 1915-16. The revenue from the Native Hut and Poll Tax amounted to £264,513, as compared with £182,699 collected in the preceding year, the increase being mainly due to the extension of the five rupee rate to parts of the Nyanza, Ukamba, Kenya, and Naivasha Provinces.

The revenue from the Non-Native Poll Tax amounted to £11,090.

Expenditure.

The original estimate of expenditure was £1,250,337. A further sum of £177,090 was subsequently sanctioned to be spent, no provision having been made in the original estimate for the Protectorate share of War Expenses, and further funds being necessary for the completion of works authorised, but not finished, during the previous year. The total authorised expenditure therefore amounted to £1,427,427. The net expenditure was £1,197,396, which was £52,941 less than the original estimate, and £230,031 less than the revised estimate. The net savings on recurrent expenditure amounted to £101,527, while £32,474 under Special Expenditure on Public Works Extraordinary is carried forward to 1917-18, and £10,429 represent savings under this head. Personal Emoluments, exclusive of Railway and Military, Local Travelling Votes, and the votes for Passages for officials, are the main heads under which the savings of the year were effected.

---

* A Sketch Map will be found in the Report for 1914-15, No. 881: [Cd. 8,172-7].

(C534) Wt. 11/42. 1000, 3.19. B.&F.,Ltd. Gp.11/2

Financial position on 31st March, 1917.

The net excess of Assets over Liabilities on the 31st March, 1917, was £578,538.

This figure is arrived at as follows:—

Excess of Assets on the 31st April, 1916		£242,151
Revenue, 1916–17	£1,533,783	
Expenditure, 1916–17	£1,197,396	
Excess of revenue over expenditure		£336,387
		£578,538

(B) CURRENCY.

The total value of Currency Notes in circulation on 31st March, 1917, was Rs.89,54,500, as compared with Rs.79,87,500 on 31st March, 1916.

The total value of notes issued thus increased by Rs.9,67,000 since the beginning of the year in spite of a shrinkage of Rs.5,47,000 in the circulation of Rs.500 notes.

The total for subsidiary coinage on 31st March, 1917, was Rs.19,69,508, as against Rs.17,22,288 on March 31st of the previous year.

II.—TRADE.

The Customs Receipts during the financial year amounted to £330,886, and refunds to £19,390.

The net revenue therefore amounted to £311,496, as compared with £185,249, an increase of 60 per cent. over the previous year.

Imports.

The total value of trade imports increased from £1,708,333, the figure for the previous year, to £3,024,123, an advance of 77 per cent., and compared with the pre-War record figures of 1913–14, an advance of 41 per cent. Cotton piece-goods again proved the largest item, their value being £1,060,997, and representing 35 per cent. of the total import values. As compared with the previous year the increase of these goods is in value £609,975, or 135 per cent., and in quantity 22,894,130 yards, or 83 per cent., with an average rise in price of 28 per cent. Of unbleached cotton piece goods the 1917 import values were £351,290 from India and Burmah, £71,914 from the United States, and £35,829 from the United Kingdom; the total value of this class being £480,441. In 1916 the United States figure was £106,018, India and Burmah £81,931, the United Kingdom £10,347, and the total £208,639. In other varieties such as bleached, printed, and dyed cottons of the total value of £132,340, 89 per cent. was imported from the United Kingdom and 6 per cent. from Holland. India and the United Kingdom contributed 90 per cent. of the increase in cotton goods imports, the total increase being £609,975.

The next largest item under this head is Provisions, the total figure being £291,319, showing an increase of 82 per cent. over the preceding year, and of 108 per cent. over the fifth preceding year. The share of the United Kingdom was the largest individual share, being 45 per cent.

The third largest item is Alcoholic Liquors, which has increased from £97,340 to £162,384 this year; of these, Ale and Beer show the most considerable figures, 182,847 gallons with a value of £37,515, as against 156,788 gallons valued at £26,352 for 1915–16, and 82,808 gallons valued at £13,568 for 1914–15. Of this total, 77,270 gallons valued at £15,586, comes from South Africa, and 58,139 gallons valued at £12,325, from the United Kingdom. English beer averages 4*s*. 3*d*. per gallon, as against 4*s*. for South Africa beer. Whisky, which has the first place in value, is second in quantity, having an increase of 30,664 gallons with a value of £39,347; the advance is 46 per cent. in quantity and 109 per cent. in value, giving an advance in the specific value of 43 per cent., the average value being 15*s*. 8*d*. per gallon, as compared with 10*s*. 11*d*. of the previous year. More than 98 per cent. of the whisky came from the United Kingdom and Canada, shipments from Holland amounting to 1,580 gallons valued at £612.

The increase of wine imports is small, being 821 gallons, or 2 per cent. in quantity, and £4,168 or 20 per cent. in value, with an average value of 12*s*. 6*d*. per gallon instead of 10*s*. 8*d*. 53 per cent. came from France, 18 per cent. from Italy, and 14 per cent. from Portugal.

Brandy shows an increase of 5,134 gallons,or 33 per cent. in quantity, and £7,057 or 77 per cent. in value, this rise of 33 per cent. in the average value being due to the French Government securing the entire supply of the cheaper descriptions for military purposes.

The increase in the importation of gin amounts to 1,988 gallons, valued at £2,383, the average value rising from 6*s*. 8*d*. to 9*s*. 10*d*. 90 per cent. of the total quantity came from the United Kingdom and 10 per cent. from Holland.

The next largest item is grain, of which 207,156 cwts., valued at £133,772, were imported, as against 189,661 cwts., valued at £113,202 of the previous year; the percentage of increase being 9 per cent. in quantity or 18 per cent. in value. Rice, as usual, takes the first place in quantity as well as in value, representing 57 per cent of the total quantity, and 55 per cent. of the total value of grain; the increase is one of 11 per cent. in quantity and 28 per cent. in value, as compared with the past year.

Flour and wheat meal come next, with an increase of 8 per cent. in quantity and 6 per cent. in value. Over 97 per cent. of the total grain was imported from India and Burmah; the importations for the troops are not included in these figures.

Of other imports, Tobacco, &c., show an increase of 10,609 lbs., or 9 per cent. in quantity and of £10,787 or 12 per cent. in value. The quantity of sugar imported was 70,405 cwts., valued at £91,674, as against 76,957 cwts., valued at £95,033 of the previous year; of this import 82 per cent came from Java.

Exports.

The comparative values of the exports from the countries serving the ports of Mombasa and Kilindini for the past five years are as follows:

Exports of produce from:—	Year ending 31st March.			
	1917.	1916.	1915.	1914.
	£	£	£	£
East Africa Protectorate	587,044	329,519	314,804	443,624
Uganda Protectorate ..	699,824	356,642	506,878	564,244
German East Africa ..	47,118	872	150,941	448,103
Belgian Congo	279,670	424,209	31,986	26,127
Soudan	197	182	187	778
Total £	1,613,853	1,111,424	1,004,796	1,482,876

Domestic exports show an increase of £257,525 or 78 per cent., as compared with the previous year.

Hides and skins have increased from £104,764 to £156,056, the latter figure representing an improvement of £8,582 over pre-War figures. 97 per cent. of the total exports of this article, valued at £150,602, went to the United Kingdom, and the balance to India, Italy, and Egypt.

The second largest item is fibre, valued at £129,955, and representing 22 per cent. of the total domestic exports. Shipments of fibre are classified under the two headings of "Sisal" and "Other Sorts," representing 62,090 cwts. (£126,258) and 6,331 cwts. (£3,697), respectively. As compared with the previous year, there is an increase of 18,676 cwts. or 38 per cent. in quantity, and £52,905 or 69 per cent. in value. With the exception of 3,018 cwts., all fibre was consigned to the United Kingdom, 95 per cent. of the total fibre being consigned to the United Kingdom and 5 per cent. to Italy, and all fibre of "Other Sorts" to the United Kingdom only.

The export of grain and oil seeds while still only 27 per cent. of the quantity shipped five years ago has increased this year, the quantity being 142,568 cwts., valued at £77,302, as against 76,883 cwts., valued at £37,076 of the previous year, an increase of 85 per cent. for quantity and 108 per cent. for value for the year.

The export of copra has risen from 9,774 cwts., valued at £8,433, or 17*s.* 3*d.* per cwt. to 28,748 cwts., valued at £28,748, or 20*s.* 0*d.* a cwt. Of this, 23 per cent. was exported to the United Kingdom, 31 per cent. to Italy, and 45 per cent. to France.

While 6,028 cwts. of coffee, valued at £17,297, were exported in 1915–16, 16,552 cwts., valued at £46,028, were exported in 1916–17, an increase of 10,524 cwt. or 175 per cent in quantity, or £28,731 or 166 per cent. in value. 70 per cent. was exported to the United Kingdom, and 20 per cent. to South Africa.

Wool exports are again gradually increasing, the rise from last year being one of 3,302 cwts., valued at £12,327, from 2,869 cwts., valued at £10,061, of the preceding year. It is exported solely to the United Kingdom.

The exportable surplus of mangrove poles (known locally as borities) during the year increased from 495,363 to 757,487 in number, and from £8,264 to £14,224 in value. 75 per cent. went to Arabia, 10 per cent. to Italian East Africa, and 5 per cent. to India. 81 per cent. of the total quantity was derived from the Lamu district, 9 per cent. from Kismayu, and 9 per cent. from Malindi. The trade in these poles benefited by the large number of Arabian and other dhows visiting ports in this country, instead of other ports now closed to them owing to the War.

The export of carbonate of soda amounted to 2,163 tons, valued at £45,056. Of this 1,771 tons were exported to India, 212 tons to Egypt, 100 tons to Italy, and 51 tons to South Africa.

Ivory exports increased from 152 cwts. (£7,946) to 259 cwts. (£13,211) due to the recovery of a large quantity of buried ivory recovered by Government. 41 per cent. went to the United Kingdom, 44 per cent. to India, and 15 per cent. to Zanzibar.

The quantity of rubber exported increased from 500 (£4,081) to 1,001 cwts. (£8,422), a rise of 100 in quantity and 108 per cent. in value. 76 per cent. of the total quantity was shipped to the United Kingdom, and the balance to Zanzibar for re-shipment.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

The general prosperity of the Protectorate has again been well-maintained in the exceptional circumstances caused by the War.

A considerable amount of building has been done, particularly in Nairobi, in spite of the ever-rising cost of cement and corrugated iron.

The dairy-farms round Nairobi, and in the Naivasha and Lumbwa districts continue to pay excellent profits.

Sisal cultivation is rapidly increasing with the establishment of electric power stations, and the very high prices obtained in England for this commodity. The future of the flax industry is looked upon as most promising, a number of factories being now established in various points of the country, and the local demand for the necessary machinery being very much in excess of the supply available under present conditions.

The progress of coffee-planting as one of the most important and profitable industries of the country has been greatly hampered by the restrictions imposed on the importation of this article into the United Kingdom. The acreage under cultivation has, however, not ceased to increase steadily, and the prices obtainable whenever sales have been effected, continue to rule high.

The local timber industry has shown remarkable liveliness, the demand from builders being much in excess of the saw-mills' capacity of supply.

The establishment of a factory on a large scale, with cold-storage facilities, on the Escarpment, has lent considerable impetus to the bacon industry, and the growing tendency towards co-operation amongst local producers generally, has been exemplified by the formation of a well-supported pig-breeders' association.

Town and farm properties have not decreased in value.

(B) MINES AND MINERALS.

The working of the soda deposits of Lake Magadi continues to be carried on successfully, and this industry will probably develop into one of the most important in the Protectorate.

The position as regards mica remains much as it was in the previous year, the effect of the War having been to cause good prices to obtain in the home-markets, but at the same time to cut off the supply of skilled European supervision necessary to the successful working of the concessions.

IV.—AGRICULTURE AND STOCK-RAISING.

(A) CROPS.

The year under review is notable for the increased production in respect of a number of crops.

Maize.—It is estimated that the total acreage under maize is 170,000 acres, with an average yield of 1,200 lbs. per acre, the total crop harvested being approximately 2,820,000 200 lb. bags. Of this crop 150,000 bags were purchased by the military, 1,456 bags exported, and the remainder consumed in the country. The cultivation of maize is considered remunerative for export at 10*s.* 6*d.* per bag f.o.r., or 11*s.* 8*d.* delivered at Kilindini. The variety grown by the European settlers is almost invariably Hickory King. Progress has been made in encouraging the sowing of good white seed by the native, and in introducing better methods of storage as a protection against weevils. Enquiries are being made into the possibilities of the production of industrial alcohol from this crop.

Wheat, Barley, and Oats.—In spite of the uncertainty of wheat as a regular crop, owing to the difficulty of finding varieties suitable to the country, certain farmed districts continue to cultivate it, and it is considered that an extension of the wheat area would result from improved transport facilities particularly in the case of the Uasin Gishu plateau.

Barley is grown successfully for pig food and malting, but the local demand is not at present great, though its possibilities for the brewing of beer are promising.

Rust has so far prevented oats suitable for human consumption being cultivated successfully while there is at present not a sufficient market to encourage the growth of varieties suitable for stock-food.

Leguminous Crops.—It is found that seed from such varieties of beans as Canadian Wonder, Rose Coco, Noyau Blanc, and Haricot are, when grown for a year or two in this country, superior to home-produced seed, and the same improvement is found in the case of peas. This has been recognised by English seedsmen, and it is expected in consequence that this branch of agriculture will find greatly increased favour amongst settlers in the future.

Fibres.—The present area under sisal is estimated at 15,000 acres and the present monthly production at 400 tons. One large hydro-electric plant has been established on the junction of the Chania and Thika Rivers to supply various factories, and the construction of other power stations is contemplated. Large profits are naturally forthcoming from a crop which is considered profitable at a selling price in London at £25–30 per ton, and is now saleable at £75. The area of land available for this crop is very large, and experiments are now being conducted to test the value of sisal waste as a source of alcohol.

There is every sign that high quality flax can be cultivated on a large scale and with much profit, and experiments now being conducted with New Zealand flax suggest the probability of this branch of farming finding much favour in the higher altitude of the Highlands.

Coffee.—It is estimated that out of 22,000 acres planted up with coffee, 8,000 acres are in bearing. The present restrictions on the importation of coffee into the United Kingdom, together with absence at the front of many coffee planters, have imposed a very serious check on this very important industry.

Coconuts.—The increased values this year of export of coconuts, and particularly copra, over that of 1915–16 are considerable :—

Coconuts, 1915–16	.. .. ..	Rs.7,564–00
„ 1916–17	.. .. ..	Rs.8,278–00
Copra, 1915–16	.. .. ..	Rs.116,433–00
„ 1916–17	.. .. ..	Rs.381,798–00

The soil and climatic conditions at the coast of this Protectorate, which is outside the range of hurricanes, are exceptionally favourable, and extensive planting has been carried out in the last few years. It is hoped that it will soon become practicable to apply existing legislation to check the ravages, both of insect pests and of palm-wine tapping by the natives.

Sugar.—The demand for this commodity has steadily increased during the past few years, and it is recognised that there are large areas, not only near the coast, but also in the Highlands, suitable for sugar-growing. Experiments have proved the high quality of the juice extracted from the local cane, and it is hoped that large scale undertakings with plant suitable for the production of exportable sugar may result from the success which has attended the manufacture of a low-grade type of this product.

Sim-Sim.—The increase in the production of this oil-producing catch-crop, particularly in the Nyanza Province, where it is largely grown by natives under supervision by the Agricultural Department, is very considerable, namely :—

In 1915–16, 4,527,344 lbs., valued at Rs.341,779 were produced.
In 1916–17, 8,758,971 lbs., valued at Rs.723,677 were produced.

Wattle.—Central factories are now required to deal with the products of some 16,000 acres of wattle in this country, which has been proved to give tannin of the highest quality.

Rice.—The military requirements of the Carrier Corps have withdrawn large numbers of natives from the rice-fields, and rice-growing has in consequence received somewhat of a set-back. Considerable areas near Vanga, in the Tana and Sabaki Valleys, and up-country in the Nyanza Province, are available, and the question of largely increasing the rice production of the country is receiving very careful attention.

Potatoes and Sweet Potatoes.—Improved and imported varieties have given excellent results and the quantity and value of potatoes exported have increased from 1,367,069 lbs., valued at Rs.51,429 in 1915–16, to 5,378,492 lbs., valued at Rs.151,842 in the past year. The possibility of obtaining starch, flour, and alcohol from the universally-grown sweet potatoes has not escaped the notice of the Agricultural Department.

Citrus and other fruits.—Selected samples of first-grade oranges have been satisfactorily reported on in London, but the absence of any local market for the second-grade fruit precludes profitable cultivation for export for the present.

The manufacture of citrate of lime and concentrated lime juice from lemons is still in the experimental stage, but one factory for the purpose has been established, and large areas have been planted up with lemon trees in the last few years, with the hope of creating an export trade.

(B) STOCK.

Very large numbers of cattle for both food and transport purposes were again supplied from the Protectorate to His Majesty's troops: *e.g.*, 27,954 slaughter oxen, 60,470 sheep and goats, and large quantities of ham and bacon.

The estimated number of cattle in the country is 1,913,000 head, of which the great majority belong to natives, from whose herds it is calculated that 100,000 slaughter oxen could be annually available.

Similarly with sheep, the majority of the total number of 3,515,000 are of the native breed, but the process of grading up by utilising Merino and English mutton rams is continuing successfully. Wool clips, marketed in London in December, 1916, realised as much as 1*s.* 7*d.* per lb. The breeding and rearing of horses is, owing to the continued prevalence of horse-sickness, still pursued as an accessory only to farming. The pig industry has received encouragement by the establishment of a large factory, with cold storage on the Escarpment, producing from 30,000-31,000 lbs per month, and this has been accompanied by the formation of a pig-breeders' association and more scientific methods of pig rearing

(C) EXPERIMENTAL FARMS.

KIBOS.—The rainfall was normal in quantity, but its distribution was somewhat worse than in the two preceding years. Hailstorms and some high winds effected only slight damage. Extensions were made to the nursery, proportionate to increasing demands for economic plants and trees, and improvements introduced in the arrangements of light and shade.

Beans.—Canadian Wonder and Haricot gave fair results planted as a catch crop, but the yield of Rose Cocos, planted as an intermediate crop after maize, was spoilt by too much rain at the wrong time. Careful selection of seed is gradually improving the yield and reducing the percentage of discoloured beans.

Cotton.—A small experiment with Afifi Cotton from Uganda showed that planting could be successfully delayed as late as June. Sufficient seed was distributed in Mumias District to plant up 2,000 acres, and signs of increased knowledge by the native of the proper cultivation of this crop were noticeable.

Maize.—Experiments were confined to White Hickory King, in accordance with the general policy of encouraging the natives to cultivate this variety only, an object towards which good progress has been made. Maize-planting suffered generally from too much rain, but in spite of this a considerable increase in output was obtained by Indians opening up fresh areas, and their improved methods of cultivation.

Rice.—No trials were undertaken with Swamp or Upland rice, but a report made on the prospects of this crop in Nyanza Province remarked on its great possibilities if the natives could be persuaded to take it up.

Sim-Sim.—An interesting series of experiments was commenced for the purpose of obtaining definite information as to the difference of yield resulting from European and native methods of cultivation.

Sugar Cane.—A number of cuttings of seedling canes, from the Government Farm at Mazeras, were passed through Bordeaux Mixture before planting, as a protection against fungus, and are all doing well, and this experiment aroused great interest amongst both Europeans and Indians throughout the Province.

Tobacco.—The varieties planted were White Burley, Gold Finder, Oronoko, and Hester, and the yield was at the rate of 412 lbs. of cured leaf per acre. The germination of White Burley was poor, but that of the other three varieties from 50–70 per cent.

Permanent Crops.—New stocks of fruit, timber, and other economic plants and trees were raised, and all-round progress was obtained under generally favourable conditions.

Livestock.—In spite of outbreaks of rinderpest in the neighbourhood, the farm lost only one animal, and the stock continued to be in good condition.

Agricultural Instruction.—Encouraging progress was made with the farm school established last year for the sons of chiefs and headmen. The system of field work adopted was a modified form of that obtaining in the Agricultural Schools of the West Indies. A number of boys showed considerable aptitude, and all a willingness to learn.

NAIVASHA.—The rainfall was such as to enable the stock to remain very healthy and in good condition.

The pure-bred cattle have, with the exception of a few odd cows, mostly fat shorthorns, bred well.

The shorthorn herd has by now become a very fine mob; the Hereford herd is small, and now contains only the best and fittest. The utility of the Friesland cattle to the dairymen is now established, and the Ayrshires combine this same good quality, with the advantage of maintaining an excellent appearance.

The addition of a Guernsey cross to shorthorn grades has been shown to be an improvement. Hereford grades being very uniform in colour and size, are very noticeable from a spectacular point of view, but are inclined to run to beef, at the cost of the supply of milk available for their calves.

Sheep have been fairly healthy, the woolclip being 13,053 lbs. in 1915, and 13,380 lbs. in 1916, fetching prices in 1915 from 1*s.* 2½*d.* to 1*s.* 8*d.*

The Angora Goat flock continued to do well, the mohair fetching 1*s.* 5*d.* per lb. Crossing the native donkeys with the Catalonian jackass continued successfully, with a gratifying increase of numbers. The ostrich industry was stagnant, but the birds on the farm were healthy. The prevalence of horse-sickness caused a less number of mares to be brought for service to the Government stallion than would otherwise have been the case.

The pigs have been satisfactory.

The annual stock-sale resulted in prices being obtained considerably in advance of those of recent years, particularly in respect of shorthorn cattle and Merino and mutton rams.

Oats, barley, and wheat did well on the Lake shore, and milk was provided as before for the military hospitals.

KABETE.—30,895 gallons of milk were supplied to the military hospitals and bases in and near Nairobi.

A number of Wa-Kavirondo youths from Nyanza Province were indentured for three years as apprentices, and are receiving a general agri-horticultural training, and in addition elementary school instruction; the majority of them have made good progress. An interesting report was furnished by the Government Analyst on the respective milk-producing qualities of chopped green sugar cane and maize-stalks, to the effect that 70 lbs. of sugar cane was shown by the food units to go as far as 100 lbs. of maize-stalks.

19,620 lbs. of cured parchment coffee, being an average yield of 1 lb. 6 ozs. per tree, was raised and disposed of locally; coffee leaf disease was effectively dealt with by preventive measures. Practical demonstrations of the treatment of flax continued to arouse considerable interest, and a number of boys were sent by settlers to receive a course of instruction in the retting, scutching, etc., of this crop.

(D) DISEASES OF ANIMALS.

East Coast Fever.—East Coast Fever has spread on the Uasin Gishu, and, owing to the absence of many of the settlers on active service, it has been necessary to modify the quarantine regulations in that district.

With the exception of a tank built by the military authorities at Athi River, no Government dipping tanks were erected during the year. There are now more than one hundred tanks in use in the Protectorate.

The number of cattle belonging to settlers admitted during the year to the East Coast Fever Testing Area, at Kamiti, was 264. The number of deaths was 7.

Considerable losses among cattle drawn from the Kitui District have occurred, owing to the necessary passage of the animals through the heavily infected Machakos area on their way to Nairobi.

Rinderpest.—Outbreaks of this disease have been general in the Nyanza Province, and have also occurred at Nakuru, Eldama Ravine, Kedong Valley, and Machakos. As far as possible the disease was suppressed by the double inoculation method. In the settled areas in Nyanza Province, 7,917 cattle were inoculated. The mortality was 172, of which 134 are said to have been due to rinderpest.

The outbreaks at Nakuru were spasmodic, and there is abundant evidence to show that the last of the series was directly due to the game in the neighbourhood. Double inoculation of the whole district was undertaken, and the disease subsequently disappeared entirely. Approximately 14,500 cattle were inoculated by the simultaneous method of blood and serum, and, in addition, 12,000 received the single method of serum only.

The outbreak at Ravine in native cattle was eradicated by serum inoculation, 2,256 cattle being inoculated.

266,096 doses of anti-rinderpest serum were manufactured during the year at the Kabete Veterinary Laboratory, while 349,840 doses were issued, chiefly to the military authorities.

Anthrax.—There has been considerable mortality among cattle and equines in the Nairobi district, otherwise only a few cases of anthrax came under notice.

Pleuro-Pneumonia.—Pleuro-pneumonia has spread considerably in the Masai Reserve, and two outbreaks have occurred on European farms. The spread of the disease in the Reserve is due to the movement of large numbers of slaughter oxen purchased for the military authorities, and one of the outbreaks on the European farms was due to the same cause. The other outbreak was traced to infection from the Masai Reserve.

Numbers of infected animals found near Ngong Station were slaughtered, owing to the menace they afforded to the European-owned cattle in the neighbourhood, and the same procedure was adopted in the cases of the outbreaks on the European farms.

Veterinary surveys are being carried out in the Masai Reserve, with a view to ascertaining the extent and distribution of the disease. Precautionary measures have been taken to prevent the spread of the disease from the Reserve by prohibiting the movement of cattle therefrom.

Trypanosomiasis.—The quarantine restrictions placed on the Thika District in 1915 have now been confined to two farms. Periodical microscopical examinations of the blood of all cattle in the infected areas and transport oxen were made, and all affected cattle were slaughtered, compensation being paid The number of animals so destroyed was 249.

It appears probable that the infection in the majority of cases occurred through the medium of tsetse flies in the neighbourhood of the Ithanga Hills, or at the outspan on the Saba Saba River, on the Fort Hall Road, but infected animals have also been found which could not have been attacked by the tsetse; it is possible that stomoxys may have been the transmitting agents in these cases.

Blackquarter.—Outbreaks of blackquarter were reported at Elmenteita, Nakuru, Muhoroni, Gilgil, and in the native reserves at Nyeri, Meru, and Machakos. 721 cattle were vaccinated at the Government Farm, Kabete, without mortality.

Epizootic and Ulcerative Lymphangitis.—Several cases of epizootic lymphangitis have occurred in and around Nairobi, and one case is reported from Fort Hall. Treatment with potassium iodide has proved successful in many cases.

Cases of ulcerative lymphangitis have frequently come under notice during the year throughout the Protectorate. This disease has been reinstated as one of which notification must be given.

Horse Sickness.—The past year has been particularly bad for horse sickness, and districts hitherto known to be free from the disease have been visited by this epidemic.

Fort Ternan Quarantine Boma. 5,062 head of trade stock from Uganda, and the native reserves bordering Lake Victoria, and 5,838 military transport oxen, passed through Fort Ternan quarantine boma.

All the cattle were double inoculated against rinderpest, 400 were inoculated against blackquarter, and 1,500 oxen were dipped. The revenue accruing from inoculation and dipping fees and sale of serum, etc., amounted to Rs.5,253.

V.—FORESTS.

The total area of proclaimed forests is now 1,344 square miles, and the estimated area of demarcated and partially demarcated forests, 2,025 square miles.

The total timber trade was very high throughout the year, partly on account of military demands, which stimulated the activity at the various saw-mills, and also on account of the increased demand from builders, which was far in excess of previous years. During the year, 447,778 cubic feet of timber were sold, as compared with 146,564 in 1915–16. Of this, some 54,200 cubic feet were still standing in the forest at the end of the year, and the actual quantity milled was 393,578 cubic feet.

The average retail prices for sawn imported woods in Nairobi were teak, Rs.530, and deals Rs.240 ; there were no stocks of pitch-pine.

Railway Fuel.—Camps for the supply of wood-fuel to the railway were maintained throughout the year at Molo, Elburgon, and Escarpment. The total quantity of wood cut and stacked was 519,290 cubic feet.

The Timber Market.—The local demand was very good throughout the year and exceeded the quantity which the local saw-mills were able to put on the market. Military orders received prior attention, and as a result private buyers had frequently to wait to obtain their supplies. Muzaiti increased by Rs.24 per ton, but otherwise the prices charged in Nairobi for sawn timber remained the same ; they were per ton of 50 cubic feet, as follows :—Cedar, Rs.120 ; Podo, Rs.102 ; Musharagi, Rs.120 ; Mueri, Rs.108–120 ; and Muzaiti, Rs.240. Stocks of imported timber were again very low, only 925 tons, valued at £9,790, being imported, as compared with 1,429 tons, valued at £10,570, in the previous year. This shrinkage in imports may be almost entirely attributed to the conditions arising out of the War, but it is possible that the consequent enforced use of local timber by builders and others may result in their becoming preferred to imported varieties in the future.

VI.—COMMUNICATIONS.

(A) RAILWAYS.

Uganda Railway.—The estimates for the year's working were based on the assumption that the year's work would be under normal conditions, and provided for an expenditure of £391,997, a gross Revenue of £692,500, and a net Revenue of £300,503. These estimates were found early in the year to be obviously insufficient in view of the very heavy traffic due to military operations, and revised estimates were subsequently passed. The final results of the year's workings were Expenditure, £428,863 ; Gross Revenue, £780,688 ; and Net Revenue, £351,815 ; 41 per cent., *i.e.*, £319,731 of the receipts were derived from military traffic, and 59 per cent., *i.e.*, £460,957, from the ordinary traffic of the country. The earnings of the year represent 5·41 per cent. upon the total capital outlay on the Railway and Steamer Service up to date, as compared with 4·13 per cent., of the preceding year, 2·82 per cent. of the year before, and 3·39 of the year before the War. The cost of working was 54·93 per cent., practically the same ratio as that of last year. Against this increase, however, must be taken into account the fact that the ordinary maintenance and renewal of buildings, locomotives, rolling stock, and the Lake flotilla has been left to the future.

The war in German East Africa had a far more serious effect upon the traffic of the railway during the first than during the second half year, with the corresponding result in each half as regards public traffic being delayed in transit. Enemy attempts to wreck the railway ended in May, 1916.

Thika Railway.—This branch pays working expenses and should prove of very great assistance to the Uganda Railway and local traders in the future. Owing to the fact that only a small load can be hauled, the receipts per train mile are only Rs.3/12, as against Rs.6/90 over the whole mileage of the main line.

Magadi Railway.—This line, 91 miles in length, was built by the Magadi Soda Company for the purpose of exploiting the soda which is found in Lake Magadi; it is owned by the Company, but worked and administered by the Uganda Railway on a profit sharing, but not a loss sharing, basis. The year's result was a loss to the Uganda Railway of Rs.112,362.

The number of passengers carried was 15,596, representing a revenue of Rs.15,526, as against 30,554 passengers, with Rs.29,957, for eight months of the previous year. The total receipts of coaching traffic were Rs.21,318, against the previous eight months' total of Rs.63,878, and the goods traffic figures for 1916–17 were only 10,027, representing Rs.33,646, while the eight months' working of the railway in 1915–16 showed 15,687 tons, and earnings of Rs.56,692. During the year 1915–16 this line was used for carrying military traffic, but in the year under review the change in the main theatre of operations caused the traffic returns to fall short of expectations.

Busoga Railway and Marine.—The total revenue of £28,102, as against an expenditure of £24,078, shows a profit of only £4,024, less than half the amount which it was hoped might be gained. The small amount of this balance is due to the conditions arising out of the War, and the lateness and paucity of the cotton crop. This railway not being in touch with the lines of military communications, did not receive any compensating traffic from that source to counterbalance the general traffic shortage due to the War.

Port Bell—Kampala Railway.—This year is the first complete year of working, and although the revenue did not reach the figure hoped for, it can fairly be regarded as promising from the point of view of future development. The expenditure was £2,808, the revenue £4,160, and the net earnings therefore £1,352.

(B) Roads.

Work on the maintenance of country roads was conducted under difficulties due to the shortage of supervising staff, and the depletion of the unskilled labour supply by military requirements. A number of timber bridges were, however, replaced by more permanent structures on the Fort Hall Road, while the Molo, Sosiani, Rongai, Ruarwai, and Moruba rivers were afforded improved bridging facilities at various points where they are intersected by important roads. In Nairobi, the Ainsworth bridge was widened, and its approach causeway raised. The total expenditure on new road-work was £5,794, and on the maintenance and repair of existing roads, £15,586.

VII.—CLIMATE AND HEALTH.

(A) PUBLIC HEALTH.

1.—*The Coast Zone.*

Insect-borne Diseases.—6,089 cases of malaria were treated, with 16 deaths; a decrease from 7,112 in cases, and an increase of two in deaths.

There were two cases of blackwater fever, one of which resulted in death, among the native general population (including Asiatics). 24 cases of filariasis came under notice; this disease is said to be very common in Tanaland, but few persons suffering from it present themselves for treatment.

Infectious or Epidemic Diseases.—Seven cases, all fatal, of cerebrospinal meningitis were reported, as against 27 cases with 12 deaths in the previous year.

The number of dysentery cases was 498, of which 30 resulted fatally. Of the 13 European cases all recovered.

There were ten cases of enteric, four of whom were officials, one of whom died, and six members of the general European population, one of whom also succumbed.

Two fresh cases of leprosy were admitted, and no cases of plague came under treatment.

All the small-pox cases, 71 in number, occurred amongst Africans, 23 of whom died.

One case of beri-beri came under treatment, and amongst Africans three cases of tetanus, one ending fatally.

2.—*The Mountainous Zone.*

Insect-borne Diseases.—The number of malarial cases again shows an increase, being 6,144, as against 5,352 of the previous year.

Seventeen cases of blackwater came under notice, one of which terminated fatally; sixteen of these cases were European.

One case only of filariasis was noted in the native general population. There was one case of dengue.

Infectious or Epidemic Diseases.—Seventy-two cases of cerebrospinal meningitis, with 31 deaths, occurred amongst the native general population, and none amongst Europeans.

Dysentery hospital cases increased again from 1,647 with 89 deaths, in the previous year, to 2,168 with 138 deaths, in the year under review; of these totals, 159 with 6 deaths were European cases.

There were 34 cases of enteric with three deaths; of these, 20 cases with one death occurred amongst Europeans, one amongst native officials, and thirteen, with two deaths, amongst Africans.

The hospital statistics show that there were 128 cases amongst the native population, and one fatal case amongst Europeans.

There were 269 pneumonia cases with 64 deaths, mostly amongst Africans.

Venereal cases include 392 of syphilis, three being fatal, and 324 of gonorrhea.

The occurrence of 59 scurvy cases is noted with two deaths.

3.—*Kenya and Nyanza Provinces.*

Insect-borne Diseases.—Here again an increase in malaria is noted, the number of cases being 5,304 (including 71 European admissions to hospital), as against 4,687 of the previous year.

One case of blackwater fever occurred in a native official, and four cases of filariasis in the native general population.

Infectious or Epidemic Diseases.—There were six cases of beri-beri; 19 cases of cerebro-spinal meningitis, with 14 deaths, amongst the native population; 804 cases of dysentery with 26 deaths, mostly amongst the native population, but four also amongst Europeans.

No cases of enteric were noted. The leprosy admissions were three. One European case of plague ended fatally, and there were 18 deaths in 33 cases amongst other nationalities. All the small-pox cases, 630, occurred amongst the native population, and include 212 deaths. There were five fatal cases of syphilis out of 292 cases, and 220 cases of gonorrhea. Yaws increased from 126 to 146 cases, and there were three cases of tetanus with one death.

4.—*The Desert Zone.*

Insect-borne Diseases.—There was a slight decrease in the number of admissions for malaria, viz., 1,548, as against 1,666 of the preceding year. No cases of blackwater fever were reported.

Infectious or Epidemic Diseases.—There were twelve cases of beri-beri, no cases of cerebro-spinal meningitis, ninety cases (three fatal) of dysentery, no leprosy or small-pox cases, one case of tetanus, and two of scurvy.

(B) SANITATION.

Malaria.—This disease is universal, and, in comparison with the previous year, its incidence remains practically unaltered throughout the Protectorate. Considerable activity in cleaning drains, filling in excavations, etc., was maintained, particularly in Nairobi, Mombasa, and Kisumu.

Plague.—New areas have become invaded and a decided increase is observed, supervision and control being necessarily restricted to the more important towns. The areas affected this year by plague for the first time were in the Nyanza Province and the Native Reserve towards Kyambu near Nairobi. It is observed that Kisumu and the adjoining districts are endemic plague centres, and that the disease spreads from Kisumu, along the trading routes into the interior. A rat destruction campaign was inaugurated in the Kavirondo area of Nyanza, but the statistics are not yet available. This method of prevention was greatly assisted in the three principal towns of the Protectorate by the adoption of the use of poison with much success. Fumigation plant was obtained and installed for the treatment of accumulations of country produce (cotton, grain, etc.) and also hides obtained from known epidemic areas.

Small pox.—This disease continued to spread in the Nyanza Province, and threatened to become a serious epidemic, and a strict vaccination campaign was conducted by civil and military authorities alike in all infected and dangerous areas, 977,055 vaccinations being performed during the year, as compared with the previous year's figure of 162,184.

Enteric.—A considerable diminution is noticeable in the number of cases of this disease, viz., 63 cases with 8 deaths, as compared with 216 cases and 33 deaths; of these, 36 cases with 6 deaths were amongst Europeans; 189 voluntary double inoculations were performed amongst the Europeans of the Protectorate during the year.

Cerebro-Spinal Meningitis.—Here again a decrease is to be noted, which has continued since 1914, the total number of cases being this year 182 with 82 deaths, as compared with 170 cases and 105 deaths, and 225 cases and 103 deaths of the two preceding years. The prevalence of this disease during the cold weather confirms the opinion previously recorded as to its occasional occurrence.

Chicken-pox.—411 cases were notified with one death, as against 429 cases with no deaths last year.

Measles.—This disease has been responsible for 6 deaths in 294 reported cases.

Dysentery.—The observed number of cases has shown a steady increase during the past three years, the figures being this year, 3,569 cases with 197 deaths, as compared with the 2,722 cases and 168 deaths of last year. In addition to these figures, the Medical Officers of Health have reported 566 deaths from diarrhoea and dysentery in the townships of Mombasa, Nairobi, and Kisumu. The figures relate only to cases observed in Government civil institutions, and, as they exclude cases occurring within the military sphere of operations, bear no relation to the extent and distribution of this disease.

Anthrax.—Nine cases, of which three terminated fatally, are recorded. One case only was treated with serum.

2.—*General Measures.*

Sewage Disposal.—No water-borne system of sewage disposal has been initiated, nor works for the treatment of sewage constructed in any part of the Protectorate; night-soil is disposed of by dumping into the sea, trenching, incineration, collection in cess-pools, or distribution on the ground.

Water Supply.—The Mombasa water supply from the Shimba hills reached the town in 1915; during the year under review, an extension of the distribution to some parts of the town was possible, though the native population generally still relied on tanks and well water. Owing to military exigencies, the intake ground was occupied, and efforts were directed to prevent serious contamination within that area. At Nairobi, the water was analysed on five occasions, and the analytical results were on the whole satisfactory, though the necessity of maintaining a constant supply for civil and military requirements prevented the periodical clearing of the reservoir, with some effect on the water's taste and colour.

Drainage.—6,052 yards of new drains were constructed in Nairobi, 420 yards in Mombasa, and 2,066 yards in Kisumu. The work of cleansing ditches and drains in these towns has been well organised and sustained.

Bush Clearing.—Prosecution of this work has in some instances been curtailed owing to the shortage of labour and other causes incidental to the War.

VIII.—NATIVE ADMINISTRATION.

(A) HIGHLANDS AND NYANZA BASIN PROVINCES.

1.—*Nyanza Province.*

The population of the Province is estimated at 1,062,075, comprising 1,059,857 natives, 312 Europeans, 1,884 Asiatics, and 23 Anglo-Indians.

General.—Recruiting for the Carrier Corps and private enterprise continued steadily throughout the year from the three Kavirondo Districts, the total number of natives actually recruited during the year being 40,400.

The Nandi and Lumbwa have responded well to calls for volunteers for the King's African Rifles, and are showing an increasing tendency to seek employment outside the reserves.

Trade.—Trade in native produce has increased, owing to the renewed railway facilities, but the crops were not so good as usual, on account of the abnormal rainfall. Maize, m'tama, and sim-sim are still the main exports. The cultivation of cotton was recommenced on a small scale, and the good prices obtained may induce the natives to extend their energies in this direction in future years.

The import trade has been steady, but the high prices now demanded for all imported articles has hampered development.

There are 46 trade centres in the Province, the trade being mainly in the hands of Indians.

2.—*Naivasha Province.*

The European population of the Province is 1,785, the Asiatic 723, and the natives 154,444.

General.—During the early part of the year the Turkana showed signs of gradually coming peacefully under the Administration, but signs of unrest appeared in December, 1916. Certain malcontents who had lost stock in the punitive expedition of 1915, and certain of the more northerly tribesmen who had not been touched by the expedition, instigated raids from their inaccessible retreats near Mount Labur, and carried out attacks on the Suk on several occasions, successfully looting some 15,000 head of Suk cattle.

Trade.—The trade in the native areas consists principally of exchange and barter in livestock, trade-goods, hides, etc. This trade has been much handicapped by veterinary restrictions and military requirements.

3.—*Masai Reserve.*

The total population of the Reserve is estimated at 48,481, of which 20 are Europeans, 208 Asiatics, 47,435 Masai, including Muran, and 818 other natives. The area is 14,600 square miles. The amount of stock owned by the Masai is estimated at 715,000 cattle, 2,098,000 sheep, and 10,300 donkeys.

General.—Although the War has had an unsettling effect on the Masai Muran, the tribe has, on the whole, behaved well, and has given no serious trouble to the Administration. Assistance was rendered to the Intelligence party posted in the Guaso-Nyiro-Mara area, which continued work until August, 1916.

Though the Masai have provided few recruits for combatant units in connection with the campaign in German East Africa, and though they are incapable of carrying loads, they have proved of very material assistance in supplying meat for the troops, and it is estimated that 40,000 bullocks and 50,000 sheep have been sold to the military for this purpose.

The Masai do not show much desire to improve themselves, their cattle, their country, or the conditions under which they live, and remain almost unaffected by the changes that have taken place around them, but there are signs that they are slowly emerging from their old ideas. The elders are loyal, but apathetic, while the semi-military organisation which still obtains, has a demoralising effect on the Muran. Raids conducted by these young warriors into German territory have not been successful, and it appears that their strength and military ardour has to a large extent deserted them.

Considerable friction between the Loita and the Purko Masai was caused by the E-unoto ceremony which became due during the year, but there has been no actual disturbance.

Trade.—Trade has been less hampered by the war conditions than in the previous year, and the trading stations formerly closed under martial law have been reopened. A number of additional centres were also established, and there are now 42 such stations occupied by 20 Europeans, and 195 native and Indian plot holders.

The export of hides has been very large, the estimated number sold to traders being between thirty thousand and forty thousand. The principal imports are maize, tobacco, gourds, tea, blankets, knives, and americani (cheap calico). More than 140,000 sheep have been taken out of the reserve by traders.

4.—*Kenya Province.*

The population of the Province is estimated at 777,614, consisting of 280 Europeans, 302 Asiatics, and 777,032 natives.

General.—Relations between the natives and Europeans have been excellent throughout. Administration has been hampered by war conditions, but has proceeded as satisfactorily as possible.

Trade.—The trade of the Province is in an increasingly flourishing condition. Returns show that the value of goods imported during the year was more than Rs. 920,000, while exports are valued at Rs. 370,500.

5.—*Ukamba Province.*

The population of the Province is estimated at 387,072, of which 377,691 are Africans, 2,837 Europeans, and 6,544 Asiatics. Of the European population of the Province, 2,036 reside in the Nairobi District.

General.—The natives have responded well to the heavy demands made of them for men and cattle in connection with the military operations in German East Africa. Nearly 11,000 young men have been enrolled during the year, this figure representing 44 per cent. of the total native able-bodied population. No disturbance of any kind has resulted from this constant process of recruitment, and the District Officers are to be congratulated on the tactful and able manner in which their duties have been discharged.

Owing to the exceptional conditions no new projects could be attempted on a large scale, but the customary routine work has been carried out in a satisfactory manner.

Progress is being made in the social advancement of the natives, and the demand for better clothes and small luxuries is increasing. Mules and ox waggons are being purchased, and some of the Kikuyu are now in possession of ploughs. The Kikuyu natives are showing an increased inclination towards regular attendance at Mission schools.

A marked improvement is noticeable in regard to drunkenness in the native reserves. This improved state of affairs has been brought about by administrative action taken in September, when restrictions were imposed upon the sale of imported sugar, from which the native beverage is brewed. These restrictions had the effect of reducing the amount of sugar sold by 80 per cent., and the situation is now well in hand.

Trade.—There are 24 trade centres in the Province and five townships.

Owing to the increased scarcity of shipping, supplies were harder to obtain, and trade in general was hampered.

Native trade is increasing in the Ulu and Kitui Districts, and satisfactory returns of exports have been received from all the native districts.

(B) COAST PROVINCES.

1.—*Seyidie Province.*

The population of the Province is estimated at 190,337, of whom 365 are Europeans, 4,202 Asiatics, 2,763 Arabs, and 183,007 natives.

General.—The situation in the Teita District had become practically normal by the end of the year, and the natives are settling down in a satisfactory manner.

There was a local shortage of foodstuffs in the Nyika Reserve, which has resulted in a temporary emigration of Giriama into the Malindi and Takaungu Districts. The Giriama are still somewhat obstructive to Government control, but in the area near Kakoneni, the new station on the Sabaki River, marked progress has been made.

A distinct improvement is noticed in the demeanour of those who have returned from service with the military authorities.

The Vanga District suffered from enemy activity during the first two months of the year, and it was not until the middle of June, 1916, that the enemy finally retired across the boundary. District headquarters were established at Gazi, on July 26th. The departure of the enemy was followed by an almost total failure of the rains, and the consequent shortage of food was severely felt.

Trade.—The export of copra from the Mombasa District has increased. The value of exports during 1916 was Rs.381,798, as compared with Rs.126,495 in 1915, and Rs.31,020 in 1914.

The shortage of food in the Malindi, Teita, and Vanga districts has militated against trade in native produce, and native purchase of imported goods has decreased also. A large trade in stock is carried on between Rabai, Mazeras, and Mombasa, and the stock in the Nyika Reserve appears to be on the increase.

2.—*Tanaland Province.*

The European population is 15, the Asiatic 687, and the native approximately 36,888.

The attempted recruitment of natives as porters for military purposes produced a feeling of unrest among the tribes living in the Tana River District, and resulted in the natives leaving their homes near the river and taking refuge in the bush. The river was continuously patrolled by a Government official from October to December, by which time confidence had been restored, but the temporary abandonment of their homes produced a shortage of food.

The Abd Wak Somalis have been troublesome on the Upper Tana River, and there are several complaints of their having robbed the Pokomo and Korokoro natives of money and food.

The Arab staff has proved loyal throughout, and has been of material assistance in collecting porters for military purposes from the Coast area.

Trade and Industries.—The copra industry is increasing, but is handicapped by shortage of labour and capital. The export of mangrove poles is the largest on record, royalty having been paid on a million and a half poles during the year. These poles are shipped by dhows to Arabia and the Persian Gulf, and large quantities have been used by the military authorities at Basra.

The building of native dhows has increased, and the vessels have been improved in type and size. Locally-made dhows have this year sailed from Lamu to the Persian Gulf.

3.—*Jubaland Province.*

The European population is 31, the Asiatic 363, and the native approximately 17,655.

General.—Administration of the interior has not been undertaken since the fall of Serenli, in February ,1916, and administrative officers have been stationed in the Kismayu and Gosha Districts only. There have been signs of restlessness amongst the Somali tribes further inland, but no attempts have been made by them against the Government, though the northern section of Gosha have suffered at the hands of the Aulihan.

The headquarters of the Gosha District were moved from Alexandra to M'fudu, in December, 1916.

Crops in Gosha were greatly damaged by floods on the Juba River.

(c) NORTHERN FRONTIER DISTRICT.

Efforts have been made during the year to make good the set-back caused by the sack of Serenli, and the consequent evacuation of Wajir and the Garre country, which took place at the end of the year 1915-16. In spite of numerous difficulties, good progress has been made.

The situation in Moyale and on the Abyssinian frontier has been quiet and satisfactory, but a time of anxiety followed on the deposition of the Abyssinian Emperor, Lij Yasu, in October, 1916, and the consequent rumours of unrest in Ethiopia.

Our evacuation of the Garre country in March, 1916, resulted in encroachments by the Degodi from the north, and in July a collision occurred between the tribes without decisive result. Shortly afterwards the Degodi were heavily defeated by the Garre, under their Chief Gababa, and were driven out of Garre country, losing a large quantity of stock. In November, Mr. Glenday proceeded to Derkale, and stayed with the Garre until the end of the year, successfully frustrating attempts at retaliation by the Degodi.

On the evacuation of Wajir, the administrative staff was stationed at Bulesa. Wajir was reoccupied in July, 1916, having been, in the interim, in charge of the Mohammed Zubeir. The Aulihan Somalis made only one attempt at disturbing the peace of the district, and it seems that they have failed to entice other sections to join them in their policy of insubordination.

The fine levied on the Aulihan on the Lorian, in December, 1915, on account of the raid on the Samburu, was slowly paid off, but, on account of the delay in payment, it became necessary to despatch a mounted patrol against them; this resulted in the capture of 1,800 head of cattle.

Owing to shortage of staff, the Samburu District has been somewhat neglected. The year was uneventful, except for two raids carried out on the Samburu by the Reshiat and Turkana. The casualties in these raids were not so large as might have been expected.

Two patrols were sent into the neighbourhood of Horr.

Trade.—Moyale is the chief trade centre, but this has been closed to anyone except residents of the bazaar and Abyssinian caravaners. Brisk trade in livestock was carried on in the Moyale market for some months. Otherwise, wholesale trade has been dull. Retail trade is flourishing in Moyale, the chief articles of commerce being grain, coffee berry, and tobacco.

Trade in livestock among the Samburu and Rendili has been closed by Government.

Population.—While the information at present available is insufficient for the compilation of accurate statistics of population, it seems that the population has been underestimated in previous years. The officer-in-charge gives the following estimates of the numbers of the various tribes in the Northern Frontier District.

Samburu	10,000
Rendili	7,500
Ajuran	8,500
Gabbra	7,000
Sakuye	6,000
Boran	5,000
Aulihan Abukr section, on the Lorian only	4,000
Other Ogaden Somalis	10,000
Degodi	4,000
Other Yaben pseudo Adjuran	6,000
Garre	20,000
Total	88,000

He is, however, in some doubt as to whether the number of Somalis here given is not an over-estimate.

IX.—EDUCATION.

(A) GOVERNMENT SCHOOLS.

European Schools.

(1) *Nairobi Division "A" School.*—The standard of examination has been raised without alteration of the existing organisation of the school. The Cambridge University Senior Local Examination is now taken. Progress has been normal.

The net cost of the school was £2,188; there were 54 boarders and 93 day scholars in attendance.

(2) *Nakuru Division "A" School.*—The progress of the school has been satisfactory. The net cost of the school was £132; on an average, eleven pupils were in attendance.

(3) *Central School, Eldoret.*—Additional accommodation was provided and instantly filled. Great satisfaction has been expressed at the spread of education on the Uasin Gishu plateau. The progress of the school is entirely satisfactory.

There were nine boarders and 41 day scholars at Eldoret, and 23 at Wheeler's Drift; the net cost to Government was £684.

Indian Schools.

Indian education does not progress greatly. Additional accommodation would probably bring several hundreds of children under education, but the most unsatisfactory feature is the removal of children from school to become wage earners at an early age. The Indian population of Nairobi is apathetic towards education, and compares, in this respect, most unfavourably with Mombasa. Continual changes of staff have had a bad effect on the teaching in the school.

The net cost of the Nairobi School was £513; there was an average number of 142 pupils on the roll.

The Mombasa School has greatly benefited by the arrival of a trained headmaster from India. The progress made is satisfactory, but the school could be improved by an increased provision of staff. The net cost to Government was £482; there was an average number of 136 pupils on the roll.

Arab Education.—Government has been asked to take charge of the education of Arabs from the Koran stage, upwards. A desire for education seems to be awakening at last.

Native Schools.—The Ukamba Industrial School at Machakos was closed for three months of the year owing to an outbreak of cerebro spinal meningitis. At the close of the year the pupils had completed two years' literary education, and the highest class, comprising 13 boys, was about to enter on a three-years' course of carpentry and masonry. Instruction in practical work has been prohibited, however, by the departure of the headmaster on military service.

Aided Schools.—The Nairobi High School continues to serve a useful purpose, and steps are being taken to improve the accommodation at Government expense.

The Young Women's Christian Association have maintained commercial classes which have proved of great use in qualifying girls for clerkships in Government and mercantile appointments.

(B) MISSIONS AND PRIVATE SCHOOLS.

The number of industrial apprentices who have passed the Government examinations has increased, the Church of Scotland Mission at Tumu-tumu, and the Church Missionary Society, at Maseno, being especially satisfactory. Roman Catholic Missions are still unable to provide apprentices, as their lay brethren are fighting in Europe.

X.—LAND AND SURVEYS.

(A) LANDS.

Alienation of Land.—The total number of grants made during the calendar year, 1916, was 97, comprising an area of 519,154 acres, compared with 100 grants the previous year, totalling 246,979 acres. Of this figure 97, 77 represent grants under licence agreements and old leases for which new titles were issued in 1916. Therefore the actual number of new grants was only 20, of which 9 were for farms, and 11 were for business, residential, or Mission plots.

Land Available for Allotment.—Last year there were some 900 farms available for allotment, of which 50 were to be retained for Government Reserves and unsettled claims. There are now 975 farms in all, leaving a balance of 925 available for allotment.

(B) SURVEYS.

As was the case last year, the whole staff of the trigonometrical and topographical branch were on active service throughout 1916–17. Almost all work in the cadastral branch has been suspended for the same reason, but 338,165 acres were, however, surveyed at a reduced cost per acre, as compared with last year, but still at a much higher rate than that of pre-War years.

XI.—PUBLIC WORKS.

The total expenditure of the Public Works Department amounted to £99,850—a smaller figure than in any year since 1910–1911. More than half the staff of the department were engaged on military service in the adjoining conquered territory or in Europe. The amount spent on recurrent services was £37,744, and on new works £35,560.

In the latter category, the only new project of any considerable importance, was a further instalment of the Nairobi Drainage Scheme, costing £10,026. This comprised a new intercepting sewer, 3,225 feet long, and concrete drains of various standardised sizes, to a total length of 15,593 feet. The execution of this work materially improved the drainage of the commercial area of the town, and rendered possible the abolition of all drainage sumps and cesspits.

A sum of £3,422 was spent on the final stages of the Mombasa Water Supply project. This important work, which had been estimated to cost £107,900, was finished at a saving of £4,840 below the estimate. The main is now delivering some 600,000 gallons a day, though the consumption in Mombasa and at the port of Kilindini has not so far exceeded 125,000 gallons a day.

Among the minor works of the year, which numbered 38, and cost in the aggregate £5,259, may be mentioned additions to the European School at Nairobi (£401), to the Central Jail at Nairobi (£620), to the Bacteriological Laboratory (£233), to the Land Office, Nairobi (£220), to the Telegraph Store, Nairobi (£195), and to the office of the Recorder of Titles, Mombasa (£266).

The training of African apprentices in handicrafts had, unfortunately, to be suspended for a portion of the year, as the Military required the Training Depot buildings. An effort was made later to resume work on a limited scale in other, though less convenient, accommodation.

APPENDIX

SUMMARY OF POPULATION OF BRITISH EAST AFRICA AS ON 31st DECEMBER, 1916.

Province	Europeans	Indians	Goans	Arabs	Other Races	Natives	Total
Ukamba	2,837	5,187	1,324	14	19	377,691	387,072
Seyidie	369	3,749	443	4,459	101	181,677	190,798
Naivasha	1,885	583	107	25	7	154,433	157,140
Kenya	271	276	43	8	3	851,026	851,627
Nyanza	360	1,742	157	66	240	1,063,560	1,066,125
Tanaland	14	659	42	795	22	36,938	38,470
Jubaland	51	302	30	1,495	—	14,796	16,674
Northern Frontier District	17	8	4	—	—	35,075	35,104
Masai Reserve ..	20	110	30	2	66	42,892	43,120
	5,824	12,616	2,180	6,864	458	2,758,088	2,786,030

TOTAL POPULATION OF PROTECTORATE :—2,786,030.

COLONIAL REPORTS, &c.

No. 1013.

EAST AFRICA PROTECTORATE.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1917-18.*

I.—FINANCIAL.

(A) GENERAL REVENUE AND EXPENDITURE.

The final results were a deficit of £115,746 on the Revenue Estimate, and an excess of £6,498 on the Expenditure.

The surplus balance on 31st March, 1918 amounted to £456,296.

Revenue.

The total revenue for the year amounted to £1,368,329, showing a deficit of £115,746 on the estimate and a decrease of £165,454 compared with that of 1916–17. It was, however, £202,768 more than the revenue for 1915–16.

When the revised estimates were prepared a deficit of £196,467 was anticipated, notably under Customs and Government Railways. The revenue from Customs, however, exceeded the estimate by £16,970, but the earnings of Government Railways fell short of the estimate by £149,059.

The gross Customs revenue from import duties was £230,838, being an increase of £43,838 on the estimate, due to unexpectedly large importations and to rise in prices. It showed, however, a decrease of £61,705 on the previous year. Export duties realized £23,437, or £12,497 more than the estimate and an increase of £4,484 on the previous year. This is due partly to large shipments of hides and ivory and partly to rearrangement in the method of accounting upon the amalgamation of Customs Departments of Uganda and East Africa Protectorates. Under the amalgamation scheme Uganda received 33 per cent. of net total Import and Export duties. The whole Customs Revenue for the year exceeded the estimate by £16,970 but compared with the previous year when importations had been even greater it shewed a decrease of £73,261.

The estimate for Native Hut and Poll Tax, which was placed at £285,200, realised £275,318, a deficit of £9,882, but an increase of £10,805 over the previous year. The deficit is mainly due to no taxes having been collected in Turkana and Suk, to absence of natives with the Carrier Corps, and to remission of hut tax of Wa-Gosha.

---

* A Sketch Map will be found in the Report for 1914–15, No. 881 [Cd. 8,172–7].

Non-Native Poll Tax shewed an excess of £197 on the estimate and an increase of £1,107 on the preceding year. The amount collected during the year is the highest since the introduction of the tax.

Expenditure.

The total amount voted in the original Estimates of Expenditure for the year under review was £1,484,075, and in addition to this a sum of £32,474, representing balances of uncompleted works at the end of the previous financial year was authorised to be spent out of surplus balances. The total authorised expenditure for 1917–18 therefore amounted to £1,516,549.

The total expenditure actually amounted to £1,490,571, an excess of £6,496 on the original estimate, but £25,978 less than the total authorised expenditure.

Financial position on 31*st March,* 1918.

The net excess of Assets over Liabilities on 31st March, 1918, was £456,296.

This figure is arrived at as follows :—

Excess of Assets on 1st April, 1917		£578,538
Total Expenditure 1917–18 ..	£1,490,571	
Total Revenue 1917–18 ..	£1,368,329	
Excess of Expenditure over Revenue		£122,242
Balance		£456,296

In order to ascertain the true financial position it is necessary to make certain deductions from this balance in respect of unexpended balances of votes for works sanctioned but uncompleted, receipts from stand premia on farm and town plots earmarked for road construction, and Protectorate share of War Expenses for the month of March, 1918, amounting in all to £93,767. This leaves an available surplus of £362,529 which, if compared with the available surplus at the end of the previous year, reveals a deficit on the year's working of £16,759.

(B) CURRENCY.

The total value of Currency Notes in circulation on 31st March, 1918, was Rs.83,30,500, a decrease of Rs.624,000 on the circulation at the same date of the previous year.

II.—TRADE AND SHIPPING.

(A) TRADE.

The Customs receipts during the financial year amounted to £311,565, and the total refunds to £57,309.

The net revenue from Customs duties therefore amounted to £254,256, a decrease of £57,240 or 18 per cent., as compared with the previous year, but still the second highest amount collected in one year.

(607) Wt.1/155 1,000 & 90. 12.19. B.&F.Ltd. G.11.

Imports.

The total value of commercial imports during the year under review receded from £3,024,123 to £2,809,681, thus showing a decrease of £214,442 or 7 per cent. as compared with the preceding year when the highest figures were registered. If compared with the pre-War record year—1913–14—a rise of £661,744 or 31 per cent. is shown.

Cotton textiles still continue to constitute the most important and largest class of imports. They were valued at £950,608 and represent 34 per cent. of the total trade imports.

As compared with the previous year, the decrease in value is one of £110,389, or 10 per cent., and in quantity 17,074,499 yards, or 34 per cent., thus giving an average rise in price to the extent of 36 per cent.

The imports of other varieties of cotton fabrics, such as bleached, printed, and dyed manufactures, amounted to £477,186, showing an increase of £53,298, or 12 per cent. over the previous year.

Of these imports 92 per cent. were from the United Kingdom, and showed an increase of £63,600 over the previous year; Holland occupied the second place, being represented by £22,695, or 5 per cent. only.

The second largest item in order of value is grain, which forms 8 per cent. of the total imports. The quantity increased by cwt. 79,278 or 38 per cent., and the value by £89,663, or 67 per cent. The price per unit hardened by 21 per cent.

Over 89 per cent. of the total grain was imported from India and Burmah. The importations of grain for the troops are not included in the foregoing figures.

The third group in order of value after grain is that of provisions, which represent £144,056, or 5 per cent. of the total merchandise.

The decrease as compared with the previous year is one of £147,263, or 50 per cent.

Importation from the United Kingdom amounted to 33 per cent.

The value of imports of private merchandise (excluding Government and Railway importations, goods in transit, telegraphic materials, and specie) was distributed among the United Kingdom, British Possessions, and Foreign Countries in the proportion 45 per cent., 30 per cent., and 25 per cent. respectively.

The share of the United Kingdom, prominent as it was in the past years, has since the War increased enormously with a value of £1,253,695.

Export of Imported Goods.

Consignments of foreign goods originally imported for home consumption but subsequently re-exported to foreign ports are allowed full drawback of duty previously paid.

The trade is chiefly carried on through the port of Mombasa, which continues to act as a receiving and distributing centre between East Africa and the neighbouring territories of German East Africa, Zanzibar, Italian East Africa, and the Belgian Congo.

The re-export during the year under report was at its highest point, amounting to £548,179, or 19 per cent. of the total imports. This was mainly due to large quantities of stocks on hand being reshipped to the conquered territory of German East Africa, and partly due to re-exports of produce imported from that territory and from Zanzibar.

Although the trade imports show a decrease of £214,442 as compared with the previous year, they are the second best on record.

Had it not been for the diminished imports of bleached and unbleached cotton piece goods and blankets, etc., the year under report would have surpassed all previous records.

Prices of cotton piece goods and other merchandise were carried to the highest point by speculation. In many cases goods merely changed hands thus intensifying values.

Large stocks were held over and it will be a long time before the demand overtakes the supply.

Transit Trade.

Imports under this heading still further increased in the year under review, giving a total of £556,869 as against £176,960 in the previous year.

Exports.

The really fine harbour of Kilindini is the inlet and outlet for trade with a vast territory running from the sea to Lake Victoria, and thence extending to the upper part of what was originally German East Africa, and a large slice of the Belgian Congo. These areas are extraordinarily rich and their potentialities of trade enormous. They are linked up with the port of Kilindini by the Uganda Railway and Lake steamers.

Prior to April, 1917, Uganda collected its duties on produce and hence statistics were recorded separately.

Since then East Africa and Uganda Protectorates have become one for Customs purposes and exports of produce from the two Protectorates are shown under one heading.

Produce from the conquered territory of German East Africa, Belgian Congo and the Soudan is registered separately.

The combined exports from the two Protectorates during the year amounted to £1,543,104, a rise of £256,236 or 20 per cent. over the previous year.

Prices have of course been much inflated, but the actual exports have increased most satisfactorily.

It must be borne in mind that large quantities of grain, foodstuffs, etc., which formerly took a prominent place in our exports have had to be retained for local consumption on account of war conditions and famine caused by two successive droughts.

Cotton heads the list of combined exports from the two Protectorates and represents 46 per cent. of the total value.

As compared with the preceding year, there is an increase of cwts. 4,291 or 5 per cent. in quantity and £270,791 or 63 per cent. in value, which means a rise of 55 per cent. in specific value. The average price in 1916 was 5½*d.* per lb., while during the year under report it reached to 15*s.* 8*d.* per lb.

With the exception of 200 cwts., the produce of British East Africa, all cotton originated in Uganda.

71 per cent. of the total quantity was consigned to the United Kingdom and 29 per cent. to British Possessions.

The trade of hides and skins is one which has held an important place during the last five years in the list of exports, and represents £222,425 or 15 per cent. of the total during the year under report.

It is rather difficult to estimate the proportion of Uganda produce during the year under report, but an average of the last quinquennial period gives a ratio of 60 per cent. for East Africa hides and skins and 40 per cent. for Uganda produce.

The exports for hides and skins would have been far greater had it not been for restriction on exports and lack of shipping.

88 per cent. of the total quantity of hides and skins, valued at £197,277, went to the United Kingdom and the balance to India and Egypt.

The third largest item of export is fibre, valued at £202,328, and representing 13 per cent. of the exports.

The shipments of fibre are classified under the two headings of "Sisal" and "Other sorts," representing 90,332 cwts. (£197,473) and 2,771 cwts. (£4,855) respectively.

As compared with the previous year there is an increase of 24,682 cwts. or 36 per cent. in quantity and £72,373 or 56 per cent. in value, which means a rise of 15 per cent. in specific value.

All fibre was consigned to the United Kingdom.

Sisal has proved itself as an East African product. It will grow almost anywhere, and it is hoped that it will be able to compete successfully with manilla obtained outside the Empire.

59,111 cwts. of coffee representing £124,268 were exported. This shows a decrease of 12,719 cwts. or 18 per cent. in quantity and a decline of £47,878 or 28 per cent. in value as compared with the previous year. 54 per cent. was shipped to the United Kingdom and 33 per cent. to the Union of South Africa.

Coffee produced in British East Africa and Uganda is of the very highest quality, and given an adequate labour supply, it should undoubtedly take a very prominent place in the list of exports.

The export of carbonate of soda during the year amounted to 4,688 tons, valued at £111,322. 4,095 tons were exported to India, 302 to Egypt, 50 to the Union of South Africa, 50 to Ceylon, 167 to Zanzibar, and 23 tons to the conquered territory of German East Africa.

Shipments of this mineral produce show signs of taking a premier place in the list of exports. It occupied the fifth place during the year under review and is only awaiting sufficient labour and shipping facilities to be exported in very large quantities.

Grain and oil seeds occupied an important place in the list of exports prior to 1913–14, but during the year under review the exportable surplus was only valued at £2,034, 10 per cent. of the quantity shipped five years ago.

Potato shipments take the seventh place in the list of exports with a value of £19,203 for 55,946 cwts. The increase over the previous year is one of £8,984 or 88 per cent. in value and 6,550 cwts. or 13 per cent. in quantity.

The average price was 6*s*. 10*d*. per cwt. during the year, as against 4*s*. 2*d*. in the preceding year.

This industry, left to a large extent in native hands, has not progressed as well as it should have done. The seed used has deteriorated and the potatoes grown during the year were not up to standard. Large quantities were used locally for feeding troops, etc.

The export of copra receded from 28,748 cwts., valued at £28,784, to 19,285 cwts., valued at £18,599, showing a decrease of 33 per cent. in quantity and 35 per cent. in value when compared with the previous year.

26 per cent. of the quantity was exported to the United Kingdom, 40 per cent. to Italy, 21 per cent. to the Union of South Africa, 7 per cent. to France, and 6 per cent. to French Possessions.

Besides copra, there was an export of 207,780 coconuts, valued at £679, during the year to South Africa, India, Arabia, and other countries.

The by-product (coconut fibre) remains practically unutilised.

High shipping freights, lack of shipping, and periods of prohibition on export, all affected the exports of copra.

The exports of ivory originating in British East Africa and Uganda amounted to 396 cwts., valued at £17,326.

Of the total quantity exported during the year under review 95 per cent. was consigned to India.

The exportable surplus of mangrove poles (known locally as borities) increased from 757,487 to 934,955 in number, and the value increased from £14,224 to £14,400.

84 per cent. of the total quantity originated in the Lamu district; 85 per cent. of the quantity was taken to Arabia.

1,666 cwts. of rubber, valued at £14,026, were exported to the United Kingdom. Most of the rubber originated in Uganda.

Chillies, a semi-wild crop, thrive exceedingly well in Uganda. 7,396 cwts., valued at £12,696, were exported during the year.

The export of wool is gradually increasing. 3,031 cwts. valued at £12,341 were exported to the United Kingdom during the year.

94 per cent. of the total produce was consigned to the British Empire and 6 per cent. to foreign countries.

(B) SHIPPING.

Mombasa has been served by four lines of steamers from Europe this year—the Union-Castle, Messageries Maritimes, Marittima Italiana, and the Clan Ellerman-Harrison Line. Owing to the War the calls of the above steamers have been irregular, and the Marittima Italiana's steamers have ceased calling since December, 1917.

A branch of the British India Steamship Navigation Company's steamers still maintains a service with Bombay and Durban.

The total steam tonnage entered in the Ports of the Protectorate amounted to 515,750 tons gross, represented by 181 steamers, a decrease of 146,347 tons and 79 steamers compared with last year.

III.—INDUSTRIES AND MINES.

(A) INDUSTRIES.

The general prosperity of the Protectorate was well maintained. The high prices obtainable for sisal and flax caused a considerable increase in the cultivation and production of these fibres.

Restrictions on the importation into the United Kingdom of coffee again hampered the coffee growers, but the position was partially relieved before the end of the year and record prices were obtained.

Shipments of carbonate of soda more than doubled the record of the previous year.

The bacon industry appears now to be thoroughly established in the Protectorate and offers opportunities for quick returns from a small capital.

In spite of the high cost of materials a considerable amount of new building has been carried out, particularly in the capital, and local timber merchants have been unable to meet the demand.

Extensive outbreaks of disease and the failure of the short rains, causing a lack of grazing, rendered the year a bad one for the cattle industry generally.

(B) MINES AND MINERALS.

The continuation of the War and the consequent shortage of European miners and prospectors practically stopped all mining work. One firm made an effort to produce mica for war purposes but suspended operations on failing to make the venture pay.

IV.—AGRICULTURE AND STOCK-RAISING.

(A) CROPS.

Climatic conditions were most adverse to agricultural operations. In the early portion of the year, excessive rains "drowned" the crops, and during the latter portion drought resulted in their general failure. A shortage of food ensued which necessitated large importations of maize by the Government, and the famine also caused a lack of seed for subsequent sowings. Great difficulties were encountered in the importation of agricultural implements. Shipping and export facilities were curtailed, coffee planters being peculiarly affected, but measures for relief were introduced and a certain quantity of coffee was sold in South Africa. Insects and fungus pests followed the drought, and stock diseases were rampant. Prices of agricultural produce consequently rose to heights previously unknown.

Coffee.—The lack of shipping and home demand for coffee beans gave rise to grave anxiety, and the Government held it imperative to make representations to the Home Authorities on the position of coffee planters in the Protectorate should they be prevented from exporting. These representations resulted in a certain number of facilities being granted and quantities of beans were exported and obtained record prices.

Many coffee plantations suffered severely from the drought, *Hemileia vastatrix*, a new disease *Phoma*, *Thrips*, *Antestia*, and other pests.

At the desire of a number of coffee planters and dealers an Ordinance regarding the registration of coffee plantations and dealers has been introduced and become law.

Maize.—This important crop suffered very severely through the adverse season, and the produce proved insufficient for local needs.

Wheat.—It is reported that the approximate area which is being put under cultivation is 10,000 acres. This area would have been much larger if a guarantee could have been given that the importation of implements and machinery would take place. Several varieties such as Golden Ball, Equator and the Kabete hybrids are proving most successful.

Potatoes.—There was during the latter months of the year under review a great lack of edible potatoes on the local markets, prices as high as Rs.15 per load of 60 lbs. obtaining.

Small quantities of seed were procured from Europe but adverse seasons at Kabete and the sudden rising of the lake at Naivasha which covered the potato field, have prevented the provision of the quantities of new seed it was hoped would have resulted from this importation.

Beans.—There has been a shortage of bean seed and seed was distributed of imported varieties such as Canadian Wonder and Rose Coco. A considerable improvement in the general standard of the bean crop of the Protectorate is anticipated.

As a measure of precaution the exportation of beans has been prohibited for the time being.

Sugar Cane.—Renewed activity of a practical nature is being displayed in sugar-cane-growing over a wide area of the Protectorate.

New trial plots with several varieties were laid out at the Experimental Farms at Kabete, Kibos, and Mazeras. Cane plants from these institutions are also much in demand. Among the districts where cane-growing has already been taken up are Kibos, Muhoroni, Koru, Donyo-Sabuk, Kyambu, and Masongaleni. Plots of cane for trial and nursery purposes have been established by planters in several parts of the Coast belt.

Companies and syndicates have been formed for the purpose of sugar-growing in the Protectorate, and other companies are in course of formation.

At the present time it is estimated there are about 250 acres of sugar cane being grown by Indian settlers in the Kibos locality.

In the Muhoroni District several settlers have established trial plots of sugar cane on their estates.

On the Koru Estate a field of Striped Ribbon and White Transparent varieties of cane is established, the plants having been supplied from the Government Experimental Station Mazeras. The growth of both varieties is excellent, but especially the Striped Ribbon, which is undoubtedly exceptionally well suited to the district.

In the valley between Muhoroni Railway Station and Koru an area of about 700 acres is established in sugar cane by Indian settlers.

The installation of a central factory in the district or an adjoining one would provide facilities for making sugar of first rate quality, and at the same time encourage cane-farming generally on the lower lands in the locality.

Swamp rice.—Over twenty tons of seed rice were imported from India for distribution or sale.

The resuscitation of rice-growing in parts of the Coast belt was continued by the Administrative Officers and the results were of an encouraging nature, the yield per acre being in some instances trebled owing to the practical supervision and assistance given.

Coconuts.—Although the extension of coconut planting was not as great as in the past few years, further progress was made and the established estates were all kept in cultivation as far as a somewhat lessened labour supply admitted.

Citrus and other Fruits.—The citrus industry is still in the experimental stage as regards export of the products and it is too early as yet to make any definite statement as to the prospects of the industry.

Precautionary measures against the introduction of insect and fungus pests have been taken. The cultivation of deciduous fruit trees continues to be a great success in the Machakos and Donyo Sabuk districts.

(B) STOCK.

Cattle.—Extensive outbreaks of disease were largely responsible for a bad year, but another important factor was the failure of the "short rains," with the consequent mortality from lack of grazing especially in the native reserves, the natives owning approximately 7-10ths. of the cattle in the Protectorate. The principal diseases were rinderpest, East Coast fever, pleuro-pneumonia, and anthrax. The economic loss was considerable.

The Veterinary Department was considerably understaffed owing to the number of officers who were engaged on military duty, with the result that no organised attempt could be made to deal with outbreaks of disease in native reserves. Every effort, however, was made to cope with outbreaks in the European-settled areas where movement of stock could be controlled. Over 31,000 head of cattle were double inoculated against rinderpest during the year.

East Coast fever spread considerably as, owing to the high price of cement, the erection of cattle-dipping tanks was practically suspended. This disease will continue to cause a considerable amount of anxiety to stock owners until dipping tanks have been erected along the main stock routes so that all cattle moving along these routes can be regularly dipped.

The military demands for transport oxen in the past resulted in a serious shortage of work oxen for agricultural purposes and it became necessary, owing to the shortage of shipping, to rely largely on locally-grown foodstuffs. Arrangements were made with the Military Authorities to sell untrained oxen to farmers to replace those which had been commandeered. In this way the agricultural requirements of the country have largely been met.

Although the cattle industry is one of the most important industries of this Protectorate it never can be developed to any great extent until there is a demand for meat for export purposes, and until dairying receives more attention. The meat at present available for export is of poor quality and could only be exported profitably in a canned condition.

The need for suitable pure-bred bulls was so great that arrangements were made to obtain a supply from South Africa, and some 73 head of pure-bred bulls were bought. With the provision of a sufficient supply of suitable breeding bulls for grading purposes the value of the stock industry could be greatly increased.

It is estimated that there are now over 2½ million head of cattle in the Protectorate and, after allowing for local requirements, losses from disease, etc., it is considered that upwards of 80,000 bullocks should be available annually for export. This would represent over 8,000 tons of beef worth at least £240,000.

From the point of view of meat inspection the chief drawback to East African meat is the prevalence of "measles" (a stage in the development of one of the human tapeworms), and it will be necessary to free our pastures of this parasite before the East African frozen meat trade can be placed on a firm basis.

Sheep.—The sheep industry, in as far as the European settled areas are concerned, has continued to give the same hopeful indications as in previous years.

Considerable losses among sheep have occurred in the Masai Reserve, which is the main reservoir for the supply of our native ewes. The cause of these losses was mainly *strongylosis* ("wireworm"). A remedy for this disease has been discovered at the Onderstepoort Veterinary Laboratory, in South Africa, and experiments are being conducted in this country with a view to ascertaining if the doses recommended can be safely administered to native sheep. As soon as the proper doses have been ascertained little difficulty should be experienced in eliminating this disease, which is, at present, the cause of considerable anxiety to sheep farmers.

The export of wool both from pure-bred and grade sheep shows a marked increase over that of last year while the prices realised were considerably higher.

Pigs.—During the first six months of the year under review this industry was developing rapidly and besides satisfying local requirements large quantities of bacon and ham were supplied to the military. In the latter half of the year the supply of these products fell off considerably owing to the failure of crops and the consequent high prices ruling for food for fattening and finishing off pigs for slaughter. But the industry may now be said to be established, and, with the elimination of the Seychelles blood originally introduced and the breeding of only the best English breeds, it is anticipated that pig raising will become a very important accessory branch of farming on many of our holdings.

(c) EXPERIMENTAL FARMS.

KIBOS. *Beans.*—The shortage of food in the country and the consequent high prices beans are fetching have been the cause for closer attention being given to this crop, with the result that well over one hundred acres were put under the Canadian variety at Kibos, where the largest acreage recorded before was fifty.

Chillies.—The trials with chillies included the same varieties as heretofore. The results of the experiments were not so satisfactory as in previous years.

Cotton.—Since the outbreak of War interest in cotton cultivated by the natives has gradually been on the wane, especially in the Kisumu district, where, at one time, it disappeared altogether.

The experimental crop at the farm was smaller than heretofore and was planted as late as the end of June. The distance which has been found best in normal years to plant at Kibos is 5 ft. by 2 ft.

Maize.—Both on the farm and out in the Reserve a much larger acreage was put under maize during the year. Just as this acreage was the largest for the past ten years, so also was the yield on the farm the lowest recorded during that period. This again was due to too much rain at a critical stage of the growth of the crop.

Upland Rice.—During the past two seasons this experiment has been a failure. Although unlike the lowland varieties these rices could be successfully grown in normal years without the aid of irrigation any lengthy break in the rains is often fatal to the crop.

This year the experiment promised quite well right up to the "earing" stage, when, owing to the absence of rain, the panicles failed to develop seed, with the result that more than 75 per cent. of the seed heads were empty.

Sugar-Cane.—Sugar-cane-growing promises to supersede all other crops at Kibos. This crop, which appears eminently suited to the local conditions, has been gaining more and more popularity during recent years, where the manufacture of jaggery has now become one of the staple industries.

Tobacco.—This crop was badly damaged by standing water, which caused the premature yellowing of the leaves in the field; the percentage of mildew was also higher than heretofore.

The prospects of producing the finer types of tobacco at Kibos are poor but there seems every possibility of producing a class of tobacco suitable for the cheaper class of cigarettes often seen in the Kisumu markets and said to be the product of Muanza. The curing of the leaves was carried out as heretofore in a mud and grass hut, but, owing to the small quantity of leaves, much difficulty was experienced in curing them to the desired light brown colour.

Permanent Crops.

Coffee.—This experiment, despite various adverse conditions such as abnormal rains, alternating with leaf disease and drought, continues to attract attention.

Special attention was given to the matter of pruning and topping the trees, which appear to have had a decidedly beneficial effect on them. Leaf disease made its appearance in a mild form during the year but this was soon got under control.

Fruit Trees.

Citrus.—With the exception of two of the young grafted trees whose growth appears to have been arrested by the attack of a fungus disease, all the plants made good growth.

The citrus brown scale was much in evidence but was more or less confined to the imported lemons. The immunity of the ordinary rough lemon from the attacks of any kind is worthy of mention. Seedlings are being raised for providing stock for budding later.

Cashew.—The three plants in the fruit plot have now become fully established and produced a good crop of fruits.

Coconuts.—The old trees produced a few fruits which, owing to the drought, were rather undersized.

Mangoes.—All the young trees produced a small crop for the first time.

The other fruits of importance which produced good crops were bananas and pomegranates. The new banana plot planted on the south of the fruit plot is fast becoming established.

Agricultural School.

Work in connection with the school continued on the same lines as in the previous year, the greater portion of the time of the pupils being devoted to general farm operations. Boys showing any tendency to become expert at any special branch of work were selected, and given the chance to qualify in that special branch.

NAIVASHA. *Cattle.*—The pure bred Shorthorns and the Friesland cattle did well. They continue to be a success and are good breeders and milkers.

The pure-bred Hereford cattle did not come up to anticipations.

The pure-bred Ayrshire cattle again fulfilled expectations, the increase being splendid, and proved good milkers; the only cattle that compare with these in increase are the Friesland. All the milking breeds of cattle have given a much better return of calves than any of the beef breeds.

Grade Cattle.—The grade shorthorns are giving very satisfactory results.

The grade known as the Guernsey Shorthorn, *i.e.*, Guernsey on native and then Shorthorn on each cross afterwards are worthy of special notice for dairy farming.

The Friesland grades are bred from imported Cape Colony cows and are of good quality.

A Hereford bull was purchased at the Sydney Royal Show, in April, 1917. An Ayrshire bull was also purchased.

Sheep.—Many varieties of sheep are kept on the farm, including Pure Merino, Pure Suffolk, Pure Lincoln and Shropshire, and also each of these pure breeds crossed on the native ewes. The wool of the higher grade merino is practically pure merino wool.

The Suffolk cross on the native ewe gives a good mutton animal, and the demand for rams of this grade is very marked.

The crossing of the pure merino with the native sheep has been a success in every way.

The clip shorn in October, 1916, was well reported on. The lowest price received for locks, etc., was 10 pence per lb.

The sheep this year suffered from disease more than usual and the losses were high.

Goats.—The Angora and grade goats suffered badly with worms; otherwise they did well. The price obtained for the mixed grade mohair was 19 pence per lb.

The improvement on the native goat when crossed with the pure Angora is very marked, and in each successive cross this is more clearly seen.

Donkeys.—The crossing of the native donkey mares with the imported Catalonian Jack continues to be a success.

Ostriches.—These are still on the farm but owing to the War and fall in price nothing has been done with them lately.

The usual cultivation was done at the lake front but the rising of the lake destroyed all crops planted there.

KABETE.—Fairly good crops were obtained after the long rains of April, May, and June. During these months over 28 inches of rain were recorded, and on several days very heavy rain-fall was registered, notably 4·41 inches on 30th April.

An area of 20 acres of different varieties of maize was planted during the long rains; of this area only 5½ acres of "Hickory King" was harvested which yielded at the rate of eight bags (of 200 lbs. each) to the acre.

The rainfall was excessive at the time this crop was planted.

Eighteen acres of beans and peas were planted at various times.

"Canadian Wonder" beans, planted on 5th June and harvested on 2nd October, 1917, yielded eleven loads (of 60 lb. each) to the acre.

"Rose Coco" beans, planted on 1st June and harvested on 10th October, 1917, yielded eight loads per acre.

An acre of "Soya" beans, planted on 17th April and harvested on the 13th September, 1917, yielded 100 lb. of seed. This is the best success which has, so far, attended this variety of bean in our district.

"Telephone" peas took five months to grow and yielded 10 loads per acre.

Eight acres of wheat were planted in May, 1917, and yielded seven loads per acre.

A good sample of grain was obtained and, in spite of the season, rust did comparatively little harm.

Four acres of barley were planted, but the excessive rain seemed to do most harm to this crop.

Sugar cane gives promise of being a crop suited to vigorous growth in many parts of the country.

All the varieties on the farm have grown excellently.

The general health of the livestock was good.

(D) DISEASES OF ANIMALS.

East Coast Fever.—During the period under review cases of East Coast fever occurred on several farms, hitherto free of the disease, in the Nakuru District. An outbreak also occurred in the Limoru clean area, involving three farms. In the Naivasha quarantine area, in February, two cases occurred in a herd of cattle which had been permitted to move from an infected area under the Dipping Rules. The remaining cattle were promptly removed by rail from the clean area and precautions were taken to prevent the further spread of the disease.

East Coast fever has spread considerably in the Masai Reserve during the year. This is largely, if not entirely, attributable to the movement of large herds of slaughter cattle purchased from all parts of this densely stocked area to meet the military requirements.

The extension of East Coast fever in the European-settled areas during the past four years has mainly occurred through the illicit movement of cattle from infected areas. Contributory causes were the lack of dipping tanks and the scarcity of immune oxen as a result of the War.

The Kamiti testing area was closed down in May as the number of cattle produced for testing did not justify the employment of a Stock Inspector to supervise it. During April and May two cattle died on the area and thirty-two were released and branded as immune to East Coast fever.

During the year fourteen dipping tanks were inspected by engineers of the Public Works Department and eleven of these were passed as built in accordance with the Government plan and specification. A public dipping tank was built by the Government at Naivasha in March and two others are in course of construction at Machakos and Londiani.

The decrease in the number of private dipping tanks erected is attributable to the high prices of cement and to overcome this difficulty several stock owners have decided to erect tanks constructed of timber.

Rinderpest.—This disease was the cause of exceptionally heavy losses during the year. Extensive outbreaks occurred amongst native-owned cattle in the Province of Tanaland and in the Nandi, Machakos, Kenya, and Masai Reserves. From the Nandi, Machakos, and Kenya Reserves the disease spread to European farms in the Uasin Gishu, Lumbwa, Nyeri, Fort Hall, Ulu, Nairobi, and Kyambu Districts. Isolated outbreaks occurred at Ravine and at the Kabete Government farm. The Ravine outbreak was successfully dealt with by the use of serum only. At the Kabete Government farm 700 head of cattle were double inoculated, with a loss of 1·6 per cent.

During the period under review, 22,962 head of cattle, the property of settlers, squatters, and transport riders, and 8,374 cattle, the property of the Military Authorities, were double inoculated against rinderpest. Owing to the shortage of staff it was not always possible to detail a Veterinary Officer to enquire into the losses following inoculation but, so far as can be ascertained, the losses seldom exceeded four per cent. and in the majority of cases were below this figure.

Rinderpest Quarantine Stations were opened at Kipkarren (Nandi-Uasin Gishu border) and at Machakos during the year in order to allow of cattle being brought out of the infected areas of Machakos and Nandi.

Pleuro-Pneumonia.—This disease spread considerably in the Masai Reserve during the year, and two outbreaks occurred on farms near Nairobi in March and June, 1917. One hundred and eighty-one head of cattle were slaughtered in suppressing these outbreaks, which apparently resulted from illicit movement of cattle from the Masai Reserve boundary.

A branch Veterinary Laboratory in the Masai Reserve for the investigation of pleuro-pneumonia and other stock diseases prevalent there is now in course of construction.

Foot-and-Mouth Disease.—Outbreaks of this disease occurred in March and April, 1917, on farms at Gilgil and Kinangop in the Naivasha District. The history of these outbreaks pointed to the disease having been introduced by a herd of trade cattle brought from the Northern Frontier District and sold at Naivasha on the 10th March. This suspicion was confirmed when information was received in June to the effect that the main stock route from the Northern Frontier was infected between Archer's Post and Rumuruti.

Anthrax.—Twenty-five cases of anthrax occurred amongst cattle in the Nairobi and Kyambu Districts during the year. Other outbreaks were reported from Machakos, Thika, Limoru, Escarpment, Elmenteita, Nakuru, Molo, Koru, and Songhor.

An outbreak of disease which occurred in April amongst Kongoni (hartebeeste) in the game reserve, near Nairobi, was diagnosed as anthrax.

Reports of anthrax were received from the Masai Reserve in April, June, September, and November, and in some cases natives were reported to have died of the disease.

Trypanosomiasis.—At the beginning of the year two farms in the Thika area, Fort Hall District, were in quarantine for trypanosomiasis. A Veterinary officer was detailed to inspect the cattle on these farms in October, and again in December, when moist blood films from all the cattle were examined microscopically, with negative results. In view of these findings, quarantine was raised in January.

Blackquarter (Quarter Evil).—Cases of this disease occurred on farms in the Naivasha, Nakuru, Lumbwa, and Ulu Districts. The Veterinary Laboratory issued 21,590 doses of blackquarter vaccine during the year.

Horse Sickness.—Fourteen deaths from horse sickness were reported by Veterinary officers in Nairobi during the year. A few cases were also reported to have occurred in the outlying districts, but it would appear that the losses from this disease have been less than in previous years.

Epizootic and Ulcerative Lymphangitis.—Twenty cases of ulcerative lymphangitis were treated with vaccine in the Nairobi Quarantine Station during the year; of these, eight recovered, ten died, and two are still under treatment. Dipping at seven-day intervals in cattle dipping fluid of three-day strength appeared to act as an efficient preventative and, in some cases, effected cures.

Ten cases of epizootic lymphangitis were treated with potassium iodide; one recovered, two died, four were sent to the Veterinary Laboratory, and three are still under treatment.

Glanders.—No case of this disease came under notice during the year.

Diseases of Sheep and Goats.—Sheep and goat scab, *strongylosis* (wire-worm), foot-rot, Nairobi sheep disease, and contagious (caprine) pleuro-pneumonia are prevalent in practically all the native reserves.

Strongylosis is the cause of considerable loss to European sheep farmers in the Protectorate.

Diseases of the Pig.—Swine Fever.—Outbreaks of this disease were reported during the year at Limoru, Parklands (Nairobi) and on the Uasin Gishu Plateau. The mortality ranged from 50 per cent. to 100 per cent.

V.—FORESTS.

No new forest areas were proclaimed during the year and no alterations were made in the forest boundaries. Statistics of forest areas therefore remain the same as last year.

Legislation has been introduced providing for the payment of a in the Nyika Native Reserve and despatched by rail. Rules were also promulgated to provide for the conservation of trees growing royalty on gum copal collected on a forest area, and on firewood cut on Crown lands not being within a forest area, in the neighbourhood of Nairobi.

Timber.

The local timber trade was brisk throughout the year, the demand being constantly in excess of the supply. In spite of climatic conditions, the year was the most prosperous one ever experienced by the local timber trade.

389,121 cubic feet of timber were sold, as compared with 447,778 cubic feet in the preceding year, a decrease of 58,657 cubic feet, accounted for by the fact that 54,200 cubic feet of Muzaiti timber which were sold in 1916–1917 have not yet been felled. 52,634 cubic feet of timber were issued free to Government Departments, free timber permit holders and natives.

During the year ending 31st December, 1917, the quantity of timber from the Grogan Forests, on which the royalty payment is based, amounted to 99,020 cubic feet, a decrease of 52,155 cubic feet, as compared with the preceding year. The area clear-filled was 182 acres. The decreased output is mainly attributable to adverse weather conditions which necessitated the closing of the only set of mills operating in the forest, that at Maji Mazuri, for four months. Difficulties were also experienced in the transport of the timber to the Railway line.

The Timber Market.

Owing to the high cost of corrugated iron there was a largely increased demand for roofing shingles. Large quantities of " Boriti " were cut in the Lamu mangrove swamps and at Ngoneni in anticipation of a big demand for them at Persian Gulf ports. This demand did not materialise.

Towards the end of the year there was a rise in the selling prices of all timbers except Muzaiti. Other prices remained high.

The Nairobi prices at the end of the year were as follows per ton of 50 cubic feet :—Cedar, Rs.144 ; Podo, Rs.120 ; Msharagi, Rs.144 ; Mueri, Rs.144, and Muzaiti, Rs.240.

Stocks of imported timber were low. During the year under report only 183 tons valued at £2,288 were imported, as compared with 925 tons, valued at £9,790 in 1916–17.

During the year timber to the value of £2,074 was exported, an increase of £2,011 over the value of timber exported during 1916–17.

Saw-Mills.

Twelve saw-mills were operating in the Government forests during the year.

Railway Fuel.

Camps were maintained at Molo, Elburgon, and Escarpment for the supply of wood fuel to the Railway, and a camp was opened at Londiani in October for the supply of wood fuel to the Uganda Railway Marine Department.

Forest Fires.

During the last seven months of the year dry-weather conditions prevailed, and in spite of all precautions several fires occurred causing a great deal of damage.

Silviculture.

A total area of 1,126 acres was planted, as compared with 1,077 acres in the previous years.

Revenue.

The total cash revenue for the year amounted to £11,900 10*s.* 4*d.*, as compared with £11,359 3*s.* 3*d.* in the preceding year. The amount of net cash revenue after deducting expenditure, was £1,538.

Expenditure.

The net expenditure amounted to £10,442, as compared with £10,166 in 1916–17.

VI.—COMMUNICATIONS.

(A) RAILWAYS.

Uganda Railway.

The estimates for the year's working were based on the assumption that normal conditions would have prevailed and that an increased gross revenue would have resulted from a gradual increase in the prosperity and development of the country. They provided for an expenditure of £512,838, and a gross revenue of £800,000. These figures were subsequently revised when it became evident that the gross revenue would fall far short of the estimates, and estimates of expenditure went down to £432,000, gross revenue being estimated at £635,000. The total revenue for the year actually amounted to £647,086, and the actual expenditure was £438,100.

The net earnings for the year were £208,986, a decrease of £142,839, as compared with the net earnings in 1914–1915. They represent a profit of 3·21 per cent. on the total outlay on the Railway and Steamer service as against 5·41 per cent. in 1916–17 and 4·13 per cent. in 1915–16. Of the receipts, 38 per cent. were on account of military traffic.

The gross revenue was second in amount only to that of the previous year, which still remains the highest on record.

The total tonnage handled was 221,601, as against 328,130 last year, a decrease of nearly 32 per cent.

The total goods receipts were Rs.4,625,345 compared with Rs.6,761,060 last year and Rs.5,582,690 in 1915–16.

Coaching receipts increased from Rs.3,499,651 to Rs.3,634,455.

The tonnage carried by Lake steamers decreased from 38,696 to 37,815.

Owing to the War, traffic on the Lake has been easily moved with less than half the fleet. Three steamers were running on regular sailings, while two, together with lighters, have been continuously employed in carrying repatriated porters, recruits, and general cargo.

The mileage run during the year amounted to 95,087, as against 60,331 for 1916–17.

Oil fuel is burnt on three of the steamers, and an oil installation was placed in the "Winifred" during the year.

Magadi Railway.

The result of the past year's working of the Magadi Railway showed a loss of Rs.157,562. Only 6,111 tons of soda were conveyed to the coast.

Busoga Railway and Marine and the Port Bell-Kampala Railway.

Coaching traffic on the Busoga Railway shows a slight decrease of Rs.2,976, as compared with the previous year, and on the Port Bell-Kampala Railway there was a decrease of Rs.5,606.

The working of the Busoga Railway Marine was greatly handicapped by the exceptionally high levels that have been experienced on Lake Kioga.

(B) POST AND TELEGRAPHS.

The East Africa and Uganda Post and Telegraph Services comprise 115 Post Offices and Agencies, of which 89 are in East Africa, and 26 are in Uganda. There are 39 Money Order Offices and 108 Telegraph Offices.

The total Post and Telegraph Revenue of the two Protectorates amounted to £66,116 0*s.* 6*d.*, as compared with £58,738 5*s.* 10*d.* in 1916-17.

The Departmental expenditure, including the cost of telegraph and telephone construction and maintenance in both Protectorates, amounted to £72,639 6*s.* 3*d.*, as compared with £62,014 18*s.* 9*d.* in 1916-17, an increase of 17·13 per cent. Of the total expenditure, £12,840 represents the capital cost of new telegraph and telephone lines and wireless stations, of which sum £11,865 was spent in East Africa and £975 in Uganda.

Postal Matter.

The number of letters, postcards, newspapers, and book packets dealt with during 1917-18 is estimated at 7,677,407 of which 1,941,084 were official or soldiers' letters. This total represents an increase of more than 44 per cent. over the returns of the pre-War year 1913-14.

Parcel Post.

102,936 parcels were dealt with in the combined Protectorates, as compared with 124,004 in the preceding year, a decrease of 17 per cent. This decrease is attributable to the suspension after October, 1917, of Parcel Post from India. The parcels imported from abroad were valued at £134,264, as compared with £145,023 for the previous year—a decrease of 7·42 per cent. The Customs duty collected at the Post Office amounted to £15,937.

Post Office Savings Bank.

The number of deposits made during the year was 15,202, as compared with 7,970 for the previous year, but the total amount deposited fell from Rs.904,225 to Rs.811,685. This apparent anomaly is attributed to the largely increased use of the Post Office Savings Bank made by the men of the K.A.R. Withdrawals numbered 2,961, a decrease of 387, or 11·56 per cent., as compared with similar transactions during the preceding year. The actual sum withdrawn exceeded that for the previous year by Rs.58,287 or 7·40 per cent.

On March 31st, 1918, there were 6,222 active accounts with a balance due to depositors of £77,713. The corresponding figures for March 31st, 1917, were 5,049 active accounts with a balance of £77,780.

Telegraphs.

During 1917–18, the telegrams transmitted, including an estimated traffic of 76,804 (with military and private messages) received from military lines in German East Africa, amounted to 603,127. The number of telegrams forwarded on the service of Government Departments other than those in German East Africa, is estimated at 172,824, of which 105,331 were military messages.

Wireless Telegraph Construction.

A wireless station was erected at Kismayu, the actual time occupied in the erection of the plant, including the construction of concrete foundations, being 69 days from the date of the arrival at Kismayu of the engineer in charge. The station was opened for State traffic on January 15th.

Telephones.

Additional public facilities were provided within the business zones at Nairobi and Mombasa, 45 public telephones being installed at the former, and 7 at the latter.

VII.—CLIMATE AND HEALTH.

(A) Public Health.

The general tenour of the reports from almost all districts was that, on the whole, the public health of the country was exceptionally good. Malaria, as usual, was common everywhere, and but few districts escaped dysentery and the occurrence of sporadic cases of small-pox. Cerebro-spinal meningitis appeared at widely separated centres, cases being reported from Nandi, Machakos, Nairobi, Mombasa, and the Tana River. Plague made its appearance on the Kisii and Maragoli Hills of Kavirondo, and at Kyambu, Nakuru, and Mombasa. The desert areas suffered notably from beri-beri. A small epidemic of influenza was reported from Meru.

(B) Sanitation.—1. Preventive Measures.

Malaria.

Considerable activity has been maintained in cleaning drains filling in excavations and oiling in the principal towns in the country.

Plague.

This disease reappeared in Mombasa on April 25th, 1917. Further cases were discovered on May 19th, and it appeared at intervals in various localities subsequent to that date. Of the 101 cases recorded 84 with 78 deaths were among the uninoculated and 17 cases with 10 deaths among those who had received prophylactic protection.

In Nairobi the case incidence was somewhat higher. The disease originated in the Indian Bazaar and spread rapidly to other quarters of the town and to the native villages on its perimeter. 20,776 rats were caught, of which 37 were found to be infected.

The total number of inoculations against plague was 100,214, as against 18,273 in 1916, and 6,878 in 1915.

Small-pox.

There is evidence to show that there is a recrudescence of this disease in the Kenya Province and in Nairobi. 297,303 vaccinations were performed, as compared with 977,055 in 1916.

Cerebro-Spinal Meningitis.

796 cases with 615 deaths were reported from twelve districts extending from the Coast to Lake Victoria. This is a considerable increase over every year since 1913.

Dysentery.

There were 2,613 cases observed, with 160 deaths. In addition to these the Medical Officers of Health have reported 2,559 deaths from dysentery and diarrhœa in the townships of Mombasa, Nairobi, and Kisumu.

2.—General Measures.

Sewage Disposal.

No water-borne system of sewage disposal has been established in any of the chief towns; nor have any works for the treatment of sewage been constructed.

Night soil is disposed of by dumping in the sea, trenching, incineration, collection in cesspools, or distribution on the ground.

Scavenging.

With the exception of Kisumu, where the Conservancy Department is under the direction of the Health Office, executive control in other towns is vested in other authorities.

The disposal generally adopted is by means of dumping, burning or burial.

Water Supply.

The supplies to the principal towns in the country remain in the same state as last year. Owing to financial restrictions it has been found impossible to safeguard them further by means of filtration, increased storage areas, chemical treatment, protection of the intake and gathering grounds.

Drainage.

4,043 yards of new drains in Nairobi, and 207 yards in Kisumu were constructed during the year. The work of cleansing ditches and drains falls largely upon the Health Office staffs in the towns.

This work has been well organised and sustained and has been of material benefit, as the bulk of the sullage water and effluents from settled areas is discharged into earth drains.

Bush Clearing.

This important work has been actively prosecuted in most of the townships; in some places where this activity has not been supervised and controlled by the Health Offices, monetary grants have been made by the Division for the maintenance of working gangs. The number of acres kept clear was 782, 4,182, and 179 in Mombasa, Nairobi, and Kisumu, respectively.

VIII.—NATIVE ADMINISTRATION.

The year under review has again been one of activity connected with military requirements. The demands made for porters for the Carrier Corps have been larger than ever, and it has also been necessary to collect oxen for military transport and supplies. In spite of the compulsory recruitment of carriers, no untoward incidents occurred and the work of the district officials, Chiefs, and native authorities is worthy of the highest praise. Though depleted in numbers the Administrative Staff has carried on its duties in the development of the natives as in the past, and normal progress has been made.

IX.—EDUCATION.

(A) GOVERNMENT SCHOOLS.

European School.

(1) *Nairobi Division "A" School.*—In spite of the shortage of staff and changes in temporary teachers a satisfactory standard was maintained. Examination results were satisfactory, particularly in the Fourth Standard.

Additions were made to the buildings in April 1917, accommodation being provided for about 20 extra pupils by an increase of class rooms, dormitories, and dining hall.

(2) *Nakuru Division "A" School.*—The progress of this school has been satisfactory.

(3) *Central School, Eldoret.*—This school continues to make good progress and is well supported on the Plateau.

Additional accommodation was provided for the staff, and funds were sanctioned for a commodious boarding house which is now nearing completion.

Indian Schools.

(4) *Nairobi Division "B" School.*—This school has maintained a satisfactory standard under the Indian Headmaster. The school accommodation has been well filled throughout the year, and a number of children are on the waiting list.

(5) *Mombasa Division "B" School.*—This school showed a great improvement during the year under a trained and qualified Headmaster. Criticism and demonstration classes for teachers were started, with good results.

The present unsatisfactory building will shortly be replaced by the new Allidina Visram High School.

Arab School.

(6) ***Mombasa Division* "*C*" *School.***—This school does not increase in size to any extent, as the Arab population is anxious that Arabic shall be taught and the Koran Schools absorbed. When this is done, a large influx may be anticipated.

Native School.

(7) ***Machakos Division* "*C*" *School.***—This school, during the absence of the Headmaster, was carried on in a very creditable manner by native teachers.

Grants-in-Aid.

Grants for Education have been given to Nairobi High School for the maintenance of a European Kindergarten, and an indulgence grant to Missions to enable them to continue their technical training, which had lapsed owing to the absence of native pupils with the Carrier Corps.

(B) MISSIONS AND PRIVATE SCHOOLS.

Seyidie Province.

The Missions in the Mombasa District belong to the Church Missionary Society and the Roman Catholic Mission; there are also three schools in Mombasa, viz., the Government Arab School, the Indian School and the Buxton High School.

Ukamba Province.

In the Nairobi District the Church Missionary Society and St. Austin's Catholic Mission have maintained their progress.

There are, in all, ten Mission Stations, with 23 village schools in the Kikuyu District.

The African Inland Mission has four stations in the Ulu District and one in the Kitui District, but the organisation of schools has been considerably upset by the War. Results of mission teaching in the Kitui District are not encouraging.

A valuable service was rendered to the Government by the recruitment, in April 1917, of a battalion of carriers from the Mission Stations under the leadership of Dr. Arthur of the Church of Scotland Mission, for service in German East Africa.

Kenya Province.

The call for carriers took away pupils from all Missions to such an extent that work became stationary until the end of March, when repatriated carriers began to return.

Naivasha Province.

Two branches of the African Inland Mission are established, one near Kabarnet and the other in Elgeyo, but their labours have not as yet had an appreciable effect on the natives.

Masai Reserve.

There is still a school at Ngong, the number of pupils averaging 40 during 1917–18. At this school the Masai are taught reading, writing and arithmetic, and receive some instruction in agriculture. The Masai themselves offer little encouragement to Missions.

Nyanza Province.

The various Missionary Societies maintain schools in most cases they also have day schools in charge of native teachers. In the North Kavirondo District alone there are night schools under direct European control, and 121 in charge of native teachers. The natives as a whole are anxious to be taught, and a marked improvement in civilisation is noticeable among mission pupils.

X.—LAND AND SURVEYS.

(A) LANDS.

Revenue.—The estimated revenue in respect of rents was £25,000, of which £21,257 were actually collected, the deficit being principally due to causes arising out of the War, such as shortage of staff, the absence of a large number of lessees on Active Service and the postponement of contemplated sales of land.

The actual amounts of £338 in respect of Freeholds and Homesteads, and £2,095 in respect of Stand Premia were collected.

Expenditure.—The expenditure for the year amounted to £7,583, showing a saving in the estimate of £1,719.

Alienation of Land.—The total number of grants made during the calendar year 1917 was 98, totalling 242,244 acres, compared with 97 grants the previous year, comprising 519,154 acres. Of the figure 98, 79 represent grants under licence agreement and old leases for which new leases were issued in substitution in 1917; the actual number of new grants was, therefore, only 19, representing 70,210 acres, and of these 19, 14 grants were farms (9 being old outstanding claims finally settled). The remaining 5 grants were 5 plots granted for special purposes such as Missions, sports grounds, etc.

Land available for Allotment.—There are some 850 farms surveyed and available for allotment.

A start has been made on the examination of cases of plots on which development should have been effected before August 1914. The work is in progress and should, when completed, effect an increase in revenue due to imposition of penalty rents where such are incurred.

Owing to the large numbers of cases of acquisition of land in Mombasa in connection with the town planning of the island, and the high prices realised, a Land Assistant was posted to Mombasa.

Coast Land Settlement.

Revenue.—The total revenue during the year amounted to Rs.23,680.87, as against Rs.10,053.50 in 1916–17. The increase in revenue was due mainly to the increase in fees paid on Certificates of Title issued, viz., Rs.19,127 as against Rs.5,098.

The amount of revenue outstanding on account of Certificates issued, Court costs, etc., now amounts to Rs.40,881.58 as against Rs.26,896.58 outstanding on the 31st March, 1917.

Of the latter amount Rs.1,113 was collected during the year under review and Rs.859 was written off, so that the actual new money owing to Government for the year was Rs.15,957.

Expenditure.—The expenditure under all headings amounted to Rs.168,131.99 as against Rs.103,475.61 last year.

A considerable increase has been incurred under Survey, which is partially accounted for by the fact that a sum of Rs.27,000, being a third share of Head Office expenses, has been charged to the Land Settlement vote for the first time.

General.—A Chairman has been appointed with control of all the Arbitration Boards in Seyidie Province.

It has not yet been found possible to complete the demarcation of the Digo Reserves.

(B) SURVEYS.

The Staff of the Trigonometrical and Topographical Branch was on active service throughout the year. Almost all cadastral work was suspended owing to shortage of staff, 60,000 acres only being surveyed; the cost of survey per acre was consequently higher than in previous years. Deed plan work has been kept up to date.

XI.—GAME.

Revenue from licences remained low but showed a slight increase over the previous years. Only one sportsman's licence was issued, but the return from the front of some of the residents in the Protectorate has caused an increase in the number of other licences issued.

Game Reserves.

Northern Reserve.—No reports have been received of the Northern Reserve during the year.

Southern Reserve.—Satisfactory reports have been received in regard to the condition of nearly every species. Rhinoceros are still scarce, but giraffe, elephant, buffalo, eland, oryx, and other animals are increasing in numbers.

Principal Game Districts.—Favourable reports have been received from all the principal game districts. But little shooting has taken place and, in spite of the drought, satisfactory increases in all species except rhinoceros have been noticed. Elephant have given a certain amount of trouble in settled areas and in the coconut plantations near Lamu.

XII.—PUBLIC WORKS.

The authorised expenditure, as sanctioned in the Estimates for the year, was £138,473. Additional sums which became available during the course of the year, brought the total authorised expenditure to the figure of £147,850. The total actual expenditure was £112,944, or £34,906 less than the votes sanctioned.

The non-completion of the sanctioned programme was unavoidable under the prevalence of war conditions, which affected so adversely the Department's supply of skilled and unskilled labour, and of trained supervision. Fifteen members of the European Staff remained on military duty during the year. The demands of the Carrier Corps for native labour brought civil work to a standstill in a number of directions. Indian artizans also were almost unobtainable for civil employment as much higher wages were offered in the areas under full military occupation.

Among the major works of the year the principal one was a further instalment of Nairobi drainage (£5,661). This included the completion of the Victoria Street sewer by the construction of a length of 1,605 feet varying in size from 5 feet 3 inches by 3 feet 6 inches to 3 feet by 3 feet. Surface drains to a total length of 594 feet were also laid. A start was made with the development of a new Native Quarter at Nairobi. A system of murrum roads was laid out and constructed to a total length of 4·2 miles while concrete drains for the removal of storm water were constructed to a total length of 9,168 feet. In addition a considerable mileage of tributary earth drains was provided.

There were also provided a complete building for the wireless station at Kismayu (£4,079) including accommodation for machinery equipment and staff; additions to the Government School at Nairobi (£1,341); two staff quarters at Mombasa (£1,520); two at Nairobi on which £1,138 was spent without their being completed before the end of the year. A large boarding house was started for Eldoret School, but only £811 was spent before the end of the year. An extension at an estimated cost of £1,467 to the Court House at Nairobi for the accommodation of the High Court was started just before the end of the year, the expenditure being £93. A masonry office at Meru Station cost £1,092.

The expenditure on the maintenance of roads and bridges was £17,029 and that on new roads and bridges was £9,036. The most important item under this head was a new permanent bridge over the Ruiru River on the Fort Hall Road. This consists of two reinforced concrete elliptical arches of 60 feet span, and expenditure on it up to the end of the year amounted to £2,838. In Mombasa Island £1,112 was spent on reconstruction. Three bridges were built in the settled area near Muhoroni (£1,211), where the resident settlers gave assistance with the transport of materials, and thirteen other bridge projects were dealt with. A new line of road was opened from the direction of Limoru into Nairobi through the settled area in the vicinity.

The revenue derived from the Mombasa Water Supply project during the period of fifteen months from January 1st, 1917, when regular revenue accounts were opened upon the completion of construction operations, up to March 31st, 1918, was £5,711.

XIII.—POPULATION.

The estimated European population of the East Africa Protectorate on the 31st December, 1917, was 5,362. Of these 2,357 were adult males, 1,529 were adult females, and 1,476 were children of both sexes. Of the adult males 2,096 were British and 261 were of foreign nationalities. They were classified as follows:—

Government Officials	641
Planters and Farmers	1,011
Commercial	473
Missionaries	126
Professional Men	57
Unclassified	49

The population according to Provinces is set out in the following statement :—

Province	Euro-peans	Indians	Goans	Arabs	Other Races	Natives	Total
Nyanza	382	1,861	138	68	15	1,055,968	1,058,432

No. 1073.

ANNUAL REPORT ON THE EAST AFRICA PROTECTORATE FOR 1918-19.*

(*Colonial Office Note :—Now known as the Kenya Colony and Protectorate.*)

I.—FINANCIAL.

(*a*) GENERAL REVENUE AND EXPENDITURE.

The total expenditure sanctioned at the opening of the year amounted to £1,675,123, of which £1,592,090 was authorised to be spent out of the year's revenue by the Appropriation Ordinance, 1918, and £83,033 was carried forward from the previous year's votes for completion of works in the 1917-18 programme, to be met from Surplus Balances.

The Supplementary Estimates provided for expenditure of £236,819, which was not authorised by the Appropriation Ordinance. Of this £221,596, including War Bonus for the Staff, was to be met from Surplus Balances, £3,000 from a fine on the Aulihan Somalis, and £12,223 was to be met from Savings which were expected to amount to £102,111. The total expenditure then anticipated was £1,726,798.

The total actual expenditure amounted to £1,570,705, of which £1,363,649 was a charge against the revenue, and £207,056 (including £155,973 charged to War Expenses) was a charge against Surplus Balances. In order to make a satisfactory comparison with the amount authorised it is necessary to deduct therefrom the sum of £95,734, the total unexpended balance of the year's votes which require to be carried forward to complete the 1918-19 programme, and to add to the actual expenditure the sum of £33,600 deferred charges on account of Military Expenditure. The total year's expenditure is then found to be more than the total amount sanctioned at the opening of the year by £24,916, but to be less than the aggregate expenditure provided for in the original and supplementary estimates by £109,792.

---

* A sketch map will be found in the Report for 1914-15, No. 881 [Cd. 8172-7].

LIBRARY OF CONGRESS
RECEIVED
NOV 1 - 1921
DOCUMENTS DIVISION

The following table shows the Expenditure for the last six years :—

	£
1913–14	1,115,899
1914–15	1,151,730
1915–16	1,072,917
1916–17	1,197,396
1917–18	1,490,571
1918–19	1,570,705

FINANCIAL POSITION ON MARCH 31ST, 1919.

The net excess of Assets over Liabilities on 31st March was £434,294.

This figure is arrived at as follows :—

		£
Excess of Assets on 1st April, 1918..		456,296
Total Expenditure 1918–19	£1,570,705	
Total Revenue 1918–19	£1,548,703	
Excess of Expenditure over Revenue		22,002
Balance		£434,294

From this Surplus the following amounts must be deducted in order to ascertain the financial position :—

	£
Unexpended balance of votes for works sanctioned but uncompleted	95,734
Expenditure in connection with military patrols to be adjusted in 1919–20 accounts	33,600
Receipts from stand premia on farms and town plots earmarked for road construction	19,964
	£149,298

This leaves an available Surplus of £284,996, which is less than the available Surplus at the end of the previous year by £77,533, but it exceeds the anticipated Surplus on which the estimates for 1919–20 are based by £109,750.

(b) CURRENCY.

The total value of the Currency Note Circulation on the 31st March, 1919, was Rs.1,17,13,500, an increase of Rs.33,83,000 on the circulation at the end of the previous year.

(3040) Wt.5414/129 625 5/21 Harrow G.75/1921

II.—TRADE AND SHIPPING.

(*a*) TRADE.

In consequence of the amalgamation of the Customs Departments of the East Africa and Uganda Protectorates as from 1st April, 1917, separate statistics relating to the trade of each Protectorate are not available.

The following particulars, therefore, refer to the total trade of the two Protectorates :—

Gross receipts from import and export duty during the year under review amounted to £346,216, from which should be deducted the sum of £75,654 refunded in respect of goods in transit, re-exported, etc., the net Customs revenue therefore being £270,562. Of this amount two-thirds is credited to the East Africa Protectorate and one-third to Uganda.

There was a considerable decrease on export duty, which was due to lack of shipping facilities, large stocks of all varieties of produce, including hides and skins which are the principal source of export remaining on hand at the close of the financial year. It is confidently expected that a complete recovery in the export trade will take place during 1919–20.

Imports.—The total value of commercial imports during the year increased from £2,809,681 to £3,397,810, thus showing an increase of £588,129, or 21 per cent. The imports were the highest in value on record and would have shown an increase of 36 per cent. had it not been for the high rate of exchange ruling during the year, viz.: 1s. 6d. = Re.1, while conversion from rupee to sterling currency was made at 1s. 4d. = Re.1 for statistical purposes.

Cotton textiles continue to constitute the most important and largest class of imports, amounting to £912,467, or 27 per cent. of the total trade imports, as compared with £950,608, or 34 per cent., in 1917–18. This decrease represents 4 per cent. in value and 31 per cent. in quantity, thus indicating an average rise in price during the year of 40 per cent. Of the various descriptions of cotton textiles, unbleached piece goods to the value of £263,514, or 29 per cent. of the total value, were imported, by far the greatest proportion (£158,575) originating in India, the second largest supplier being the United States of America (£51,116), followed by the United Kingdom (£30,138) and Japan (£22,624). Imports of other varieties of cotton fabrics amounted in value to £613,682, showing an increase of £136,496, or 28 per cent., over the preceding year. Ninety-five per cent. of this amount is represented by goods originating in the United Kingdom.

Grain and flour represent the second item in importance and constitute 11 per cent. of the total trade imports. The quantity increased by 92,460 cwt., or 32 per cent., and the value by

£163,320, or 73 per cent., the disparity between the two figures indicating a general rise in price of 31 per cent. as compared with the previous year.

Rice, as usual, takes the first place under this head in quantity as well as in value, 215,124 cwt. costing £219,180 being imported as against 170,756 cwt. to the value of £140,615 received in 1917–18.

Wheat flour comes next in importance under this heading, 93,027 cwt. to the value of £107,206 being imported, showing an increase of 35,570 cwt. or 61 per cent. in quantity, and £53,958 or 101 per cent. in value over the importations during 1917–18. Of the total quantity of grain and flour imported, 86 per cent. originated in India.

Spirituous liquors, including wines and spirits, ale and beer, formed the third group of imports (in importance as regards value), 216,059 gallons to the value of £218,155 being imported during the year as against 144,943 gallons to the value of £97,487 in 1917–18. Ale and beer show the largest increase under this head, representing 34 per cent. of the total quantity and 14 per cent. of the value. 74,363 gallons worth £30,248 were imported, 49 per cent. originating in the United Kingdom, 37 per cent. in the Union of South Africa, and 13 per cent. in Japan. Importations of whisky show a quantitative increase of 11,602 gallons, or 21 per cent., and an advance of £52,498 or 102 per cent. in value, thus indicating a rise in price of 67 per cent. With the exception of 254 gallons, all whisky was imported from the British Empire. Imports of wine show an increase of 15,219 gallons or 73 per cent. in quantity, and £18,103 or 118 per cent. in value. Of this quantity 48 per cent. was consigned from the Union of South Africa, 20 per cent. from Italy and 18 per cent. from France. Brandy shows an increase of 15,455 gallons, or 130 per cent., in quantity and £26,322 or 258 per cent. in value over the importations of the previous year.

Tobacco, cigars and cigarettes ranked next in importance. 1,401,661 lb. to the value of £184,242, being imported, an increase of 540,673 lb. in quantity and £94,492 in value over 1917–18.

A decrease of 12 per cent. in the quantity of sugar imported is shown, 78,997 cwt. to the value of £104,614 being received during the year under report. Of this total 83 per cent. originated in Mauritius, Java, which had hitherto been the principal source of supply, furnishing 15 per cent. only. The decrease in quantity imported may be ascribed rather to shortage of supply than to any increase in local production or diminishing demand.

With regard to the countries of origin of trade imports the share of the United Kingdom, prominent as it was in past years, advanced from £1,253,695 in 1917–18 to £1,619,993 in the year under review and represented 47·68 per cent. of the total value of goods imported. British possessions contributed 31·26 per cent., or £1,062,245 as against £839,659 in 1917–18.

Of the balance of 21·06 per cent. from foreign countries, 7·14 per cent. was received from the United States of America, 2 per cent. from Japan, and 1·68 per cent. from Holland. Trade with Japan has increased considerably, being negligible in volume prior to the War, whereas some diminution in the trade with Holland has to be recorded.

The value of the imported goods subsequently re-exported amounted to £726,280, a considerable advance on any previous year. This was mainly due to the fact that large quantities of imported goods were re-shipped to and received from the conquered territory of German East Africa.

Transit traffic decreased from £556,869 to £425,583, or by 13 per cent. These figures should, however, be considered in conjunction with the figures relating to re-exports, and it will thus be seen that little, if any, diminution in this traffic has occurred.

Exports.—Since 1st April, 1917, the exports of produce originating in the East Africa and Uganda Protectorates have been shown under one heading, exports of produce originating in the conquered territory of German East Africa, Belgian Congo and the Sudan being registered separately.

Produce of the East Africa and Uganda Protectorates to the value of £2,231,827 was exported during the year under review as against £1,543,104 in 1917–18, an increase of £688,723 or 45 per cent. From German East Africa produce to the value of £231,590 was exported from this Protectorate as compared with £165,500 during the previous year.

Cotton heads the list of combined exports and represents 48 per cent. of the total value. The quantity exported was 109,179 cwt. of a declared value of £1,064,065 or £9 14s. 11d. per cwt., an increase as compared with the previous year of 13,905 cwt. accompanied by an advance in price of £361,290 or 32 per cent. in specific value. With the exception of 337 cwt., the produce of this Protectorate, all cotton exported originated in Uganda. Fifteen years ago the export of cotton from the East Africa and Uganda Protectorates did not exceed 500 cwt., whereas shipments during the year under review totalled more than 100,000 cwt. This is, however, still very far from what the country is capable of producing, and it is confidently expected that the encouragement afforded to native growers both by Government and by the enhanced prices realized will result in a largely increased output for export. As regards countries of destination, cotton to the value of £540,648 was consigned to the United Kingdom, and £522,535 to India and Burmah, as against £472,396 and £229,475 respectively in 1917–18.

The second place in the list of exports is taken by coffee, which represented 15 per cent. of the total value of shipments. A striking increase in the export of this product has taken place, 139,404 cwt., valued at £327,880, being shipped during the year, as against 59,111 cwt., valued at £142,268 exported in 1917 and 1918. The increase of 80,293 cwt., or 136 per cent. in quantity, is due in part to the fact that stocks from previous years were held over for lack of shipping tonnage, but after this factor has been given due consideration it is evident that the production and export of coffee is increasing enormously. Of the total quantity exported 97,330 cwt. were consigned to the United Kingdom, 22,164 cwt. to Egypt, and 9,763 cwt. to the Union of South Africa.

Carbonate of soda is next in importance in the list of exports, 240,133 cwt. valued at £269,258 having been shipped during the year as compared with 93,755 cwt. valued at £111,322 shipped during the previous year. Sixty-three per cent. was consigned to British Possessions and the remainder to foreign countries. Practically the whole of this product is obtained from the natural deposits of soda at Lake Magadi.

Fibre, which includes sisal fibre and flax, represented 10 per cent. of the total exports, 117,442 cwt. valued at £234,814 being shipped during the year. As compared with the previous year an increase of 24,339 cwt. or 26 per cent. in quantity and £32,486 or 16 per cent. in value is shown. Of the total quantity exported 112,007 cwt. valued at £224,025 was sisal fibre.

The increasing importance of flax-growing in this Protectorate is very noticeable, 5,065 cwt. valued at £10,049 being exported during the year, whereas no flax was exported prior to 1916. It may be anticipated that this commodity will shortly occupy a prominent place in the list of exports. The enhanced demand coupled with a grave shortage in the world's supply, should result in a continuance of the high prices now ruling, thereby giving a decided impetus to what is already a most promising industry.

The export of hides and skins shows a retrogression, the value of such exports being £150,012 as compared with £222,425 in 1917 and 1918. It is probable that the export of this commodity would show a better result had it not been for restricted opportunities for shipment. Eighty-two per cent. of the quantity of hides exported was shipped to the United Kingdom and 16 per cent. to Italy. Forty-three per cent. of skins was shipped to the United Kingdom, 38 per cent. to India and 19 per cent. to the United States of America.

The value of combined exports was distributed in the following proportions among the various countries trading with this Protectorate :—United Kingdom, 53·5 per cent. ; British Possessions, 37·6 per cent. ; Japan, 3·8 per cent. ; Italy, 2·3 per cent. ; United States of America, 0·5 per cent. ; France, 0·5 per cent. ; other foreign countries, 1·8 per cent.

General Summary of Trade.—Total trade imports amounted to £3,397,810, an increase of 21 per cent. over the previous year, trade exports being valued at £2,498,574, or 43 per cent. above the figures for 1917–18. These figures indicate an adverse balance of trade of 26 per cent. as compared with 38 per cent. in the previous year. By including imports and exports of all descriptions, such as Government stores, material for the Uganda Railway, etc., the total value of imports amounted to £4,567,419, and exports £2,498,574, indicating an adverse balance of 45 per cent. as against 71 per cent. in 1917–18.

The adverse balance of trade is, however, rather apparent than real; a large proportion of imports is represented by industrial and agricultural machinery and implements, live stock for breeding purposes, etc., all of which are in the nature of capital expenditure likely to yield a handsome return in the shape of increased exports.

(*b*) Shipping.

Shipping, which was disorganised owing to war conditions, began to show signs of improvement towards the end of the year, but a still further decrease in arrivals and sailings of merchant vessels has to be recorded.

A fairly regular service of steamers of the Clan Ellerman Harrison Line was maintained with Mombasa (Kilindini) but through the exigencies of the war vessels of the Union-Castle, British India Steam Navigation Company, Messageries Maritimes and Marittima Italiana Lines, previously trading regularly between this Protectorate and Europe, called only at irregular intervals.

The service of steamers between East Africa and Bombay, although curtailed, was maintained with fair regularity by a branch of the British India Steam Navigation Company.

The total steamers tonnage entered in the coast ports of the Protectorate amounted to 365,472 tons gross, a decrease of 150,278 tons.

III. INDUSTRIES AND MINES.

(*a*) Industries.

(*See* under Agriculture.)

(*b*) Mines and Minerals.

The continuation of the War stopped practically all mining work by private enterprise.

The demand for mica by the Ministry of Munitions resulted in the Administration undertaking the development of this mineral. Mining was carried out at Sultan Hamud and on the slopes of Mount Kenya at Chuka. A total of approximately 20 tons of rough mica was mined and 2 tons finished by cutting was sent to England.

Development may be said to have reached a paying stage when owing to the Armistice the demand ceased and work was stopped.

IV. AGRICULTURE AND STOCK-RAISING.

(*a*) CROPS.

The adverse conditions, which prevailed last year, continued and caused a considerable set-back to agricultural industries. The difficulties previously experienced in the importation of machinery were only partially overcome. The drought and the various insect pests which follow in its train caused severe damage. A serious epidemic of influenza overran the country during the year and added to the difficulties of development.

Coffee.—Considerable damage was caused by "thrips" and by the failure of the rains throughout the year. *Hemileia Vastatrix* (Leaf Disease) appeared only in a mild form; it has been found that if proper means of restraint are used, the fungus can easily be kept under control.

The acreage under coffee has not increased greatly, owing to the attention which is being paid to the flax industry in many districts; but the Protectorate coffee readily commands the highest prices on the London market.

Flax.—The flax industry has barely passed the experimental stage; but the acreage under cultivation has been greatly increased, and a number of factories for dealing with the crop on a large scale have been erected in the Highlands of the Protectorate. The situation, at the present time, is most favourable for the development of the crop and great interest is being taken in the industry. Home spinners have given excellent reports on the working qualities of the East African fibre.

Sisal.—This industry continued to flourish to a marked degree during the year, and several new estates were put under cultivation. The average monthly output was about 500 tons. Prices in the Home markets ruled very high.

Maize.—The crop was severely affected by the drought and the yield was much below the normal.

In order to relieve distress due to famine among the native population, Government imported large quantities of maize from South Africa, which was retailed to natives.

Potatoes.—The crop was scarce throughout the year and prices ruled high.

Sugar Cane.—In spite of the serious drought sugar cane has given good results at the Government Experimental Station. In August, 1918, the Chief of the Economic Plants Division made an inspection of the Kibos and Kibigori districts and reported that the soil and climatic conditions were highly favourable to the successful cultivation of sugar cane. As there was a prospect of cultivation being undertaken on a large scale, cuttings of several varieties have been in request for planting purposes, but development has been delayed.

Swamp Rice.—The cultivation of this crop is almost entirely in the hands of natives. Owing to lack of seed in the Protectorate, some 22 tons of Swamp rice seed were imported from India and distributed, but the crop suffered severely from drought.

Coconuts.—Attention, during the year, was directed towards keeping the established plantations in good order rather than to new development.

Fruit.—In several districts in the Highlands good crops of apples, peaches, and plums were harvested. Oranges and other members of the citrus family also gave good results. There is a good local market for all fruit, and further attention is being devoted to this branch of agriculture.

(*b*) Stock.

Cattle suffered considerably from the long drought ; many old cattle died and young stock received a severe check.

Unfortunately rinderpest broke out in the Rift Valley, with the result that double inoculation was considered advisable on most farms.

The demand for pure bred bulls was very keen and further consignments were imported from South Africa. The supply was far short of the demand, and another consignment is being selected in South Africa. The principal breeds used for grading are Shorthorn, Friesland, Ayrshire and Herefords. All these breeds cross well with the native cow, and results show a marked improvement both in beef and milk.

Sheep.—The sheep industry covers a very limited area from Kijabe to Elmenteita, Molo district, Laikipia and West Kenya. Excellent results are still being obtained from grading up with the Merino ram. There is a keen demand for mutton grade rams.

Wool sent to the London market has realized good prices.

Scab causes the sheep farmers considerable anxiety and expense, and the sheep require regular dosing for internal parasites.

Pigs.—The pig industry has received a severe set-back, owing to the high price of maize. Many farmers were forced to dispose of their stock. Those who have continued should now do well, as 50 cents. per lb. live weight is a very high price. Wild pigs died in large numbers near Naivasha in September and October from swine fever or rinderpest.

Donkeys.—The crossing of the native donkey with Catalonian Jack has proved a great success. The progeny of the Catalonian Jack, mated with the half-bred donkey mares, shows a marked improvement on the half-breds.

(c) EXPERIMENTAL FARMS.

Kabete.

Maize.—An area of 42 acres was planted during April, 1918, the varieties being "Hickory King" and "Iowa Silver Mine." The former yielded 6½ bags of 200 lb. to the acre and the latter 5 bags.

Beans.—Forty-three acres were planted in April. They were harvested in four months and yielded 6 bags of 200 lb. to the acre.

Wheat.—Twenty-five acres were planted and harvested in four months, the average yield being rather less than 400 lb. to the acre, and the maximum yield 650 lb. to the acre.

Potatoes.—A considerable acreage was planted with "King of the Early." The crop was planted in September and grown under irrigation, yielding at the rate of 5 tons per acre.

Tea.—The trees withstood the drought satisfactorily, and it is possible that they may do quite well under more favourable conditions.

Coffee.—The trees were damaged by "thrips," and the yield during the year was very light.

Sugar Cane.—One acre of each of the following varieties was planted in April, 1918:—"Seely Seedling," "No. 3,922," "No. 156," and "No. 1,528"; all varieties have given good results.

Naivasha.

Cattle.—Stock has experienced the worst year in the history of the farm. The young stock suffered severely and received a set-back, from which they will take a long time to recover.

Rinderpest made its appearance during August and September.

Sheep.—In spite of the drought the sheep have been fairly healthy.

Two Suffolk rams were imported from South Africa to mate with grade Suffolk ewes. This produces a good grade Suffolk ram, which is in great demand.

The two Lincoln rams imported from Australia in 1917 have been mated with grade Lincoln Merino ewes. The progeny appear to lack constitution. Forty-nine bales of wool weighing 21,964 lb., and one bale of mohair weighing 464 lb. were despatched to London on 1st January, 1919.

Donkeys.—The new Catalonian Jack crossing with the half-bred mares shows a marked improvement, but the increase is disappointing.

(*d*) DISEASES OF ANIMALS.

Diseases of Cattle.

East Coast Fever.—During the year under review, 141 outbreaks of East Coast Fever were reported; of this number, 41 occurred on the Uasin Gishu Plateau, where infectivity has greatly increased owing to illicit movement of stock and insufficient attention being paid to the strength of dipping fluids.

Two outbreaks occurred in each of the clean districts of Limoru and Elmenteita. All native reserves are infected areas, and it is reported that the disease has increased considerably in the Masai Reserve.

An endeavour was made to re-infect the Kamiti testing area, which had been out of use for 18 months. Susceptible animals placed on the area have, with few exceptions, failed to contract the disease. It is hoped to open this boma for testing immunity during the next year.

Fourteen dipping tanks were inspected by Engineers of the Public Works Department and twelve of these were passed as having been built in accordance with the Government plan and specification. A public dipping tank was built at Gilgil. There are now 160 dipping tanks in the country.

Rinderpest.—During the year disease was widespread. In some cases the disease is said to have spread by infected eland and warthog. During the period under review, 69,493 head of cattle, the property of settlers, squatters and transport riders, were subjected to double inoculation against rinderpest. Owing to shortage of staff it was not possible to detail a Veterinary Officer to enquire into losses following inoculation, but so far as can be ascertained the mortality rarely exceeded 5 per cent., the average losses reported being 2 per cent.

In certain areas higher rates of mortality were experienced, reaching 11·5 per cent. at Naivasha. This was, on enquiry, found to be due to infection of redwater and anaplasmosis and insufficient care as to grazing at the critical period.

Pleuro-Pneumonia.—Several outbreaks in the settled areas have been reported and dealt with during the year. The disease is still rampant in the Masai Reserve, where it was found that, from a mob of 3,332 apparently healthy oxen collected at random, 889 showed, on post mortem examination, lesions of varying degrees of severity of pleuro-pneumonia.

Foot and Mouth Disease.—In March outbreaks of this disease were reported throughout the country. This disease runs a very mild course, affects stock of all ages, and causes no mortality.

Anthrax.—Twenty-seven cases were reported during the year. The disease was dealt with by double vaccine inoculation. Two forms of anthrax are found throughout the country, the splenic and the subcutaneous. The former shows no clinical symptoms and the animal is usually found dead ; in the subcutaneous form diffuse swellings are found in different parts of the body and in many cases the animal recovers. Native cattle show a degree of natural resistance, as the disease is known to exist in nearly all Native Reserves.

Trypanosomiasis.—Five outbreaks occurred at Thika and may have resulted from one of two causes :—

(1) A latent infection from a previous outbreak, transmitted mechanically by such means as the ordinary *Stomoxys* biting fly.

(2) Direct infection from the bite of tsetse-fly.

It was proved that at least one outbreak coincided with the near encroachment of buffalo from the Ithanga hills. Tsetse-flies will follow herds of buffalo for some miles ; and it can be assumed, in certain cases at least, that the tsetse-fly was the primary cause of infection. Other minor outbreaks occurred in Nairobi and Uasin Gishu.

When the presence of tsetse-fly is negatived on an infected estate, it must be assumed that the ordinary blood-sucking fly is the active agent in spreading the infection from some imported infected animal. Support is lent to this theory by the fact that, in certain infected farms, where regular dipping was practised, cases rapidly diminished in number and the disease ultimately disappeared.

Colon Bacillosis.—In dealing with this disease a standard Colon Bacillosis vaccine is issued by the Laboratory with satisfactory results.

Anaplasmosis.—There is evidence that this disease is considerably on the increase among grade and imported stock.

Redwater.—Outbreaks were reported from Gilgil, Naivasha, Muhoroni, Molo and Uasin Gishu. Trypanblau is a specific in the treatment of the disease.

Black Quarter.—Vaccination has proved very satisfactory, with the result that no outbreaks of importance have been notified during the year.

Diseases of Equines.

Horse Sickness.—No case was reported in Nairobi during the year, as compared with 14 cases in the preceding year. Three cases were reported from the Uasin Gishu Plateau.

Glanders.—One case was found among military horses ; the incontacts were malleined and no reactions resulted.

Lymphangitis.—This disease has shown a marked tendency in the last two years to spread throughout the Protectorate Whereas the number of cases treated was about the same as in the preceding year, the fresh areas affected have increased considerably.

A successful treatment for epizootic lymphangitis has been found to be Mercury Biniodid or Potassium Iodide dissolved in water, and given daily until the lesions begin to reduce, which in mild cases usually takes place in a month.

The vaccine treatment for ulcerative lymphangitis is still fairly satisfactory. Counter-irritation in the case of thickened legs has given good results in conjunction with vaccination.

Diseases of Sheep and Goats.

Heartwater.—An outbreak of Heartwater was reported from the Rift Valley and heavy losses resulted, in spite of dipping at fourteen days' interval. There were few cases of diseases of sheep and goats reported during the year; this is attributed to the abnormally dry weather.

Diseases of the Pig.

Swine Fever.—Outbreaks of swine fever were reported. No advance has been made in obtaining a preventive serum against this disease, as little success has attended the numerous experiments carried out at the Veterinary Laboratory at Kabete.

V.—FORESTS.

No new forest areas were proclaimed during the year and no alterations were made in the forest boundaries.

Legislation has been introduced making it illegal to place honey "barrels," or search for honey in any forest area except under licence, on account of the great damage caused by reckless use of fire by honey-hunters.

Provision has also been made for the payment of a royalty on timber and firewood cut in the Nyika Reserve for use outside the Reserve.

Timber.

The demand for local timber continued to be in excess of the supply.

Saw milling machinery has been difficult to acquire.

459,944 cu. ft. of timber were sold, compared with 389,121 cu. ft. in 1917–18.

17,836 cu. ft. of timber were issued free to Government Departments, free timber permit holders and natives, compared with 52,634 cu. ft. in 1917–18.

During the year ending 31st December, 1918, the quantity of timber sold, including the output of the mills working the forests, the subject of the Grogan licence, amounted to 459,944 cu. ft., as compared with 389,121 cu. ft. in 1917.

Saw Mills.

Eleven saw mills were operating in the Government forests throughout the year.

Railway Fuel.

Camps were maintained at Molo, Elburgon and Escarpment for the supply of wood fuel to the railway.

2,696,536 cu. ft. of wood fuel were taken over by the railway from contractors cutting in Government forests, as compared with 2,625,496 cu. ft. in the previous year.

The total quantity of wood fuel taken over by the railway throughout the whole length of the line was 5,433,912 cu. ft., as compared with 5,037,497 cu. ft. in 1917–18.

Forest Fires.

The year was most disastrous as far as fires were concerned owing to the long drought.

At Kijabe 50 acres of cedar forest were destroyed and in Njoro district 50 acres of scrub forest and 60 acres of bamboos were destroyed. In the Sclater Road district of the Tinderet forest, 30 acres, which were being exploited for timber, were practically destroyed.

Many other small fires, doing much damage, were caused by native honey-hunters—especially in Naivasha District.

Silviculture.

The year was not propitious for planting owing to the deficiency of rain everywhere except on the coast.

The total area planted was 1,066 acres of which 599 acres was re-afforestation of areas cut over for railway fuel.

Revenue.

The total cash revenue for the year amounted to £11,911 as compared with £11,980 in the preceding year. Revenue derived from royalties on mangrove bark showed a large falling-off, due to the lack of shipping prohibiting export.

Expenditure.

The total expenditure for the year amounted to £13,788 as compared with £11,276 in 1917–18. A sum of £820 was contributed by the Uganda Railway towards the cost of replanting areas felled for the supply of wood fuel. The nett cost was, therefore, £12,968.

VI.—COMMUNICATIONS.

(*a*) RAILWAYS.

Uganda Railway.

The year under review was again influenced very considerably by military operations, more especially towards the latter part when demobilization took place; the result of the work compared with the Estimates is as follows :—

	Actual.	*Estimates.*
	£	£
Expenditure ..	493,213	520,892
Gross Revenue	645,468	750,000
Nett Revenue	152,255	229,108

giving a deficit in nett Revenue over the Estimates of £76,853.

Goods Receipts increased to Rs.4,922,994, from Rs.4,625,345 in 1917–18, and Coaching Receipts decreased to Rs.3,208,135 from Rs.3,634,455 for last year.

During the year £174,349 or 27 per cent. of the gross receipts were derived from military traffic.

The gross revenue was the third highest on record, being £1,618 less than 1917–18.

The nett earnings showed a further decrease, being £56,731 less than in 1917–18: they represent an interest of 2·33 per cent. on the Capital outlay as compared with 3·21 per cent. in 1917–18 and 5·41 per cent. in 1916–17. The lower percentage of this year is due entirely to the increased cost of working.

The total tonnage handled was 237,976 as against 221,601 last year and 328,130 in 1916–17.

Marine Department.

Owing to the war, traffic on the lake was again low and has been handled with two ships and tugs with lighters, the steamers "Winifred," "Sybil" and "Nyanza" being laid up for the whole year.

The "Nyanza" has been fitted with the oil fuel installation; this now gives a total of four steamers so fitted.

The mileage run during the year amounted to 62,852, as against 95,087 for 1917–18.

The tonnage carried by the Lake Steamers was 39,521, the highest figure since 1914–15.

The Steamboat earnings came to Rs.882,254, against last year's figures of Rs.938,352; passengers earned Rs.334,233 and goods Rs.542,747, against Rs.360,504 and Rs.542,987 for 1917–18.

Expenditure has dropped from Rs.853,820 in 1917–18 to Rs.822,999, owing to the decrease in mileage run, but the cost of maintenance and general stores, owing to the high prices of all materials, has increased.

Busoga Railway and Marine.

For the first time in the history of this Railway a sum of Rs.114,750 interest on the capital cost has been included in the expenditure, therefore no correct comparison can be made with the workings of previous years without deducting this amount from the expenditure.

The statement of receipts and expenditure shows a nett loss of £9,251 against last year's nett profit of £876, but if the Loan Charges are deducted the nett loss only amounts to £1,601.

Receipts show a decrease of Rs.6,740, due to the poor cotton crop, which earned Rs.23,000 less than in the previous year.

Excluding Loan Charges, expenditure shows an increase of Rs.30,419, principally due to the high cost of rations and material used in the maintenance of rolling stock and steamers.

In the Marine Department passenger earnings showed an increase as compared with last year—Rs.38,186 against Rs.30,981—whereas merchandise decreased from Rs.143,126 to Rs.125,284 due to the poor cotton crop.

Port Bell-Kampala Railway.

This Railway also has had to bear for the first time an expenditure of £1,645 on account of Loan Charges; if this sum were excluded the nett earnings would amount to £1,236 against £1,268 for the previous year.

Coaching traffic increased by Rs.3,500 and goods by Rs.1,500.

(*b*) POST AND TELEGRAPHS.

The East Africa and Uganda Post and Telegraph Services comprise 118 Post Offices and agencies, of which 92 are in this Protectorate and 26 in Uganda.

There are 41 Money Order Offices and 110 Telegraph Offices. The development of the Post and Telegraph system has been arrested owing to the War, and a considerable expansion of existing services will have to be provided for as soon as circumstances permit.

The total Postal and Telegraph Revenue of the two Protectorates amounted to £74,950, an increase of 13·3 per cent. on £66,116, the revenue in 1917–18.

The departmental expenditure, including the cost of telegraph and telephone construction and maintenance, in both Protectorates, amounted to £68,299 as compared with £72,639 in 1917–18, a decrease of 5·97 per cent.

Postal Matter.

The number of letters, postcards, newspapers and book packets dealt with during 1918–19 is estimated at 7,386,245, of which 1,649,922 were official and free (soldiers) letters.

Parcel Post.

During the whole of the year under review parcels post from India was suspended; there is accordingly a decrease in the number of parcels dealt with in the two Protectorates. The number for this year was 93,713, as compared with 102,936 in 1917–18, a decrease of 9 per cent. The parcels imported from abroad were valued at £171,321. The Customs duty collected by the post office amounted to £15,704.

Money Orders.

The money order business shows an increase in value, but a decrease in the number of orders. The increase in the value of orders occurred mainly in respect of remittances to the United Kingdom and the Union of South Africa, and is attributed to the favourable rate of exchange between East Africa and countries of sterling currency.

Post Office Savings Bank.

As in the preceding year, the amount withdrawn exceeded that deposited. This was due mainly to the closing of 3,000 accounts standing to the credit of native troops of the King's African Rifles.

Telegraphs.

During the year 636,073 telegrams and cablegrams were dealt with, as compared with 603,127 in 1917–18. The total includes 60,424 telegrams received from Conquered Territory. The number of telegrams forwarded on the service of other Government Departments was 171,623, of which 107,692 were military messages.

Wireless Telegraph.

The wireless stations erected at Mombasa and Kismayu were opened for public traffic.

Telephones.

Towards the end of the year it was possible to obtain a certain amount of telephone material from the military, and, in consequence, development of public facilities was recommended on a limited scale, which resulted in 68 additional telephones being installed for private subscribers.

VII.—CLIMATE AND HEALTH.

(*a*) PUBLIC HEALTH.

It may be said that the general health of all sections of the community, almost without exception, during the year, was exceptionally bad. There was a considerable addition to the number of cases treated, which, even allowing for the normal rise in attendance at hospitals consequent on the development of the country, was much above the average. The mortality was abnormal, due to a variety of explainable causes which could not be controlled. The effects of the year's work was further reflected in the increase of the invaliding rate amongst the official class. Stoppage of leave, the withdrawal of every available man either from his billet here or who might have been selected to fill that post from home, resulted in the retention of an understaffed, overtaxed body of war-stale Government servants to carry on the administration of the country.

Briefly, the conditions which so adversely affected the country were the universal drought throughout the greater part of the year, due to the failure of both rains; and the consequent famine conditions which greatly stimulated the continued existence of the usual communicable diseases. It became apparent that the return of large numbers of discharged soldiers and Carrier Corps porters had, and is having, its inevitable effect on the country; this, in spite of the most admirable efforts of the work of the medical staff of the Carrier Corps. It was not possible for the civil department to take over the segregation of disease "carriers." Thus it was that various diseases became especially prominent. The rapid spread of *tuberculosis* is becoming a serious menace. Equally with the rest of the world, this Protectorate was devastated by *influenza*, which swept like a tidal wave to its very confines, practically exhausting itself after nine weeks. Generally speaking, the most noticeable thing about it was that its virulence was more deadly in the colder up-country regions than in the moister and hotter coast areas. One condition which the progress of medical work during the War has demonstrated very clearly is the enormous liability of the African to helminthic affections. Fully three-quarters of the native population is infected, and the question of *ankylostomiasis* alone must have a marked bearing on the labour market. In fact, it is possible that the African lethargy inherent in this tropical region is largely dependent on this cause.

(*b*) SANITATION—(1) PREVENTIVE MEASURES.

Malaria.

In the principal towns trained anti-malarial gangs are employed clearing drains, filling in excavations, and oiling water.

Plague.

Rat trapping and systematic investigation have been continued throughout the year though the Coast and Nairobi were free and only one case was reported from Kisumu and eight at Nakuru. Voluntary prophylactic inoculations have been popular among Asiatic communities.

Small Pox.

A satisfactory vaccine has not yet been prepared that affords complete immunity.

The experience gathered is that no strain, whether from overseas or locally prepared, has been successful over a prolonged period unless it has been reinforced. Generally a new strain has been substituted for the old.

(2) GENERAL MEASURES.

Sewage Disposal.

No advance has been made as regards the disposal of sewage by water-borne system or other treatment. The disposal of night soil by dumping in the sea, trenching, incineration, collection in cesspools, or distribution on the ground are in no instance satisfactory, and within some of the more settled areas constitute a danger to the public health.

Scavenging.

With the exception of Kisumu, the responsibility for conservancy in the chief towns is vested in local authorities. The disposal generally adopted is by means of dumping, burning or burial.

Water Supply.

The supplies to the principal towns remain in the same state as last year. Financial restrictions have obviated their safeguarding by means of filtration, chemical treatment, and protection of intake and gathering grounds.

Drainage.

Five hundred yards of new drains have been constructed in Mombasa and 44 yards in Kisumu. The Health Office staff have continued the work of clearing earth drains and channels for the public benefit.

Bush Clearing.

The Health Office staff have continued this important work in the chief townships, and in places where it has been impossible to supervise the work monetary grants have been made for the maintenance of gangs.

VIII. NATIVE ADMINISTRATION

The year bore heavily on the native population owing to the famine and the influenza epidemic. Administration, therefore, already hampered by depletion of staff and with many officials long overdue for leave, was carried on with some difficulty. The relations with natives were peaceful, with two exceptions. A raid by Loita and Purko Moran into the Occupied Territory rendered an armed patrol necessary; peaceful conditions were quickly restored. A raid by the Elgeyo upon the Plateau farms was quickly followed by the recovery of the cattle and the imposition of a fine.

IX. EDUCATION.

GOVERNMENT SCHOOLS.

European Schools.

(1) *Nairobi Division " A " School.*—The shortage of staff has been serious and influenza prevented the holding of examinations. Structural additions include a new Staff double bungalow, dining room and bath rooms.

(2) *Nakuru Division " A " School.*—The work of this school has been satisfactory. A house for eight boarders was opened.

(3) *Central School, Eldoret.*—The improvement in this school has been very marked. A house to accommodate 48 boarders is under construction.

Indian Schools.

(4) *Nairobi Division " B " School.*—This school has maintained a satisfactory standard. All available accommodation has been filled, necessitating a waiting list for pupils.

(5) *Mombasa Division " B " School.*—The progress of this school has been maintained. Further accommodation is required.

Arab School.

(6) *Mombasa Division " C " School.*—Examinations at this school showed good results. Attendance has increased from 15 pupils in 1914 to 69 in 1919. Discipline and general tone has improved.

NATIVE EDUCATION.

Increasing interest in education is being taken by natives, particularly of the Kavirondo, Kikuyu and Akamba tribes.

A satisfactory report was received from the Headmaster of the Machakos Industrial School.

The Church Missionary Society's Stations at Maseno, Kikuyu, and Mombasa, each received a grant of £600 towards the foundation of training colleges for native teachers, who are in great demand.

X. LAND AND SURVEYS.

(*a*) LANDS.

Revenue.—The estimated revenue in respect of rents was £25,000, of which £23,925 was actually collected.

£616 was collected on freeholds and homesteads, where £100 only was estimated. This was due to purchasers paying their balances in lump sums on converting leasehold land into freehold.

£12,405 was collected from stand premia, where £4,000 only was estimated. This increase was due to the sale of residential plots in Mombasa in September which was not anticipated in the Estimates.

Expenditure.—The expenditure for the year amounted to £7,562, showing a saving in the estimate of £1,523.

Alienation of Land.—The total number of alienations for 1918 was 89, totalling 177,435 acres, compared with 98 grants in the previous year comprising 242,244 acres.

Of these 89, 75 represent grants in substitution for licences, agreements, old leases of farms and plots, and sub-divisional new leases for which new titles were issued in 1918, so that the actual number of new grants was only 14, representing 56,198 acres. Of these 14, 10 grants were farms and 4 business, sports, and other plots.

Coast Land Settlement.

Revenue.—The total revenue during the year amounted to Rs.31,953, an increase over 1917–18 of Rs.8,272.

The revenue outstanding on account of certificates issued, Court costs, etc., amounts to Rs.29,531 as against Rs.40,881 outstanding on 31st March, 1918.

Expenditure.—The expenditure amounted to Rs.55,016.

(*b*) SURVEYS.

No actual field work was carried out during the year, but in January the Deputy Director returned to duty from active service and was followed by his surveyors. The whole staff had been on active service since August, 1914.

Trigonometrical Work.

(*a*) Major and minor triangulation has been completed on the following areas :—

(1) Lake Magadi to the Uganda Railway which was run and completed before the outbreak of war. There was a triangular error of 2″·25.

(2) Extension of the Protectorate triangulation from the Athi Plains Base Extension into Conquered Territory to Lolkissale, south of Arusha. There was a triangular error of 4″·37.

(*b*) The total area covered by major triangulation is approximately 10,000 square miles.
